

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

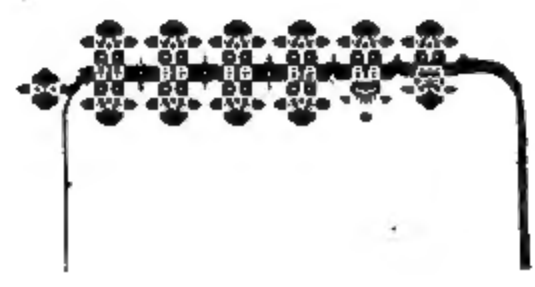

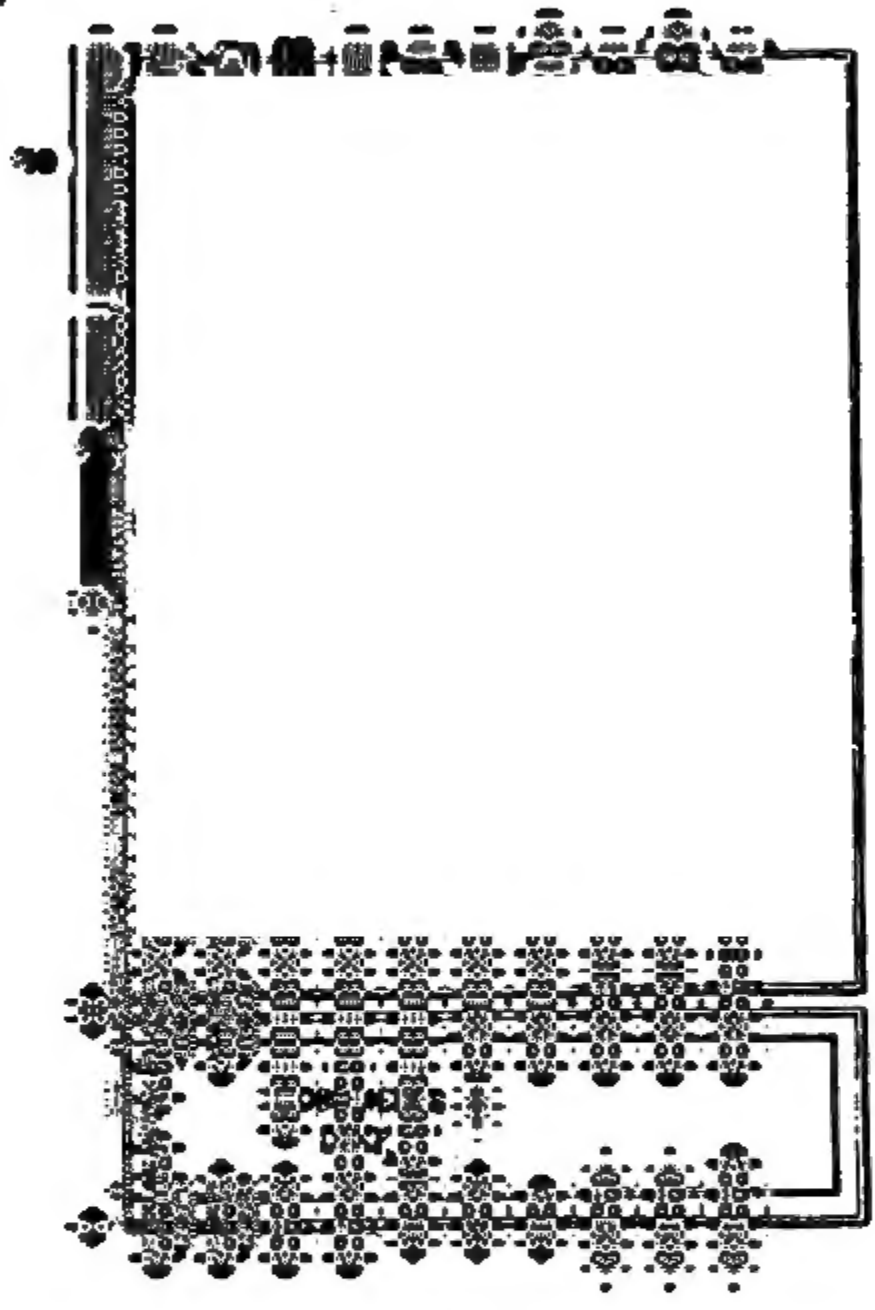

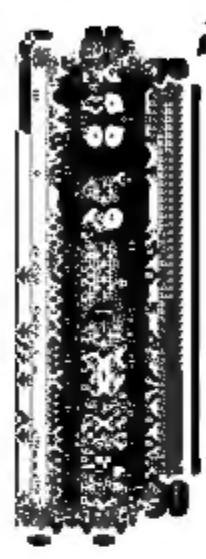

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

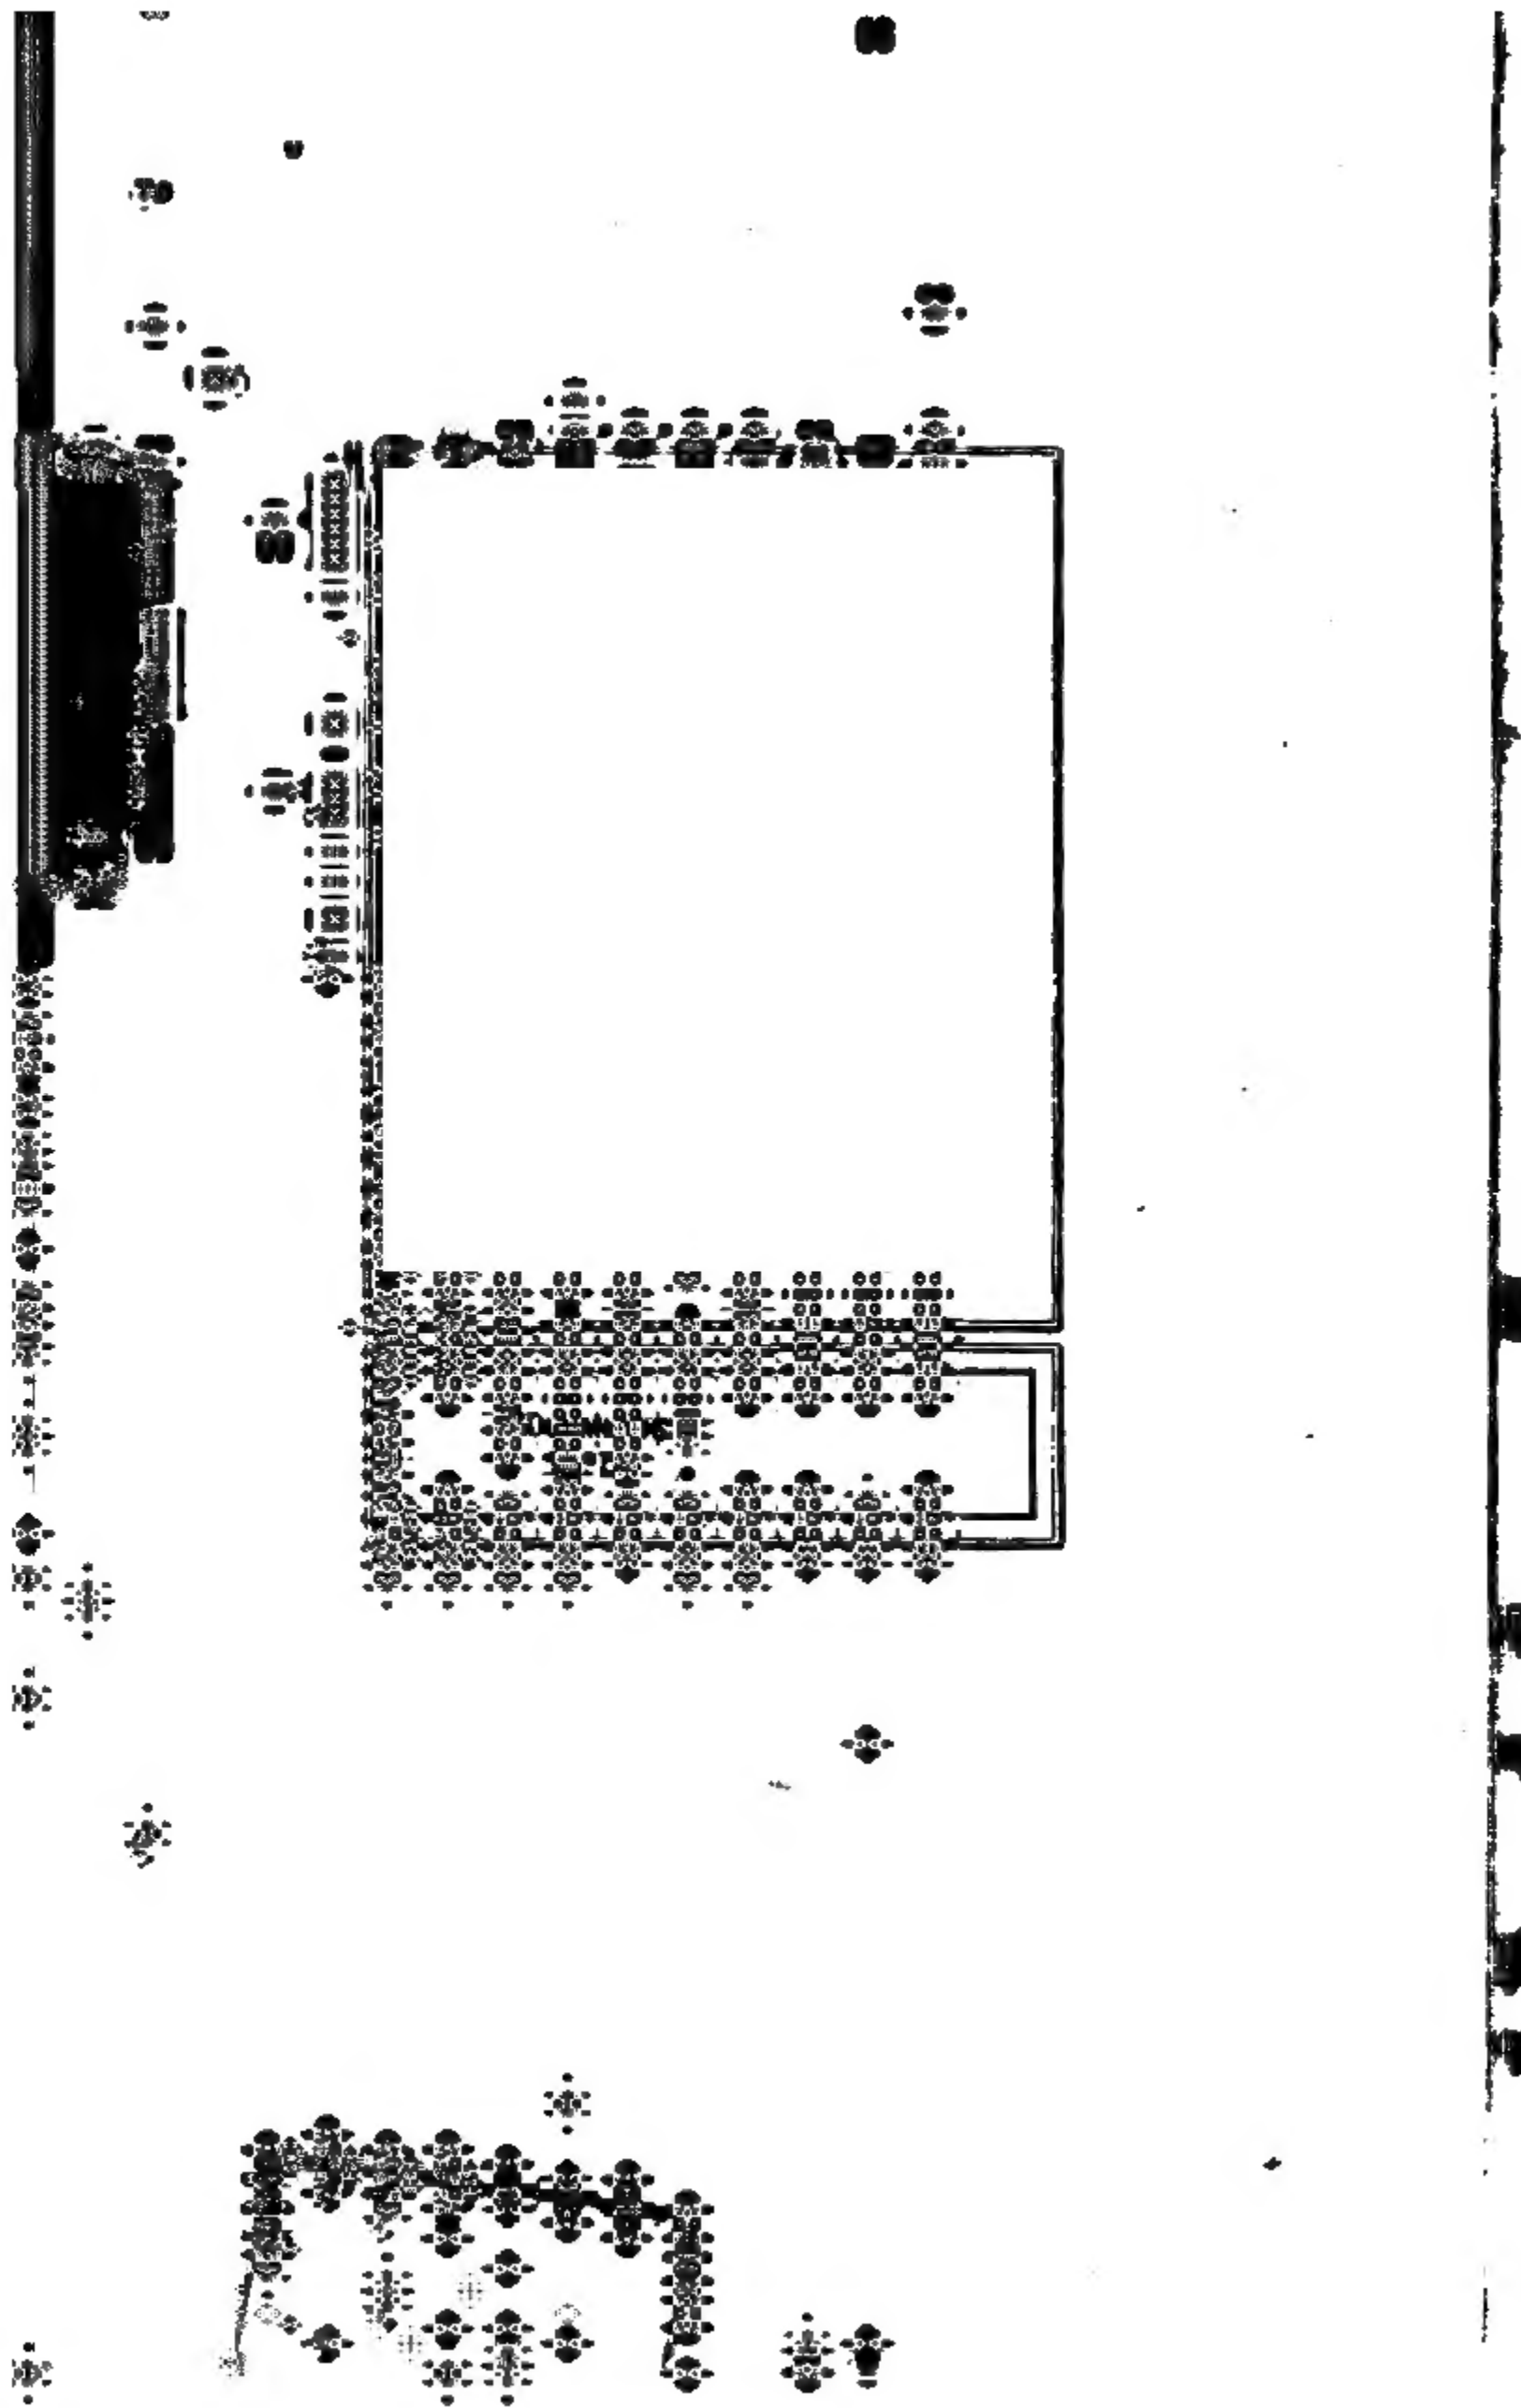

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

## TRUSTS.

---

JULY 30, 1888.—Referred to the House Calendar and ordered to be printed.

---

Mr. BACON, from the Committee on Manufactures, submitted the following

### REPORT:

[To accompany Mis. Doc. 124.]

The Committee of Manufactures respectfully report that, acting under the authority and direction of a resolution of this House passed on the 25th day of January, 1888, they have proceeded to investigate and inquire into the matters and things referred to in said resolution, and having examined witnesses and papers in relation thereto they have been unable to complete such inquiry and investigation, and respectfully report the following resolution, with the recommendation that it do pass.

Your committee further report that the names of various combinations and trusts have been from time to time furnished to your committee; that the number of such combinations is very large; and that your committee, in calling witnesses and taking testimony, proceeded upon the following plan of investigation, *i. e.*, to inquire—

(1) With relation to trusts or combinations in lines of business which are connected with or use articles in which there exists a competition in our markets between the domestic product and the foreign product imported and dutiable under our tariff laws.

(2) With relation to such combinations dealing in articles which are not imported into this country or are not subject to import duties.

(3) With relation to such combinations dealing in articles which are subject to taxation under the internal-revenue laws of the United States.

Your committee has particularly directed its inquiry into the methods of and the extent of the business done or controlled by, the sugar trust and the Standard Oil trust, and respectfully submit herewith the testimony taken before it in relation to these two trusts.

In submitting this testimony your committee desire to call the attention of the House to the form of organization of these two trusts. Both of them are organized upon substantially the same plan. From the testimony it appears that there exists a certain number of corporations organized under the laws of the different States and subject to their control; that these corporations have issued their stock to various individuals and that these individual stockholders have surrendered their stock to the trustees named in the agreement creating these trusts and accepted in lieu thereof certificates issued by the trustees named therein. The agreements provide that the various corporations whose stock is surrendered to the trustees shall preserve their identity

and carry on their business. In the Sugar Trust agreement the provision is that the several corporations shall maintain their separate organizations and each shall carry on and conduct its own business.

In the Standard Oil Trust agreement it is provided that all property, real and personal, assets, and business shall be transferred to and vested in the said several companies. The duties of the trustees are restricted to the receipt of the dividends declared by the various corporations and the distribution of the aggregate of them to the holders of the trust's certificates, pro rata, and to holding and voting upon the stock of the corporations. The trustees in both cases, upon the stand as witnesses, specifically denied that the trustees, as such, ever do any other business than to receive and distribute these dividends and exercise the only other function given to them by the trust agreements, that is, to hold the stock of the various corporations and exercise the right of stockholders in such corporation.

The care with which the trustees avoid making any agreement relating to commodities appears from the testimony as to the arrangement made with the Oil Producers' Association in the fall of 1887. The officers of the Producers' Association testified that an arrangement was then made with the Standard Oil Trust by which 5,000,000 barrels of oil belonging to the Standard Oil Trust were set apart for the benefit of the association, upon its agreeing to curtail the production of crude oil at least 17,500 barrels per diem. These witnesses undoubtedly understand that their arrangement was with the trustees of the Standard Oil Trust. But the written agreement produced, and now in evidence, shows that it was made with and is signed by the Standard Oil Company of New York, one of the companies whose stock is held by the trustees, and that the Standard Oil Trust or the trustees thereof, as such, are not parties to it, nor is either of them responsible for the carrying out of that agreement.

This form of combination was obviously devised for the purpose of relieving the trusts and trustees from the charge of any breach of the conspiracy laws of the various States, or of being a combination to regulate or control the price or production of any commodity; hence they assert that the corporations themselves, which control and regulate the price of commodities and the extent of production and have tangible property, remain with their organization intact and distinct, and not in combination with each other; that the stockholders, who owned only the stock, and by well-settled legal rules had no legal title in the property of the corporations, entered into the agreements and sold their stock in the corporations and accepted in payment trust certificates, and that the trustees receive and hold only the stock of corporations, and have no legal title to any of the property of the corporations, and neither buy nor sell anything nor combine with any one to fix prices or regulate production of any commodity.

Your committee have deemed it proper to call attention to this feature of these combinations because it is believed that it will be found that all trade combinations having similar aims either have adopted this method or speedily will do so; and also, because the legislation which has been proposed to this House and referred to your committee has been directed against combinations to fix the price or regulate the production of articles of merchandise or commerce. It is plain that the two combinations, the testimony concerning which is herewith submitted, have been intentionally formed so as to avoid, if possible, the charge that the trust, as such, or the trustees, in that capacity, either fixed the

price or regulated the production of any article of merchandise or commerce.

Complaint having been made to him by citizens of the State of New York against the sugar trust and one of the corporations whose stock it holds, the attorney-general of that State has, after hearing, directed prosecutions to be commenced against that trust and the corporation complained of, upon grounds which are set forth in an elaborate opinion, which is submitted as part of the evidence in relation to that trust, and as containing a careful statement of the law of that State so far as it affords any remedy against such trusts.

## PROCEEDINGS OF THE COMMITTEE ON MANUFACTURES, HOUSE OF REPRESENTATIVES OF THE UNITED STATES, IN RELATION TO TRUSTS, ETC.

---

WASHINGTON, *March 8, 1888.*

The CHAIRMAN. I will first read the resolution under which this investigation is held:

[Fiftieth Congress, first session.]

CONGRESS OF THE UNITED STATES.

IN THE HOUSE OF REPRESENTATIVES,  
*January 25, 1888.*

Mr. BACON, from the Committee on Manufactures, submitted the following, which was agreed to:

Whereas it is alleged that certain individuals and corporations in the United States engaged in manufacturing, producing, mining, or dealing in some of the necessities of life and other productions, have combined for the purpose of controlling or curtailing the production or supply of the same, and thereby increasing their price to the people of the country, which combinations are known as associations, trusts, pools, and like names; and

Whereas such combinations not only injuriously affect commerce between the States, but impair the revenues of the United States as derived from its duties on imports: Therefore,

*Resolved*, That the Committee on Manufactures be, and the same is hereby, directed to inquire into the names and number and extent of such alleged combinations, under whatever name known, their methods of combination or doing business, their effect upon the prices of any of the necessities of life, and of all productions to the people of the country, upon its internal or foreign commerce, and its revenues from impost duties, together with any and all other matters relating to the same which may call for or suggest legislation by Congress, and report the same to the House with such recommendations as the said committee may agree upon. And for these purposes the Committee on Manufactures is authorized to sit during the sessions of the House, to employ a stenographer, to administer oaths, examine witnesses, compel the attendance of persons, and the production of papers. And the expense of such investigation shall be paid out of the contingent fund of the House.

Attest.

JNO. B. CLARK,  
*Clerk.*

Pursuant to that authority certain subpoenas have been issued, and I will call the names of the persons subpoenaed.

The roll of persons subpoenaed having been called the following answered to their names: Henry O. Havemeyer, John E. Parsons, George H. Morrell.

The following persons failed to respond when their names were called: William H. Morris, Hugh N. Camp, and John W. Dodsworth.

**TESTIMONY OF JOHN E. PARSONS.**

The CHAIRMAN. Mr. Parsons, will you please take the stand ?

Mr. JOHN E. PARSONS took the stand and was sworn by the chairman ; whereupon the following testimony was given.

By the CHAIRMAN :

Q. State your full name.—A. John E. Parsons.

Q. State your residence.—A. I reside in the city of New York.

Q. Your occupation ?—A. I am a lawyer, practicing in New York City.

Q. You are one of the trustees named in the agreement or deed creating the Sugar Refineries Company so called ?—A. There is a deed or agreement to which the question of the chairman refers, which creates a board called the Sugar Refineries Company. I am not a trustee named in that agreement. I am a trustee through the fact that one of the members of the board mentioned therein subsequently resigned, and I took his place.

Q. Have you the deed or agreement in your possession ?—A. I have an exact copy of the original deed or agreement, complete in all respects with the exception that the original deed distributes the entire capitalization among the various persons interested. That portion of the deed has been regarded as private, and as not having any bearing or relation to legislation, and the board has not authorized the production of that portion of the deed. The board has authorized me to produce the deed complete in other respects.

Q. To recur to the question, Mr. Parsons ; have you the original deed in your possession ?—A. The original deed is in my office in New York.

Q. And under your control ?—A. No, not under my control. The deed prescribes that it is under the control of the board, and its official custodian is the president of the board ; but the deed, I think, has never been in the possession of the president. It was drawn by me, and since the time of its preparation during most of the interval it has been in my possession. It may from time to time have been out of my possession for special and temporary purposes. In the main it has been in my possession, however, under the authority of the board.

Q. Who is the person named in it as president ?—A. No one is named in it as president. The deed creates a board of eleven persons, and Mr. Theodore A. Havemeyer is president by selection of the board.

Q. And he is the person to whom you made reference in whose custody officially the deed is. Now I understand you to say you have a copy of it ?—A. I have.

Q. Will you please produce it ?—A. I will. I produce a copy made yesterday and compared by clerks in my office and reported to me as being accurate in all respects. The omission to which I have referred is on page 10 and it readily explains itself. I refer to that for the reason that in another part of the paper amounts are omitted which are omitted from the original. In all respects the copy is complete with the exception of the omission of the amounts against those names.

Q. The comparison made of this copy with the original paper was made, you say, by clerks in your office ?—A. Yes, sir.

Q. And they reported it to you as correct ?—A. Yes, sir ; but its general purport I can testify to from my own knowledge.

Q. You have examined the copy yourself ?—A. I have.

Q. And substantially it is correct ?—A. Yes, sir,

Q. If there are any errors in it they have not been discovered by you and are merely typographical?—A. Or rather clerical; but I am very well satisfied that there are no errors of any kind in it. I will read it for the information of the committee.

The CHAIRMAN. We will not give you that trouble, Mr. Parsons. The clerk of the committee will read it.

The clerk of the committee then read the copy of the deed or agreement as follows:

#### DEED.

##### *The Sugar Refineries' Company.*

The undersigned, namely: Havemeyers & Elder, The Decastro and Donner Sugar Refining Company, F. O. Matthiessen and Weichers Sugar Refining Company, Havemeyer Sugar Refining Company, Brooklyn Sugar Refining Company, the firm of Dick & Meyer, the firm of Moller, Sierck & Co., North River Sugar Refining Company, the firm of Oxnard Brothers, The Standard Sugar Refinery, The Bay State Sugar Refinery, The Boston Sugar Refining Company, The Continental Sugar Refinery, and The Revere Sugar Refinery, for the purpose of forming the board hereinafter provided for, and for the other purposes hereinafter set forth, enter into the following agreement:

#### NAME.

The board herein provided for shall be designated by the name of The Sugar Refineries' Company.

#### OBJECTS.

The objects of this agreement are:

- (1) To promote economy of administration and to reduce the cost of refining, thus enabling the price of sugar to be kept as low as is consistent with reasonable profit.
- (2) To give to each refinery the benefit of all appliances and processes known or used by the others, and useful to improve the quality and diminish the cost of refined sugar.
- (3) To furnish protection against unlawful combinations of labor.
- (4) To protect against inducements to lower the standard of refined sugars.
- (5) Generally to promote the interests of the parties hereto in all lawful and suitable ways.

#### BOARD.

The parties hereto who are not corporations shall become such before this deed takes effect.

Each corporation subscribing hereto agrees, and the parties hereto who are not corporations agree as to the corporations which they are to form, that all the shares of the capital stock of all such corporations shall be transferred to a board, consisting of eleven persons, which may be increased to thirteen by vote of a majority of the members of the entire board, the two additional members to belong respectively to the first and second classes hereinafter provided for.

Any member of the board may be removed by vote of two-thirds of the members of the entire board in case of incapacity or neglect or refusal to serve.

Any member may resign by filing written notice of his resignation with the secretary of said board.

Vacancies during the term of office of members shall be filled by appointment by vote of the majority of the members of the entire board.

A member appointed to fill a vacancy shall hold office until the expiration of the term of the member in whose place he is appointed, which new appointee shall succeed to all the rights, duties, and obligations of his predecessor under this deed.

Vacancies by expiration of office shall be filled at the annual meeting of the holders of certificates herein provided for, or at such other times as shall be prescribed by the board.

Such annual meetings shall be held in the city of New York, in the month of June, and notice shall be given to each certificate holder of record of every meeting of certificate holders, by mailing to him, at least seven days before said meeting, a notice of the time, place, and objects of such meeting. Holders of certificates shall vote according to the number of shares for which they hold certificates. They may vote by proxy.

The board may make by-laws. All arrangements for meetings, elections, and all details not herein specifically provided for, shall be made by the board. A member of the board may act by proxy for any other member with like effect as if he were present and acting.

A majority of the members of the board shall constitute a quorum for the transaction of business. The action of a board meeting, by a majority vote of such meeting, shall have the same effect as the unanimous action of the board, except as herein otherwise provided, and that to authorize the appropriation of money, bonds, or shares, shall require the assent, either written or expressed, by vote at a board meeting, of at least a majority of the members of the entire board.

No member of the board shall, during the time that he holds office, buy or sell sugar or be interested directly or indirectly in the purchase or sale of sugar, whether for the purpose of speculation or otherwise, without a vote of a majority of the members of the entire board. For any violation of this provision he may be removed as a member of the board and shall be liable to account for all profits which shall be realized by him to the board for the pro rata benefit of the certificate holders.

As it is desirable that the board shall consist of members who are largely interested in the properties and the business contemplated, it is hereby agreed that all members of the board shall be free to join in or become parties to agreements and transactions which the several boards of directors hereinafter referred to, or this board, may arrange, to the same extent and in the same manner and with the like effect as if they were not members of the board.

The said board may transfer, from time to time, to such persons as it may be desired to constitute trustees, or directors, or other officers of corporations, so many of the shares as may be necessary for that purpose, to be held by them subject to the provisions of this instrument. Such transfers may be executed by the president and treasurer of the board in behalf of and as attorneys for the board for that purpose and to be retransferred when so requested by the board.

The first board shall consist of the persons hereinafter mentioned; they shall hold office as follows and until their successors shall be elected:

*Members of the first class.*—Harry O. Havemeyer, F. O. Matthiessen, John E. Searles, jr., Julius A. Stursberg; to hold office seven years.

*Members of the second class.*—Theodore A. Havemeyer, Joseph B. Thomas, John Jurgensen, Hector C. Havemeyer; to hold office five years.

*Members of the third class.*—Charles H. Senff, William Dick; to hold office three years.

At the expiration of the terms of the third class, and of each successive class, their successors as members of such class shall be elected for seven years.

#### OFFICERS.

The board shall appoint from its members a president, vice-president, and treasurer, and it shall also appoint a secretary, who may or may not be a member of the board. The board may from time to time create other offices and appoint the persons to fill them. It may appoint committees. It shall designate the duties and prescribe the powers of the several officers and committees.

#### PLAN.

The several corporations, parties to this agreement, shall maintain their separate organizations and each shall carry on and conduct its own business.

The capital stock of each corporation shall be transferred to the board, and in lieu of the same certificates not exceeding \$50,000,000, divided into 500,000 shares, each of \$100, shall be issued by the board and distributed as hereinafter provided.

The certificates shall be in the following form:

No. ———.)

[——— Shares.

[Shares one hundred dollars each.]

THE SUGAR REFINERIES COMPANY.

This is to certify that ——— is entitled to ——— shares of the Sugar Refineries Company.

This certificate is issued under and subject to the provisions of a deed dated the 16th day of August, 1887.

The shares represented by this certificate are transferable by the holder and his personal representatives in person or by attorney, upon the books of the board and not otherwise, and only upon the surrender of this certificate.

They entitle the holder to the rights and are subject to the provisions mentioned in the deed.

The interest of the holder is in the proportion of the number of shares represented by this certificate to the entire number of shares outstanding. The total amount represented by outstanding certificates and the terms of the deed may be changed from time to time by a majority in interest, as therein provided.

In witness whereof the board has caused this certificate to be signed by its president and treasurer and the seal of the board to be affixed hereto, the day of , 188 ,

For value received \_\_\_\_\_ do hereby assign, transfer, and set over unto \_\_\_\_\_ shares of those represented by the within certificate, and \_\_\_\_\_ do hereby constitute and appoint \_\_\_\_\_, attorney irrevocable for \_\_\_\_\_, and in \_\_\_\_\_ name and stead to transfer the said shares upon the books kept for the purpose under the direction of the within board.

The assignee, by accepting this transfer, assents to the terms of the deed referred to in the certificates as the same shall be changed from time to time.

Witness hand and seal this \_\_\_\_\_ day of \_\_\_\_\_, 1890.

#### TITLE.

The shares of the capital stock of the several corporations to be transferred to the board as herein provided shall be transferred to the names of the board as trustees, to be held by them and by their successors as members of the board strictly as joint tenants.

By the death, resignation, or removal of any member of the board, the whole title shall remain in the others. All members ceasing to be such shall execute such instrument as may be necessary, if any, to keep the title vested in the persons who from time to time shall be members of the board.

The board shall hold the stock transferred to it with all the rights and powers incident to stockholders in the several corporations and subject only to the purposes set forth in this deed.

#### DIVISION OF INTEREST.

The several corporations shall be entitled to the shares in the following proportions of the \$50,000,000, viz:

Havemeyers & Elder.....	.....
Decastro and Donner Sugar Refining Company, F. O. Matthiessen and Weicher's Sugar Refining Company.....	.....
The Havemeyer Sugar Refining Company.....	.....
The Brooklyn Sugar Refining Company.....	.....
Dick & Meyer .....	.....
Moller, Sierck & Co.....	.....
Oxnard Brothers.....	.....
North River Sugar Refining Company.....	.....
Standard Sugar Refinery .....	.....
Boston Sugar Refining Company.....	.....
Bay State Sugar Refinery.....	.....
Continental Sugar Refinery.....	.....
Revere Sugar Refinery .....	.....

Each refinery and the corporation to which it belongs shall be freed from liability and indebtedness by the parties interested in it; or such parties, if the board shall approve, may provide in cash for such indebtedness or liability, leaving the same to stand at the pleasure of the board, except that the employees' contracts shown in the schedules hereto annexed, and the contracts with Havemeyer & Elder and the F. O. Matthiessen and Weichers Sugar Refining Company, and the Bay State Sugar Refinery pending for improvements and enlargements, shall continue as liabilities.

Annexed hereto are schedules in general terms of the properties of the several refineries. The properties are guaranteed to correspond with the schedule by the parties interested therein, who are to make good any deficiency. On the complete execution of this agreement each of the said parties shall make a full inventory of the property not embraced in such schedules, and useful for the conduct of the business, on hand or contracted for, including raw and refined sugars, molasses, sugars in process, sirups, bone-black, fuel, barrels, packages, charcoal, and other supplies; and such inventory is to be examined, and the articles appraised at their present cash value (except as to sugar and molasses to arrive, which are to be appraised at their market value on arrival) by a committee of five persons, as follows:

THEODORE A. HAVEMEYER.  
F. O. MATTHIESSEN.  
JULIUS A. STURSBURG.  
JOHN E. SEARLES, Jr.  
JOSEPH B. THOMAS.

The value of such property as fixed by four-fifths of the appraisers shall be paid for in cash by the said board to the treasurer of each corporation.

Bone-black may at the option of the board be paid for in cash or in bonds hereinafter provided for or in certificates at a rate for bonds or certificates to be fixed by vote of a majority of the members of the entire board.

The property shall remain with the refinery where it is, to be used by it, except as such refinery shall make a different disposition of it.

**TRUSTS.**

In consideration of the transfer of their stock to the board, the board shall also pay to Havemeyer & Elder the sum of \_\_\_\_\_, to the F. O. Matthiessen and Weichers Sugar Refining Company the sum of \_\_\_\_\_, and to the Bay State Sugar Refining Company the sum of \_\_\_\_\_ on account of payments already made on pending contracts for improvements and enlargements.

Additional shares to the amount of \$400,000, less 15 per cent. to be left with the board as hereinafter provided, shall be received by Moller Sierck & Co. for improvements and enlargement of capacity of their refinery now in progress, when said improvements are completed and the increased capacity demonstrated.

The shares assigned to the several refineries shall be distributed by them to and among the parties interested therein.

Each holder of stock in a refinery company shall be entitled to so many of the shares allotted to such refinery as shall be in proportion of his stock to the capital of his company.

Shares for stockholders of any refining company who shall not surrender their stock, may, under the direction of the board, be deposited for their account with the right to receive the same upon the surrender of their stock.

Of the shares allotted to the several refineries they shall leave 15 per cent. with the board, and these shares and any shares not allotted of the \$50,000,000, except as herein otherwise provided, shall be subject to be disposed of by the board either for the acquisition of other refineries, to become parties to this deed, payment for additional capacity, or by appropriations to the several refineries.

But in no case shall any appropriation be made to or any action be taken by any corporation without the approval of its board of directors, and no action be taken by the board which shall create liability by it or by its members.

**PROFITS.**

The profits arising from the business of each corporation shall be paid over by it to the board hereby created, and the aggregate of said profits, or such amount as may be designated for dividends, shall be proportionately distributed by said board, at such time as it may determine, to the holders of the certificates issued by said board for capital stock, as hereinbefore provided.

**FISCAL ARRANGEMENTS.**

The funds necessary to enable the said board to make the payments herein provided to be made by it may be raised by mortgage to be made by the corporations, or either, any, or all of them, on their property, and by such other means as shall be satisfactory to such board.

In case any mortgage shall be laid on the property of any corporation by its directors or stockholders, the holders of certificates shall, within a time to be fixed by said board, have the right, at such uniform rates as said board shall arrange, to have the bonds, certificates, or other evidence of debt or interest in proportion to their respective holdings. Any parts which shall not be thus taken may be disposed of by said board.

**CHANGES.**

The number of shares and the total amount thereof issuable by said board may from time to time be increased or diminished by deed executed by a majority in value of the certificate holders.

The provisions of this deed may from time to time be changed by deed executed by not less than a majority in interest of the certificate holders, provided no change shall be made which shall discriminate to the disadvantage of the certificate holders as between themselves.

**ACQUISITION OF OTHER REFINERIES.**

The capital stock of other sugar-refining companies and of companies whose business relates directly or indirectly to sugar refining (in every instance to be incorporated) may be transferred to said board with the consent of a majority thereof at valuation and upon terms satisfactory to it, to be held by said board under and subject to all the terms of this deed, and certificates may be issued therefor by said board, and may be sold by it to provide funds for such purchase or purchases, and any such corporation or corporations shall thereupon become a party to this deed upon causing the same to be duly signed in its behalf.

**CUSTODY OF DEED.**

This deed, when executed by the parties hereto, shall be delivered to the president of the board, who shall have the sole and independent custody and control of the

same, and the said deed shall not be shown or delivered to any corporation, firm, person, or persons whatsoever, except by the express direction and order of the board.

A copy of the said deed shall be also lodged with a member of the board residing in Boston, Mass., which shall be held by him under the same condition and in the same manner as the original deed.

In witness whereof the parties have hereto set their seals and affixed their names, these presents to become binding when completely executed by all the parties, and to take effect from October 1, 1887.

Dated August 16, 1887.

LOUISIANA SUGAR REFINING CO., JOHN S. WALLIS, *President*.

The CHAIRMAN. This instrument is dated August 16, 1887. Was it executed on the day it bears date?

Mr. PARSONS. My recollection is that at or about that time it was signed by Havemeyers & Elder and by H. O. Havemeyer in the mode in which his signature appears there as manager of the Donner and De Castro Sugar Refining Company; and that the other signatures came along from time to time during an interval of one, two, or more months, so that the complete execution of the paper—I mean of the original paper, not the appendix—may not have been consummated until some time in October. The supplementary paper was executed later.

Q. Was the execution of the original paper completed by the 1st of October, 1887?—A. I speak with some diffidence on that subject, because I have no recollection that I saw it signed by anybody except the Havemeyers, as I have stated, but according to reports received by me from time to time I think that the complete execution did not occur until October. At all events this I know about—the fact that the arrangement was not considered as complete for practical operations until October, but whether the signatures were all affixed by that time I am in doubt.

Q. The instrument itself provides that it shall go into effect on the 1st of October, 1887. When did it go into effect?—A. Some time later than that; I think as of November 1.

Q. The addition appended here, signed by the Forest City Sugar Refining Company, the Saint Louis Sugar Refining Company, the Planters' Sugar Refining Company, and the Louisiana Sugar Refining Company,

is not dated. Can you tell me when it was put upon the papers?—A. I think the Forest City Company, which is a Portland company, signed not very long after the others. The Saint Louis Refining Company and the two companies in New Orleans signed somewhat later. But, as I had nothing to do with securing those signatures, I can only speak in a vague way about the date.

Q. Was it completed in the form in which it is now in your possession before the 1st of January?—A. I should think not. The paper has been so often in and out of my possession and has so frequently come back to me with additional names, that you can easily see I can not speak with much confidence as to the date.

Q. Can you fix the last time that it came back to you with additional names?—A. I think it must have been before the 1st of January.

Q. You think it was before the 1st of January?—A. I think so. My recollection and very strong impression is, that it was before the 1st of December.

Q. In the shape in which you have it here?—A. Yes, sir.

Q. Then somewhere about the 1st of December, 1887, it went into effect as to all the persons and corporations you have named here?—A. No action of which I know has been taken to fix the date at which it should take practical effect other than that which fixes the date as of October 24, and parties who came in later probably came in, so far as possible, to be parties as of that date.

Q. So that as far as concerned the date to which this should go into effect, the intention was that the parties who signed this appendix should have their relation to the business date back to the others?—A. Yes, sir. You observe that reference is made to the inventories of different refineries to be passed upon by various gentlemen representing the board. Those inventories were delayed more or less, and before they could be completed and an examination of titles could be perfected there was an interval of time which largely explains the delay from the date when the paper was completely signed down to the time when it went into practical effect. The parties interested in the various refineries by the terms of the paper guarantied the schedules which they furnished, and those schedules are the complete schedules of the entire property belonging to each refinery.

Q. It is provided here in this agreement that parties to it who are not corporations shall become such before this deed takes effect. In fact, where the copartnerships turned into corporations the corporations which took their place fully organized before the 24th of October?—A. They were fully organized into corporations, but whether that was complete before the 24th of October I am in doubt; and for this reason, Mr. Chairman, that it was a matter of very little practical difference. Each one of these refineries were in the ownership of a limited number of persons. The Havemeyers, for instance, consisted of three partners, and others were in somewhat the same proportion, and whether the interest stood in the names of the individuals as owners, or in their interest as holders of stock of a company, made very little difference. The matter of having these partnerships organized into corporations was intrusted to me, and I have a general recollection that it was done about the time fixed for the arrangement to go into effect.

Q. At any rate it has been done now?—A. Yes, sir; it has been done. The present situation is this: All the interests in all these refineries are represented by stock.

Mr. BRECKINRIDGE. All of what, Mr. Parsons?

**Mr. PARSONS.** All the property of all these refineries is represented by stock—the stock of corporations—and that stock, the stock of the individual owners, has all been transferred to the members of this board. And against that stock the members of this board have issued certificates in the form stated in the deed. Although the deed runs in the names of corporations, it must be obvious to the members of the committee that the interests are individual interests. Although these signatures are of corporations, they were affixed with the authority of the limited number of individuals named, and they, as individuals, have surrendered the stock and as individuals have received these certificates of interests, the management remaining unchanged and the business going on under the management of these individuals.

**Q.** Then the situation to-day is that the property of these various copartnerships has been transferred to the corporations which have been formed since this agreement was prepared, and that the stock in those corporations has actually been surrendered to the trustees named in this paper?—**A.** Yes, sir; but I do not wish to answer this without the qualification that there may be a limited amount of stock as to which a transfer has not yet taken place; but as a general proposition, you are correct. Every individual holder of stock in each one of these corporations has surrendered his stock to the members of this board, and they have given him in exchange certificates of the kind named in the deeds.

**Q.** To take these up in detail, the first signature is Havemeyers & Elder; that was a copartnership?—**A.** Yes, sir.

**Q.** That was turned into a corporation?—**A.** Yes, sir; the Havemeyer and Elder Sugar Refining Company.

**Q.** And that corporation was formed under the laws of what State?—**A.** New York.

**Q.** Do you recollect whether it was under the mining and mechanical act of 1848?—**A.** Yes, sir; it was under the general law. You are aware, Mr. Chairman, that there were two acts, the act of 1848 and the act of 1875. This incorporation took effect under the act of 1848.

**Q.** The next signature is Donner and De Castro Sugar Refining Company. Was that an existing corporation?—**A.** It was.

**Q.** That company was organized under the laws of New York?—**A.** That company has been in existence for many years as a corporation. I did not organize it, but my strong impression is that it was organized under the general act of 1848. It was certainly not organized under a special act.

**Q.** You do not remember how long it has been organized?—**A.** I think for at least twenty years prior to 1887.

**Q.** The next signature is F. O. Matthiessen and Weicher's Sugar Refining Company, F. O. Matthiessen, president. Was that a corporation at that time?—**A.** That, at the time of the execution of the paper, was a corporation. It was originally a partnership, but the change took place before the execution of this paper.

**Mr. HAVEMEYER.** It has always been a corporation, organized under the New Jersey laws.

**Q.** It is located where?—**A.** The refinery is located in Jersey City.

**Q.** Is the office of the company in the refinery building?—**A.** I presume so, but it also has a business office in Wall street, New York.

**Q.** The Havemeyers and Elder Company was organized with its office where, Mr. Parsons?—**A.** The certificate, I think, makes the county of Kings the locality of that corporation. Its refinery is situated in the

eastern district of Brooklyn, but it has an office at the corner of South and Wall streets, New York.

Q. Where is the Donner and DeCattro Sugar Refinery Company located?—A. Its principal office—I might say its legal office—is in the eastern district of Brooklyn.

Q. The certificate is filed in Kings County, then?—A. I think the certificate is filed both there and in New York, but its official location is in Brooklyn, and it also transacts business in New York. In that company the members of the Havemeyers & Elder firm have always been very largely interested, and my impression is that their office is in the office of Havemeyers & Elder.

Q. The next signature is "Havemeyer Sugar Refining Company, John E. Searles, jr., treasurer;" was that a corporation?—A. That was an existing corporation.

Q. Located where?—A. Its refinery was in the eastern district of Brooklyn, and it also had a refinery in Jersey City.

Q. Where was the legal location of the company?—A. It is a New York State corporation, with its principal business office in Kings County, and its principal mercantile office in the city of New York.

Q. But where was its principal business office as named in the act of 1848?—A. That I do not know.

Q. Then you do not know whether the certificate was filed in Kings County or in New York?—A. No, sir.

Q. The next signature is "Dick & Meyer."—A. They were a copartnership and became organized into a corporation about the same time as Haymeyers & Elder.

Q. What was the corporate title of the company?—A. I think it was called The Dick & Meyer Company.

Q. Was it organized under the act of 1848?—A. Yes, sir.

Q. Location where?—A. Kings County.

Q. The next signature is the "North River Sugar Refining Company, George H. Moller, secretary;" was that an existing corporation?—A. Yes, sir.

Q. Organized where?—A. In the State of New York, having its refinery in New York City on the eastern side of the city near Grand street, I think, and having a mercantile office on Wall street near the Ferry.

Q. The next signature is "Oxnard Bros."—A. They were a copartnership, with their refinery in Kings County, and they became incorporated as the Oxnard Company in accordance with the provisions of that paper.

Q. And the location of their principal office was in Kings County?—That is my belief, but I am quite satisfied that they became incorporated as a Kings County corporation, that is, having their principal office in Brooklyn.

Q. The next signature is "Moller, Sierck & Co.;" was that a copartnership?—A. What was said in reference to the Oxnard Company applies to their case. They were a copartnership and became organized into a corporation, with Kings County as the locality of the corporation. Whether they have a mercantile office in New York or not, I do not know.

Q. The next signature is the "Brooklyn Sugar Refining Co., Henry Offerman, treasurer;" was that a corporation at that time?—A. It was.

Q. Formed under the laws of what State?—A. New York; and I think having a location in Kings County.

Q. The next signature is the "Standard Sugar Refining Co., by Charles O. Foster, pres."—A. That, as I understand it, was a corporation at the date of the paper. It was a Massachusetts corporation.

Q. The next signature is the "Bay State Sugar Refining Company, per Edwin F. Atkins, pres."—A. That was also a Massachusetts company.

Q. Next is the "Continental Sugar Refinery, by Silas Piree, pres."—A. That was also a Massachusetts corporation.

Q. That completes the list of the original signatures. Those signing the appendix are the "Forest City Sugar Refining Company."—A. That was, as I understand, a Maine corporation established at Portland, Me.

Q. Its refinery was situated there?—A. So I understand.

Q. The next signature is the "Saint Louis Sugar Refining Company?"—A. I assume that to be a Missouri corporation. It was a corporation at the time of the execution of the paper and previously thereto, and I believe that its refinery is in Saint Louis.

Q. The next signature is the "Planter's Sugar Refining Company?"—A. That is a Louisiana corporation with location at New Orleans.

Q. The next signature is the "Louisiana Sugar Refinery Company?"—A. The same answer will apply to that.

Q. Now you have testified fully as to the original signers of this paper. Will you state, please, with reference to these four companies who signed the appendix to this agreement, whether their stock has been transferred to the trustees?—A. My answer previously given applies to those companies. I believe that all of the stock has been transferred by the individual owners of the stock to the board, and that to them in exchange have been issued the certificates of interest given by the board. Perhaps, in order to be exact and accurate, I ought to qualify this answer and the answer I have previously given to this extent. The transfer took place with the intermediation of a committee consisting of myself, Mr. John R. Dos Passos, who was of counsel for some parties interested, and a lawyer of Boston by the name of Merwin. Our habit was to see if the stock of these various refineries was actually surrendered and check it off before giving certificates. And that makes me think that in every case the certificate has issued with this possible exception, that in case of some small lots of stock there may have been some informality about the transfers which led us not to issue certificates in exchange.

Q. Then, with the exception of transfers which have been delayed by informality the stock of all these companies has come into the possession of the trustees?—A. I believe so.

Q. And in each instance all the stock has been transferred with the exceptions as stated?—A. I may go a step further and say, without qualification, that all the stock has either been transferred or is in the way of being transferred. No stockholder of any of these corporations has failed either to transfer his stock or to take steps looking to its transfer.

Q. The paper which you have produced provides that this board shall consist of eleven persons, which number may be increased to thirteen by the vote of a majority of the members of the entire board, the two additional members to belong respectively to the first and second classes therein provided for. Has any action been taken under that provision?—A. Not that I know of.

Q. None could be taken without your knowledge, could it?—A. Very readily; I do not attend the meetings of the board very often.

Q. Where are these meetings held?—A. Those that I attended were at the office of Mr. Dos Passos, to whom I have referred as counsel for some of the parties interested.

Q. Have there ever been meetings of which you have been notified which you have not attended?—A. I think I have received from Mr. Searles a very informal memorandum of one or two meetings, which I have not attended. I have known in a general way that informal meetings were often held, and I have not been present at those meetings.

Q. Do you know if Mr. Dos Passos was more frequent in attendance than yourself?—A. He was not a member of the board.

Q. And not secretary of the board?—A. No, sir; he was not secretary.

Q. He has no connection other than as counsel?—A. At present he has no connection. He was counsel for some of the parties interested, down to the complete consummation of the business.

Q. You took your place in this board by reason of the resignation of some member of it, I understand?—A. Yes, sir. Before the arrangement became consummated there was some question about the membership of this board, and that settled itself by the resignation of Mr. Hector C. Havemeyer, who, I think, was a member of the second class, and by my becoming his substitute, as a sort of balance-wheel, by the unanimous action, as I understood, of all the other parties, including himself.

Q. And your connection with the board was the result of an appointment made by a vote of the board?—A. So I understand. I was not present at the meeting, but it was so reported to me, and I believe it to be so.

Q. This instrument also provides that this board may make by-laws. Has it made any by-laws?—A. I think not. I have no knowledge that by-laws have been made, and I think they could not have been made without my knowing it, as I would probably have been called upon to make them. There has been no occasion for them.

Q. There is a provision in this agreement that "No member of the board shall, during the time that he holds office, buy or sell sugar, or be interested, directly or indirectly, in the purchase or sale of sugar, whether for the purpose of speculation or otherwise, without a vote of the majority of the members of the entire board." To your knowledge, has any such permission been given to any member of the board?—A. Not to my knowledge. The gentlemen who compose the board represent a majority, and I think much more than a majority, of the interest, but their interests are represented in each of these companies, and I do not believe that such permission was necessary or that it has been given.

Q. Then this permission was intended simply to restrict their personal action as members of the board, and not to affect the corporations represented by them?—A. Decidedly. It was the intention that nothing should hamper the action of these corporations, but that the members of the board having knowledge of the conferences in the board should not take advantage of that knowledge except—

Q. Except for the benefit of his own corporation?—A. Exactly.

Q. There is this provision in the deed:

The said board may transfer, from time to time, to such persons as it may be desired to constitute trustees or directors or other officers of corporations, so many of the shares as may be necessary for that purpose, to be held by them subject to the provisions of this instrument; such transfers may be executed by the president and treasurer of the board in behalf of and as attorneys for the board for that purpose, and to be retransferred when so requested by the board.

Has any action ever been taken on that provision to your knowledge?—A. Yes; this action has been taken. Either stock belonging to the individual trustees or directors of these various corporations sufficient to qualify them has been retained by them, or, if transferred to the board, has been retransferred back so as to continue their qualifications.

Q. And whether the stock was retained by them or has been retransferred to them, they hold it subject to the right of this board to require a retransfer to the board?—A. I think that puts it as I understand it. That I understand to be the effect of this agreement. I understand that the members of this board own stock, and they have all the rights of the stockholders of the corporation.

Q. So that, as you understand the purpose of this agreement, the persons who hold this stock for the purpose of qualifying them as officers of the corporation have no beneficial interest in it whatever?—A. They have a very large beneficial interest in it.

Q. In the stock they hold for the purpose of qualifying them as officers?—A. The chairman uses the words "beneficial interest;" and they have a very large beneficial interest. Their beneficial interest is in the proportion of certificates held by them to the entire number, which is very large. They hold a very large interest.

Q. At the time that this stock is transferred or retransferred to various persons in order to qualify them as officers, does your board require a surrender of its certificates which it issued as the equivalent of the stock to be transferred back?—A. I do not think that the board has taken any action upon the subject.

Q. Was any reduction made from the amount of certificates issued by your board to the various corporations whose stock was transferred to you by reason of the retention or retransfer of any portion of the stock of those companies, respectively, to individuals who are to be qualified to act as officers of it?—A. The question of the chairman contains an error, inadvertent, no doubt. He spoke about the certificates as being transferred to the corporations. No certificates have been withheld in respect to the share of stock with which trustees in the various corporations have been qualified; and to make the case perfectly clear attention must be called to the fact that by the deed or agreement 15 per cent. of the entire capitalization remains with the board, and therefore there is a considerable reserve, quite ample for the purpose referred to.

Q. Now I understand you to say that the effect of this instrument is to vest the legal title, and to make this board the owner of all the stock of the various corporations—that they become the owners of it?—A. They become the absolute owners, with the exception of the stock transferred to trustees, as to which I have fully explained.

Q. Still, the trustees have a right to recall that stock?—A. According to the deed, yes.

Q. Let me call your attention to the provision.—A. I am very familiar with the provision. I think that if I were a trustee of a corporation and were asked to transfer stock, I could do as I liked about it, and I doubt very much if I could be compelled to give up my stock. But if I were a trustee of one of these corporations, or a recognized officer, and the interest that I represented was the interest of a person who held a certificate, I would do as any other person would do—follow the wishes of my stockholders.

Q. When you drew this agreement requiring that these shares of stock which were given to various persons in order to qualify them as

officers of the corporation should be transferred when required by a board created by this agreement, did you not intend that the ownership or retention of these shares should be absolutely at the disposal of the members of this board?—A. No; my recollection is that that provision looked to the case of trustees of one of these refinery corporations ceasing to be interested, and if he ceased to be interested——

Q. If he ceased to be interested, would he continue to hold stock?—

A. He might hold the stock, although he parted with his certificates.

Q. Would he still hold the stock of the corporation?—A. Yes, sir; and in such a case there would be a transfer of his stock to some person who became a trustee of that particular corporation.

Q. In that event he would have a legal title to the stock without any interest in it?—A. In that event, if he retained the stock, he would. If an officer or trustee surrenders his stock, I think by law he then resigns his position, and it then becomes the right of parties interested to name a substitute.

Q. The transaction, as I understand you now from what you have stated with regard to each of these corporations, then amounts to this, that the stockholders transfer to this board at an agreed valuation their stock and take from the board certificates as provided for by this instrument?—A. The question states the case with the exception of a portion of it which speaks of an agreed valuation. There was no relation of the certificates, so far as I recall, to the stock of these various corporations. The relation was between the value of their properties and the certificates issued.

Q. At an agreed valuation of the properties?—A. Yes, sir; that is, a valuation of the properties was agreed to in certificates.

Q. And that valuation was not diminished in any way by reason of the fact that some of the certificates of the stock of this corporation were permitted to remain in the hands of gentlemen who are permitted to act as trustees of the board?—A. No, sir; and for the reason that these trustees were holders of stock. They held them in their beneficial right.

Q. Holders of the stock of what?—A. Theodore A. Havemeyer is a trustee of the Havemeyer Sugar Refinery Company, and he is also a member of this board. He is a holder of a large amount of the certificates of this board which represent a large interest in the stock.

Q. Which he has surrendered to the board?—A. Which he has surrendered to the board.

Q. And the amount of the certificates which the board issued to him was not diminished by reason of any amount that might have been left in his hands or has since been retransferred to him in order to qualify him as an officer of Havemeyer & Co.?—A. It was not.

Q. Has any other change been made in the membership of this board other than the substitution of yourself for Hector C. Havemeyer?—A. No.

Q. The board was authorized to appoint a president, vice-president and treasurer. Has that been done?—A. I am very sure that Mr. Theodore A. Havemeyer has been made president; whether by appointment or just how I do not happen to recall. The matter has been very informal. Mr. John E. Searles, jr., has in a similar manner become the treasurer, it being necessary that somebody as treasurer should sign the certificates representing the stock in the several refineries.

Q. The vice-president's place has not been filled?—A. I was not aware that it was. I will accept Mr. Havemeyer's statement that F. O. Matthiessen is vice-president.

Q. The board was authorized to appoint a secretary. Has that been done?—A. I think that must have been done, although I do not remember of being present, because I know that Mr. Searles has been spoken of, in a general way, as secretary. I think when a meeting of the board is called the notice comes from John E. Searles, jr., secretary.

Q. Has the board created any committee, either formally or informally?—A. I think the board has subdivided itself into a body of its members—I being always excluded—who gave more attention to refining; and another body perhaps, which is called a committee, who give more attention to what is considered the mercantile business of sugar refining.

Q. Can you state to the committee how those committees are appointed; of whom they now consist?—A. I should say that Mr. H. O. Havemeyer was elected as a member of the mercantile committee, assuming that there is anything which justifies the use of that term.

By Mr. WILSON:

Q. Tell us a little more definitely what you mean by the "mercantile committee."—A. I will in one minute. I think that Theodore Havemeyer and others who are looked upon as refiners look rather to the refining interest.

Q. You are not a member of any committee yourself?—A. I am not. Now, in answer to the question that was addressed to me, I will say that I have had relation with sugar refining for quite a number of years, from the fact that many of these gentlemen have been my clients and I have some general ideas upon the subject. They enable me to give this answer to the question. The business of sugar refining is done at the refineries. It is an intricate, careful, exact, and thorough business, the prosperity of the project depending upon very close adherence to details. On the other hand, sugar is sold and sugar is bought, and that branch of the business is quite distinct from the business of actual refining, and that is called mercantile. Each department of the business looks to profit, if there is profit, and loss when loss comes. If sugar is bought or sold to a disadvantage, the loss may come either as a refining loss, or it may very easily come from a lack of capacity or failure to use the best appliances to make the cost as low as possible to produce the best results.

By Mr. BRECKENRIDGE:

Q. You are not as familiar with the details of the work of this committee as the gentlemen on the committee themselves?—A. I am not; I do not believe there is any formal distinction or organization. I have already stated that these gentlemen own a majority of the interests in these various corporations. Their place of business is within a few doors of each other, and they are in constant communication with each other. When they meet they talk, and in that way there is an exchange of views; that is the beginning and the end of the transaction of the business so far as I know.

By Mr. SMITH:

Q. Is this mercantile committee engaged in the purchasing of raw material?—A. No; the corporations buy their own raw material and sell their product; but on this mercantile committee are representatives of the several corporations. If Mr. H. O. Havemeyer were a member of the mercantile committee and was, as he is, the trustee and an officer of

the Havemeyers and Elder Sugar Refining Company, it would be very difficult to tell, when he bought sugar, whether he did it in his own capacity or did it for the company, as he buys and sells and has a large interest, I presume, in both capacities.

By the CHAIRMAN:

Q. So far as you know there has been no formal designation of the duties or prescribed powers of these several officers and committee?—

A. None.

Q. You have not been called upon in your capacity as counsel or member of the board of trustees to prepare any such designation or prescription?—A. No, sir; the only occasion when the stockholders would have any action to take would be at the annual meetings of the various corporations. I think I ought to add this, that the annual meetings of several corporations have taken place since the 24th of October last—I know that is true of some of the Boston corporations; I think it is true of some of the New York corporations—and at these annual meetings the stock of the particular corporation was voted by the board. They are the owners of the stock who voted at that meeting.

Q. The owners of the stock who voted at that meeting were the representatives of this board?—A. They were the board.

Q. The board voted as a whole?—A. They are the stockholders of these various corporations, voting in that capacity. I do not know but what the president was obliged to cast the ballot or make the vote, but it was as the representative of stockholders holding all the stock of these corporations.

Q. And the person depositing that ballot was to represent the trustees created by this agreement?—A. Yes, sir; except that the trustees have no authority and the president had.

Q. The provision of this agreement is that "the capital stock of each corporation shall be transferred to the board, and in lieu of the same, certificates not exceeding fifty millions of dollars divided into five hundred thousand shares, each of one hundred dollars, shall be issued by the board and distributed as hereinafter provided;" in point of fact were such certificates prepared?—A. Yes, sir.

Q. Have you a form of one of them?—A. I have [handing the chairman a certificate].

Q. This is the form still in use?—A. This is the form still in use.

Q. I will call your attention to that which is printed on the top of this certificate, that "This certificate will be exchanged for the engraved certificate when ready."—A. I think the engraved certificates are not yet ready.

(Certificate referred to marked for identification "R. L. M., No. 2.)

## TEMPORARY CERTIFICATE.

[This certificate will be exchanged for the engraved certificate when ready.]

<b>SHARES ONE HUNDRED DOLLARS EACH.</b>	
<b>No. 275.</b>	_____ Shares.
<b>THE SUGAR REFINERIES COMPANY.</b>	
<i>This is to certify, that</i> _____	
<i>is entitled to</i> _____ <i>shares of</i>	
<b>THE SUGAR REFINERIES COMPANY.</b>	
This certificate is issued under and subject to the provisions of a Deed dated the sixteenth day of August, 1887.	
The shares represented by this Certificate are transferable by the holder and his personal representatives, in person or by attorney, upon the books of the Board and not otherwise, and only upon the surrender of this Certificate.	
They entitle the holder to the rights, and are subject to the provisions, mentioned in the Deed.	
The interest of the holder is in the proportion of the number of Shares represented by this Certificate to the entire number of Shares outstanding. The total amount represented by outstanding Certificates, and the terms of the Deed, may be changed from time to time by a majority in interest, as therein provided.	
<i>In witness whereof, the Board has caused this Certificate to be signed by its President and Treasurer, and the seal of the Board to be affixed hereto, the</i> _____ <i>day of</i> _____, 188 _____.	
_____, <i>President.</i> _____, <i>Treasurer.</i>	

## [Indorsement.]

*For value received,* \_\_\_\_\_ *do hereby assign, transfer, and set over unto* \_\_\_\_\_

\_\_\_\_\_ *Shares of those represented by the within Certificate, and* \_\_\_\_\_ *do hereby constitute and appoint*

\_\_\_\_\_ *attorney, irrevocable, for* \_\_\_\_\_ *and in* \_\_\_\_\_ *name and stead to transfer the said shares upon the books kept for the purpose, under the direction of the within Board.*

The Assignee, by accepting this transfer, assents to the terms of the Deed referred to in the Certificate as the same shall be changed from time to time.

*Witness* \_\_\_\_\_ *hand and seal, this* \_\_\_\_\_ *day of* \_\_\_\_\_, *one thousand eight hundred and eighty* \_\_\_\_\_.

Q. This agreement further provides that "the shares of the capital stock of the several corporations to be transferred to the board as herein provided shall be transferred to the names of the members of the board as trustees, to be held by them and by their successors as members of the board strictly as joint tenants;" was that the form of the assignment?—A. Yes, sir.

Q. Is it strictly pursued?—A. Yes, sir; all of these transfers ran to the eleven persons, the board, as you see, having no organization or entity at all, but the individuals being really the parties concerned.

Q. So that no portion of that stock was transferred to "The Sugar Refineries Company?"—A. Not at all; it is a mere name.

Q. Then the fact is that the "Sugar Refineries Company" is merely a name?—A. It is merely a name.

Q. And it is not a corporation under the laws of any State?—A. It is not. It is merely a name designated for convenience.

Q. On page 10 of this paper the amounts set opposite the names of the persons or corporations named there are omitted?—A. They are.

Q. The agreement provided for the issuing of certificates to the amount of \$50,000,000?—A. It did.

Q. Were certificates issued to that amount?—A. The deed also contains a provision of 15 per cent. of the authorized amount to be reserved. Certificates were therefore issued to the amount of \$50,000,000, less 15 per cent., and out of that 15 per cent. certificates were issued to the subsequent signers. So that in a general way the amount of outstanding certificates is about \$45,000,000.

Q. To-day?—A. To-day.

Q. Without going into the question here of the items on this page 10, can you tell us what the aggregate of those items amounted to?—A. About \$45,000,000.

Q. On this page 10?—A. I can tell you that exactly. The amount was \$50,000,000, less 15 per cent., which is \$42,500,000 in round numbers.

Q. The amount was distributed among the corporations named?—A. Not among the corporations, but among the persons interested.

Q. The provision of the agreement is that "the several corporations shall be entitled to the shares in the following proportions of the \$50,000,000." Then follows this list. I want to know what the aggregate, as it exists upon the original contract, is?—A. As near as may be \$42,500,000. If it had not been for the 15 per cent. reservation it would have been \$50,000,000. There may have been a little shortage.

Q. There is a provision following that, requiring the refineries and corporations to be freed from liability and indebtedness by the parties interested in it, or that those parties may provide in cash for such indebtedness or liability. Will you state, please, what was done under that provision of the agreement?—A. The transaction amounted, when we get right down to what is fundamental, to a purchase of the stock of each one of these corporations by the stockholders of that company and, of the others. Now, the value of that stock depends upon the question whether the corporations were or were not free from debt, and, therefore, as a condition of the instrument, it was required that the parties interested in each particular corporation should take care of the then existing indebtedness of the corporation, so that they could make a new departure from that time, and that has been done.

By Mr. BRECKENRIDGE:

Q. What was done with regard to a new departure and management? What was the thing to be done?—A. That the various corporations, after the date on which this arrangement took effect, should be freed from debt, because the stock of a particular corporation was worth more or less according to whether that corporation was or was not free from debt, and as the stockholders of each corporation were purchasing an interest in the stock of each other, inequality would have resulted if one corporation had been free from debt and the other not. It means free from indebtedness on all of the properties of these refineries.

By the CHAIRMAN:

Q. The question I put, which I think has not yet been answered, is, was the liability and indebtedness of these various persons liquidated

before these certificates were issued to them?—A. It was provided for, whether it was paid or was not.

Q. Was it provided for by the payment to the treasurer?—A. Not at all. Not by payment to the treasurer of this board.

Q. The provision is that they might provide in cash. It does not say how that provision is to be made?—A. I think that that referred to this subject. In addition to the plant of these various refineries which is supposed to be represented by the capitalization of these certificates, to carry on the business requires an enormous amount of money. I will not undertake to say what the amount may be, but an enormous amount. It was supposed at the time that it might be better, it might be wise at all events, to allow the indebtedness to stand, and to let the parties who were to provide for the indebtedness furnish cash against it, and then the corporations could have this cash with which to carry on the business.

Q. The cash, then, was not to be paid into the treasury of this trust, but was to remain in the treasury of the corporation?—A. To remain for the use of the corporation. There was no particular mode at that time projected or ever carried into effect. Now, what has occurred in regard to that matter is this: The parties interested in these various refineries have made their own arrangements to provide their own working capital, starting, to use a term which I previously used, as a new departure, on the 24th of October, and taking care of all indebtedness then pending. Now, there is to that this qualification; upon the property of some of these corporations there were mortgages. The amount was not very considerable; but in the same direction, to enable the corporations to use cash, instead of having those mortgages paid off, the amount represented by them was put up by the parties, who bound themselves to pay off these mortgages, and that has been available to the corporation for carrying on their business.

Q. Put up with whom, is the very point I want to get at?—A. Put up with me. [Laughter.] This is undoubtedly what you wish to know. Mr. George H. Moller, pending the investigation in New York, did something which rather pleased me. He was examined as a witness hostile to our interests. He was asked why he was willing to trust all the stock of his corporation to me and have nothing to show for it. He said he knew John E. Parsons, and knew where he was there would not be any cheating going on. The fact is there was a time when the stock of these corporations was in the control of myself.

The mortgages to which reference has been made represented a certain amount of cash. There is another provision in this paper that the common interest shall take care of certain pending contracts.

By Mr. BRECKINRIDGE:

Q. The mortgages, you say, represented a certain amount of cash?—A. Yes; they represented a certain amount of cash, for the reason that if they were paid off it took a certain amount of cash to pay them off, and if they were not paid off by the parties there would be a certain amount of cash in hand.

Q. That cash was presumed to be in your hands?—A. It was in my hands under these circumstances. There is another provision in this paper by which certain pending contracts by the Havemeyers and Elder Company, the Matthiessen and Weichers Company, and the Bay State Company were to be treated as incurred or paid subsequent to this business. The cash referred to, therefore, was used to provide those amounts so far as was requisite. The result, therefore, was that the

several corporations remained subject to their mortgages, but the cash equivalent of that amount has discharged this indebtedness; so that those corporations now stand with the benefit of these new contracts, enlargements for greater production, and the money has discharged the amount.

Q. It appears to be indicated that two applications were made of the same cash: One is that it liquidated a given amount of indebtedness, and the other is that it was available for each corporation to use in conducting its current affairs. Now, of course the same cash could not do both things.—A. There are two provisions upon the subject, each using the term "cash." They are distinct one from the other.

Q. I am only talking about the given item of cash as applied to a given corporation. You take any given corporation that may have been subjected to an indebtedness secured by mortgage of, say, \$100,000. Now, I would find it difficult to tell from what you have stated whether the \$100,000 which is provided by this association for that corporation was applied to liquidate the debt and lift the mortgage, or whether it was applied to the current business of buying and selling the manufactures of that corporation.—A. The former, not the latter. I think that if I illustrate you will see clearly how the thing was done.

Q. I am not so particular about the mode; I want to get at the fact.—A. I will tell you the fact. The property of the Havemeyers and Elder Sugar Refining Company was mortgaged. The members of that firm were compelled under the terms of this deed to pay it off. The members of that firm were entitled to receive a certain amount of money upon contracts for enlarged capacity which were then pending. Assuming the amounts to be the same, one would balance the other.

Q. They received a certain amount of money against large contracts for extended capacity?—A. Yes, sir; or improvements—extended capacity.

Q. That is to say, that certain parties gave a bond, a security for adding those improvements, which represented an asset that belonged to the corporation about equal to the mortgaged indebtedness that you speak of?—A. This projected improvement was being constructed at the time, and for the construction of it there was a contract upon which large payments had been made and other payments were to be made. It was an obligation.

Q. And you had security for the fulfillment of that obligation?—A. The security for the discharge of that provision, that is to say, that the indebtedness should be paid, consisted in the responsibility of the parties interested in these various refineries. May I say this in reference to this matter, that the board had no instrumentality at all. The board did nothing. Mr. Dos Passos and I were delegated to see that the money was received from the persons who were to put up the cash, and that the money went on these contracts. It was, in large part, an exchange of checks.

Q. You gentlemen should constitute a board that issued the certificates, as I understand it, so that each corporation came into this association, or its members, without any indebtedness still hanging over the corporation, I believe. That is true, is it not?—A. An examination of all the enormous properties of these various refineries was made under my direction by competent counsel, and a certificate was given whether there was or not any lien upon that property, and if there was a lien we notified the gentlemen interested that it must be discharged, and it was discharged, with the exception of these mortgages.

Q. That statement is entirely different from what you mean when you speak of a certificate of stock?—A. Yes, sir; I mean a lawyer's certificate that the title of the property is good.

Q. So that before they could deal with you or become parties with these gentlemen, this association, or whatever it may be called, they had to have their property in what may be called clean shape?—A. Yes, sir; before any stockholder of either of these corporations could get these certificates which represented their stock they were compelled to clean their property.

Q. Were there not instances in which this association of gentlemen that is known as the Sugar Refineries Company became possessors of the mortgages?—A. No, sir.

Q. And certificates of stock only issued for the resultant value of the property?—A. No, sir; those mortgages stand as liens against the property now, held by outsiders.

Q. They never have been paid off?—A. They have never been paid off. Assuming there was a mortgage of \$300,000, instead of using that money to pay off that amount it was used to discharge these contracts for constructions or improvements. It was paid to the corporation, and the corporation used it in that way.

By the CHAIRMAN:

Q. Now, under this agreement can you tell me who of the subscribers to this paper were found to have mortgaged property?—A. Yes, sir.

Q. State them, if you please.—A. There was a mortgage upon the property of the Havemeyers and Elder Sugar Refining Company. There was a mortgage upon the property of the De Castro and Donner Sugar Refining Company. I don't think there is any objection to having it stated that there was a mortgage upon the Havemeyers and Elder property. The members of the firm of Havemeyers and Elder, who were the owners of all the stock of that company, agreed that they would discharge their mortgage, and their obligation to that effect is perfectly good. They did put up the cash which represented it, and the same is true of the Donner and De Castro Sugar Refining Company. There may have been one other corporation upon whose property there was a mortgage. I think there was one other. I only recall one other, and I think that as that is one of the weaker bodies I will ask the chairman to excuse me from testifying as to that.

I hope the committee will abstain from asking me in regard to that subject. You can ascertain from an examination of the record whether anybody has a mortgage. The record discloses the fact that the property is under mortgage; but we know that a great many persons have property mortgaged and it is not known, and they do not like to have disclosed that their property is subject to mortgage.

Q. I will ask you simply this question, to which I think there can be no objection to your replying. That is to say, state whether there were any other properties owned by the subscribers to this paper that were found by your examination of the records to be subject to mortgage, and if so, state whose it was.—A. As to the general fact, I will state that there were. The details seem to me to be in the nature of private business. I prefer not to answer, and I take my position squarely and frankly in regard to the matter, although it would become disclosed if I undertook to testify about it; that the details I can not state.

Q. The question, then, so far as it relates to this, you decline to answer.—A. Yes, sir.

**Mr. BRECKINRIDGE.** Permit me to suggest, without forestalling any conclusion the committee may come to if it goes into conference on the subject, that I would not care to ask questions that have not a direct bearing upon the public policy of the business. I can understand that there might be some facts which simply relate to the private character and standing of the individuals who are associated, and concern nothing but their own properties. If that be the case, without, as I say, meaning to forestall any conclusion that the committee may come to if we take the matter into conference—go into executive session on the question—I suggest that we waive this kind of questions. I understand Mr. Parsons to admit all we asked as to certain companies.

**The WITNESS.** I have testified as to the firm of Havemeyers & Elder, and the Donnor and De Castro Company, and I said there was certainly one other.

**Mr. BRECKINRIDGE.** If the chairman thinks it is a matter of importance, I suggest that we go into executive session for a moment in order to settle the matter. I would not like to come to a conclusion without hearing discussed the matter objected to.

**The CHAIRMAN.** Whether it is a matter of importance or not we will probably have to decide if we go into executive session. A discussion of it now will be unprofitable.

**The WITNESS.** Until the committee instruct me to answer I will decline to answer. I wish to add to that this—the parties interested in this arrangement think they have everything to gain by the fullest examination into the character of the arrangement and everything concerning it which can bear upon legislation. The only line which they have drawn against investigation is as to matters which are purely private and can not affect legislation, and as to them they have thought the committee would not wish to ask. They have a right to decline to answer regarding those private matters. There is nothing else which it is not a pleasure and a desire for the gentlemen interested to answer. It is to the interest of all concerned to sell their sugar at as low a price as is consistent with a fair profit to them for refining sugar, and they think it is to their interest to give the committee information, because they believe that that information will lead to correct results in the matter under investigation.

By Mr. SMITH:

**Q.** You spoke about low price. Who is to be the judge of that?—  
**A.** The judge of that in a large way is the consumer—not of the United States, which is a small place—but the consumer throughout the length and breadth of the world. The price is not fixed by the market of the United States. It is fixed by the market in Europe, and to determine whether the price of sugar here is high or low you must first ascertain what is the price in London, which boasts that the price there is lower than anywhere else. The price may be higher to-day than it was yesterday, or the day before, and yet it may be lower by comparison with the London standard.

**Q.** Do I understand that foreign countries, as nations, use more sugar than the United States?—**A.** Mr. Theodore Havemeyer has statistics upon that subject. I did not say that they used more, by which I mean and I suppose you mean per capita, but I believe that they do.

By Mr. BRECKINRIDGE:

**Q.** Is it not a fact that they do?

**Mr. HAVEMEYER** (interrupting). England uses 70 pounds of sugar per capita to the United States 50 pounds.

**The WITNESS.** The United States will use more if these gentlemen are permitted to continue this business, which is in the interest of the consumer, and make a fair profit out of it.

By Mr. SMITH:

**Q.** This committee is to take care of the American population. It has nothing to do with foreigners. The question is, who fixes the price in this country? All of us desire to regulate our own affairs.—**A.** We are compelled to recognize this as a commodity which is dealt in throughout the whole world, and therefore there must be a relation between the price here and the price in London, otherwise foreign sugar would come here.

**Q.** As I understand you, you say foreign sugar would come here? If protected by a high tariff how can it come here?—**A.** I expect that I am a very poor authority.

**Q.** It strikes you right home?—**A.** My ideas are somewhat vague and indefinite upon the subject; but I think, Mr. Smith, if you will look into the matter you will find that, quite aside from any tariff question, it is necessary for the American refiner to pay wages from 2 up to 3 and 4 times what are paid for cheap labor in Europe.

**Q.** That brings me right here to this question. In the reasons given in that deed for the formation of this combination, one reason you state is to furnish protection against unlawful combinations of labor. What do you mean by that?—**A.** I mean by that this: I do not mean strikes; I believe in strikes. I believe in giving to operatives the fullest right to combine for the protection of their interests; but I do not believe that it is lawful for the operatives of one railroad to combine by intimidation or violence to prevent the operatives of another railroad—

**Q.** I want you to confine yourself to the sugar business.—**A.** That deed was drawn after I had gone through an experience of the injury which results from the operatives of a railroad to the owners of the road by what I call an unlawful combination of labor.

**Q.** Is not this sugar combination engaged in a strike?—**A.** If you will permit me to answer, I will say "no." I think that when two persons become partners and combine their capital and capacity in a broad sense you may say that is a strike, because if the two persons are kept separate you have one competing against the other. I know of no law or public policy that forbids that sort of an arrangement.

**Q.** Who is to be the judge of this unlawful organization of labor?—**A.** The courts are, unless the parties agree.

**Q.** You claim that you have only got a name attached to you just for convenience sake; that is what you are sailing under?—**A.** Yes, sir.

**Q.** What are you going to do about it?—**A.** I can tell you what I am going to do about it. I am going to see whether sugar can not be furnished at a fair profit to the refiners, because business in the long run can not be carried on at a loss and yet have the price to the consumer lower and the rate of wages higher than under a losing arrangement, such as was done down to 1887.

**Q.** You claim that sugar is cheaper now than it has been heretofore?—**A.** If I am compelled to answer yes or no, I do, and yet the price is higher than it has been. I have all the prices here. In 1887 the price in London went up 1 cent a pound. The price under this arrangement, and as I believe due to this arrangement, only advanced half a cent, and subsequently that was reduced.

**Q.** If my memory serves me right, in the Territory of Wisconsin, when it was a Territory, we bought sugar cheaper at that time than we do now.—**A.** What was the price?

Q. I think it was 6 cents a pound.

Mr. SMITH. At that time we had no means of transportation.

The WITNESS. What year?

Mr. SMITH. 1845, 1846, and 1847, I think.

The WITNESS. I have a table here giving the prices from 1887 down, showing the steady diminution in price, everything else being equal, by the mere superiority of the American refiners, against the necessity of paying two or three times the rate for labor here that is paid in the continental countries of Europe and twice what is paid in England.

(At this point a recess was taken until 3.30 o'clock p. m.)

AFTER RECESS.

The committee resumed its session at 3.30 p. m.

The CHAIRMAN. Now, Mr. Parsons, to return to the subject we were inquiring about. After discussion with the committee they instruct me to repeat our former inquiry whether there were, as you recall it, any mortgages upon the property of any of the subscribers to this agreement, other than those you have named, at the time the stocks of the various corporations were turned over to the trust?—A. Rather than that any fact which the committee deem material shall seem to be withheld, I propose to answer the question. I do so on advisement with the Messrs. Havemeyer, whose interests are very large, retaining, however, the opinion I have expressed that it is a private matter, which can not aid legislation. I shall, therefore, answer not only upon information which I had when the question was put, but upon fuller information which I have received in the interval. The property of the Oxnard Brothers was subject to a mortgage; the property of Moller, Sierck & Co. was subject to a mortgage—the amount I do not recollect, but it was insignificant, and the same is true in regard to the Matthiessen and Weicher Company, which was small—I mean small by comparison with the value of the property.

Q. Are there any others?—A. Not that I know of.

Q. In each instance where there were these mortgages was the cash paid to you to pay them off; that is, the amount necessary to pay off these incumbrances?—A. The Oxnard arrangement was made without instrumentality on my part. Just how that was done I do not seem to recall. In the case of the Havemeyers and Elder Company and the Donner and De Castro Company the money came into the possession of Mr. Dos Passos and myself. The same is true of the Matthiessen and Weicher Sugar Refining Company and the Moller and Sierck Company.

Q. These payments were made, I take it, at or about the time that this arrangement went into effect—payments to you?—A. At or about that time. Not necessarily exactly at that time, because the parties interested in each case were assumed to be of such responsibility that the guaranty in the agreement could be relied upon, and the matter could be arranged at convenience. But it was about the time.

Q. Taking the Havemeyers and Elder case, what became of the fund paid to you to discharge the mortgage on their property?—A. The bulk, and perhaps the whole of it, went back to reimburse the payments made and provide for payments to be made upon pending contracts for construction or improvement.

Q. Were those the contracts referred to on page 11 of this agreement as being the contracts for improvements and enlargements, which were to continue as liabilities?—A. Yes, sir.

Q. The next case that you have spoken of in which there was such a payment was that of the Donner and De Castro Company?—A. Yes; and in the testimony which I have given as to the Havemeyers and Elder Company, I include the Donner and De Castro Company. I do not separate those interests because the parties concerned are largely the same, and the management is the same.

Q. So that the moneys received from the Havemeyers and Elder Company and from the Donner and De Castro Company were paid out indifferently for these improvements and enlargements on the property of one or the other company?—A. You are not quite accurate in saying money received from those companies. No money was received from those companies. The money came from parties interested under their guaranty.

Q. Still, moneys coming from stockholders of those companies were used indifferently for paying liabilities on these pending contracts referred to on page 11 of this agreement?—A. Yes, sir.

Q. Now, I understand you to say that the F. O. Matthiesen and Weicher's Company mortgage was also not paid off by you.—A. Yes, and what I have stated in reference to Havemeyers and Elder is true as to that company; that is, money was retained against a mortgage on the property of the company. There was a pending contract which under the deed was to be provided for.

Q. The Oxnard Company, of which you have spoken, also had a mortgage?—A. It did.

Q. And was the money to pay that provided by you?

(Mr. Havemeyer here leaned over and whispered something to the witness.)

The CHAIRMAN. Pardon me, Mr. Havemeyer.

Mr. HAVEMEYER. Excuse me, I only wanted to correct Mr. Parsons as to matters of which he does not know.

The WITNESS. It runs in my mind that there was a mortgage on the Oxnard Company. There was certain indebtedness in respect to that company which required that the parties interested should put up a certain amount of cash, but just how I do not recall.

Q. And what was done with the cash?—A. Have you any objection that I should ask Mr. Havemeyer? I do not believe that I can answer without refreshing my recollection.

The CHAIRMAN. There is no objection.

(After consultation with Mr. Havemeyer the witness answered the question as follows):

A. Mr. Havemeyer explains, and that recalls to me that the fact is so, that they put up the cash and paid off the mortgage themselves.

Q. That is, the Oxnard people, the owners of the stock of that company, discharged their own mortgage before the transfer to the trust?—

A. Yes, before they received their certificates.

Q. What was the other company?—A. Moller and Sierck Company. They paid their money to Mr. Dos Passos and me, and it went into the fund, which was used in the manner described.

Q. Which was used in providing for these pending contracts for improvements and enlargements referred to on page 11?—A. Yes, sir.

Q. Was there another?—A. No, I think that was all.

Q. Upon page 11 there is this statement: "Annexed hereto are schedules in general terms of the properties of the several refineries." Those schedules are not attached to this copy?—A. They are not, and they are not attached to the original.

Q. Are such schedules in existence? Were such schedules made?—A. There were such schedules made. They were verified by persons designated for the purpose, and it having been ascertained that they corresponded they ceased to be of any importance. They were required for the purpose of assuring all parties interested that the property in fact corresponded with the assumed property.

Q. Were they schedules showing values or of property merely?—A. Property merely. Take, for example, the Havemeyers and Elder Company. The Havemeyers and Elder Company were possessed of several blocks of property in the eastern district of Brooklyn, with very important and valuable water privileges, and upon which were erected what I believe are the finest refining establishments in the world, and the most costly. There were diagrams of these supplied and a general statement of the improvements upon them, and parties who were not familiar with these properties had an opportunity of seeing whether the estimated property was really represented by the existing property, and that having been ascertained those schedules ceased to be of importance.

Q. And were not preserved?—A. I have no reason to suppose they do not exist somewhere.

Q. But not in connection with this deed?—A. No, sir.

Q. And they are not in your possession?—A. No; they have all gone through my possession, for the course of procedure was to place those schedules in my possession as being the principal counsel. I put them in the hands of subordinate lawyers, who examined the title to see not only that the property was there but free from lien and indebtedness.

Q. Who made the examination on behalf the signers of this agreement of the various properties referred to in those schedules?—A. I am very sure that Mr. Theodore A. Havemeyer was one. I think that Mr. Matthiessen was another. There very possibly were others, but if so their names have escaped me.

Q. Were not the gentlemen connected with the Boston and Maine refineries represented on the examining committees?—A. I know that Mr. Matthiessen and Mr. Havemeyer went to Boston to examine the Boston properties. Whether any of the Boston gentlemen examined the New York properties I do not happen to recall. The general situation, the general character, and the general extent and importance of these properties were known, and the parties interested would naturally take very much for granted that the property in fact corresponded with the statement. The Boston properties were not so well known in New York, and I know that New York parties did make an examination of them.

Q. Now, do you recall whether in any instance any deficiency was found in the property as scheduled?—A. Deficiencies of this kind were found. The examination of title revealed that there were apparent defects of title, and in all cases the parties interested in the particular refinery were called upon to remedy these defects, and they did.

Q. Were there any other deficiencies than those of defects in title?—A. There was no shortage of property that I recall.

Q. It is further provided that, upon the complete execution of the instrument, there should be made full inventories of the property not embraced in such schedules and useful for the conduct of the business on hand or contracted for, including raw and refined sugars, molasses, sugars in process, sirups etc. Were such inventories made?—A. I think so.

Q. Did they come under your observation?—A. Only in a very general

way. I was cognizant of the fact that such inventories were made. They may have been made very informally, but the results were reached.

Q. And there was a committee of five persons named in this agreement to examine and appraise the articles in such inventory?—A. So it provides.

Q. Were they in fact submitted to those five persons?—A. I think so.

Q. Do you know where the inventories are?—A. I do not. I suppose they are in New York, but in the possession of whom particularly I do not know, and in fact since they served their purpose I have no information or knowledge about them.

Q. It is further provided that the value of the property as thus inventoried and fixed by the appraisers should be paid for in cash by the board to the treasurer of each corporation. Was that done, Mr. Parsons?—A. No, that was not done.

Q. Was anything towards carrying out that covenant?—A. I can tell you what was done as I understand it, and if you permit me to ask Mr. Havemeyer I can refresh my recollection. (After consulting with Mr. Havemeyer.) What was done in respect to that was that each corporation took the property of that description and was charged with it.

Q. Charged how; charged in the books of this new association?—A. I do not believe that I can be very specific in testifying upon that subject.

Q. You have said it was charged; now charged as against what?

Mr. HAVEMEYER. Can I prompt him?

The CHAIRMAN. There is no objection.

Mr. HAVEMEYER. It was charged to the credit of the old stockholders.

Mr. PARSONS. The general idea was that each of these corporations should be balanced as of the time this agreement went into effect, and therefore the assets on hand were treated as belonging to the parties interested in the particular refineries as against the parties who from that time were interested in all the refineries.

C. Then the charge as made was made in the books of the separate corporations?—A. I do not know anything about the books.

Q. Has this trust any books?—A. None of which I know, except a certificate book and a transfer book.

Q. No set of cash-books?—A. The trust never has had any money that I know of, and from the arrangement it was not intended that it should have any money.

Q. It seems to me to have been an arrangement for it to pay some money?—A. Yes; and the matter of receiving and disbursing money was attended to by Mr. Dos Passos and myself.

Q. But here is a special provision by which this new combination contracts to pay cash for certain property?—A. The fact is that no money has been received or disbursed by the board unless you call that which I have explained in reference to the fund the receipt and disbursement of money.

Q. For the payment of mortgages?—A. Precisely. I may add to that, Mr. Chairman, this: The original arrangement contemplates some other things which have not been done. I think under the head of fiscal arrangements there was something which looked to the raising of money through the instrumentality of this board. Nothing of that kind has been done.

Q. It is also provided below here that in consideration of their transfer of stock to the board, the board shall pay to Havemeyer and Elder, the Matthieson and Weichers Company, and to the Bay State Sugar

Refining Company amounts which are left in blank and which are to be paid on pending contracts for improvements and enlargements?—A. Those are amounts as to which I have testified.

Q. Not as to liabilities which were to accrue, but payments which had already been made before this agreement was entered into. Were any such made?—A. Yes, sir. Upon those contracts payments had been made and payments were to be made; the parties concerned were to be reimbursed what had been paid up to that time, and what was to be expended in the future.

Q. Was that the fund which was put into your hands for the payment of the mortgages upon the property which either had already been paid or were to be thereafter paid?—A. Precisely. It has paid what has been expended and it has made payments upon expenditures later in date; but whether they were all discharged or not I do not know.

Q. The next provision I want to call your attention to is that—

Additional shares to the amount of \$400,000, less 15 per cent., to be left with the board, as hereinafter provided, shall be received by Moller, Sierck & Co. for improvements and enlargements of capacity of their refinery now in progress, when said improvements are completed and the increased capacity demonstrated.

The effect of that, I take it, is that these certificates, instead of being limited as originally provided to \$50,000,000, are to be increased to the extent of \$400,000?—A. No; I think I stated that there was some shortage of the \$42,500,000, and, including amounts from Moller, Sierck & Co., did include the total amount to be received from them, meaning the amount to which they would be entitled without this \$400,000.

Q. So that that is included in the \$42,500,000 issue?—A. Or whatever the amount may be; approximately that. Moller, Sierck & Co. were enlarging their capacity, and the valuation put upon them was upon the basis that the work was to be done, and they were required to demonstrate the additional capacity which that called for before they could obtain that additional amount of certificates.

Q. Then when this expression is used, "additional shares to the amount of \$400,000 shall be received by Moller, Sierck & Co.," it means in addition to those which Moller, Sierck & Co. were to have, according to the schedule on page 10, and not in addition to the amount of \$50,000,000, at which the amount of certificates was originally fixed?—A. Yes, sir.

Q. Has that \$400,000 been issued to Moller, Sierck & Co.?—A. (After consulting Mr. Havemeyer.) I learn that it has not been issued. Since the 24th of October, for a part or the whole of the time, the work to demonstrate the additional capacity of Moller, Sierck & Co. has been going on, and I was under the impression that it had reached or was nearing completion, but I learn from Mr. Havemeyer that it has not been completed. I would like to be permitted to add that one of the strictures put upon this arrangement is that one of the first results was to stop the works of Moller, Sierck & Co. Any stoppage there grew out of the fact that prior to this arrangement Moller, Sierck & Co. were arranging to enlarge their capacity, and that work has gone on precisely the same as if this arrangement had not taken place, and it all looks to an increased capacity and consequent increase, instead of limitation of production. It has also been stated, I think, that the result was to throw out of employment 600 operators. I believe the number employed by them was 60—a mistake only of 540 out of 600. It was stated in the testimony before the New York committee that other refineries, which under ordinary circumstances would have stopped, were continued, resulting in the employment of several thousand operators.

Q. There is also a provision here, Mr. Parsons, that—

Of the shares allotted to the several refineries they shall leave 15 per cent. with the board, and these shares and any shares not allotted of the \$50,000,000, except as herein otherwise provided, shall be subject to be disposed of by the board either for the acquisition of other refineries to become parties to this deed, payment for additional capacity or by appropriations to the several refineries.

Now, in fact, was this 15 per cent. of the \$50,000,000 retained ?—A. It was.

Q. And what has since been done with that ?—A. Out of that the stockholders of the four additional refineries have been provided for, and the residue, I suppose, remains on hand. Just exactly what the amount of the residue is I do not know.

Q. Can you state the aggregate amount paid to the four ?—A. I can not. I am quite sure that it was very considerably less than the total reservation.

Q. Considerably less than 15 per cent. ?—A. Yes, sir.

Q. It is further provided in this agreement that “ the profits arising from the business of each corporation shall be paid over by it to the board hereby created.” Has there been any payment made by any of these corporations to the board on account of profits ?—A. There has not.

Q. And, of course, there have, therefore, been no dividends declared ?—A. There have not.

Q. Has any account been rendered by these corporations or any of them to the board ?—A. I think not; none that I am aware of.

Q. No account either of the money or the amount of business done by each corporation ?—A. The only accounts of which I know, or of which I have ever heard, are sugar reports, which are transmitted by the several refineries to Mr. Searles, the secretary, and which are in a form that I have here for the service of the committee. [Handing forms to the chairman.]

The forms are as follows :

Q. These forms which you produce are the forms of daily reports, I think. Are they so denominated?—A. They are the forms of reports which are assumed to be daily, and in the main I think that they are sent in daily.

Q. To whom are they sent?—A. To Mr. Searles.

Q. Has Mr. Searles any office?—A. I do not think that he has an independent office. Mr. Searles is a member of one of these corporations.

Q. Which one?—A. The Havemeyer Sugar Refining Company.

Q. Where is the office of that company?—A. In Wall street.

Q. Can you give me the number?—A. No; but it is on the north side of Wall street, within a block or so of the Wall Street Ferry.

Q. And that is Mr. Searles's place of business?—A. That is his place of business—the Havemeyer Sugar Refining Company, and that is where he is to be found.

Q. And these reports, as you understand it, are sent there?—A. Yes, as I understand it, they are sent there.

Q. I think I will ask you to explain to us the meaning, if you can, of the headings there. One is called "Daily report," and the other "Daily meltings."—A. I think I can make the explanation, but Mr. Theodore A. Havemeyer can make it so much more intelligently that if the committee propose to examine him they would do better to wait and get the information from him.

The CHAIRMAN. All right.

Q. Of course, if you received no money and no profits, there were no dividends?—A. No money and no profits that I know of were received, and no dividends were made; that I do know. We are waiting and longing.

Q. Now, under the head of "Fiscal arrangements" here, it was provided that the funds necessary to enable the board to carry out the provisions of this agreement and make the payments required, should be raised by mortgage, or such other means as should be satisfactory to the board.—A. Might be raised.

Q. It reads:

The funds necessary to enable the said board to make the payments herein provided to be made by it, may be raised by mortgage to be made by the corporations or either, any, or all of them on their property, and by such other means as shall be satisfactory to such board.

I understand you to say no funds have been raised in any way.—A. Nothing whatever has been done under that provision, or will be.

Q. Has this company issued any bonds or evidence of indebtedness?

—A. It has not; by this company, you mean the board?

The CHAIRMAN. Yes.

A. It has not.

Q. There has been no increase or diminution of the number of these certificates as fixed by this board, has there?—A. None.

Q. I understand that the outstanding certificates at the present time are about forty-five millions.—A. Yes, sir.

Q. So there are about five millions yet in the treasury?—A. Yes; out of fifty millions there remain about five millions.

Q. Under the head of "Acquisition of other refineries," it is provided that—

The capital stock of other sugar refining companies and of companies whose business relates directly or indirectly to sugar refining (in every instance to be incorporated), may be transferred to said board with the consent of a majority thereof, at valuation and upon terms satisfactory to it.

Has any use been made of that authority?—A. Not to my knowledge, except in respect of the four additional signers—the one Saint Louis refinery, the Portland refinery, and the two New Orleans refineries.

Q. Were the valuations and terms upon which the stock of those refineries or those companies was turned over to this board fixed by this board?—A. I think that they were fixed by a majority in interest of the then certificate holders.

Q. They were not fixed, then, by the board?—A. I have no recollection that they were fixed by the board.

Q. As the result of formal action?—A. Not to my recollection.

Q. And did you take any part in any meeting of the board at which the question of valuation or terms in which those companies were to be permitted to unite with this union were fixed?—A. I think I was present at a meeting of the board when there was some conversation as to the value of these refineries, but whether exact figures were named, I do not recall.

Q. Did the board, so far as you know, cause any valuation to be made of the property of these four companies before admitting them to its arrangement?—A. Some examination—I do not know how formal—certainly was made; because I know that there was an examination of the title of the Portland Refinery and of the Saint Louis Refinery, and some examination in respect to the title of the two refineries in New Orleans; they may have furnished schedules, or they may have been taken for granted.

Q. But I inquire of your knowledge as to whether any such thing was done?—A. No; I have throughout taken the position that if these various parties were responsible, we could rely upon their statement that their property was equivalent to their schedules and was free of debt, and be saved any very exact examination.

Q. Do you know who conducted these examinations on behalf of your board—the financial part of it, I mean?—A. I know that Mr. Searles took some part—the details I cannot give you. I think that so far as the New Orleans refineries were concerned perhaps they had representatives in New York—I cannot give you their names—and there may have been general talk there.

Q. But you are unable to name any person connected with this board, except Mr. Searles, who took part in the negotiations relating to the

transfer of these companies?—A. I cannot remember the details. I remember that I knew about the matter, and my statement in reference to Mr. Searles is only from general impression. I never saw Mr. Searles act in reference to that matter.

Q. Do you know where Mr. Searles is now?—A. I presume he is in New York.

Q. His residence is in New York?—A. Yes; if you call Brooklyn New York. I think he resides in Brooklyn.

Q. Do you know where?—A. I do not, but I think he is to be found at his office—the office of the Havemeyer Sugar Refining Company.

Q. Mr. Parsons, as I understand this transaction with regard to these partnerships that were turned into corporations and whose stocks were then turned over to this trust, it amounted to this: That the individual co-partners transferred the properties to the corporations which they formed.—A. That is right.

Q. And took in payment for it the stock of the corporations?—A. That is so.

Q. There was no cash paid by the new corporation to the old partnership?—A. I think not. I do not think there was any case in which cash was paid.

Q. And then the stock of these companies was turned over to the directors under this agreement, and the certificates provided for by this agreement issued in lieu of that stock?—A. "Issued in lieu" is, perhaps, not the most suitable expression. They were issued against it to the persons who previously held the stock.

Q. That old stock has not been suppressed?—A. It is still outstanding.

Q. It is held by the directors or trustees?—A. Yes · under this agreement.

By Mr. WILSON:

Q. How was the value, or by whom was the value, fixed upon the property that belonged to individuals when it became a corporation?—A. The valuation of all of these properties was reached by agreement. Messrs. Havemeyers and Elder said, for example, "we value our property at such an amount," and provided the parties came to terms, certificates for the agreed amount were issued against the property.

Q. Then they agreed between and among themselves as to the amount of the value of all the property or properties put in?—A. Yes, sir.

Q. These properties that were already represented by corporations instead of companies—do you know whether there was any increase or decrease in their value as estimated when it was placed in the trust?—A. The properties were not assured at any time to have any relation whatever to the amount at which the particular company might be capitalized, because the scale might be different; what the parties were looking at was actual value. They paid no regard, therefore, to the capitalization of the companies, but to the actual value of the properties.

Q. Do you know whether the valuation of any of the companies was in excess of what it was capitalized for at the time?—A. I have no doubt that the valuation of the properties was in excess of the capitalization of the particular refining companies, because there was no object in excessive capitalization; and my experience is that these refining companies have kept their capitalization very low.

Q. All I wanted to know was when this agreement was formed and these several corporations became members of it, and when they changed the aggregate amount of their capital stock, whether it was placed in this

agreement at a greater amount than it had been prior to that time—A. No. The reverse was true in the case of the Donner and De Castro Company. The Donner and De Castro Company was originally capitalized at \$3,000,000, and I think that it was subsequently, and before this arrangement, reduced about \$1,500,000, and that was again reduced, to what amount I do not remember, at the time of this arrangement; but I know this, that the amount of capitalization of the several companies bears no relation whatever to the valuations of the properties, and was not treated by the parties in interest as a matter in which they were concerned at all. What they were looking at was the substantial value of the properties themselves, and it made no difference whether the Donner and De Castro Company, for instance, was capitalized at \$3,000,000 or \$300,000.

Q. The property then, in pursuance of this agreement, was actually estimated at the real value?—A. Consisting, however, as I understand, of two factors, one the actual cost, with a difference in favor of refineries able at the same expense to produce higher results, and the whole matter was eventually arranged by agreement.

May I say this. The charge has been made that this capitalization represents water. I think I know something upon the subject, and I think I am justified in saying that is not so. It represents actual value. I understand that it would require from 60 to 70 per cent. of this capitalization to produce this property, making no allowance whatever for patents and processes in use which have cost large sums of money, and for the good-will of these companies which represents a business capacity worth many millions of dollars.

By Mr. BRECKINRIDGE:

Q. Are the real estate and improvements now vested in the trust?—No, sir; no change whatever has been made. They remain vested in the corporations, and the business is carried on by them.

Q. Is there any of this stock thrown on the market?—A. The newspapers say so. I have no knowledge about it. I never happened to meet anybody who had ever sold or bought any. If the question asks whether one object was to make these certificates a subject of sale, I am very well satisfied that that is not so. And yet I presume if any member of the committee would like to have one or more of these shares and would pay satisfactory prices perhaps they could be supplied.

Q. But the trust not being incorporated, how could that stock be thrown on the market by parties holding it outside of this combination?—A. There are several thousand persons who own these certificates. It does not require a corporation to own them any more than it requires a corporation to hold the stock of the Pennsylvania Railroad Company. On the contrary, the law in many States forbids ownership of stock by corporations. Individuals own this stock.

Q. But railroads are incorporated, and this institution is not incorporated. It is outside the pale of law, as I understand it?—A. It is a mere convenient designation. You might say Mr. A, Mr. B, Mr. C, and so go through the eleven names, and use their names for the ownership of this stock and the persons who issued these certificates. As a matter of convenience a name has been adopted, and they issue them with Mr. Havemeyers as president and Mr. Searles as treasurer.

By Mr. WILSON:

Q. Suppose one of these corporations desires to withdraw, what is the modus?—A. There is no association in which there is a corporation.

That is just the point which I hope the committee will understand, and that I may make clear.

Q. I am speaking now of this voluntary association composed of corporations?—A. No, sir; composed of individual stockholders. A stockholder who has sold his stock and received these certificates could no more withdraw than you could withdraw if you sold your railroad stock one day at fifty and it went up to a hundred the next day. You could not withdraw and get that price.

Q. How are you going to enforce that?—A. There is nothing to enforce.

Q. You say we must stand by it—how?—A. If you had been a stockholder in the Donner and De Castro Company, and had given me your stock, and had received in place of it the certificates, it would not require me to make you stand by it. The courts would compel you to. Honesty and fairness would require you to stand by it.

Q. But you are not incorporated?—A. No, we are not incorporated.

Q. It is a good deal like the wild-cat banks out West.—A. No, sir; there is nothing wild cat about it. It all comes right down to the question whether a stockholder is to be permitted to own stock in several corporations, or is to be limited to one. The stockholders in these corporations own the stock in several refineries. That is all about it. I do not know any law or any public policy against it.

By Mr. BYNUM:

Q. And yet no books and no accounts are kept with these several corporations, and no dividends are declared?—A. I have not stated that. The corporations conduct their business precisely the same as before.

Q. Is there no account kept of the business of these several companies as an aggregate body?—A. I think if profits had been made so that earnings had come to this board, it would have been necessary for accounts of receipts and disbursements to have been kept.

Q. Are there any accounts kept by this company of individuals or association formed by this agreement by which you can tell whether there have been any profits or not?—A. No. Again I fear that I do not make the situation clear. This board do not carry on any business. When a refinery has made profits they will turn over the dividend, and instead of its being distributed piecemeal to each holder of these certificates it will be aggregated with the returns from the other refineries and distributed to the whole number of certificate holders.

By Mr. WILSON:

Q. In other words, when the period at which you see that you can declare dividends arrives, if one of these companies reports that it has made a dividend equivalent to 10 per cent. on the stock of that company, and another one reports that it has run at a loss, this board is to equalize them and put them on the same footing?—A. In fact, yes; a sugar refinery which is deemed to have run at a loss is to go on until it makes up that loss.

Q. These companies have not declared any dividends—these corporations, I mean?—A. They have not.

Q. They employ their own officers?—A. They employ their own officers.

Q. And pay their own salaries?—A. Yes; and all other expenses.

Q. Over that subject you exercise no control as directors and trustees?—A. None whatever; the board possesses this control, that if at

the end of the current year they are dissatisfied with the situation, they can remove the officers of the particular corporations and put in others.

Q. Then, if the officers of one of these corporations should conclude not to do any business at all and shut up its refinery, there is nothing to prevent the persons who hold certificates of stock which that company has surrendered from sharing in the dividends declared by the trust from the earnings of the other companies?—A. That is so.

Q. Has this body of trustees ever formally or informally assumed to control or contract the business of any one of the corporations whose stock they held?—A. Not to my knowledge, and I am very well satisfied that the fact is not so; that the corporations have gone on with their business independently, as provided in the deed.

Q. And there is no method provided by this instrument or any other by which the directors under this trust agreement could interfere with the management of any one of these single corporations, except as it might at the next annual election change the officers of the corporation.—A. That is the beginning and end of it.

By Mr. HERMANN:

Q. They could not compel a corporation to shut down?—A. That is a fine point of law. My opinion is no, and yet if the stockholders of a corporation unanimously found that the officers were doing their business in fraud of the rights of the stockholders the courts would give them redress.

Q. That redress would come through the equity power of the court and not *ex contractu*?—A. That is so.

Q. Does the board assume to limit the production of any of these corporations?—A. Not to my knowledge.

Q. You believe that they have never attempted anything of that kind?—A. Not by the action of the board, so far as I know and so far as I believe, but you must always bear in mind that the members of this board represent vast interests in the properties of these companies. They meet each other frequently, and I have no doubt that each one has a tolerable idea of the views of the others, and I take it for granted that the officers of these stock corporations would rather adapt themselves to the interests of the several corporations than go against them.

By Mr. BRECKINRIDGE:

Q. Mr. Parsons, this company or board now holds all the stock of these corporations?—A. It does, less the shares which qualify trustees.

Q. That is nominal?—A. Inconsiderable.

Q. The full voting power, therefore, as respects the direction of affairs in any one of these corporations, rests with this board?—A. The whole voting power at stockholders' meetings rests with this board.

Q. That is what I mean. Therefore this board has all the authority and control over these corporations that stockholders possess over any corporation?—A. Just that.

Q. Have any of these refineries been closed up since this association was formed?—A. Mr. Theodore Havemeyer can give you more exact information about that than I can. The North River Refining Company I know to have been closed. I know that the Moller, Sierck & Co. refinery has been closed pending the improvements to which reference has been made, and for the same reason the Oxnard refinery has been temporarily closed.

Q. That is as far as you know?—A. That is as far as I know. I ought to make this addition. I can not testify as to the Boston refineries. As to them I do not happen to know or to have heard.

Q. Mr. Havemeyer is better informed on that question than yourself?

—A. He is.

Mr. BRECKINRIDGE. I will then pass that over.

Q. The only way, then, that this association can give force and effect to any policy that it may agree upon is the way that would ordinarily obtain to a majority of stockholders?—A. That is it.

Q. You have this board divided into a refining committee and a mercantile committee, I believe you stated?

The WITNESS. Kindly repeat that question.

Q. This board is subdivided into committees, is it not?—A. Not exactly that, for I am a member of the board, but not a member of a committee; but there is a committee called the mercantile committee and one called the refining committee. How formal the organization may be I do not know; but I do know that there is no specification of their duties.

Q. You are not a member of either committee?—A. No, sir.

Q. You are not able, therefore, to tell what are the peculiar functions of these committees?—A. Except as their designations imply, that one has reference to refining and the other to money matters. By money matters I mean anything which is mercantile as contradistinguished from operative.

Q. Do you mean by money matters the granting of credits to their customers?—A. No; I think every corporation is entirely independent in reference to credit.

Q. You stated awhile ago that the association does not regulate the wages to superintendents and employes of the respective corporations.—A. Each regulates its own internal affairs.

Q. Therefore you do not mean by money matters either the expenses of the corporation or its mercantile credits?—A. No; I do not.

Q. What other mercantile matters remain—or money matters—that they can regulate?—A. Well, I am pretty ignorant about that matter, Mr. Breckinridge.

Q. I take you to be pretty well informed about money matters.—A. I do not mean to disavow any knowledge that I have, and I am going to see if I can not rake up some information upon this subject, but as I have never had anything reported to me on this subject, you can see that any information I have must be meager. (After a pause.) I can surmise that on the question of whether it was desirable to reduce time, production, if you please, by which I mean the volume of refining, that subject might be considered by the refining committee.

Q. I am not talking about the refining committee. I am talking about money matters.—A. I think you had better examine somebody who belongs to that committee. One is here, Mr. Havemeyer, and he can tell you all about it.

Q. Very well, sir. You stated, Mr. Parsons, that the committee about which we were not talking, the committee on refining, might regulate the running of establishments, or the output of establishments. That, of course, involves the question of what are known as shut-downs, or lockouts, does it not?—A. Possibly.

Q. If you quit running, you shut down.—A. Possibly; I am not prepared to say that this committee can regulate anything.

Q. They have all the power which a stockholder has over all these concerns?—A. Precisely that; I think if they had a certain view, that they would indicate that to the officers of the corporation, and that might relate to the matter of what you call shutting down or what you may.

Q. Or lockout?—A. I have never heard that word used in connection with sugar refining.

Mr. BRECKINRIDGE. I have.

The WITNESS. We keep men of long experience in. It is equally to the advantage of the refiners and the operators. It was testified before the Senate committee in New York that one of these refineries, which for some reason was not working, was continuing 2,000 men under pay.

Q. That was very charitable in them.—A. Not charitable, but business, and business on legitimate principles and prompted by intelligent recognition of the situation and capacity to meet it.

Q. I do not blame them for doing what they believed to be profitable. Of course, a lockout does not obtain with an institution that does not lock out. Those that still run or pay wages do not practically lock out anybody. You speak of sugar having gone up a cent in London recently?—A. Subsequently to November last. There has since been a decline there, and in larger proportion here.

Q. You stated that the advance in this country was only half a cent?—A. The advance in this country was less in proportion than in London.

Q. Half a cent, I think, was the expression you used.—A. Yes, I think I said half a cent.

Q. You also stated that if it had not been for this trust the advance would have been greater. That is merely a matter of fact—you stated that. What I would like you to explain as relating to the effect an organization of this kind may have upon the public and public interests is why, when sugar could have advanced more than it did, it did not advance.—A. Because the practical result of the aggregation of capital which this arrangement represents is to enable the parties concerned to conduct their business in a steady, as against doing it in an irregular, way. I understand that from November until March the Louisiana crop of sugar is refined and goes into direct consumption. I understand that heretofore during that period it was necessary that the Eastern and Northern refineries—I mean the refineries outside of Louisiana—should either shut down—what you call lock out—or should reduce either the time or number of their employes by from 25 to 33 per cent., as the case might be, because they could not compete with the production in Louisiana during that period. The result of this arrangement, as I understand, is that as the production can be regulated and graduated during a long period, the business can be conducted in a steady way and kept going.

Q. May I understand, then, from your present reply that the limited advance was due to the large output from Louisiana?—A. I have not said so, and I do not know that that is the fact. Yet the fact is, as I stated, that while the advance in London was one cent, here it was but half a cent.

Q. You brought in Louisiana, and if you do not mean that the marketing of the Louisiana crop at this time in the autumn limited the advance in price, what did you mean by bringing in the State of Louisiana?—A. As I understand it, under an arrangement which is not steady as this is, the refiners might take advantage of every occasional opportunity to run up the price to the highest possible figure and then wait until forced down. An advance of one cent in London, for instance, would furnish an occasion for advances here. Now, I understand that these people are not looking for temporary advances to-day or to-morrow, but a steady business, and they can keep the prices free from fluctuations which otherwise would exist, and that it was not necessary that the prices here should advance up to the London advance.

Q. You have not explained where Louisiana came in.—A. As I understand it, but for this arrangement Louisiana would demoralize the market here.

Q. Make it lower, you mean, by demoralization?—A. Yes, and shut up the refineries more or less. Now, I am giving you the best information I have on the subject, but I am not a sugar refiner.

Q. I think you are a very intelligent and well-informed witness, Mr. Parsons.—A. I am giving the best information I can.

Q. I think you understand the theory of this business about as well as anybody I have met.—A. I think that a great many factors come into the question of fixing the price here at that season of the year. One is the fact that the Louisiana crop is being harvested. The question of the high rate of labor here by contrast with the cheap pauper labor in other parts of the world is another. The question of tariff is a matter for very important consideration. As I understand it, the present tariff really discriminates against this American industry, the rate on low-grade sugar being higher than on refined grades, thus extending a premium really to the foreign refiners to come into competition with our refiners. Now all these circumstances are taken into consideration by those competent to deal with them and able to construct prices. If it were a question of my fixing the price, I would not know where to strike between 5 and 10 cents a pound.

Q. Is that your reply to the question in reference to Louisiana?—A. I do not know that Louisiana has any direct bearing upon the accidental fact that sugar in London advanced and subsequently declined and advanced here less pro rata than in London. The circumstance is material as showing that there, where there is no such arrangement, prices advanced more than here, where such an arrangement does exist, which is assumed to affect injuriously the consumer.

Q. You introduced Louisiana?—A. I have given you the best explanation I can in relation to this business.

Q. You will pardon me if I fail to see any revelancy in the subsequent proceedings.—A. I merely answered to the best of my ability and will let the answers carry their own responsibility. But this I do know, that if you were a Northern sugar-refiner you would dread that period from November to March, when the sugar of Louisiana was being turned out by their refineries into direct consumption.

Q. Why?—A. Because it would compel your either closing up altogether during that period, or making a large diminution in the time or number of your operatives, which means that the business here could not be done at a profit, but only at a loss.

Q. Then the effect of the marketing of the Louisiana crop was to lower and not to advance the price last November?—A. Everything else being equal, yes. There being no other considerations to regard, yes.

Q. You had previously stated that when the Louisiana crop was coming into the market, if it had not been for the sugar trust the price would have advanced to approximately the full cent it did advance in London?—A. I think perhaps I did not put it in those words or in that shape. What I mean is that the effect of this arrangement is that you can steady the market, and therefore there is no occasion to take advantage of a rise in London, and enables you to do a better business and to extend your market over the dull period.

Q. Will you permit me, as you seem to have studied that pretty carefully, to ask you how the trust can keep the marketing of the Louisiana crop from affecting the price and can prevent the shutting up of these

refineries?—A. As I understand, there are a vast number of refineries in Louisiana carrying on business on a small scale and bringing their product into immediate consumption.

Q. Is that the explanation?—A. I did not intend it as an explanation, but as an answer to the suggestion made by one member of the committee which I understood to mean that there were no Louisiana sugar refineries.

Q. Will you proceed to the explanation?—A. I can add nothing to what I have said.

Q. And that, you say, you did not intend as an explanation?—A. I do not mean what I stated just now, but all that I have said on the question; but there are gentlemen here who are thoroughly competent to give you the explanation.

Q. You had laid emphasis on the point that you *did* know that; therefore, I thought you prepared to give an explanation. However, we will pass on. What is the effect of this sugar trust upon the wages of men who are employed by the refineries belonging to the trust?—A. The highest rate of wages we have paid has been retained.

Q. Has there been any advance?—A. The rate has remained as it was before the formation of the trust.

Q. There has been, then, no change in the rate of wages?—A. No, sir; no change.

Q. The certificate that you produced referred to the books of the company?—A. Yes, sir.

Q. Will you please state exactly what are those books?—A. They are the books I previously mentioned, a certificate book and a transfer book.

Q. That is all?—A. That is all.

Q. The trust keeps no other books?—A. Not that I know of, and I am satisfied there are no others.

Q. Has the trust an office in New York or elsewhere?—A. No.

Q. Where are those books kept?—A. I think that they have been somewhat migratory. They have been at my office at times, because I checked these certificates and they were there for the purpose, but unless for some special reason they were elsewhere. I think Mr. Searles would have them.

Q. The trust, then, has no fixed place of meeting and no fixed place for conference?—A. No designated place. I think at present it meets more frequently at the office of Havemeyers & Elder than elsewhere, because they are the largest established refiners and have a convenient office.

Q. Can a corporation that has passed its stock over to the gentlemen composing this trust declare a dividend out of its earnings?—A. Each one of these corporations can declare a dividend of its earnings.

Q. How so?—A. Like any other corporation.

Q. Does not that stock all belong to the trust?—A. The organization of the corporation is such that the stock does not belong to the corporation. The stock of the Pennsylvania Railroad Company, for instance, does not belong to the railroad.

Q. The officers of a company, as I understand, would declare a dividend, and not the stockholders?—A. Yes; the officers would declare the dividend and then it would be payable to the stockholders.

Q. Would that dividend be payable to the holders of that particular stock?—A. If any one of these corporations declared a dividend, that dividend with the dividend of other corporations would be distributed to the members through this board.

Q. It becomes a common fund?—A. Yes, sir.

Q. You stated, I believe, that you had a table of prices of sugar for quite a period in the past. Have you that table with you?—A. I have here a table of prices of raw sugar for each month, commencing with 1885, and continuing down to 1888. It was furnished by the editor of the Commercial Bulletin, a New York business publication, to the investigating committee of the senate of New York, and I have knowledge of the fact that in 1887 refined sugar, meaning granulated, sold at \$10.89 a hundred, and that the price has steadily reduced down to 1887, but the price at each successive stage during that period I cannot give.

Q. This is for 1885, 1886, 1887, and 1888?—A. It shows, as you will observe, that the price of raw sugar advanced subsequently to the formation of the trust.

Q. These prices are limited, I believe, to this country?—A. Yes, sir.

Q. You have no comparative prices between this country and other countries?—A. Those prices exist. I do not know that I have them.

Q. This is only on raw sugar?—A. Yes, sir.

Q. You do not sell raw sugar?—A. No.

Q. Therefore you are only interested then in the decline of raw sugar and the advance of refined sugar?—A. Of course, if we could get raw sugar for nothing and sell the refined sugar at a high price it would be to our advantage. But these matters are in the control of other parties. Raw sugars exist all over the world. We do not control that. Even in this country outside of this arrangement is a large output, and any attempt at an excessive price would bring into the field innumerable other refineries.

Q. How long would it take to construct a refinery?—A. The newspapers say that Mr. Claus Spreckles, of California, is here to construct a refinery in competition to those refineries. They have stated that he proposes to put \$15,000,000 in the venture; later, that he proposes to put five millions, and another statement that he proposes to make a combination of forty millions, and I think in connection with those statements it has been asserted that a refinery could be constructed in something less than a year.

Q. What per cent. of the present refining capacity of the country is in this association? I do not mean to include the sugar planters—the sugar-houses on the plantations in Louisiana.—A. And you do not mean what are called molasses refineries, of which, as I understand, there are a large proportion.

Q. No.—A. It has been stated, as I believe the fact to be, that the refineries represented in this arrangement represented about two-thirds of the entire product.

Q. The entire capacity?—A. Yes.

Q. Exclusive of plantation refining?—A. Yes.

Q. You have alluded several times, Mr. Parsons, to the fluctuating character of sugar production and of sugar refining. If sugar declines in London does it necessarily decline in this country?—A. Everything else being equal, yes sir, as I understand it.

Q. But supposing everything else is not equal?—A. There might be disturbing causes affecting the price.

Q. Such as what?—A. I do not think I can answer that. How can I tell? I can guess; but I would not have much more confidence in my guesses than in yours, Mr. Breckinridge.

Q. I am not speaking of temporary differences in prices?—A. Then there is no such thing as an advance, because the price of sugar has steadily declined all the time.

Q. Do I understand you to say that the price of refined sugar is the same here as in London, except the differences caused by freight, etc. ?—  
A. No, I have not said that, and about that subject I am really incompetent to testify.

By the CHAIRMAN :

Q. Mr. Parsons, in executive meeting the committee have agreed that it is necessary, in connection with the other proof here, that I should ask you to furnish the information necessary to fill up the blank spaces which have been left in this copy. Without insisting upon the production of the original instrument, and its being left here with it, we feel that the copy which we have should be made perfect.

It has now reached so late an hour that, with the consent of the committee we will adjourn the hearing, leaving that suggestion to your reflection, Mr. Parsons.

The committee thereupon adjourned until 11 a. m., Friday, March 9.

---

WASHINGTON, *Friday, March 9, 1888.*

The committee met pursuant to adjournment, at 11 o'clock a. m.

#### TESTIMONY OF MR. PARSONS—Continued.

The CHAIRMAN. I observe in the testimony of Mr. Henry O. Havemeyer, as given before the committee of the senate of New York, that he states that this deed which he was examined about at that time had been changed once or twice. I understood you to testify yesterday that there had been no change in the instrument since its signature.

The WITNESS. Mr. Havemeyer, according to my recollection, testified that it had been so changed as to permit, first the Maine refinery and then the Saint Louis and the New Orleans refineries to become parties. And you will notice an appendix to that effect.

Q. The only change, then, is the appendix, which is signed by those refineries ?—A. The only change that I recall is a change permitting those refineries to become parties.

Q. Is that provided for on page 15, under the head of "Acquisition of other property ?"—A. Yes. You will observe, Mr. Chairman, that that clause contemplated that the stock of other refineries might be acquired by the action of the board, or a consent of a majority of the board. The change consists in requiring the consent of a majority of the stockholders, and any other changes are merely papers signed by a majority of the stockholders authorizing those refineries to become members.

Q. That change, then, is contained in another subsequently executed paper ?—A. That is my impression. This I can state without any question, that no change has been made which affects the tenor of the deed ; nothing more than a paper which requires the consent of a majority of the stockholders to the admission of these other refineries.

Q. And there is no instrument varying or curtailing the authority of the board as expressed in this deed executed by the parties to this instrument ?—A. None.

Q. In the course of the investigation yesterday, I think I asked you whether there was anything which restrained the officers of these sev-

eral corporations, elected by this board as a stockholder of the corporation, from exercising all powers and conducting the management of the several corporations, and even though their methods might not be acceptable to the board; and I understood you to say that there was nothing expressed in the paper to prevent their doing that, but that in your opinion their legal duty was to conform to the wishes of the stockholders?—A. Probably what I said was substantially what you embody in your question. To be a little more accurate, I think I must have said that the board as the owners of the stock of the several corporations have all the authority which belongs to stockholders; no less, no more; and that that authority could only be legally exercised at an annual meeting of stockholders, and that the only mode in which it could be exercised was to displace the officers at an annual meeting.

Q. According to my recollection you also stated that in your opinion the board would have the right to apply to the courts for the correction of any course of action which was detrimental to the interests of the company on the part of its officers?—A. That is my opinion.

Q. And by that you mean they would have the same authority that any other stockholders would have to go into a court of equity to restrain officers from such course of action as in the judgment of the stockholders would be detrimental to the interests of the stockholders?—A. Precisely that.

Q. But no more than any ordinary stockholder?—A. Precisely; no more, no less.

By Mr. HOPKINS:

Q. In your opinion has the price of sugar been increased by the creation of this so-called trust or not, as a lawyer?—A. In my opinion, referring to myself as a lawyer and as a member of this board, the price of sugar has not been increased by this arrangement, or as the result of this arrangement.

By Mr. BRECKINRIDGE:

Q. Some of the refineries embraced in this association have, I believe, been acquired by purchase by the association, have they not?—A. No.

Q. None, whatever?—A. None, whatever.

Q. Have they not been acquired by members of the association by purchase?—A. No. Mr. Breckinridge, do not let us misunderstand. The stock of refinery corporations has been acquired by the members of this board. I understand you to discriminate between the stock of corporations and stock which does not belong to corporations.

Q. My impression is that if you own all of the stock of a refinery, and there is no other evidence of title except that stock, the refinery being a corporation, you own the refinery.—A. As a practical question, that is so. As a legal question, the fact is exactly the reverse.

Q. Well, the practical question is as far as I care to go.—A. As a practical question, the stockholders own the property of the corporation. As a legal question, they have no legal interest in the property. It belongs to the corporation.

Q. It is the practical part of it I want to get at. I am not speaking of any legal questions that might arise in certain contingencies. But the gentlemen who compose this association, as I understand it, have acquired the stock of some refineries, which stock they did not possess before they formed themselves into this association.—A. They did not exist.

Q. The refineries?—A. The gentlemen whom you speak of as an association did not exist before this arrangement.

Q. The gentlemen existed.—A. Yes, they did; but not in the associated form to which you allude to them.

Q. I did not say they did. That was not my question.—A. Perhaps I misapprehended the question. Will you kindly put it again?

Q. It seems to me to be a very plain question. I am not particularly expert in putting questions, being only a business man, but it seems to me like an ordinary business question. Have not these gentlemen who compose this association, all of them or some of them, acquired stock of some sugar refineries, one or more, that these gentlemen did not possess before they went into this association?—A. Yes, if you allude to the eleven persons who compose this board.

Q. Of course, that is what I am talking about.—A. And there are sugar refineries whose stock now belongs to them, in which refineries not one of them was interested before this arrangement. Does that meet your purpose?

Q. That is precisely what I am trying to get at. They having acquired this stock, the parties who owned the stock prior to its acquisition are, I suppose, not members of this association?—A. They are persons other than the eleven gentlemen spoken of.

Q. And are not of that eleven now?—A. They are not of that eleven now.

Q. Why did these gentlemen prefer to acquire that stock rather than to take the gentlemen from whom they bought their stock into their association?—A. Because they are but eleven in number and the stockholders of these various other companies may be five or six hundred, and a body consisting of six hundred is an unmanageable body, but according to our arrangement they are represented by a limited number, and that limited number in this case is eleven. These eleven gentlemen represent not only their own interests, which are large, but the interests of all the others.

Q. Do I understand, then, that these purchases were made solely because of the desire to keep down the number of the association? That is, you made the purchases in preference to permitting others to come into the association on the basis of their property?—A. Mr. Breckinridge, I am apprehensive that you do not understand the matter as I do, and I think the difficulty comes from the fact that perhaps I as a lawyer am compelled to answer with reference to legal distinctions to which you do not attach importance.

Q. I am simply trying to get at a few facts, not opinions?—A. I think I know what you mean, and I will state it according to your assumption.

Q. I am not proceeding under an assumption, but simply asking a question, which I will still try to make plain, and I will state the case in this way to make it plainer than the previous statement. Here is an association composed of eleven gentlemen. They are the owners of the stocks of sundry sugar refineries. Some of these refineries these gentlemen owned before they formed this association, and before perhaps they thought of forming this association; or, rather, to speak with perfect accuracy, owned some of the stock of some of the refineries. Since they formed this association, or since they thought of forming the association, these gentlemen have acquired at least the control of the stock of some refineries that they did not own the controlling amount of stock of before this period.—A. The statement which you have made is literally true and exactly according to the fact.

Q. That is what I have been trying to get at.—A. You may go one step further. All the stock of these additional refineries is now owned by members of this board—not a controlling interest, but all the stock.

Q. Now I ask why these gentlemen bought the controlling, or as you state the entire, amount of the stock of these to them additional refineries, instead of increasing the number of the association by admitting into the association those from whom they bought the stock? That is a plain question, is it not?—A. Perfectly plain. For the same reason that the number fixed was eleven, which is a convenient number, and all the persons interested were satisfied that the number should be eleven, and that they should be represented by these gentlemen rather than that they should have a representation themselves.

Q. Do I understand you to say that these gentlemen represent stock that they do not own?—A. Why, certainly.

Q. They do represent a large amount of stock that they do not own?—A. Certainly; they represent the stock of these refineries. They own a considerable proportion of it, but by no means all.

Q. Do these eleven gentlemen constitute the whole number of the association known as the Sugar Trust?

Mr. HOPKINS. I object.

The CHAIRMAN. There is no objection which can prevent any member of the committee asking any question he pleases.

The WITNESS. I am perfectly willing to answer the question.

Mr. BRECKINRIDGE. No, the question is objected to, and I will let it pass.

Q. These gentlemen represent a good deal of stock now which, unless it had been acquired since the formation of this trust by themselves or by a recent purchase, they would not represent, as I understand?—A. That is right.

Q. Now, has any part of this stock which has been purchased been acquired substantially—I mean where it is a controlling amount of the stock of the given refinery—has it been acquired substantially in block from one man or one or two men?—A. It has been acquired by a transfer from all the stockholders of the corporations as part of one transaction, which I suppose is what you mean by saying in block, but it is not in block, because it comes from individuals.

Q. No; that is not what I mean. If you were to acquire stock in small amounts for a number of stockholders, and in that way have gotten together the entire amount of stock, you would have brought it into block, but you would not have found it in block. You would have found it dispersed. Has there been any instance where you have found it in block, massed into the hands of one holder, for instance?—A. Not at all. The stock has existed in the hands of a large number of corporators.

Q. In every instance?—A. In every instance.

Q. Then it was acquired from the hands of numerous holders?—A. In every instance.

Q. That applies to every new refinery that has been brought into the association?—A. To every one.

Q. Is there any instance where you have offered to take the stockholders of these newly-acquired refineries into the association, and they refused to enter?—A. Not to my knowledge.

Q. You just stated, Mr. Parsons, that in some cases you bought up all the stock of certain refineries.—A. Mr. Breckinridge, that is where you and I differ. You speak of purchasing and buying up. There was none purchased and bought up. The stock has been by its owners transferred to this board, and against that stock this board has issued certificates of interest.

Q. Yes; but these present owners, as you have just stated, are not the men who were the owners prior to the formation of this association.

I am speaking of their individual interests.—A. But in no case have the members of this board as individuals acquired any stock in these refineries.

Q. I understood you to say they had.—A. There is where you and I misunderstand each other. You talk of purchasing stock, which in my mind is not a suitable name to apply to this transaction.

Q. You are mixing up two transactions, or rather attributing that to me. I am not intending to do so. I understand you to say that certain gentlemen who are in this association have become personally the owners of the stock of some sugar refineries, one or more, which stock they did not own prior to their forming this association or contemplating the formation of this association?—A. Yes, personally; but not in their individual right. Only as the representatives of the stockholders of all of these corporations.

Q. Well, I do not care about the succeeding step if I get the first one. That is all I am after at this time—the fact that those gentlemen, in one capacity or another, did acquire that stock.—A. That is true.

Q. That is all. The rest of the matter can be settled as it comes up.—A. Except that you are dividing the parts of one transaction.

Q. I am trying to get at the transfer of this stock.—A. Your proposition is literally correct, and I have answered it literally. My testimony shows the rest of the transaction.

Q. Then the original holders of that stock—I speak of the original holders as relating to a period anterior to the formation of this association or its contemplation—are not now the holders of certificates of that stock?—A. They are not the holders of stock certificates.

Q. That is what I mean. What other certificates are there than stock certificates?—A. They are holders of certificates of interest in the stock of their refinery and of all these other refineries.

Q. Yet I would not take that to be the case if they had sold out as individuals to other individuals. Mr. Parsons, suppose you were a sugar refiner, and you did not care to take the certificate of this association, but you had no objection to selling to some gentleman who wanted to go into the association provided he could get a sufficient consolidation of property, and you sold it to Mr. Havemeyer for instance, and Mr. Havemeyer paid you his money, or you sold to any other gentleman who chose to buy you out. You are no longer in the sugar business. You have sold out.—A. But that state of things does not exist. There has been no such transaction with one possible exception.

Q. What is that?—A. There is in New York a refinery called the North River Sugar Refinery.

Mr. BRECKINRIDGE (interrupting). That is what I wanted to know, whether there was any such case.

The WITNESS. There is this case. There is or was in New York a refinery called the North River Sugar Refinery. Mr. George H. Moller, its principal officer, is here as a witness now. Its name appears signed to the deed, signed by Mr. Moller, but before the consummation of the arrangement the North River Sugar Refinery objected to proceeding. Their property in whole or in part had been condemned for a public park in the city of New York, and my belief is that they believed that by staying out they could get from the corporation of the city for their property as a park more than they could receive from this arrangement. Whatever their motive, they did not proceed, and the result was their stock was purchased by Mr. John E. Searles, jr., and he, as owner of the stock, became party to this arrangement.

Q. That exactly covers the kind of transaction I have been trying to get at.—A. That occurred in that case, and that is the only case in which that transaction occurred, and there there was no departure from the mode of the arrangement except that Mr. Searles became a member of the association instead of the previous stockholders, and that was the only instance which occurred.

Q. What is the name of this gentleman who signed the deed for them?—A. George H. Moller; there he sits [pointing to Mr. Moller].

Q. Did Mr. Moller tell you or any of you gentleman —

The WITNESS. May I add to my previous answer? Mr. Havemeyer raises a question as to whether those certificates have been actually issued or not. As to that I can not answer, but they exist.

Q. They are issued or to be issued?—A. Yes, you put it straight.

Q. Mr. Searles and Mr. Havemeyer, as I understand, own all Mr. Moller's stock?—A. Mr. Searles does.

Q. Mr. Searles alone?—A. Yes, sir.

Q. He, then, owns the stock and Mr. Moller does not?—A. Mr. Moller does not.

Q. What did he pay for that stock—money?—A. Money.

Q. Mr. Searles then receives the certificates, and not Mr. Moller?—

A. Mr. Searles would be entitled to the certificate, and not Mr. Moller.

Q. That is precisely what I want to get at. You stated, I believe, that an effort had been made, or an invitation had been extended to Mr. Moller, to let his stock come into this association in the same manner in which other gentlemen had consolidated their stock, and he declined?—

A. Mr. Moller signed the deed, this very paper; his name appears among the signatures.

Mr. HOPKINS. Mr. Moller senior or junior?—A. Mr. Moller; I do not know whether senior or junior. There are several branches of the Moller family.

Mr. HOPKINS. I know that very well indeed. As a New York merchant, I know them all.

The WITNESS. He is not of the Peter Moller family.

The CHAIRMAN. This is George H. Moller who is present.

Mr. BRECKINRIDGE (to the witness). Please continue.

The WITNESS (continuing his answer). His name appears among the signatures, but there was a long interval between the time when Mr. Moller signed and the time when other parties signed, and the time fixed for the consummation of the arrangement, and at that time Mr. Moller, or the parties represented, changed their minds.

Q. That is very well. The only point I wanted was the fact that an invitation had been extended to him, or an effort made to secure his co-operation.—A. That is so.

Q. What was the face value of the stock that Mr. Moller possessed?—

A. The capital of Mr. Moller's company was \$350,000. The amount of the certificates—

Q. I am not speaking of certificates, but of stock.—A. The stock was \$350,000.

Q. What amount of money did Mr. Searles pay for this property?—A. \$325,000.

Q. What amount of certificates was Mr. Moller to have received?—

A. \$700,000, less 15 per cent., reducing the amount to \$595,000.

Mr. HOPKINS. Mr. Parsons, I would like to ask a question, please.

Q. You do not know that the stock is on the New York market, do you? I ask you as a lawyer.—A. Do you mean the certificates?

Q. Yes.—A. Only by newspaper report. I know of no sales.

The CHAIRMAN. Mr. Parsons, we come back to the question submitted to you at the adjournment.

The WITNESS. That matter has been considered since the adjournment, and the situation is this: I do not own that deed. I have no control over that deed. It is the property of the board. I come here with authority to furnish a copy complete, with the exception of the distribution of the certificates. I have no authority to furnish that distribution. I hope the committee will be satisfied to take the deed in the form in which it exists without raising any further question, and for this reason: While it is the desire of all parties to furnish any information which in their judgment bears upon legislation, there are large private interests at stake here which might be hurt by an inquiry into matters which we regard as purely private. These various refineries differ in strength, importance, and credit, and it might easily be that inferences would be drawn, if these amounts were given, which might be seriously injurious; and I am very satisfied that the committee would not wish to be even innocently the instrument of occasioning such injury.

The CHAIRMAN. Now, gentlemen, it seems to me that with that statement before us it is proper that the committee should go into executive session.

Mr. WILSON. I would like to ask a question or two first.

Q. I understand, Mr. Parsons, that the certificates of interest in your sugar refineries' company were based not upon capitalization or stock of corporations, but upon the actual value of the property.—A. The actual value of the property, and the supposed superiority which one might have as against another by better appliances in use, etc.

Q. That would probably be included under the head of actual value of property. I infer from your statement of amount of stock issued to Mr. Searles, who became the owner of the refinery of Mr. Moller, that the certificates of interest were exactly twice the actual value of the property that entered into the association?—A. That would be an erroneous inference. The capital of Mr. Moller's company had been about \$350,000.

Q. The actual value \$325,000?—A. The amount of certificates was \$700,000, less 15 per cent.—\$595,000. In no consideration of the subject was the relation of the \$350,000 of capital to the \$595,000 of certificates considered.

Q. I understand that you did not consider the capitalization or the amount of stock, but the actual value under the rules of an assessment laid down in your agreement, and that certificates in your company were based upon that actual value in its ratio to the entire cost?—A. Yes, sir; but I do not mean to say there was any regular ratio. It was a matter of agreement.

Q. But you had fixed your limit at fifty millions?—A. Yes, sir.

Q. I understand, then, the transaction was this: Here was a sugar refinery whose stock was nominally \$350,000, whose actual value was \$325,000, that being the price at which Mr. Searles became the purchaser, and upon putting that refinery into this association he received upon the agreed basis of distribution of the certificates of interest in the organization for his \$325,000 worth of actual property \$700,000 of the certificates, less 15 per cent.?—A. I can not say that the market value of the stock of Mr. Moller's company was \$325,000.

Q. I am not speaking now of the value of the stock issued, but of the market price of the property.—A. I can not say what its value was. The market price in that transaction was \$325,000.

Q. That is the best evidence, is it not; a transaction of that sort between competent men?—A. Yes.

Q. Then \$325,000 worth of property, as shown by this transaction between men who knew what they were doing, received in certificates of this association \$595,000?—A. Or rather was entitled to receive that amount. Now, Mr. Searles, you will remember, is a member of this board and a party interested in this transaction, and although Mr. Searles was the purchaser, yet the purchase was made on behalf of other parties interested.

Q. Mr. Searles as a member of the board was not the purchaser of the property?—A. No; as an individual.

Q. And as the representative of other individuals he was the purchaser of the property?—A. The property was purchased at \$325,000.

Q. And received \$700,000 in the certificates of the Sugar Refineries Company, less 15 per cent. off?—A. Yes; or was entitled to receive that amount.

The CHAIRMAN. That is the agreed valuation at which you issued certificates for the stock of the company was \$595,000, which stock of the par value of \$350,000 had been bought at \$325,000?—A. That was that transaction.

By Mr. HOPKINS:

Q. Would not you, sir, as a lawyer, having me as your client, have paid \$400,000 for the Moller property? I ask as a merchant.—A. I never saw the Moller property. If I had seen it I would be entirely incompetent to tell whether it was worth \$250,000 or a million.

(After fifteen minutes spent in executive session, the doors were reopened, and the committee resumed its session.)

The CHAIRMAN. Mr. Parsons, the committee have had under consideration the question asked you, and your objection to answering it at this time, and they have reached the conclusion that they will not, for the present, insist upon it. There are, perhaps, however, one or two questions which Mr. Hermann desires to ask you, and to have your answers reported.

By Mr. HERMANN:

Q. Excuse me for repeating the question formally, inasmuch as it was reduced to writing by the stenographer. You have stated that the actual cash value of this property was rated at \$325,000?—A. Of the North River Sugar Refining Company.

Q. So I understand.—A. The stock of the North River Sugar Refining Company, which was \$350,000, was sold for \$325,000 cash.

Q. What did I understand, or what did you say was the par value of the certificates which were issued?—A. \$595,000 net.

Q. Then I recur to the main question. What was the object or the purpose to be conserved by issuing a certificate so much greater than the actual cash value of the property?—A. The parties interested in the North River Sugar Refining Company became parties to this arrangement under an agreement by which they were to receive \$700,000, 15 per cent. off, in certificates. Between the time of their signing the agreement and the consummation of the arrangement they changed their minds and declined to go on. Mr. Searles then came forward in the interests of everybody else, and bought their stock at a price agreed upon—\$325,000 for \$350,000 worth of stock—and then the arrangement became consummated in that way.

Q. My question is as to what was the object, or what was expected to be made, or what was the consideration for these certificates being

issued so far above the actual cash value of the property which was given in exchange?—A. The transactions were separate transactions. The first transaction fixed for the property of the North River Sugar Refining Company was \$700,000—15 per cent. off. The second transaction, which took place months afterwards, fixed for the property for the North River Sugar Refining Company \$325,000 in cash. The purchaser at \$325,000 in cash consummated the arrangement. There was never a sale of \$595,000 of certificates for \$325,000 cash, although that was the practical result.

Q. What was the object of fixing the \$595,000 as the par value of the certificates?—A. That arose in pursuance of the terms of the arrangement. The North River Sugar Refining Company people by agreement—everybody was trying to get as much as he could from the others, and in the end the price being fixed by agreement—were entitled to \$700,000 less the 15 per cent. off, or \$595,000. As they did not come in, Mr. Searles, in the interest of all the other parties interested, acquired their stock at \$325,000. He simply took their place, but that stock was represented at \$595,000, as agreed upon.

Q. In your accounting among yourselves in the syndicate, this property is now valued at \$595,000?—A. It was by the terms of this deed represented by \$595,000 of certificates, and if you treat that transaction as representing the cash value of the certificates, the result is that \$325,000 in cash has been treated as the equivalent of \$595,000 of certificates. But the cash came from all of the other parties interested. It was not an outside transaction.

Q. I also submitted an additional question as to what possibly could have been the object of the company; whether it was not in consideration of the increased value of this property by reason of being merged with a great many properties, etc., and the various capitals being aggregated, so as to make it more valuable in the markets of the world.—A. I think the result of this aggregation is to contribute value, but it had no particular bearing upon that particular transaction. My own impression and belief is, that the property of the North River Sugar Refining Company cost much more than \$325,000; and my impression also is that it was the expectation of the North River Sugar Refining Company people that when their property was taken as a part, they would get from the corporation of New York much more than \$325,000.

Q. Would it not have been more in accordance with commercial and business transactions if you had issued your stock upon the cash value of the property, namely, \$325,000?—A. It would have been if there was anybody to buy the stock and pay cash for it. This body is a mere representative of other parties, and has no cash to use.

Q. Was not this margin left more for the purpose of speculation?—A. No, sir; there is no thought of speculation, and no action which bears upon speculation from the beginning to the end. So far as I know, no one of these parties has ever sold one of these certificates, and so far as I know no one of these parties has contemplated the sale of a dollar's worth of the certificates. Each one of the stockholders of each one of these refineries has become interested in the stock of all. That is the beginning and end of the transaction. It has no relation whatever to speculation.

By Mr. BYNUM:

Q. How much stock did this company turn over to this board?—A. The North River Sugar Refining Company turned over its capital, \$350,000.

Q. That was undoubtedly stock?—A. Yes, sir.

Q. Was that all it turned over?—A. Yes, sir.

Q. Then they issued \$595,000 in certificates for the \$325,000 in stock turned over from the North River Sugar Refining Company?—A. That was the practical result, but it was not done in that way.

Q. How was it done?—A. It was done by the stockholders of the North River Sugar Refining Company selling their stock for \$325,000.

Q. The purchasers of that stock turned it over?—A. They were represented on this board by Mr. Searles, one of their number.

Q. Did not they go on and carry this through as individuals, the same as other stockholders?—A. No. The \$595,000 which represented that stock remains in the reserve fund down to date. It has never gone upon the market.

Q. Then the transaction was that Mr. Searles, representing this trust or combination, purchased this stock for \$325,000, and it is merely the certificates which were to be issued that remain in the hands of the board?—A. That is stated exactly.

Q. Does that transaction represent the proportion of certificates that were issued to the stockholders of other companies, or did they actually turn over their stock?—A. I do not believe it bears upon it at all.

Q. Who put the estimate upon this property when this company first signed this paper and agreed to become a member?—A. George H. Moller, as the representative of the parties interested in this refinery, by agreement of all the parties.

Q. I understood you to say that each one of them examined all this property to see whether the estimate put upon it was a correct estimate?—A. To see whether the schedule corresponded with the property as it existed.

Q. Was there any estimate put upon the schedule?—A. No money estimate.

Q. There was no value attached at all?—A. In this particular case, at the time that the \$700,000—15 per cent. off—of certificates were arranged, there was no thought of the purchase of the stock.

Q. This value of \$700,000 was fixed by agreement with all the parties when they fixed the price at which all the properties were to be taken by the trust?—A. Precisely so.

Q. And the agreement by all of them was that this property should be taken at \$700,000, and it was actually, a short time afterwards, purchased for \$325,000 for the trust?—A. Seven hundred thousand dollars, 15 per cent. off, or \$595,000; and it was some few months after that that this purchase for \$325,000 in cash was made—meantime there having become disclosed the fact that this property had been condemned under a law in New York for a public park, and must therefore cease by operation of law.

Q. Did that condemnation detract from its value?—A. It tended to fix the value of the property in this, that the corporation would endeavor to buy it at the lowest price that was possible, and might be relied upon not to take into consideration the value which it had for sugar-refining purposes, as the corporation desired it for a public park.

By Mr. HERMANN:

Q. Then, I understand you that the original owners of this North River Sugar Refining Company, that is, the North River Company itself, as a matter of fact only received \$325,000?—A. Yes, sir.

Q. These certificates went into the hands of Mr. Searles, who was a member of the syndicate?—A. No sir; they rather remained in the reserve fund under the control of the board.

Q. Was the same margin allowed upon other properties which went into this syndicate?—A. It is very difficult to answer that question. Here were two parties dickering as to the value in certificates of the property of a particular refinery. There was no ratio at all. Each transaction was a separate transaction.

Q. Approximately that is substantially the same proportion?—A. It is claimed by the parties interested that it required 60 to 70 per cent. of the face value of these certificates to represent these various refineries' properties. It is claimed that without taking into consideration their earning capacity they represent a value to-day of 60 to 70 per cent. of the capitalization of these certificates. It is claimed by them that in addition to that, in reaching a valuation, it would be right to take into consideration patents which represent an enormous outlay of money; inventions, processes, and appliances which never have been patented and which are in use, and which represent an enormous amount of money; the business capacity and, if you please, the good will, which on any ordinary basis represents a very large capitalization; and the taking into consideration of all those matters, therefore, which in a conjecture between an insider and an outsider should be considered, this capitalization is no more than par.

By Mr. McKINNEY:

Q. Then, do I understand by that answer that a man's ability to conduct the business is represented in these certificates by so much cash?—A. Not by any separate item, but if you wish to buy one of these certificates, with it would go a part of Mr. Searle's refining capacity.

By the CHAIRMAN:

Q. One thing is spoken of there which is not in accordance with my understanding of the testimony. This property of the North River Refining Company has not been actually condemned?—A. No, sir. It has had upon it that stigma which results when a law is passed which authorizes condemnation, and proceedings have been initiated for the purpose. But there remains the ascertainment of the valuation.

Q. Have proceedings been commenced under the law condemning this property?—A. I understand that they have.

Mr. MOLLER. I understand that it is to come up on the 31st of this month.

The WITNESS. I understand that notice for the condemnation has been given, and you will see that the result of that transaction is that we will take our chances with the corporation instead of Mr. Moller.

Q. So that the price at which the corporation of the city of New York, the municipal corporation, will take the property is not yet ascertained?—A. No, sir; I mean to make them pay more than \$325,000 if I can. (Laughter.)

Q. You do not desire to be understood as stating here that in your judgment, in ascertaining the value of that property under these condemnation proceedings, no account is to be taken of its enhanced value by reason of the uses to which it has been put?—A. If I can prevail upon the supreme court of New York to accept that as an element of value I would have no hesitation in trying it. I think what should fairly be taken into consideration is that it was a sugar refinery.

Q. You have not intended by your answer to waive that element of value?—A. I waive nothing.

By Mr. BRECKINRIDGE:

Q. This 15 per cent. that is left in the treasury belongs, I believe, to

every member in this association?—A. Every holder of a certificate is entitled to that pro rata.

Q. Therefore, when this is left in the treasury it is in no sense lost to the party who placed it in the treasury, an equal margin being retained upon every other transaction?—A. Yes, sir.

Q. It is supposed to be just as valuable to him as if it were in his own pocket?—A. Yes, sir. Every certificate to which he is entitled is just as valuable.

Q. And he is entitled to the pro rata of the 15 per cent.?—A. Yes, sir.

Q. The North River sugar-refining property you speak of as having received a stigma when it was marked for condemnation for park purposes. You were perfectly aware of the possibility of diminishing the value on that account when you still carried out the original transaction?—A. Yes.

Q. And made no deductions on that score?—A. No.

Q. The reason, I believe, you stated was that Mr. Moller's original intention was that he considered the value had been enhanced?—A. I do not think I said that; I think I said that between Mr. Moller's signature and the consummation of the arrangement the minds of the parties represented by Mr. Moller changed, and they declined to go on. I think I ought to add this: I have understood from Mr. Moller that the question was raised as to his authority to make the arrangement. At all events, his constituents did not go on.

Q. If this refinery is condemned for park purposes it no longer possesses any power to compete with you as a refiner, as I believe that would be to its destruction.—A. Yes, sir.

Q. What was the inducement, then, to this association to acquire its stock when they knew that very soon they would neither contribute to refining sugar nor compete against refining sugar?—A. Simply an arrangement which had been made, and which concerned a large number of persons. Merely to carry out an original agreement.

Q. You spoke of those transactions with respect to the issuing of certificates as being in no sense speculative, but represented solid values. Am I to understand from that that you consider that they are, or ought to be, or soon will be, worth par?—A. I do not believe that my judgment of their value, present or future, has much importance. The New York papers have stated that they were sold at 75 and 80 per cent., and it was stated in the New York papers yesterday that 100 shares of these certificates sold at 65.

Q. Of course I do not ask the question as a person interested would ask it, but simply as bearing upon the intention and policy of the association; what they would expect to be the effect of their combining together.—A. I think their opinion is that these certificates represented all of these properties. I think that these properties were worth \$45,000,000, represented by outstanding certificates.

Q. And that the earning capacity of this refinery, if continued in this manner, ought to represent a solid value for the call of these certificates?—A. That is my opinion, unless it shall be thought necessary by legislation to injure the interests of all parties concerned; I mean the proprietors of the refineries, the persons employed in them, and, I think, as well the consumers.

Q. In other words, to break up the association?—A. O, no; not to break up the association; it has nothing to do with that matter. I mean to break up American sugar refining.

Q. American sugar refining existed before the association?—A. And will afterwards, and entirely irrespective of it.

Q. And you expected certain benefits to arise from the association of the refineries?—A. I expect these benefits will arise: the cheapness and reduction of expense, which always comes from the aggregation of capital; the lowering of the price, which results from doing business on a large scale; and the consequent increase of consumption, which reacts in the interest of the manufacturer.

Q. Increased profits will arise from those causes?—A. Increased advantages will arise from these causes, including a fair profit to the refiner.

Q. A profit which represents a fair value of these certificates?—A. A fair value of these certificates and the property concerned.

Q. Under the arrangement of which you speak?—A. Yes, sir.

Q. I do not recall just now the number of refineries that are embraced in this association. Will you please state them?—A. There are nine in New York, one in New Jersey, one in Maine, two in Louisiana, one in Missouri, and four in Massachusetts.

Q. That makes eighteen, I believe?—A. Eighteen.

Q. How many of those refineries are in operation to-day?—A. That I do not know.

By Mr. HERMANN:

Q. I understand you to say, in substance, that the aggregate of capital in this trust association was intended to diminish the expense in the refining of sugars, and therefore will have a cheapening tendency in the price as to the consumer?—A. That is my judgment, and I come to that conclusion because *that* is affected by aggregation in all lines of business, whether it is a question of selling dry goods or groceries or operating a number of railroads. The larger the scale upon which business is done the cheaper can the commodity be sold. All political economists say so. It is the experience of all merchants, manufacturers, and business men that that is so, and I do not see why in this case there should be a difference. Political economists tell you, and I think it will be the experience of this arrangement that it is so, consistent with paying a fair price for labor. The laborers in these refineries to-day get the highest price that has ever been paid for such labor, and the only thing that can injure the prices paid to American operators, which is two or three or four times that paid to cheap laborers in refineries abroad, is that legislation shall take place to ruin the refineries.

Q. On the contrary, I was about to ask you whether we do not find, from practical experience in our associations in life and in business enterprises, that the aggregation of capital fosters monopolies, and monopolies, as a general thing, associating together for one common purpose, tend to increase the price to the consumer, and increase the price to those who were engaged in the monopoly?—A. If it were possible to have a monopoly in the manufacture and sale of any commodity, I take it for granted that the self-interest of the seller would increase the price. In regard to sugar it is impossible. In reference to almost all commodities, in this day of railroads and steamships and telegraphs, it is impossible. It is peculiarly impossible in the case of sugar, because the merest minimum reduction on account of the advance of prices here, will bring in foreign sugar immediately. The erection of new refineries, proposed now, will enlarge the output of existing refineries which are not in this arrangement, and it is just as impossible to prevent competition as it is for Mr. Macy, or Mr. Wanamaker, or the late Alexander T. Stewart to prevent competition in the goods in which they dealt. The universal experience is, that when business is done on a large scale

the person carrying on the business can get his profit, and the consumer can get his article at a lower price.

Q. But in view of the immensity of this vast trust association, and its swallowing up and having merged into itself all the refineries of the United States, which I understood to be a fact, will not that in the end produce a final aggregation of the refineries in other countries? Will it not lead beyond the boundaries of the United States, and finally and entirely wipe out all competition and create such a monopoly as that it will be impossible to ever compete against it?—A. I have put together as an appendix to an argument which I addressed to the judiciary committee of the New York assembly charged with a bill upon the subject. I have put together what text-writers say upon the subject—such as Truro Rogers and John Stuart Mill—men who are recognized as leading men in dealing with this subject. They tell you what must be, and also refer to the history of the causes of trade in the past, and they all agree, and I think all gentlemen who know anything upon the subject will confirm it, that the world is too big a place.

Q. As an elementary principle, has it not been your knowledge that monopolies are the enemies of competition?—A. In the only sense in which you can use the term “monopoly;” that is to say, a monopoly protected by a patent or a Government grant. If the Government will give me an exclusive monopoly to sell a certain thing for five years, I will put the price up.

By Mr. SMITH:

Q. Mr. Parsons, you have stated something about benefits accruing to labor. Will you please illustrate that? How does this concentration in this particular class of manufactures in the hands of a few benefit labor?—A. Because the more sugar that they can sell the more labor they require.

Q. My experience with manufacturers goes to show just the reverse of employing labor. As I understand your remarks, that by the concentration of these several manufactures, and as you testified that those particular corporations which formed this trust were a little lame as to the best improvements in manufacturing sugar, this trust would look to it that they were supplied, we will say, with the best machinery and appliances for that purpose. Now, is it not a fact that when such appliances are made labor is more dispensed with?—A. No, sir; not at all. That is not in the experience of manufacturing in any part of the world.

Q. It is not?—A. No, sir; not in any part of the world. More persons are employed in manufacturing under the improvements which exist to-day than at any previous time.

Q. Then my existence here as a human being is a mistake? [Great laughter.]

The WITNESS. Mr. Smith, that argument was started at the beginning of this century [laughter],—at the introduction of the cotton-loom, the spindles for the manufacture of cotton stuffs, in England.

Mr. SMITH. Let me give you my experience. Before we had any planing-machines, let us see how many men were employed to dress lumber. Sugar sold for 5 cents a pound away out West.

The WITNESS. I am employing carpenters to-day, and am paying them \$4 a day. How much did they get at the period to which you refer?

Mr. SMITH. I got 75 cents for hewing timber. I could buy beef at 3 cents a pound and a barrel of flour for \$3 right out in that Territory.

## TESTIMONY OF JOHN W. DODSWORTH.

By the CHAIRMAN:

Q. What is your full name?—A. John W. Dodsworth.

Q. Where do you reside?—A. In Brooklyn.

Q. New York State?—A. New York State.

Q. What is your business?—A. Journalist.

Q. On what paper are you engaged?—A. The Commercial Bulletin, as managing editor.

Q. How long have you been connected with that paper as managing editor?—A. Nearly four years.

Q. How long has that paper been in existence?—A. Nearly twenty-five years.

Q. And what is its particular branch?—A. It covers all the large branches of trade—financial trade.

Q. And what do you mean by the expression “it covers”?—A. We endeavor to publish trade statistics; to give all information relating to business and to discuss business questions, and, if we can, to answer questions in an impartial manner.

Q. Have you drawn off from the files of that paper a statement of the prices of sugar?—A. I have.

Q. Covering what period?—A. I have brought with me here a statement of the highest and lowest prices of raw sugar, fair refining; refined sugar, granulated—I should, say raw sugar centrifugal, 96°; the highest and lowest prices for the years 1885, 1886, 1887, and up to the present time, 1888.

Q. Are these the figures [exhibiting a paper to the witness]?—A. Yes, sir.

Q. Now you use an expression here of “raw sugar, fair refining;” what grade of sugar does that refer to? I take it that is a technical expression.—A. That grade is selected as being accepted by the trade as a standard grade.

Q. Is the sugar of any particular form of manufacture?—A. That is a question as to which I can not answer technically; I do not consider myself an expert.

Q. I want simply to know what you mean by the expression “fair refining.”—A. That is the name of a particular grade of sugar—fair refining.

Q. Do you know what the distinction is between it and raw sugar, centrifugal?—A. No, sir; I can not answer that technically.

Q. Whether as an expert or whether from practical information?—A. I only go into that as a matter of reporting the markets.

Q. Then this expression “fair refining” is a common expression in the market, which has a technical and well-known meaning?—A. Yes, sir, to people familiar with the business.

Q. You would not be able to distinguish what “fair refining” sugar was from a sample?—A. No. I want it to be understood that I only appear here as a reporter of the markets.

Q. I understand your business is with the statistics and the condition of the market. Now, then, there is another table here of “refined sugar, granulated.” What does that mean?—A. That is a particular grade of sugar, which is also a standard grade.

Q. Fair refining sugar, the expression used by you, is one that is technical, and commonly understood in the trade?—A. Commonly understood in the trade.

Q. And you have another table here under the head of “raw sugar, centrifugal 96°.”—A. Yes, sir; the raw sugar is also a standard grade, but not so much—not so generally accepted by the trade as the other.

Q. The "96" is 96 per cent., as you understand it?—A. Ninety-six degrees test.

Q. That means by the polariscope test?—A. Yes, sir.

Q. But the expression is one in common use and one which would be understood by a person conversant with the trade?—A. Yes, sir.

Q. How do you gather the figures for your paper?—A. We have a reporter who attends to the markets daily.

Q. In canvassing the markets to whom does he go?—A. To the brokers.

Q. The brokers who buy and sell the sugar upon the market?—A. Yes, sir.

Q. Why does he go to the brokers instead of to the refiners and dealers?—A. Because they are supposed to be the most disinterested persons in the business.

Q. How often is your paper published?—A. Daily.

Q. And is this tabulated statement which you produce here gathered from its files?—A. Yes, sir.

The CHAIRMAN. I propose to submit this paper for the identification of the witness, as part of the evidence.

(The tabulated statement introduced in evidence and marked Exhibit R. L. M., No. 3.)

RAW SUGAR—FAIR REFINING.

Q. Is there any other statement of fact with relation to this market?—  
A. No, sir; I have no other statement to make.

Q. Have you in your reporting gathered up and printed the prices as they prevailed in any other market?—A. Only as it affected the New York market, and then only in the regular way.

Q. Have you such data with you?—A. I have none.

By Mr. MCKINNEY:

Q. Do you consider that New York sets the market price for the country?—A. Yes, sir; very largely so.

Q. This statement is a fair representation of the markets of the country?—A. Yes, sir.

Q. You have heard this subject of the organization of a trust among the sugar refiners so much talked about?—A. Yes, sir.

Q. Can you state when you first heard it talked about generally among the brokers?—A. It was in October that I first heard it talked about.

Q. Before that had there not been some whispering of the purpose to form such an organization?—A. We had heard rumors of some sort to that effect.

Q. It had not taken shape before that?—A. No, sir.

Q. Did these rumors produce any effect upon the market, or did any fluctuations in price follow the rumor?—A. Later on there was a declining tendency in raw sugars and an advancing tendency in the refined.

Q. What do you mean by "later;" later than October?—A. Yes, sir; later than October. It was generally stated that it was largely due to the combination, but there may have been other causes besides.

Q. The raw sugar declined, as I understand you?—A. Yes, sir.

Q. And the raw sugar is represented in these two tables as what the refiners buy?—A. Yes, sir.

Q. And the refined sugar advanced?—A. Yes, sir.

Q. Since the fact of this trust being created and having gone into effect became known, has any change in the condition of the market value followed?—A. In what respect?

Q. As to prices or extent of dealing.—A. As I said before, raw sugar has declined and the refined has advanced.

Q. That followed the rumor. Has that condition of things continued to exist?—A. There is to-day a wider difference between the raw sugars and the refined sugars than there was before that time.

Q. Can you state that in figures?—A. Yes, sir.

Q. Just summarize it.—A. I have not the latest quotations. In July, 1887, the difference in prices between "raw sugar, fair refining," and "refined sugar, granulated," was  $1\frac{5}{16}$  cents; at the present time, or within a few days, the difference is  $1\frac{7}{8}$  cents.

Q. More than half a cent a pound difference?—A. Five-sixteenths of a cent difference.

Q. Has it been known upon the market there, in the city of New York, that no raw sugar can be sold except to the members of this trust; is that the common understanding?—A. The common understanding is that the trust is the only buyer of raw sugar, and importers frequently hold themselves more or less at the mercy of the trust buyers.

Q. Has no effect followed that condition of things in the extent of the importation?—A. Not that I can testify.

Q. Has it been generally reported there that some cargoes of sugar were diverted from the port of New York?—A. That was reported.

Q. When?—A. I can not say positively.

Q. Within two weeks?—A. Farther back than that.

Q. About how many such cargoes of sugar were reported to have been diverted?—A. I do not know.

Q. More than one?—A. I can not say.

Q. Perhaps you did not catch the question; I mean how many do you recollect to have heard such reports about?—A. I do not remember.

Q. Were the cargoes of sugar so diverted reported to have been sent to foreign countries, or other parts than the United States?—A. That I do not recollect.

Q. You have given two forms of raw sugar here, one "fair refining," and the other "centrifugal, 96°." Do you know whether other grades than these come into the market in New York?—A. I believe they do.

Q. Do you know to what extent?—A. No, sir.

Q. Are these the two principal standard grades?—A. So I am told by the trade.

Q. Are any refined sugars brought into the port of New York at the present time?—A. Practically none.

By Mr. BRECKINRIDGE:

Q. You have gone very carefully over this list of quotations?—A. Yes, sir.

Q. You know it to be correct?—A. I know it to be correct according to our files.

Q. And the figures in your files are based upon actual transactions, are they not?—A. Whenever transactions can be obtained. Sometimes the reporter can not get the actual transaction; then he has to take them as they are given to him by the broker.

Q. Are these brokers generally buyers or sellers of sugar?—A. They are both. They are rather the agents between the buyer and seller.

Q. Then a broker performs both functions?—A. The buyer and seller are the principals, and the broker is the agent between them.

Q. He is looked upon as an agent?—A. Yes, sir.

Q. But the buyer has his broker, and the seller has his broker, I believe, as a general thing?—A. Yes, sir.

Q. The seller of raw sugars, I believe, employs a broker to make sales for him, does he not?—A. I presume that is so.

Q. The seller of refined sugar, I think, usually has a broker, or a salesman to conduct his sales, does he not?—A. Yes, sir.

Q. What I want to get at is to form an idea of any particular system that the brokers may have toward putting prices up or down in case they have no actual transactions to go upon.—A. That is not easy to get at. We endeavor to get as unbiased reports as we can. If the broker is biased in any way, of course we would not take his statement as authentic.

Q. Your newspaper, the Commercial Bulletin, is, I believe, considered a standard authority on quotations in New York?—A. We try to make it so.

Q. You have a large circulation with the trade?—A. Yes, sir.

Q. Your paper is taken pretty generally by the dealers in this market?—A. Yes, sir; also by the jobbers.

Q. And they treat your paper as one worthy of confidence, by continuing their subscriptions?—A. Yes, sir.

Q. That is, your paper would be called the official quotations of the market?—A. No, sir; we are not the official authority. I do not know of there being any official quotations except, possibly, what the trust may issue itself.

Q. I believe in commercial circles they usually consider the quotations of exchanges official.—A. Yes, sir.

Q. Have you a sugar exchange in New York?—A. Not at the present time. There was one some time ago.

Q. I think it is generally understood in commercial circles that in any exchange, composed possibly of men on all sides of the trade, such quotations are considered the standard?—A. Yes, sir.

Q. But your paper is as high and as authoritative a source of information as exists in New York; is it not?—A. We try to make it so.

Q. Is it so considered by the trade?—A. I am not the proper one to answer that.

Q. I want to know if there is any other source that is more reliable in its character.—A. It would be immodest in me to say so. There are other papers in the trade.

Q. Do you know how their quotations compare with yours?—A. They are very close. Sometimes ours may be a little under, and at other times a little above. It is only a fraction, and very minute.

Q. So that these quotations are substantially the same?—A. They are substantially the same.

Q. Are there any refineries in or about New York that are not in this association known as the trust?—A. I can not testify as to that. I know only from hearsay.

Q. Is it generally understood in the city of New York that if a ship comes there loaded with raw sugars the only purchaser it need expect is one of the gentlemen or companies associated in the trust?—A. Yes, sir.

Q. That is the general impression of the trade?—A. Yes; that is the general impression of the trade.

Q. The general impression of the trade is, then, that there is no competition for raw sugars in New York, as the purchasing is substantially in the hands of one association?—A. I can not answer that question.

Q. Would you not call that a necessary deduction from your former answer?—A. It would be the necessary deduction, but you want the fact, and that I can not give you.

Q. You spoke of discrepancies between the price of raw sugars and refined sugars. Is it considered by the trade that these discrepancies are more marked since the organization of this trust than before?—A. From all the information that we can collect, it is.

Q. Do you know what was the usual margin or discrepancy in price in New York between what is called "fair refining sugar" and "granulated sugar"?—A. I will have to refer you to the figures.

Q. You do not remember the usual margin?—A. No, sir.

Q. You have all that information, however, expressed in the figures here?—A. Yes, sir; they are included in them.

By the CHAIRMAN:

Q. Your testimony, as I recall it, was that the raw sugar declined in price and the refined sugar increased in price.—A. No, sir; not exactly. The raw sugar has advanced, but not in proportion to the refined.

Q. I so comprehended it.—A. If I so stated, I want to correct it. I meant to have said that the advance in the raw sugar was not in proportion to the refined.

Q. The margin between the two is different?—A. Yes, sir.

Q. Can you state the advance in price, for instance, in raw sugar at any date you may fix between the first of October and the first of January?—A. Yes, sir; since July, 1887, or shortly before the trust came

into existence, "raw sugar, fair refining," has risen from  $4\frac{1}{2}$  to  $4\frac{7}{8}$ , an advance of three-eighths of a cent; while "refined sugar, granulated," has risen in the same period from  $5\frac{1}{8}$  to  $6\frac{3}{4}$ , an advance of  $\frac{1}{2}$  of a cent; showing the amount of ratio and the advance in the refined and in the raw.

Q. So that if it is recorded here—I will not stop to look for it—that the price of raw sugars has fallen off since July, 1887, that is a mistake?—A. Yes, sir; there might have been temporary fluctuations, but in the long run the average was the other way.

By Mr. BRECKINRIDGE:

Q. You are speaking of your impression now. Suppose your impression should be contradicted by the record, then you would be mistaken?—A. Yes, sir; I would be mistaken, but not the *record*; it is based upon the figures that are before me.

By Mr. HERMANN:

Q. Then I understand you to say that the proportion of the increase in refined sugars has been greater since the creation of this trust than previously?—A. No, sir; I said that the advance in refined sugar has been greater in proportion than the advance in raw sugar since the trust was organized.

### TESTIMONY OF FRANCIS B. THURBER.

By the CHAIRMAN:

Q. You reside in the city of New York?—A. Yes, sir.

Q. And your occupation is what?—A. Wholesale grocer.

Q. You are one of the members of what firm?—A. Thurber, Whyland & Co.

Q. And for how long have you been engaged in the wholesale grocery business?—A. Twenty-five years or more.

Q. As part of your business, are you a purchaser from the refineries of refined sugar and a seller of it to the other merchants of the trade generally?—A. Yes, sir.

Q. Your business is one of the largest wholesale grocery businesses in the country?—A. Yes, one of them.

Q. You have heard of the sugar trust, I take it?—A. Yes, sir.

Q. When did the proposed formation of that association first come to your knowledge?—A. Some time during the last summer and fall.

Q. After that time was there any change in the market with reference to refined sugars?—A. Yes, sir.

Q. And what was that change?—A. The market for refined sugar, taking granulated as a standard, has advanced probably a cent a pound.

Q. And since what time?—A. Within the last five months.

Q. From what source of supply did you practically obtain your refined sugar?—A. From the New York sugar refiners. We occasionally buy small quantities in other markets, but New York is more or less our principal market.

Q. You have bought, from time to time, from the various refiners about the city?—A. Yes, sir.

Q. With whom, principally, have you dealt?—A. I think we have bought from Havemeyers & Elder; Matthiessen and Weichers; the Brooklyn Sugar Company; Havemeyer Sugar Refining Company; and Dick & Meyer. Those are the principal ones we have bought from.

Q. Now, practically, in your business, could you procure the necessary supply of sugar from any other source than the New York refineries? By "practically," I mean profitably.—A. I do not think we could procure the quantity we need, practically or profitably, from any other source than the New York refineries.

Q. You know, of course, that there are, I believe, one refinery in Boston and two in Philadelphia which are not included in this arrangement, this so-called trust?—A. Yes, sir. We have had sugars from both those markets.

Q. Have you ever supplied yourself from those outside refineries?—A. Not to a large extent. We have bought a small quantity in Philadelphia of the lower grade of sugar.

Q. Have you been able to purchase from those refineries since the formation of this trust so that you could, as a matter of practical business, get your supply from them?—A. There has not been enough difference in price between the two markets to make it an object to buy outside of New York.

Q. Has there been a difference between the Boston and Philadelphia price and the New York price?—A. A very slight one.

Q. Not enough to pay the difference in transportation?—A. No, sir.

Q. Have those refineries a sufficient capacity to supply you?—A. They have a considerable output, and I presume if there should be an inducement to them they would turn out more than what they are now turning out, and we might be able to get our supplies from them. But those things regulate themselves pretty well. They follow our market, I think, as closely as they can. They, of course, get all they can for their goods.

Q. And the difference has been slight between the prices of refineries not in the trust and those that are in the trust?—A. Very slight, indeed.

Q. Outside of your own business you keep watch, I suppose, and inform yourself of the general condition of the market in New York?—

A. Yes, sir; we have to watch all the markets of the world, more or less, in order to do business.

Q. From your observation, can you state where the refined sugar purchased by other people, and generally for sale in the New York market, comes from?—A. Almost exclusively from New York.

Q. Almost exclusively from these refineries that are connected with this organization or trust?—A. Yes, sir.

Q. Practically, is this combination, therefore, in your judgment, in such a condition that it could (should it elect to do so) control the New York market?—A. It could to a certain extent; but up to just what point other markets would begin to contribute supplies to the New York market is a very difficult thing to say. They do not control the whole business of the country.

Q. The point at which the other refineries not located in New York could supply that market would be reached, I suppose, whenever the New York refineries put their price at a point which would enable other people to pay the transportation charges and put sugar on the market in New York lower than the New York people offered it?—A. Yes, sir.

Q. And therefore the only regulation or protection which the New York market has against the raising of the price by this combination is from the fact that they must keep their prices down to a certain point which will not permit other people to pay the transportation and bring sugar to that market?—A. Yes, sir; that is substantially true.

A. So that no competition with this combination is possible until you reach the point where they put the price beyond what the other refineries can sell it, plus the transportation charges?—A. If they put their prices too high it would tempt others to put up refineries in New York.

Q. In the twenty-five years you have been in business, there have been some changes in the *personnel* of the people engaged in this refining business?—A. Yes, sir; there is not now more than one-third of them that have been in the business that long.

Q. Twenty-five years ago were there more refineries?—A. Excuse me; at any one time this would be difficult for me to say, but I was counting up, with Mr. Leggett, coming down in the cars yesterday (March 8), and we counted eighteen refineries which have gone out of business in the last eighteen or twenty-five years.

Q. Were these refineries in existence during the whole period?—A. No, sir; at different periods.

Q. Then have these refineries, the ones that are now in existence, been in existence during the eighteen or twenty years you speak of?—A. Some of them have, and there have been some changes in the personnel of others, but, I think, only eight or nine refineries now in existence have been in business for fifteen or twenty years.

Q. Without asking you to fix the time, will you please state whether the number of refineries, as they exist to-day, is larger or smaller than the number which existed at any one time during the period you have been engaged in business?—A. I think there is a smaller number now than there has been at some periods.

Q. Has there ever been a time when there were less than there are now?—A. I don't think there has been.

Q. There is no time that you recall?—A. No, sir.

Q. Is there any action or influence exerted upon the markets on this side by the markets in England?—A. Yes, sir; London is the controlling sugar market of the world.

Q. The prices on this side reflect the movement of the prices in London?—A. Yes, sir; to some extent, in a general way. When the world's supply is more or less it is first manifested in London, and it has more or less influence on our markets here.

Q. Do you know of any publication in this country which presents the figures of the London market from time to time?—A. There are a number of circulars which come here. Licht's circular is considered a standard authority. It is an English publication. It is received by the leading brokers here in this market, and the journals here reflect and quote from it.

Q. That is a circular printed where?—A. I think in London, although I believe it is continental.

Q. How frequently is it issued?—A. I am not certain. I can not say. I see it quoted regularly. Occasionally I see it myself.

Q. And where is it quoted?—A. In all commercial centers. The Daily Commercial Bulletin considers it a standard authority. I have an article in my hand which is quoted from it.

By Mr. HERMANN:

Q. To what cause do you attribute the increased price of refined sugar since the organization of this trust? Can it be attributed to the legitimate effect produced by the law of supply and demand?—A. To some extent, but perhaps not entirely. It may be attributed to a variety of causes—to the supply and demand, the state of the supply in the New York markets as compared with other markets where it might differ somewhat, and to the effect of the trust itself.

Q. I understand you to say no perceptible change has been observed between the prices of those refineries which are members of the trust and those which are not in the organization?—A. It is true.

Q. If the final conflict must come by the decree of the trust organization, would not the refineries in the trust, or the organization itself, having so large a proportion of the aggregated capital of the refineries, be enabled to compel those refineries not in the trust in the end to yield, and either retire from business, or be swallowed up, or become tools in the trust organization?—A. It might have that effect, but sometimes a small concern may endure longer than a bigger concern. That is, while they would have a smaller output and would be running at a loss, they would be running at a smaller loss than those which had a larger output. But where monopolies have the advantage is where they extend over a very large portion of the country. For instance, a railroad can do a portion of its work at a loss in one section of the country and have very large resources in other sections. You will see that demonstrated also in the contests of the oil people. The Standard Oil people will run its market down to nothing in one section of the country in order to break down and get control of that particular market, while in other sections they would be getting full profits.

Q. Notice has already been brought to the attention of some of the members of the House, though not to members of this committee, as to cargoes of raw sugar having arrived in the port of New York, and not being able to find any bidders outside of the trust organization, owing to the aggregation of the refineries under that one common head. I will ask you whether, as it becomes stronger and greater, those evil results will not be more appreciably felt?—A. I saw an account, I think, of a vessel off the capes of Delaware. It waited there for orders as to where she should go. I do not know that there was any charge of that kind, but in answering your question unquestionably the closer the control the cheaper such an organization can buy. If a seller of raw sugar had no competition for his trade, naturally he would have to take what he could get; but if his sugar was not unloaded, he could send it to European and other markets, where of course he would not be at such great disadvantage. A combination, unquestionably, can effect great economy. They can buy cheaper, work cheaper, and if they choose, can sell cheaper, than scattered and disorganized concerns.

Q. Is not it a fact that without competition they do not usually choose to sell cheaper?—A. I think that is the truth.

By Mr. BRECKINRIDGE :

Q. You state that you are able to count up in your own recollection some eighteen sugar refineries that have failed in recent years?—A. They have either failed or retired from business.

Q. So that you infer from that that the business is an extra hazardous one?—A. The tendency has been to close margins in the sugar business. For the last eight years it has been unremunerative. I don't think that the effect of the sugar combination thus far has been extreme. It may be so if they should get full control and see fit to do it. But, on the other hand, there is a safeguard that you can, without a very large use of capital, bring in competition in starting opposition refineries. It is not like a railroad where you have got to get a large amount of capital together in order to compete.

Q. I will supplement that by this question, whether the percentage of failures in the sugar-refining business has not been considerably larger than the percentage in other great lines of business, the wholesale grocery business, for instance.—A. I think it has.

By the CHAIRMAN :

Q. Have there been more men retired from the sugar-refining business than from the grocery business ?—A. I think there have been.

Q. Were there more men to retire ?—A. I do not know.

By Mr. SMITH :

Q. If my memory serves me right, Mr. Parsons testified that in building a plant for the sugar-refining business it took a great deal of capital to get the modern appliances, patents, etc. Your statement in answer to the gentleman was that in case this trust should crowd the sugar to almost an unbearable extent in price that others could step in and put up plants cheaply. I can not understand how that agrees with the statement of Mr. Parsons.—A. Well, you can go into the business, of course, on a large or on a small scale. For instance, take the North River plant. It has been valued here at \$350,000. You can go into the sugar-refining business with from one-quarter of a million to as many millions as you want to put into it. But it is not absolutely necessary that you should go into it on an enormous scale in order to do a large business. Unquestionably the larger concerns may have better machinery and better facilities, but that might be equalized by the remunerative margin there would be in the business. I have already had an application to go into the sugar-refining business since the trust was formed, but I have not, as yet, seen a sufficient inducement to do so. (Laughter.)

At this point, 2.30 p. m., the committee took a recess for thirty minutes.

#### AFTER THE RECESS.

#### TESTIMONY OF MR. CHARLES E. NICHOLLS.

By the CHAIRMAN :

Q. Give your name, please, in full.—A. Charles E. Nicholls.

Q. Your business is what ?—A. I am a grocer of the firm of Austin, Nicholls & Co.

Q. Is that one of the large grocery houses of New York ?—A. They do a very large business.

Q. About how many grocery houses of that size are there in New York ?—A. There are three houses doing a business of \$10,000,000 each.

Q. That is, your own ?—A. Yes, sir.

Q. And the Thurbers ?—A. Yes, sir.

Q. And Mr. Leggett's firm ?—A. Yes, sir.

Q. They are the three largest ?—A. They are.

Q. How long have you been in the business ?—A. Upwards of ten years.

Q. Of course in conducting your business you are the purchaser and seller of refined sugars ?—A. Yes, sir.

Q. Buying from the refiners and selling to the retailers ?—A. Yes, sir.

Q. From what sources, practically, do you make your purchases ?—A. From New York refineries.

Q. Have you, at any time during the ten years, bought from any other source ?—A. Yes, sir ; but in a very limited way.

Q. Where were those limited purchases made ?—A. I think during the strike we bought some in Philadelphia and some in Boston.

Q. With those exceptions your business has been transacted with the New York refineries ?—A. Yes, sir.

Q. And the New York refiners with whom you have dealt are the persons named in this agreement or trust-deed?—A. I think so.

Q. Will you state with whom you deal mostly?—A. We buy quite largely of the Havemeyers and Elder Company, and the Havemeyer Sugar Refinery, the Donner and De Castro Company, etc.

Q. Is it practicable for you to buy sugars for your trade from any other source than the New York refineries?—A. I think it is.

Q. Is it practicable at the present time?—A. Well, in moderate quantities.

Q. Could you purchase sufficient quantities to transact your business as it has been and is being transacted from any but the present source?—A. I think not at the present time.

Q. Does that result from the extent of the production or output of the other refineries, or from their location?—A. Largely from their output. The matter of freight is trifling to Philadelphia, but the output there would hardly be sufficient at a moment's notice to supply the New York trade.

Q. So that in effect the only source of supply to your business, as you have been conducting it, is these New York refineries?—A. Yes, sir; they are the principal source.

Q. The only adequate source?—A. Yes, sir.

Q. In conducting your business do you buy directly from the refineries?—A. We do.

Q. Are you furnished with a list of their prices?—A. No, sir.

Q. Is that a matter of dealing?—A. We have a buyer that represents us among the sugar refineries all the time.

Q. A broker?—A. No, sir; one of our employés; a buyer.

Q. In the ordinary course of the business do you gentlemen who purchase in large quantities buy from the refineries at the same price as they sell to others, or is there a shading allowed to you owing to the extent of your orders?—A. Unfortunately there is not. As far as I understand it, we pay the same prices as everybody else. Of course the market is fluctuating constantly and it is largely a matter of judgment when to buy.

Q. But there is no reduction to the large concerns as against the prices at which smaller concerns buy?—A. Not that I know of.

Q. Can you state generally to what extent you are a purchaser of sugars?—A. In the neighborhood of 125,000 barrels a year.

Q. Whereabouts are your sales made?—A. They are pretty well scattered. We are represented over the principal part of the country east of the Mississippi River, largely through the South, and of course through the Middle States and the East.

Q. You heard of the formation of this trust, or projected formation of it, I suppose?—A. Yes, sir.

Q. About when?—A. In October, I think.

Q. What effect, if any, did the announcement of the projected or contemplated trust have upon the market; or, without asking you to say it was the effect, what followed the announcement?—A. Well, shortly afterwards there was a temporary advance in the refined product.

Q. In the price?—A. Yes, sir.

Q. Has that continued?—A. No, sir.

Q. When did it change?—A. It has been a falling market since the first of the year.

Q. Has it fallen back now to the point from which it started on the first of October?—A. I think not quite.

Q. The Louisiana crop is marketed in the winter ordinarily, is it not?—  
A. Yes, sir; late in the season.

Q. When does it begin to come into the market?—A. About the last of the year or the first of the next year.

Q. Is it a fact that the market price of refined sugar ordinarily and annually drops off at the time the Louisiana product comes into the market?—A. Well, I would rather not say that it did. That is rather a local market, and while it might have an effect in that vicinity, I do not think it affects the market in New York very seriously.

Q. Well, in your experience, does not the market price of sugar decrease in December and January?—A. Well, the demand is supposed to be a little less for it, and the market is perhaps what you might call "nominal quiet" at the time. We have months in the year which are known as sugar months, in which the market is quite active.

Q. Since this organization went into effect have you made purchases from any other than New York refineries?—A. No, sir.

Q. Have any propositions to purchase from the others come to your house?—A. No, and they hardly would. If their price was sufficiently lower than that of the New York refineries to justify us in taking the goods we should know it all the time.

Q. It has not been, so far as you know, low enough to justify the expense of the freight on it?—A. No, sir.

Q. Have you known or heard of any cargoes of sugar coming to the port of New York or the Delaware Breakwater, and being diverted from New York?—A. Only through the public press. I think there was a short notice of such a cargo.

Q. When was that?—A. My impression is that it was some weeks ago.

Q. Do you recollect where it was stated that that vessel went to?—  
A. I do not.

Q. Where did she stop; at the Delaware Breakwater?—A. I understand so. I was under the impression that she stopped there because that was considered the best market.

Q. She did not come to New York?—A. I do not understand so.

Q. You did not understand that she came to New York after touching at the Delaware Breakwater?—A. No, sir.

Q. Without asking you to fix the date, was that notice brought to your attention after the formation of this so-called sugar trust?—A. I have a very indefinite recollection as to the date. I simply noticed the circumstance in the paper. I supposed it was something liable to occur at any time.

Q. You are unable to state whether that notice came to your attention before or after you had heard of the sugar trust?—A. My impression is that it was after.

By Mr. HERMANN:

Q. Is there any difference as to the parties with whom you deal since the creation of this trust? That is, do you deal with the separate refineries as formerly, in their separate firm names, or are any business relations now necessary between yourself and the trust?—A. No; not to my knowledge. We buy directly of the same parties as before.

Q. The same as formerly?—A. The same as formerly, yes, sir.

Mr. BRECKINRIDGE. I have been interrogating the witness a good deal, and I am disposed to defer to other gentlemen of the committee who may wish to ask any questions. If no one does, I will ask Mr. Nicholls one or two questions.

Q. What is your mode of buying sugar in New York?—A. We follow the principle of almost daily making some purchases. Our buyer knows each morning what our stock of sugar on hand is, and what we will require for immediate use, and he purchases according to our wants from day to day.

Q. You have a man known as your buyer?—A. Yes, sir.

Q. What is his mode of conducting that operation?—A. The same as he would purchase any merchandise. Wherever he could find the shade of yellows he wanted and thought the price satisfactory he would buy. We have to regulate our purchases according to the demands for different grades of sugar. Sometimes the orders to buy specify certain brands they want, and, of course, we execute orders as far as we can, and our buyer is constantly in the market buying such sugars as we require.

Q. Have you any place in New York or that vicinity where sellers of sugar are accustomed to gather with samples to effect sales—in the nature of an exchange?—A. No, sir; there is nothing in the nature of an exchange, but there are brokers who purchase for outside customers. Our purchasing is all done, or nearly all, direct from the refineries.

Q. All sales are made from samples, I suppose?—A. Our buyer buys from samples, which he finds in the refineries' offices.

Q. Are they pretty much in one vicinity, or scattered over a considerable expanse?—A. They are pretty much in one locality.

Q. Your buyer goes out, then, when you notify him that you want a given kind of sugar, and makes a search for the grade that is wanted?—A. Exactly.

Q. Do you find much competition among the corporations to sell to you?—A. Yes, sir; all seem to be anxious to do business.

Q. Do they cut under each other to do business?—A. No, sir; the business is so fine that there is not much cutting under. Sometimes the price of one may be a little lower than that of another, but as a general thing their prices are about the same.

Q. You do not find that one refinery is disposed to lead off a reduction?—A. Very seldom.

Q. What fixes the prices?—A. On the granulated article, the supply and demand, largely.

Q. Of course supply and demand generally fix prices, but there are some questions lying, perhaps, behind supply and demand that may affect supply and demand. Do you find less competition among refiners to sell now than there was in former years?—A. Well, I do not know. There are not quite as many of them, but they are all as anxious to push their profits now as they have always been.

Q. Does the business seem more harmonious and conducted with less friction and antagonism than formerly?—A. Well there have been shut-downs sometimes, so that we have had difficulty in getting certain grades of sugar, but on the standard brands we have had no difficulty.

Q. My question did not relate to the supply, but to the amount of competition and friction between sellers.—A. I have never been able to discover much friction between them. There is always a competition. They have expert salesmen who are always anxious to make a transaction and sell their goods.

Q. You find still quite a lively competition in prices between the refineries?—A. I do not know that the prices differ very much. There is anxiety to sell their goods, but the prices are very much the same.

Q. Do you find the same competition exists as before the formation of this trust?—A. It seems to me about the same.

Q. You can see no material difference?—A. I can not.

Q. There appears to be, then, about as much competition and rivalry between them as formerly?—A. Yes; on the part of their salesmen, apparently.

Q. So far as you see, then, the trust has not restricted competition?—A. No, sir; not entirely.

Q. I am not talking about *entirely*; I am talking about *materially*. I did not say that it obliterated competition.—A. I do not think that it has materially restricted competition.

Q. Or in contending for purchasers?—A. I do not see any material difference.

Q. They contend in the same way and to the same extent as before?—A. The business appears to be done much the same as before.

Q. You can see no effect, then, as a result of the trust?—A. No; I can see no material effect that you can attribute to the trust.

Q. Is there anybody in or about the city of New York that you can buy from who manufactures sugar in that vicinity except some member of the trust?—A. Yes; in Philadelphia or Boston.

Q. I am not talking about Philadelphia or Boston.—A. There is no refinery between Philadelphia or Boston and New York.

Q. That is the question. Then there are no sugars in or about New York that you can buy except the sugars refined by the gentlemen embraced in this trust, that you know of?—A. None except those that I have mentioned.

Q. They are not in New York, are they?—A. You say in or about New York. We call Philadelphia pretty near New York.

Q. But it is not in your city limits. There is a freight rate of about one-eighth of a cent between the two cities, is there not?—A. Yes, sir.

Q. Then if you have to look beyond New York for your supply of sugar you have to incur an expense of about one eighth of a cent additional?—A. Yes, sir.

Q. How much is the freight rate from Boston?—A. I am not certain. About 16 or 18 cents a hundred, I think.

Q. A little more than Philadelphia?—A. Yes, sir.

Q. If you bought sugar from Philadelphia and paid one-eighth of a cent a pound for freight upon it, would that increase your price to your customers?—A. It certainly would if we paid more for it.

Q. If you bought from Boston it would correspondingly increase the price?—A. Yes, unless we shipped direct from Boston.

Q. But if brought to your own establishment?—A. We should add the freight to the price.

Q. It is your custom to add all charges of any character, is it not?—A. Yes, sir.

Q. Suppose you were to look abroad for your sugar, and chose to buy from London or other European refineries, what costs would you incur?—A. The freight and the duty.

Q. What is the duty on the principal sugars that you consume?—A. On granulated it is, I think, something like 3 cents a pound.

Q. Would you add that duty to the price of your sugar?—A. Whatever the duty was we should add to the price of the sugar in London if we imported it.

Q. And the freight?—A. Yes, sir.

Q. And all other charges?—A. Yes, sir.

Q. That would advance the cost of your sugar just that much to the retail merchants who buy from you?—A. Yes, sir.

Q. Then it is the universal law of trade to add up the charges on the cost of the goods?—A. Yes, sir.

Q. That has been frequently denied here by politicians, but never by merchants. The retail merchants, you presume, would likewise add that to the cost when they sold to the consumers?—A. They would certainly be obliged to.

Q. Unless they were insane?—A. Yes, sir.

Q. So that the man who pays it at last is the consumer?—A. Yes, sir.

Q. And the price of the sugar, therefore, would be enhanced to the consumer to the extent of the freight from Philadelphia or Boston; and to the extent of the freight and the duty if imported from abroad?—A. That is correct.

Q. The existence of this duty prevents you from buying from any but domestic competitors, I believe, does it not?—A. Well, that would be a serious obstacle, but the distance and the time that would elapse would always make it inconvenient to import from abroad.

Q. Did you ever buy a dollar's worth of sugar from abroad?—A. No, sir.

Q. Did you ever know a man who did?—A. I do not know than I can name a case. We do not do it.

Q. What is considered the reliable source of market quotations of sugar in your city?—A. The refined article?

Q. Yes, sir.—A. There is the Journal of Commerce, the Price Current, and the Bulletin. They are fairly correct always.

Q. You consider them responsible quoters of the market?—A. We consider them very good authorities.

Q. As good as any?—A. I think so.

Q. As good as any that can be obtained?—A. I think so.

Q. Suppose the refineries in and about New York chose to do so, do you see any reason why they should not refuse to sell to you and compel you to buy from Boston and Philadelphia?—A. I suppose they could do that.

Q. You see no reason why they could not, you see nothing to prevent it?—A. No, sir.

Q. What are the names of the sugars used principally in your trade?—A. We use the granulated more than any other; then the A soft, the A white, and the yellow; and then, of course, come the powdered sugars.

Q. But to take them by the names used in the Government phraseology, do you sell any sugar that is below what is called No. 13 Dutch standard in color?—A. I know nothing of those gradings at all. We only sell the refined article.

Q. (To Mr. HAVEMEYER.) Have you any samples with you, Mr. Havemeyer?

Mr. HAVEMEYER. Yes, sir; I have some here.

Q. (To the witness.) You can tell when you see them?—A. Oh, yes.

The CHAIRMAN. I have a full collection of samples here.

(The chairman then opened a box of samples of sugar.)

Mr. BRECKINRIDGE (to the witness). Pick out the grade that is as low as any sugar that you handle.—A. This [picking out No. 13] is about as low as we handle. Occasionally we get orders for some dark sugars, such as No. 10, for special purposes, but very little of them.

Q. What per cent. of your sales will be as low as No. 10?—A. The amount is insignificant—nearly nothing, you might say.

Q. What per cent. is as low as No. 13?—A. Very little.

Q. Therefore your sales substantially are all above No. 13?—A. Yes, sir.

Q. Do you sell much of No. 14?—A. Well, more of that than of lower grades.

Q. Which grade do you sell the most of?—A. I should say this grade [picking out a sample of granulated sugar].

Q. The duty on that is \$3.50 per hundred, is it not?—A. I believe so.

Q. Your sales then substantially are pretty much all granulated sugar?—A. Yes, sir.

Q. Do you sell much of this grade [picking out Dutch standard No. 20]?—A. Yes sir; we sell a good deal of that.

Q. And you sell a good deal below that?—A. Yes, sir; and a good deal below that.

Q. Do you sell much below this grade [picking out No. 16]?—A. Very little.

Mr. BRECKINRIDGE. I believe that is all.

By the CHAIRMAN :

Q. This testimony which you have given with regard to these sugars other than the 100 per cent. sugar refers simply to the color. All sugars that you sell come from the refinery?—A. Yes, sir.

By Mr. HERMANN :

Q. Mr. Nicholls, you have stated that there has been no effect that you can observe which can be attributed, as to the prices of sugar, to the trust. I will ask you whether you do not observe a much higher price for refined sugar since the creation or organization of this trust than previously?—A. We do observe a higher price. I did not understand Mr. Breckinridge's question that way. I understood him to inquire as to the methods and competition of refineries to sell.

Q. I will ask you whether this increased price can not be attributed largely to the formation of the trust?—A. I presume, perhaps, a portion of it can be attributed to that.

Mr. HERMANN. That is all.

By Mr. BRECKINRIDGE :

Q. You qualified what I understood to be your reply to one or two questions of mine. I understand you now to say you can see a material difference in the effect on the market, but no difference in the manner of selling?—A. To your question I intended to say that there was the same anxiety to sell. It is true that sugar is somewhat higher than prior to the formation of the trust, but I did not understand you to ask me if I attributed it to that association.

Q. I interrogated you especially with reference to the existence or non-existence of competition in prices, and you stated that you observed no difference in competition so far as prices are concerned. You said you observed the same anxiety and willingness and effort to sell, one bidding against the other, and as willing to cut under, and all that, as you observed before?—A. The disposition to cut under is something we never observed, unfortunately.

Q. You never did observe that?—A. No; they have the sugar at a certain price, and if you want it, take it, but if not, they will not urge the subject. I do not see any material difference in prices between the different refineries any more than there has always been.

Q. You find that one refinery is just as much disposed to shade the market as it was before?—A. Yes, I think each is just as much disposed to shade it now as before.

Q. Therefore, so far as you can see, the trust has had no effect to maintain prices?—A. Well, I think that is merging two questions into one.

Q. Are you not talking in two different ways?—A. No, sir.

Q. Are you not what politicians sometimes call trying to execute a straddle?—A. No, sir.

Witness dismissed.

### TESTIMONY OF FRANCIS H. LEGGETT.

FRANCIS H. LEGGETT, having been duly sworn by the chairman, testified as follows:

By the CHAIRMAN:

Q. Give your full name, please?—A. Francis H. Leggett.

Q. Where do you reside?—A. In New York City.

Q. What is your business?—A. I am a wholesale grocer.

Q. Are you a member of a partnership?—A. Yes, sir.

Q. Will you give the name of it, please?—A. Francis H. Leggett & Co.

Q. Your concern is one of the large wholesale groceries of the city of New York?—A. Yes, sir.

Q. And referred to in the testimony of the other witnesses whom we have examined to-day, Mr. Thurber and Mr. Nicholls?—A. Yes, sir.

Q. As part of your business you purchase refined sugars from the refineries and sell to your customers?—A. That is our business; yes, sir.

Q. What portion of the country do you make sales to principally?—A. Mostly in the Middle States.

Q. That is, sales of sugar?—A. Yes; sir.

Q. From what source do you purchase your supply of refined sugar?—A. From the refineries of New York City.

Q. I omitted to ask you, but you may state now, how long have you been in the business?—A. For twenty-six years.

Q. During that time where have you made your purchases generally?—A. From New York refineries.

Q. You have not, then, at any time made purchases from the refineries at Boston or Philadelphia or elsewhere to any considerable extent?—A. No, sir; very little.

Q. About what is the extent of your business in refined sugar annually?—A. Well, some years we have sold a little over 125,000 barrels, and some years less.

Q. Then 125,000 barrels is about the average?—A. That is about the average, yes.

Q. Is there at the present time any source of supply from which you could get refined sugar other than from the New York refineries—practically, I mean; of course you could get it, but I mean get it so as to sell it again at a profit. That is what you want to do, I suppose?—A. I have not tried much; but I have heard prices which would make it cost about as much as we are paying in New York, so that we paid no attention to it.

Q. Are there any other sources that you know of where this refined sugar could be obtained at a profit except from the New York refineries?—A. No, sir.

Q. You do not import any sugar?—A. No, sir.

Q. You have heard of this sugar trust?—A. Yes, sir.

Q. The creation and organization of it?—A. Yes, sir.

Q. You may state when you first heard of it?—A. Last fall.

Q. Can you fix the date any more definitely than that?—A. I can not.

Q. You do not know whether it was in September, October, or November that you first heard of it?—A. About September or October, I think.

Q. The early part of the fall?—A. Yes, sir.

Q. You may state what effect upon the market price of refined sugars followed at the time when the information of the formation of this trust reached you?—A. Prices advanced.

Q. How rapidly and how great was the advance?—A. Well, the difference between the price in September and the price now is about a cent a pound.

Q. Has it been more than that at any time in the interval?—A. Yes; about three-eighths above the price now.

Q. It has been about three-eighths higher?—A. Yes, sir.

Q. When was that maximum reached?—A. In January, I think.

By Mr. WILSON:

Q. I understood you to say you purchased on an average about 125,000 barrels annually.—A. That is correct.

Q. How many pounds are there to the barrel?—A. Sometimes over 300 and sometimes less.

Q. Three hundred would be a fair average, then?—A. It might be a little more or less.

Q. Then the advance of a cent a pound is about \$3 a barrel?—A. Yes, sir.

Q. And on a trade of 125,000 barrels a year the increase would be in your expenditures for sugar \$375,000?—A. Yes, sir.

Q. Do you expect to get that back from some one else?—A. Certainly, we expect to get some profit on it.

By Mr. BRECKINRIDGE:

Q. I understand you to say that the price advanced after the 1st of October about a cent a pound?—A. I said the difference between the price at that time and now was about a cent a pound.

Q. Has it been higher during the intermediate period?—A. About three-eighths of a cent higher.

Q. Therefore the advance at one time was a cent and three-eighths?—A. Yes, sir.

Q. And at present it would register an advance of about one cent?—A. Yes, sir.

Q. You have been in the grocery business for a great many years and are familiar with the general course of the market?—A. Yes, sir.

Q. What is the usual course of the sugar market during the autumn and winter. Do you find it then to be an advancing market or a declining market?—A. It is generally a falling market, and as near as I can recollect I think prices declined during that time.

Q. You have observed that generally, while the Louisiana crop is being marketed and the sorghum crop of the West, which I know is a very extensive crop in a small domestic way, prices in the autumn and winter generally drop from what they are in the spring and summer?—A. That is my general impression. Without having looked up statistics, I could not state it very accurately.

Q. That is your general impression?—A. Yes, sir.

Q. Therefore we find the general impression existing that a decline was not only arrested, but an advance of  $1\frac{3}{8}$  cents established at one time, and even at this late period, in the beginning of spring, it amounts to a cent?—A. Yes, sir.

Witness dismissed.

## TESTIMONY OF HUGH N. CAMP.

Mr. HUGH N. CAMP, having been duly sworn by the chairman, testified as follows :

By the CHAIRMAN :

Q. What is your full name, please ?—A. Hugh N. Camp.

Q. Where do you reside ?—A. In the city of New York.

Q. What is your occupation ?—A. At the present time I am in the lead mining business.

Q. Were you ever engaged in the sugar-refining business ?—A. I was for about sixteen years.

Q. When did you quit that business ?—A. In 1870.

Q. Then for sixteen years before that you were continuously in that business ?—A. Yes, sir.

Q. Where, Mr. Camp ?—A. I was in the city of New York, but the refinery which I was connected with and owned was in Bristol, R. I.

Q. Your business office was in New York ?—A. Yes, sir.

Q. And the actual refining was done in Bristol, R. I. ?—A. Yes, sir.

Q. Have you, since you went out of the business kept track of the sugar industry and of the markets ?—A. Having made a fortune and then lost it in the sugar-refining business, I have always had a good deal of regard to it, and have kept the general run of it. I have no interest in it now, and I have generally kept posted on what was going on in the market from old associations.

Q. When you were in the business how many refineries were running ?—A. I think there were then about 52 in the United States.

Q. Where were they located ?—A. All the way from Portland, Me., to Boston, Bristol, R. I., New York, Philadelphia, Baltimore, Richmond, Saint Louis, and California.

Q. And can you state how many of them were in New York at that time ?—A. If my memory serves me, there were in the city of New York and vicinity some 22 or 23, of which 14 or 15 were on the island of New York.

Q. And the rest in Brooklyn or Jersey City ?—A. Yes, sir.

Q. About what was the output of the refineries in New York at that time ?—A. I think on an average of about 200 barrels, or 10,000 to 12,000 barrels in all per day. They were all pretty small then to what they are to-day. Some averaged only 75 and some 400. My impression is that the average was about 200 a day.

Q. What was the production of refined sugar at that time for the whole country ?—A. Not more than 10,000 or 12,000 barrels a day, certainly.

Q. The refined at that time put out by the refineries was of what grades ?—A. Very similar to the grades to-day.

Q. The bulk of the business then was done in the most highly refined sugar ?—A. Yes, sir; then as now.

Q. Can you tell us what the production is now ?—A. I can not tell you accurately, but I think I am not far wrong in saying about 45,000 barrels a day in the whole United States.

Q. And of that how much is made in New York ?—A. I am trying to think. I should say about 60 per cent. was produced in New York, Brooklyn, and Jersey City.

Q. Of course you know what the cost of refining sugar was while you were in the business ?—A. I do.

Q. What was it per pound?—A. About seven-eighths of a cent per pound.

Q. Do you know now, approximately, what it is?—A. Not from actual experience, but I have heard through various sources that they have cut it down to about 40 cents a hundred—less than one-half what it cost fifteen or eighteen years ago.

Q. What class or grade of sugar was used generally or usually in the refining processes when you were in the business?—A. A very different grade of sugars from what are used now. Twenty years ago there were very few centrifugal sugars used. That was in a measure a new process of sugar making. They were mainly low sugars, common muscovadoes from Cuba, and sugars from Manilla and the different English islands. There were very few of the centrifugal sugars which are now so largely used.

Q. Looking at this sample, will you please pick out something that is about muscovado sugar?—A. That is a low-grade muscovado [picking out a sample marked "Test 78"].

Q. This sugar contained in the bottle marked No. 9 is a type of muscovado sugar such as was commonly used for refining purposes when you were in the business, is it not?—A. Yes, I think so. The standards are changed since then.

Q. The centrifugal process such as you speak of is the refining of sugars by the use of vacuum pans, etc., and the muscovado sugars were refined by boiling in the open air and crystallizing by the open process, and without the use of any scientific means. It was purified from the molasses, as I comprehend it, by mere dripping and straining?—A. Yes, sir.

Q. Was there in 1870 and before that time a considerable consumption in the market of unrefined sugars?—A. Yes, sir.

Q. Can you select from these samples shown you one that is about the type of sugars used in an unrefined condition?—A. (Picking out Dutch standard No. 14.) That is one. It was very rarely under 14. That is about the number which was sold for consumption, and from that up.

Q. How much raw sugar compared to the entire consumption of the country was at that time imported to be used direct, not to go into the refinery?—A. I could not be very exact, Mr. Chairman; but my impression is, perhaps 20 per cent. of the importations prior to 1870 went into direct consumption.

Q. At the present time what proportion of imported sugars unrefined goes into direct consumption?—A. I think a very small percentage.

Q. Is it not practically nothing?—A. I think you are about right.

Q. So that practically in the consumption of sugar to-day in the American market the only sugars used are the refined sugars?—A. That is practically the case.

Q. They are all more or less refined?—A. Yes, sir.

Q. Have you paid some attention to this sugar business so as to know with reference to the amount of sugar consumed per capita in the country?—A. Only from statistics.

Q. Have you paid attention to such statistics?—A. Yes, sir.

Q. How does the present consumption compare with that of the period when you were in the business?—A. At that time we calculated about 30 or 33 pounds per capita. I think it is about 50 now. It has increased very materially.

Q. You have before you there a sample of granulated sugar?—A. Yes, sir.

Q. That is or is intended to be pure sugar, I suppose?—A. I think it is as pure as they can get any sugar.

Q. It is intended to be pure?—A. It is 99½ if not 100 per cent. pure. There can be nothing purer.

Q. How low have you known sugar to be sold in your experience?—A. Prior to 1870 perhaps not lower than 7 cents, but within the last five years as low as 5 cents.

Q. And the present price is what?—A. About 6½ cents.

Q. In giving these prices you give the prices given to the jobbers and the wholesale men?—A. I mean the prices given in the newspapers.

Q. The prices at which jobbers or wholesale men purchase from the refineries?—A. Yes, sir.

Q. What is the comparative price now between granulated sugar and centrifugal sugar, testing 96?—A. I think the last quotation that I saw of centrifugal sugar No. 96 was 5½ cents.

Q. And at the same time what was the price of granulated sugar?—A. 6½ cents.

Q. How low have you known the price of centrifugal sugar at 96, or rather how high have you known it to be, as compared with the prices of granulated sugars? How nearly have you known the prices to be together?—A. I think at one time there was only a difference of five-eighths of a cent a pound.

Q. What do you understand to be the meaning of fair refining sugars?—A. Fair refining sugar is the old name for No. 12.

Q. Dutch standard?—A. Yes, sir.

Q. That is about the average grade of gray sugars?—A. Yes, sir.

Q. Now will you please pick out No. 12?—A. It is this [picking out No. 12].

Q. So that the expression of fair refining sugar is applied to sugars of about the color of this No. 12, Dutch standard?—A. Yes, sir.

Q. And the centrifugal sugar of 96 per cent. may be either above or below 12 in color?—A. In color; yes.

Q. That depends upon the amount of saccharine matter as determined by the polariscope test, does it not?—A. At the time I was in business the polariscope had just come into vogue. We never tested sugar with the polariscope at all, our tests merely as to the color and grade.

Q. Is there any export of refined sugars now from this country?—A. There is some, I think. It was largely exported two or three years ago. I think in one year there were over 100,000 tons exported.

Q. How much was exported in 1887?—A. I think that was the year of the heavy exports, but I am not certain.

Q. That is last year?—A. Yes, sir; or perhaps the year before.

Q. You are not able to fix the year?—A. I am not able to fix the year.

Q. Have you known within the past few months of a vessel or vessels coming here with sugar and departing without making a sale?—A. Not departing. I have heard of cargoes coming here and having to wait a long while before they could find a purchaser, from the fact that there seemed to be no buyers. I do not know that they departed.

Q. When did they arrive?—A. In the month of January.

Q. January last?—A. Yes, sir.

Q. Have you heard of a vessel coming into the Delaware Breakwater and departing from there?—A. I have not.

Q. You do not know of any instance where a cargo of sugar was taken away from the market of New York because of inability to find a market for it?—A. I do not.

Q. You say, in January you heard of a vessel finding difficulty in selling a cargo of raw sugar in New York?—A. Yes, sir.

Q. Do you know how long the vessel was in finding a market?—A. I got my information from a merchant, and not direct, and I am inclined to think it lay there ten days, from what he said; but I do not know of my own knowledge about this.

Q. What was the difficulty in the way?—A. Well, as the former witness expressed it, there was nobody to buy it but the trust, and the trust did not feel inclined to pay the price.

Q. Do you know at what price it was finally sold?—A. Four and one-fourth cents.

Q. Was that the price originally asked, or the price offered?—A. The price asked was five-eighths I think.

Q. And did you understand that the sale as finally made was at the price fixed by members of this so-called trust rather than at the price fixed by the owner?—A. The "trust" bought it, and I presume at its own price.

By Mr. HERMANN:

Q. Was that very much different from the existing price for that class of sugar?—A. It is worth more to-day.

Q. But how was it at that time?—A. Three-eighths of a cent a pound is a very serious decline within ten days, without some cause other than mere dullness of the market.

Q. And you attribute that, as I understand, to the want of competition?—A. I think that is a fair supposition.

By Mr. BRECKINRIDGE:

Q. Do you know anything about glucose?—A. Not a great deal. That is a new thing since I was in the business.

Q. They did not put things like that in sugar in your day?—A. Well, sir, they did not use glucose.

Q. Do you know what uses glucose is put to now?—A. I think there is very little made now, and I understand that most of it is used in mixing with sirups. I think very little, if any, is used in mixing with sugars.

Q. Do these refineries usually turn out sirups as well as sugar?—A. A part of the product of every refinery would be sirup.

Q. What per cent. of sirup as per that of sugar would be produced?—A. That depends upon the grade of sugar used. In the low grade of sugars used before centrifugal sugars were used it was as high as 20 per cent.

Q. How is it now?—A. Very much less. Centrifugal sugars have a great deal less thrown out in the manufacture.

Q. Now, take Dutch standard No. 13. A refinery using that grade of sugar, and higher than this grade of sugar (exhibiting No. 9), say, No. 10 or 12, would turn out about what per cent. of sirup?—A. If centrifugals were used the proportion of sirup would be very low comparatively. If Muscovadoes—the old style of sugars—were used it would probably be fully 15 per cent.

Q. What kind of sugar is that which now comes from Cuba? Is it mainly centrifugal sugar?—A. Yes, sir.

Q. And we use, I believe, most of the Cuban, or, rather, most of our sugar is Cuban sugar?—A. Yes, sir. A great deal comes from Manilla and from the English islands, but the large proportion is from Cuba.

Q. And therefore sirup would be a very small percentage of the yield of the refinery?—A. Yes, sir.

Q. You know very little about the figure which glucose cuts in the modern manufacture of sirups?—A. Very little, sir.

Q. I think we might ask if you have any general views on the subject of "trusts." We would be very glad to get your opinion. Our inquiries may not have elicited all your information.—A. On general principles I think trusts are detrimental to the interests of the country, and I believe the freer the competition the cheaper the people will get their sugar. I can conceive of a "trust," if it is not too anxious to make money, being in fact a real benefit to the country in cheapening the cost of sugar; but if they are at all selfish, as men mostly are, I can conceive of the trust being made very injurious and detrimental to the interests of the country. I am satisfied that the sugar refineries of the United States can make sugar as cheap as any sugar refineries in the world. I do not suppose any house in the world can make sugar cheaper than the Havemeyers.

Q. Suppose the sugar refining industry is consolidated, as two-thirds of it appears to be here, and the workmen in one refinery were dissatisfied with their condition and wanted to quit, would they stand much chance of getting employment in another refinery?—A. I think not; no, sir.

Q. Under the organization of this "trust," as far as you can see, they would find one common master at every refinery wherever they applied?—A. So it seems to me.

Q. Well, you are a merchant, familiar with trade; what can Congress do to correct the evils of this trust? How would you go at it if you were in our place?—A. I am afraid to say. I do not see how Congress can. It seems to me that these gentlemen, if they have a mind to make up a company, have a perfect right to do it, and I am not legislator enough to suggest any way to stop them.

Q. The best legislator in a case of that sort is a man with a good business head on his shoulders, with a good lawyer alongside to advise him about some things. Can Congress prevent the fixing of high prices for refined sugars here? Is there any remedy for that in our power?—A. There is one remedy, which I think would be very effectual.

Q. What is that?—A. Make all sugars free, both raw and refined.

Q. Do you think that would do it?—A. Yes, sir; I think then the trust would go to pieces, and give the people of the United States very cheap sugar.

Q. You believe, as a business man, that one way to break up a trust is to make the product free?—A. Certainly; at least as far as sugar is concerned.

Q. Is there anything about sugar different from any thing else that you know of?—A. Well, there is nothing, Mr. Breckinridge, that goes so promptly home to the pocket of any man more than——

Q. (Interrupting.) I am not speaking of the concern of the purchaser, but of any method that would prevent the price being put up on the buyer. I am not speaking of the buyer's yearnings for the article, but the price he pays for it. Can you suggest any other method?—A. I am free to say I could not.

Q. Do you know of any reason that would apply to sugar refining and not to steel rails, for instance, if they were in a trust?—A. I think the same thing there would effect the same result.

Q. Do you know any other method?—A. I do not.

Q. Do you speak from the standpoint of a protectionist or a free-trader?—A. I am a protectionist *per se*.

By the CHAIRMAN:

Q. I would like to ask you, since we have got upon this subject, what effect, in your judgment, would the diminution of the tariff upon the high-grade sugars of the qualities suitable to go into immediate consumption without further refining, without any diminution of the tariff upon the low-grade sugars, have upon this sugar business, and the possibility of this trust being operated?—A. That would effectually kill it, but it would be a very unjust way of doing it.

By Mr. BRECKINRIDGE:

Q. That would kill them, would it not?—A. That would effectually kill the business.

By the CHAIRMAN:

Q. You do not catch my question. I ask what effect, not an annihilation, but a diminution of tariff rate upon high-grade sugars suitable for immediate consumption would have upon the importations?—A. It would undoubtedly increase importations of the high-grade sugars; but it would be ruinous to the refining business.

Q. Would it not put an effectual check upon the efforts of associated refineries to put up the price of sugar?—A. It would; but it would be a cesarian operation.

By Mr. BRECKINRIDGE:

Q. I understand you to say that you believe that a well-equipped refinery like the Havemeyers can, with raw sugar at a given price, produce cheaper sugar than any other in the world?—A. As cheap, and I am inclined to think cheaper. Hence I say that with raw sugars free I believe they could compete with the world.

Q. I suppose no man would say that it would be just for a moment to tax their raw sugars, especially upon a specific tax, and put no tax upon the refined sugars. That would be turning their toes up.

Mr. BYNUM. The rates on some low sugars are higher than the rates on the refined now.

Mr. BRECKINRIDGE (to the witness). How was it in the days when you were in the refining business? Could you have competed then with refineries abroad?—A. I could not then. I do not think refineries were so well equipped then.

Q. In what year did you cease refining sugar?—A. In 1870.

Q. What was the difference in the scale of wages that you paid at that time and those that were paid in England?—A. As near as I remember I think our wages were fully double the wages paid in England.

Q. What was the freight rate at that time from Havana to New York on raw sugars?—A. I do not remember exactly, but it was very much more than at present.

Q. How did it compare with the freight rates from Liverpool to New York?—A. I am inclined to think that freight from Havana to New York was quite as high as from Liverpool to New York, if not higher, from the fact that vessels to Havana went empty and came back full, while between Liverpool and New York they had a cargo both ways.

Q. How did the rate from Havana to Liverpool compare with the rate from Liverpool to New York?—A. That I hardly know. I never imported any raw sugar, and was not in the way of knowing much about it.

Q. You think, as a general thing, that the wages you paid your men up to 1870 were about double what were paid men in corresponding employments in England?—A. Yes, sir; and more than double the wages paid in Germany.

Q. Which did you look upon as the most dangerous competitor?—A. England.

Q. You then thought England, with higher wages than Germany, was a more dangerous competitor than Germany?—A. So I thought at that day.

Q. Do you attribute that to the fact that English workmen were more efficient, or to what do you attribute it?—A. I hardly know.

Q. You simply know the fact?—A. I simply know the fact.

Q. You could not quite stand open competition with the English at that day?—A. I think not.

Q. You are not perfectly certain?—A. I am quite certain.

Q. That you could not?—A. That we could not.

Q. Do you know the difference in wages now?—A. No, sir; I do not. (Mr. Havemeyer here said something to the witness in a low voice.)

Mr. BRECKINRIDGE (to Mr. Havemeyer). We will give you an opportunity to explain all that, Mr. Havemeyer.

Mr. HAVEMEYER. I was just asking him what wages he paid.

Q. What is considered an ordinary day's labor?—A. Ten hours.

Q. And was it an employment simply requiring muscle, and not skill?—A. Most of the sugar refiners had to be skilled to a certain extent. It was a kind of business they could learn very quickly, excepting the leading men, and they got pretty large wages; but the common men, if I remember rightly, earned \$20 to \$25 per month.

Q. And boarded themselves?—A. Yes, sir.

Q. What kind of employment were those men engaged in in your refinery—what would be their work?—A. Oh, all the various manipulations of sugar. Of course they were engaged in lowering the hogsheads, carrying the sugars into the mold from the vacuum-pans, and all the various manipulations of a sugar refinery, which, however, are very much changed now.

Q. In that day they were very different from what they are now?—A. Yes, sir; in that day we used many methods which are not used to-day.

Q. Do you consider the mode of refining sugar now simpler than it was in your day?—A. Very much. It is very much less expensive. You can refine more sugar with less men.

Mr. SMITH. That is what I want to know.

By Mr. BRECKINRIDGE:

Q. And you can find more men suitable for the work now than you could then?—A. I think so.

Q. Your men were not required to know anything about chemistry, were they?—A. No; except the boiler. He was supposed to know a little about it.

Q. He indicated when to discharge one vessel and when to fill another?—A. Yes, sir; he indicated when the sugars were at the proper stage in the vacuum-pan.

By Mr. CROUSE:

Q. You stated in answer to a question by Mr. Breckinridge what the cure would be, in your judgment—that is, you thought that the abolition of a tariff on both raw and refined sugars would have a tendency to

prevent the formation of trusts. Did I understand you correctly?—  
A. Yes, sir.

Q. Now, please explain how that would prevent it?—A. It would permit the introduction of foreign refined sugars, and that would keep the market in such a condition that no trust could regulate prices.

Q. That would regulate the market?—A. Yes, sir.

By Mr. HERMANN:

Q. I may possibly, Mr. Oamp, have misapprehended an answer given by you. Did I understand you to say that if the present duty on refined sugars was removed or repealed that the American refiners could then compete with the refineries of the world?—A. If all sugars were free. Mr. Havemeyer corrects me by saying—if the rates of labor were the same.

Q. Then, I understand you to say the American refiner could compete with the world?—A. With the difference in labor, of course; but it seems to me that we are so far ahead of the world that we could almost stand the difference in labor if the duty were removed.

Q. You have also referred to the condition of the early manufacturer of sugar in your days, and you have stated that at that time it was impossible for you to compete with the importation of foreign refined sugars. Now, I will ask you this question, whether in your opinion we could have arrived at the happy condition you now admit we are in as to being able to compete, labor being equal, with the foreign refiners of the world without having had the legislated agencies of protective duties in the meanwhile?—A. I think not.

By Mr. HOPKINS:

Q. When did you leave the sugar-refining business?—A. In 1870.

By Mr. WILSON:

Q. You say you do not think we could have arrived at this high stage without protection?—A. No, sir.

Q. Do the refineries have protection now?—A. Yes, sir.

Q. I understood you to say that you were a protectionist, and that you believed if the duty was entirely removed our refiners could compete with any refiners in the world?—A. I said so, and thought so, but of course Mr. Havemeyer knows more about the labor question than I do.

Q. You think so?—A. Yes, sir.

Q. Have they not the same difficulties to contend with in labor and increased price of machinery as any other manufacturers?—A. Yes, sir; but they have surmounted them more.

Q. Have not the others kept pace with them?—A. I think not.

Q. What ones have not?—A. I do not know; but as a general thing they have not.

Q. Have not the cotton and woolen manufacturers?—A. I think not; but of course I am not thoroughly familiar with that subject.

By Mr. HERMANN:

Q. If so, is it not owing to the protection also given them?—A. Yes, sir; I think so.

By Mr. SMITH:

Q. I want to ask a question that relates to labor. As I understand, these trusts are only formed to protect labor [laughter]. Do they employ more men now than they did when you were in the business, to a given amount of product?—A. Nothing like as many.

Q. To what do you attribute that?—A. To the improved methods of manufacture, the centrifugal machines, and the various methods they have adopted to cheapen sugar.

Q. Then you attribute that to the inventive ingenuity of certain inventors in inventing machinery to handle this product which you had to handle with labor before?—A. I think so.

Q. Then the outcome of making sugar so much cheaper is not due to the tariff, but to inventive ingenuity?—A. Not entirely. That had something to do with it.

Q. Do you not think it had more to do with it than the tariff as producing these labor-saving machines?—A. I think it might have had as much to do with it in enabling them to arrive at their present condition.

By Mr. HERMANN:

Q. Did not the tariff induce the inventive genius which finally led to this perfection?—A. Yes, sir.

By Mr. CROUSE:

Q. In your judgment do you not think that there are just as many men engaged in the refining of sugar as there were in your time, when you take into consideration the men that are engaged in the production of the different ingenuities that have been introduced into the business?—A. I think not; no, sir.

Q. Do you think that principle is true or false as applied to any other business? For instance, grain was originally cut with a sickle, then with a cradle, then with a reaper, and finally by a machine which reaps and binds it. Of course every step in that direction eliminated a certain number of the men directly engaged in cutting grain; but do you not think there are as many men engaged in the business of cutting grain to-day as there ever were?—A. I can hardly answer that.

By the CHAIRMAN:

Q. Mr. Camp, can you state what the number of employes was in the refineries in New York when you were engaged in the business?—A. I can only speak of my own refinery, and so many years have elapsed that I may not be correct. My impression is that at that time the house of which I was part owner turned out about 400 barrels a day, and as nearly as I can remember our hands numbered somewhere between 130 and 150. In other words, one man made 3 barrels of sugar. That is about the way I recollect it.

Q. What is it to-day?—A. I can not tell you.

Q. You can not tell us?—A. No, sir.

By Mr. SMITH:

Q. I was going to ask Mr. Camp, for the question has, I believe, been asked by Mr. Hermann, whether or no this inventive ingenuity was not the outcome of the tariff; now I want to ask Mr. Camp if he believes that this ingenuity was an outcome of the tariff?—A. Not entirely, no, sir; by no means.

Q. Do you believe that a tariff has anything to do with the inventive ingenuity of a human being? That is what I want to know. I know where it comes from.—A. I do not think the tariff *per se* has any inventive ingenuity about it except the making of the tariff, but I think if it were not for the tariff protecting the young industries in all these things we never would have arrived at the position we have in the

various industries of the country. We have always had to contend against the low-priced labor of Europe compared with the high-priced labor of the United States.

Q. Do you not believe that the provision in the Constitution which gave the power to Congress to pass such enactments or laws to protect the inventor in his inventions is the cause of the enormous growth of inventions in this country?—A. It has helped it undoubtedly.

Q. By the concentration of these patented inventions these trusts can be made as powerful as they are, they controlling the patents—as testimony was given here by Mr. Parsons, stating that a great number of patents were invested in this trust or combination that were worth so much money.

Mr. PARSONS. I said cost so much.

Mr. SMITH. Consequently, as I understand from the testimony taken here, the trust has been able to purchase that inventive ingenuity and concentrate it, and thereby possesses this power, and the outcome thereof is they can employ less labor and have a larger product than they did when Mr. Camp was a refiner.

The committee then, on motion of Mr. Hopkins, adjourned until Saturday, March 10 at 11 a. m.

WASHINGTON, D. C., *March 10, 1888.*

The committee met at 11 o'clock, a. m., pursuant to adjournment of yesterday.

Present, the Chairman, Mr. Breckinridge, Mr. McKinney, Mr. Grimes, Mr. Wilson, Mr. Crouse, Mr. Smith, and Mr. Buchanan.

### TESTIMONY OF H. O. HAVEMEYER.

H. O. HAVEMEYER, having been duly sworn by the Chairman, testified as follows:

By the CHAIRMAN:

Q. What is your name?—A. Harvey O. Havemeyer.

Q. Where do you reside?—A. New York City.

Q. What is your business?—A. Sugar refining.

Q. How long have you been engaged in that business?—A. Twenty years.

Q. Where?—A. New York City.

Q. And your office is where?—A. New York City.

Q. Will you give us the address, please?—A. 117 Wall street.

Q. Are you a stockholder of any of the corporations named in this deed which I show you [handing trust agreement to witness]?—A. In my capacity as trustee, I presume I am.

Q. Were you a stockholder of any of them before the execution of the deed and the transfer of the stock to the trustees?—A. Yes, sir.

Q. Will you name, please, the corporations in which you were a stockholder prior to the deed?—A. The Havemeyers and Elder Sugar Refining Company, and the Donner and De Castro Sugar Refining Company.

Q. Any other?—A. No, sir.

Q. Are you now a stockholder or officer of any of the other companies except as trustee under this deed?—A. No, sir; I am an officer

of two of the companies, but not of any of the companies outside of those mentioned in the deed.

Q. I mean any others than the two you have named. Are you, except in your capacity as trustee, an officer or stockholder in any of the corporations named in this deed, except the two you have mentioned—the Havemeyers and Elder Company and the Donner and De Castro Company?—A. If I understand you right, I am not.

Q. I want to be sure we understand each other. Let me repeat the question. Are you, excepting in your capacity as trustee, an officer or stockholder in any of the corporations named in this deed, except the two you have mentioned—the Havemeyers and Elder Company and the Donner and De Castro Company?—A. Perhaps I had better state what I am.

Q. You may do so.—A. I am a trustee, and as such probably—that is, according to my understanding—I am a stockholder in these different companies. Apart from that, and having no relation with that, I am president of the Havemeyers and Elder Company and also of the Donner and De Castro Company.

Q. Apart from your rights of trustee, you are not connected with any other than those two companies?—A. No, sir.

Q. Where is the office of the Havemeyers and Elder Company?—A. 117 Wall street.

Q. Where is the office of the Donner and De Castro Company?—A. 117 Wall street.

Q. They occupy the same office?—A. Yes, sir; and always have for, I believe, eight years; possibly ten years.

Q. Are you a stockholder of the Havemeyers and Elder Company, independent of your position as trustee under this deed?—A. No, sir.

Q. You have no stock in your name individually?—A. No, sir.

Q. Have you no stock standing in your name as an individual in the Donner and De Castro Company?—A. No, sir; apart from the stock necessary to qualify me as a director.

Q. Well, it is just that that my question is pointed at. Have you some stock in each of these companies?—A. Yes, sir.

Q. In your name individually?—A. Yes, sir.

Q. Have you any stock standing in your name as an individual in any of the other companies?—A. No, sir.

Q. How many refineries has the Havemeyers and Elder Company? How many does it own?—A. Well, the refineries are made up of an aggregation of different buildings, but they are all considered one refinery. They own one.

Q. Is this aggregation of buildings at one locality?—A. Yes, sir.

Q. And operated as one refinery?—A. Yes, sir.

Q. Where is that located?—A. At the foot of South Fourth street, Brooklyn, eastern district.

Q. How many refineries have the Donner and De Castro Company?—A. In the same sense they have only one, but there are three separate buildings.

Q. Operated separately?—A. No, sir; in conjunction.

Q. Are the buildings joined?—A. Two of them are and one is at some distance; but the product is transferred by tank-lighters in the course of process.

Q. So that the processes of refining are conducted in all three buildings?—Yes, sir.

Q. Where are those buildings located?—A. Brooklyn, Eastern District.

Q. The property of the Havemeyers and Elder Refining Company belonged, before the organization of that company, to the firm of Havemeyers & Elder?—A. Yes, sir.

Q. And it was transferred from the members of that copartnership to the company?—A. To the Havemeyers & Elder Company; yes, sir.

Q. For stock of that company?—A. Yes, sir.

Q. The transaction did not involve the payment of any cash by the company?—A. By the company; no.

Q. And the stock of the Havemeyers and Elder Company was transferred to the trustees named in this agreement, with the exception of such portion of it as was necessary to qualify the officers of the company when exchanged for certificates issued under the deed?—A. Yes, sir.

Q. Who are the officers of the Havemeyers and Elder Company besides yourself?—A. The only other officer is Julius A. Stursburg, who is its treasurer and secretary.

Q. He is the gentleman named as one of the trustees under this trust agreement?—A. Yes, sir.

Q. Who are the officers of the Donner and De Castro Company other than yourself?—A. Mr. Julius A. Stursburg is the secretary and treasurer of that company.

Q. And there is no other officer?—A. No, sir.

Q. What is the capacity or output of the refinery of the Havemeyers and Elder Company?—A. Shall I name it in barrels?

Q. You may.—A. Eight thousand barrels a day.

Q. What is the average weight per barrel?—A. About 300 pounds.

Q. And what is the output or capacity of the Donner and De Castro Company?—A. Three thousand barrels a day, of the same weight.

Q. Who were the members of the firm of Havemeyers & Elder before the organization of the company of the same name?—A. Frederick C. Havemeyer, Theodore A. Havemeyer, H. O. Havemeyer, and Charles H. Senff.

Q. And did all of those gentlemen become stockholders in the Havemeyers and Elder Refining Company?

The WITNESS. Is that essential?

The CHAIRMAN. I think so, sir, or I should not have asked it.

The WITNESS. My father has been a partner in the firm of Havemeyers & Elder ever since it existed, but he has had no interest in the business for several years. If it is necessary for it to appear who are the stockholders I will answer.

Q. I deem it so.—A. My father did not become a stockholder.

Q. And the other members did?—A. Yes, sir.

Q. And your father's name?—A. Frederick C. Havemeyer.

Q. The refinery of Havemeyers & Elder has been in operation a good many years, I believe, has it not?—A. The refinery, although under different style of firm, has been in operation for many years.

Q. Practically the business has passed from one copartnership to another, until finally it has passed to this corporation?—A. That is it.

Q. How many years has that business been continued in that way?—A. My father went into business when he was twenty, and he is now eighty two, and we are still in business.

Q. And the business has been continued during that entire time?—A. With occasional interruption. In 1838 we suspended for a short time and then resumed.

Q. For how long has the capacity of the Havemeyers and Elder Sugar Refinery Company been as high as 8,000 barrels a day?—A. Since last September or October.

Q. It was increased at that time?—A. It was increased at that time.

Q. And immediately prior to that time what had been its capacity?—  
A. Six thousand five hundred barrels a day.

Q. And for how long a time had it been 6,500 barrels a day?—A. For one year prior to that time.

Q. And before that increase what was it?—A. Five thousand barrels a day. I would like to state that the refinery of Havemeyers & Elder was totally destroyed by fire, and that the new refinery commenced work, I believe, in 1885, with a capacity of about 5,000 barrels a day, and it took a year before the capacity was increased to 6,500, and then another year before it was enlarged to its present capacity.

Q. When did the fire to which you have reference occur?—A. On January 8, 1882.

Q. And the business was not resumed until what time?—A. The latter part of 1884 or 1885, or about that time.

Q. For how long a time has the Donner and De Castro Sugar Refining company been in operation?—A. I think about fifteen years.

Q. You have given its capacity at the time of the execution of this deed. Had it been increased before that?—A. Its capacity had not been increased up to about ten years previous to the execution of the deed.

Q. In this refining business, Mr. Havemeyer, you buy raw sugars?—  
A. Yes, sir.

Q. As the article which you refine?—A. Yes, sir.

Q. Those are imported sugars, are they not?—A. With the exception of a few of the low grades of Louisiana sugars, which we get in the winter time.

Q. About what proportion of Louisiana sugars to the entire business do you use?—A. Our own company uses an insignificant amount—not more than 1 per cent.

Q. You produce at these refineries sugars of different grades?—A. Yes, sir.

Q. What is the lowest in color and standard?—A. Well, as near as I can compare a dark yellow with a gray, the lowest is about the same as Dutch standard No. 12 or 13. The difficulty of comparing a refined sugar with the Dutch standard sugar is the difficulty of comparing yellow with gray.

Q. Have you any samples of the dark sugars—I mean the lowest grade sugars?—A. I might explain the absence of such samples from the fact that the Louisiana crop during the winter time supplies the market with all low sugars, and manufacturers make none, and I think seldom make anything below No. 16 in color at this time.

Q. Well, this sample which you do produce here is what grade?—A. I would say about No. 16. No. 16 is about as low as the sugar-refining product runs in the winter time.

Q. During the period of the year when it comes in competition with the Louisiana sugars?—A. Yes, sir.

Q. And at other seasons of the year is there a product of a still lower grade than this?—A. Yes; it runs occasionally as low as No. 12.

Q. While we are on this subject, let me inquire of you between what numbers is the range of the Louisiana product as put upon the market?—A. The Louisiana product is almost necessarily what is called soft, as distinguished from granulated sugars, which are known as hard sugars, and it is my opinion that at least 50, if not 60, per cent. of the product is below No. 16 in color, the remaining percentage being between 16 and 20, 20 being the type of pure whiteness.

Q. And how much of the Louisiana product is there—what percentage of it that reaches the grade of No. 20?—A. Between No. 16 and No. 20, I should think about 40 per cent.

Q. Of that 40 per cent. what fractional part is as high a grade as No. 20?—A. I could not state that. The only way that I know that the percentages are as I have given them is by conference at different times with sugar people from Louisiana in connection with the duty on refined sugar, where they have grouped their sugar in those two classes in those respective percentages.

Q. Does the Louisiana product come to the New York market?—A. A part of the lower grades comes to New York for refining.

Q. Do the higher grades which are used for refining come to the New York market?—A. When the price is below the New York price a few of them reach here. They are generally sold in the South and Southwest.

Q. For distribution, where?—A. Along the line of the Mississippi. The freight to New York is 45 cents a hundred as against 10 cents to Saint Louis, the distributing point.

Q. Of course the testimony you have given with regard to the production of this low-grade sugar applies to both the refining companies of which you are an officer?—A. I should say—

Q. (Interrupting.) If there is any difference I would like to know it.—A. The mode of operation is almost identical, except that the Havemeyers and Elder Companies make what is known as the patent cut loaf, which no other manufacturer makes, and that adds to their percentage of hard sugars as against other refineries.

Q. The patent cut loaf is that which is cut up into regular cubes, or lumps, of the same size?—A. Yes, sir; as distinguished from lump sugar, which is very similar, the difference being merely the crystalline character of one, as distinguished from the whitish dove of the other.

Q. The patent cut-loaf sugar being the crystalline sugar?—A. Yes, sir.

Q. I think you fixed the lowest grade at about No. 13?—A. Yes, sir; as nearly as yellow can be assimilated to gray.

Q. The difference being in the tint—the Dutch standard sample being gray, and the tint of the sugar from your refinery being yellow?—A. Yes, sir.

Q. Do you make all grades between this (No. 13) and the cut-loaf sugar?—A. I believe we make every grade of sugar used.

Q. About what proportion of your entire product is the cut-loaf sugar?—A. I have never heard it estimated. I can tell you in barrels, and then of course I can figure it.

Q. Well, in barrels, then?—A. It is about 350 barrels a day out of a total of 8,000 barrels a day—about 4½ per cent.

Q. The next grade below this cut-loaf sugar that you make is what is known as the granulated?—A. They are of the same grade.

Q. The same grade; that is, they are each supposed to contain 100 per cent. of saccharine matter?—A. Yes, sir.

Q. About what proportionate amount of granulated sugar of that type is produced?—A. The average production of Havemeyers and Elder is 50 per cent. of what are called hard sugars as distinguished from these soft sugars. The percentages vary according to the market and the season.

Q. Averaging it through the year?—A. Yes, sir; about 50 per cent. are hard sugars.

Q. And hard sugars include the granulated and this cut-loaf sugar?—  
A. Yes, sir.

Q. Is the hard sugar, as you call it, the sugar which goes into private consumption, generally?—A. Yes, sir.

Q. Is it used by the confectioners and manufacturers?—A. Yes, sir.

Q. And the soft sugars—what becomes of them? Do they go into private consumption, or are they sold to manufacturers, or are they divided?—A. We do not know how it is divided, but we know the cheaper the sugar the nearer it is to the poor man; certain of the lower-grade sugars are called “poor man’s sugar.”

Q. Are these soft sugars used in manufacturing, candy making, and uses of that sort?—A. Yes, sir; a great deal, and for canning purposes.

Q. That is what I meant by mercantile uses rather than private uses.—A. I could give no estimate of the proportion in which they are used as you distinguish them.

Q. Now, in the purchasing of the low-grade sugars you have certain standards known to the trade, I believe?—A. Standards of what?

Q. Standards of the sugars, fixed standards by which you buy and sell raw sugars.—A. No; raw sugars are sold by color. Color has a certain bearing in the fixing of the value of the sugar for refining purposes, but generally the business is based on the saccharine strength of the article.

Q. And that is ascertained how?—A. By a saccharometer, which under certain manipulations indicates the percentage of saccharine in the sugar.

Q. Is that instrument the same as the one known as the polariscope?—  
A. It is an adaptation of the polariscope to sugar solutions.

Q. And the instrument is one which enables you to examine sugar solutions so as to determine the amount of saccharine contained in a given quantity of the raw sugar?—A. Precisely.

Q. As I understand the tariff rates upon sugar up to No. 13, the rate is fixed by color?—A. No, sir; not at all.

Q. Well, all sugars colored below No. 13 are at a fixed rate, with additions for each degree of relative saccharine strength?—A. Yes, sir; the sugar tariff fixes the dividing line between raw and refined sugar at No. 13 Dutch standard.

Q. That is, any sugar below No. 13 Dutch standard in color and not testing above 75 per cent. of saccharine strength is taxed at a certain rate?—A. Yes, sir.

Q. And for every additional degree of saccharine strength, as determined by this instrument, there is an addition of 4 cents per 100 pounds?—A. Per degree; yes, sir.

Q. Now, these color standards up to No. 13 afford in themselves no indication of the saccharine strength of the sugar. I take it from the provisions of the law that there is nothing to be determined from the relative strength of these various numbers from No. 13 down, from an examination of the color?—A. No, sir; that bears no relation to the tariff whatever.

Q. That is, No. 8 may have more saccharine strength—have more sugar in it—than No. 13?—A. Yes, sir.

Q. Practically, Mr. Havemeyer, is the raw sugar imported and used by these refineries—the bulk of it—No. 13 and below in color?—A. Yes, sir.

Q. The amount of sugar imported for refining purposes above No. 13 in color is small, I believe?—A. It is nothing. It is accidental.

Q. The trade for some reason seeks to make the color standard of the raw sugar purchased not above No. 13? They intend to keep it No. 13 or below?—A. No. 13 is regarded as the line between raw and refined sugars, the refined sugars being sold on color and the raw sugars on test.

Q. Now, above No. 13 the sugar is sold upon color entirely?—A. Yes, sir.

Q. The polariscope, then, is applied only to No. 13 and below?—A. That is it.

Q. And for the purposes of refining the trade has learned that the sugars tested by the polariscope and not above No. 13 in color are the only ones profitable and practicable to use, has it not?—A. Yes, sir; the sugar-refining trade is concerned with raw material.

Q. Well, these sugars here are not necessarily subjected to any refining process, although they are above No. 13?—A. Oh, yes; they are refined sugars.

Q. There are no refined sugars in these samples. They are all raw sugars, are they not?—A. Not all of them. It depends upon where you draw the line in manufacturing as to what constitutes refined sugar. The process of refining these sugars, although less expensive than in the United States, is nevertheless refining the sugar as it comes from the juice state into consumption.

Q. Well, there is no process applied to these sugars, Nos. 13 to 17, except the process of original manufacture?—A. The original manufacture.

Q. There is no process of refining as distinguished from the making of the sugar from the juice?—A. There are processes of refining very similar to what exists in this country in the refining business, only these are made on the plantation.

Q. The refining, or what you think tantamount to the refining, of these sugars above No. 13 has been done by the planter, or at the plantation, as distinguished from the refining processes of the refiners who buy sugars and subject them to process?—A. The process is very nearly the same, varying according to the ability and skill of the refiner.

Q. From your knowledge of the business are you able to state whether within the last twelve months there has been any of the sugars above No. 13 imported into the port of New York?—A. The only source of information that I have is the Secretary's statistical report.

Q. The report of the Secretary of the Treasury?—A. Yes, sir. I do not follow the importations of sugars except as concerns my own business.

Q. You have not found any of that sugar in competition with your business in the market of New York within a year?—A. Within five years I have not.

Q. Mr. Havemeyer, you are one of the persons named as trustee under this deed. "Harry O. Havemeyer, member of the first class, to hold office seven years." You are the gentleman who is named there?—A. I am the individual.

Q. And you executed this paper on behalf of the Havemeyers and Elder Company and the Donner and De Castro Company?—A. I did.

Q. In the manner that is shown in the instrument?—A. Yes, sir.

Q. Your signature for the Donner and De Castro Company reads "per H. O. Havemeyer, manager, subject to confirmation of stock and scrip holders." Do you recollect making that addition attached to your signature?—A. Yes, sir.

Q. Has the confirmation of the stock and scrip holders, stipulated by this signature, been obtained?—A. Yes, sir.

Q. When was that done, Mr. Havemeyer?—A. During October, I believe.

Q. Of 1887?—A. Of 1887.

Q. Was there a meeting of the stock and scrip holders for the purpose of confirming this act of yours?—A. No, sir.

Q. Was any paper executed by them?—A. Yes, sir.

Q. Confirming this signature?—A. The paper was an assent to receive in lieu of their stock and scrip so many certificates stated, of the United Sugar Refiners' Company.

Q. That being the name given to the organization created by the trust deed?—A. Yes, sir.

Q. And was that consent signed by all stock and scrip holders?—A. Yes, sir.

Q. I notice you make a distinction between stock and scrip holders. Did the corporation of the Donner and De Castro Company issue two classes of scrip?—A. No, sir. Shall I explain it?

Q. Yes, if you will please state what the distinction is. I presume from the care with which it is made that there is one.—A. The Donner and De Castro Company, when I took charge of it about ten years ago, had a capital of a million and a half and \$600,000 of scrip outside.

Q. By scrip you mean stock, I suppose?—A. I think they made some money one year and issued a scrip dividend for it.

Q. So that scrip, as you call it, was in the form of stock issued in lieu of cash in the possession of the company which it represented?—A. For a short time.

Q. So that was the class of stock or scrip which it was intended to cover by this expression "stock and scrip holders" in this instrument?—A. Yes, sir.

Q. And did those persons assent to the transfer of the property of the Donner and De Castro Company, as well as the stockholders proper?—A. Without exception.

Q. Who were the stockholders of the Donner and De Castro Company?—A. The principal owners were the parties interested in the Havemeyers and Elder Company, and there may have been fifty outside of them.

Q. Substantially then the stockholders of the one company were stockholders of the other?—A. Substantially. The Donner and De Castro Sugar Refining Company built a refinery about eleven years ago and were very successful. Havemeyers & Elder contemplated an enlargement of their works and in lieu of that they joined with the Donner & De Castro stockholders and built two refineries, which make the three that they now own; and we owned a majority of that stock and became owners of the majority of the scrip.

Q. So that the majority of the stock, as you say, with the exception of some small amounts, and the majority of the scrip was owned by the stockholders of the Havemeyers and Elder Company?—A. No, by members of the Havemeyers & Elder firm.

Q. Are the refineries of these companies running?—A. The Donner & De Castro refinery is not running, nor has it run at any time in any winter for five years.

Q. When did it shut down?—A. About the middle of October, the usual time.

Q. About how many men, when that sugar refinery is running, are employed by the Donner and De Castro Company?—A. I would have to ask my brother about that.

Q. Well, if you don't know we will leave it until he comes on the stand.—A. I only know in a general way; I do not know the details.

Q. And you do not know about the other company?—A. You mean in the refinery proper?

Q. Yes.—A. About 2,000.

Q. In the Havemeyers and Elder Company?—A. Yes, sir.

Q. In the division of this business the practical work of the refinery is not under your charge?—A. No, sir.

Q. Your business is what may be called the mercantile part, conducted in the city of New York at the company's office there?—A. Yes, sir.

Q. The Havemeyers and Elder Company's refinery has continued to run?—A. Yes, sir.

Q. Without interruption?—A. Without material interruption.

Q. Has it closed down entirely at any time during the past year?—A. No, sir; except that it closed at one time during the coal strike on the Reading system for three weeks, not being able to get coal.

Q. With the exception of the interruption caused by your inability to get coal the business in your refinery has gone on uninterruptedly for the past year?—A. With the exception of the diminution of the meltings as the market would require.

Q. It was not worked to its full capacity all the time?—A. The capacity I have named, 8,000 barrels a day, is the extreme capacity of the best grades of sugar, and as the grade is reduced the capacity is correspondingly reduced.

Q. About what has been its production since the 1st of December?—A. I think it would average 7,000 barrels.

Q. Have there been any meetings of the trustees named in this deed?—A. Yes, sir.

Q. How many?—A. They have been frequent.

Q. And at those meetings have the trustees all attended?—A. No, sir.

Q. Has there been any occasion when all of them attended?—A. I doubt it.

Q. Do you recollect of any occasion when all were present?—A. Could not say.

Q. Has the board of trustees any office?—A. No, sir.

Q. Has it any place of regular meeting—stated place, I mean?—A. No, sir.

Q. Where has it usually or commonly met?—A. During December at the office of Mr. Dos Passos, in the Mills building, New York, and since then the meetings have taken place at the office of Havemeyers & Elder, 117 Wall street.

Q. Mr. Dos Passos is of counsel to the board?—A. He represented certain parties to the agreement.

Q. Before the signing?—A. So I understand.

Q. And who were those persons?—A. Persons other than the Havemeyers and Elder Company and the Donner and De Castro Company, so I understand. I do not know to what extent he represented them.

Q. The Havemeyers and Elder Company and the Donner and De Castro Company and the Havemeyers Sugar Refining Company are represented by different persons?—A. The Havemeyers Sugar Refining Company has no relation to the Havemeyers and Elder Company, and never has had. The Havemeyers and Elder Company and the Donner and De Castro Company were represented by Mr. Parsons.

Q. And the other parties to this agreement were represented by Mr. Dos Passos?—A. I could not say of all of them; but I understand a majority of them were.

Q. At meetings held at Mr. Dos Passos's office will you state who were present so far as you recollect?

The WITNESS. Will you allow me to look at the names?

The CHAIRMAN. Certainly [handing witness copy of the deed containing the names].

A. The gentlemen generally present at all meetings were Harry O. Havemeyer, F. O. Moller, John E. Searles, jr., Charles A. Senff, Theodore A. Havemeyer, John Jurgensen, and William Dick.

Q. Those gentlemen are all residents of the city of New York, or its immediate neighborhood, I believe, are they not?—A. New York, Brooklyn, and Jersey City.

Q. And have their places of business in the city of New York?—A. Yes, sir.

Q. Is there any person a member of that board who is not a resident of New York City or its environs?—A. Yes, sir.

Q. Who?—A. Joseph B. Thomas. There is an omission here [referring to the deed] of one man's name who was an original signer, or who became one later—Charles O. Foster.

Mr. PARSONS. As I understand, the original deed left that vacant for the Boston interest to fill in, and I think that was agreed upon, but the name probably was not filled in the deed.

Q. (To the witness.) Who is the Boston representative?—A. Charles O. Foster.

Q. His residence is in Boston, and he is one of the trustees?—A. Yes, sir; and also Mr. Joseph B. Thomas, of Boston.

Q. Then, to complete this list as given in this deed, the name of Mr. Charles O. Foster should be added to the members, of the board of trustees?—A. Yes, sir; and Mr. Parsons should be substituted for Mr. Hector C. Havemeyer.

Q. Are you able to state at this time whether Mr. Foster was added as a member of the first, second, or third class?—A. I am not, but my impression is that he is of the third class.

Q. That is, his term of office is three years?—A. I think so.

Q. You have named the persons who were generally present at these meetings at Mr. Dos Passos's office. Were there ever any other of the trustees at any of those meetings except those you have named?—A. Different members have been there more or less and at different times. I just give you names of those who attended most frequently.

Q. Did the board of trustees as constituted by this deed elect officers?—A. They selected a gentleman to preside.

Q. Who was that?—A. Theodore A. Havemeyer.

Q. Did they elect any other officers?—A. A treasurer to sign certificates, John E. Searles, jr.

Q. Did they elect any other officers?—A. Mr. Searles acted as secretary, and used to fill that position in case there was anything to do.

Q. After the election of Mr. Theodore A. Havemeyer as the presiding officer of this board, did he, in fact, preside?—A. Yes, sir.

Q. And did Mr. Searles act as secretary at those meetings?—A. He had nothing particular to do. He had the dignity of the office without any particular functions.

Q. Then you did not call upon Mr. Searles, although nominally secretary of the board, to keep any minutes of the action of the board?—A. No, sir; there was no action and no minutes.

Q. Were no motions made and put by the presiding officer at any of these meetings?—A. There may have been. I have no recollection of any distinct motion by which the sense of the meeting was taken by a vote.

Q. You have no recollection of any vote being taken?—A. No, sir.

Q. Where is Mr. Searles's place of business?—A. 112 Wall street.

Q. He was a member of which one of these firms?—A. Of the Havemeyer Sugar Refining Company.

Q. In that you have now and have had no interest?—A. Nothing except as I hold an interest as trustee.

Q. Except your interest under this instrument?—A. Yes, sir.

Q. Mr. Searles kept no minutes of these meetings, which were submitted to any other meeting to approve?—A. He kept memoranda of matters which were discussed. There were no regular minutes, as I understand minutes, kept.

Q. At the second or subsequent meetings of the board were the proceedings of the previous meeting in any way stated by the secretary?—A. Yes, sir.

Q. Stated from any memoranda?—A. No, sir.

Q. Stated from memory solely?—A. Mr. Searles pretends to be something of a stenographer, but whether he recorded this thing as a stenographer or kept it in his head there was no evidence at the meetings that he kept minutes, as minutes are usually understood.

Q. Whether as usually understood or not, had he memoranda from which he read to the second and subsequent meetings the proceedings of the preceding meetings?—A. He had such memoranda and other gentlemen had such memoranda.

Q. And these reports of the proceedings of the earlier meetings were submitted to the later meetings?—A. These memoranda, if you call them reports.

Q. And were they approved by the meeting?—A. There was nothing to approve of.

Q. No action taken by the meeting with regard to them at all?—A. No particular action.

Q. So that this board of trustees has never kept minutes of its proceedings and none have been submitted by its secretary to it for approval from time to time?—A. None other than these memoranda of which I spoke.

Q. Won't you describe to us what these memoranda consisted of, and how they were kept?—A. If we had a discussion or interchange of views I might jot down what were this man's views or that man's views. There was nothing requiring such memoranda.

Q. Did Mr. Searles jot down these discussions?—A. We all jotted them down. Mr. Searles did not do it any more than the rest.

Q. Was it the memoranda of the discussions which were reported to the subsequent meetings?—A. Those memoranda were what the gentlemen took into consideration, and gave the board the benefit of at the next meeting. The distinction between these memoranda in my mind, and what I think is dwelling in your mind, is whether regular minutes or anything approximating thereto were made at each meeting by Mr. Searles and reported to the next meeting adopted. There was nothing of that kind.

Q. Nothing of the kind?—A. Nothing especially of that kind. I do not wish to draw the line to exclude everything of that nature, and yet I do not wish to give you the impression that that did occur, because it did not. I want to be very careful in these matters because I do not

wish to have my evidence impugned by some man who may think memoranda are minutes.

Q. I want you to be as particular as you can ; but what I want to get at is to know whether the action of this board from time to time at its various meetings was formally or informally—as informally as you please—recorded by its secretary and reported to the subsequent meeting of the board, and the action of the board continued from such reported former action.—A. There was no action of the board and no record of any action of the board whatever.

Q. What occurred, therefore, was simply informal discussion ?—A. The board was simply advisory and called for interchange of views, and when a matter was referred to any gentleman he was asked to take it into consideration and give his views upon it at the next meeting. That accounted for the memoranda I made, and I believe the same was the case in reference to memoranda made by other gentlemen.

Q. And did these gentlemen, as matters of that sort were referred to them, come in at later meetings and report their views ?—A. Yes, sir.

Q. Of all that there was no record kept by the board of trustees ?—A. No, sir.

Q. So that in the management of this business the board has no formal record of any action kept by its secretary and reported at subsequent meetings ?—A. To what business do you refer ?

Q. The business for which it was created.—A. They were created for the business mentioned in the deed. They have never done any business. They had no business to manage.

Q. Then these meetings were simply for consultation ?—A. Yes, sir. They were simply advisory.

Q. And it is your understanding of this deed that although you hold certificates of stock of various corporations for which you have issued your certificates to the amount of forty-five millions, there is no business which requires formal action on the part of these trustees submitted to them under this deed ?—A. There is no business whatever. The original intention of the parties in interest under that deed was to put the stock into the hands of the United States Trust Company, and it is a pity they did not, for the functions of those trustees have been wrongfully stated ; and the statement that they have anything to do with the management of the sugar-refining business of this country is absolutely false. It is likewise false that they manage, in any way, shape, or manner, any one of the corporations whose stock is deposited with them. There is a specific provision in the deed that nothing of the kind should occur. It has been rigidly observed.

By Mr. WILSON :

Q I wish to inquire whether Mr. Havemeyer meant that the United States Trust Company should be the trustee instead of the eleven gentlemen mentioned in the deed ?

The WITNESS That was it.

By the CHAIRMAN :

Q. And the board, as constituted by the agreement, consists of persons, with the possible exception of Mr. Parsons, who are interested in one or the other of these original corporations ?—A. Yes, sir.

Q. Subsequently four additional refinery companies became parties to this paper ?—A. Yes, sir.

Q. And they have no representation from among their original stockholders in the board ?—A. No, sir.

Q. Of course, these four additional companies were added after some negotiation, I take it?—A. Yes, sir.

Q. Who conducted those negotiations on behalf of the trustees named in this instrument?—A. That is assuming that the trustees had something to do with the negotiations, which is not the fact.

Q. I call your attention to the fact that the instrument itself provides that "the capital stock of other sugar-refining companies and all companies whose business relates directly or indirectly to sugar refining, may be transferred to said board with the consent of a majority thereof."—A. Yes, sir.

Q. The stock of these other companies has been transferred to this board, as I understand Mr. Parsons' testimony?—A. Yes, sir.

Q. I assume, therefore, that it was done under the power contained in this deed?—A. Precisely.

Q. Therefore I ask you the question who conducted the negotiations between these individual corporations and the directors, the trustees named in this instrument, which resulted in the exercise of the power which is given in this deed to the directors?—A. There was no negotiation authorized by the board. There was none taken. Nobody represented them that I am aware of, and I believe I have been present at every meeting except one or two.

Q. Was the subject of these proposed transfers not discussed at the meetings of the board?—A. I do not think so.

Q. On no occasion?—A. On no occasion. Do you mean the acquisition of new stock?

Q. I mean the acquisition of the stock of these four refineries. Was that question never discussed at any meeting of the board?—A. I do not think I could say it was discussed at the meetings. It was discussed outside by individuals, but formally, at the meetings, I do not think it ever was.

Q. Certificates of the trustees under this agreement have been issued to the stockholders of these four companies, have they not?—A. The action of the board in issuing certificates in lieu of the stock is one thing; authorizing negotiations is quite another.

Q. That is not the question I ask you. The stenographer will please read the question.

(Question repeated.)

A. Yes, sir.

Q. Did not the board of trustees authorize the issuing of these certificates?—A. They did.

Q. And was that done at a meeting of the board?—A. It was.

Q. Was there no discussion preceding the giving of authority to issue these certificates in the board with relation to transfers of this stock and certificates to be issued?—A. There may have been some discussion. I do not wish it to be implied when I say there was no discussion that there never was anything said whatever. I mean to say there was no authority given in one individual, or a number of individuals, to negotiate for the acquisition of their stock. That was done by individuals outside of the meetings.

Q. And reported to the board?—A. When the board met on the subject it was to meet for action and not for talk.

Q. Then the individual members of the board, or some of them, conducted these negotiations and reported them to the board, and the board ratified them and directed the issuing of the certificates, did it not?—A. I would rather tell you how it was done.

Q. Very well, tell me how it was done.—A. There are some members of this board in the sugar business who keep familiar with all the other refineries, I believe.

Q. Right there, will you permit me to ask who these members are?—A. John E. Searles is the representative of them.

Q. Anybody else?—A. I do not know. My intercourse with the firm has not been very close since I have been in business; but he is in with the other refiners a great deal and partly represents them, and has ascertained what certificates their stocks will be exchanged for.

Q. That was done by Mr. John E. Searles?—A. It never came to my knowledge until the question had to be decided in my mind as to whether it would be "yes or no."

Q. Now, as I understand the transaction up to this point, Mr. John E. Searles conducted these negotiations, learned what the stockholders of these various corporations were willing to take in trust certificates, and reported that matter to the meeting of the board at which you were present?—A. I do not wish to go on record as having authorized, as a member of this board, any negotiations. I do not wish to appear before this committee as evading answers.

Q. I do not wish to get it upon record that I am trying to mislead you. (To the stenographer.) Read the question.

(Question repeated.)

A. Yes. The negotiations, however, were on his own account.

Q. Now, at that meeting, when Mr. Searles reported this matter, did the directors authorize the issuing of the certificates, or was there more than one meeting before that authorization was given?—A. To my best knowledge, it was already arranged before the meeting of the trustees and a majority of the certificate holders authorized the exchange.

Q. So that at the same time that Mr. Searles reported the amounts which these several stockholders were willing to take, it was ascertained that the certificate holders had also consented to the arrangement?—A. A majority of the certificate holders were members, and they had power to give consent.

Q. Was that consent given then and there at that meeting?—A. Yes, sir.

Q. And do you wish to be understood that this transaction consisted of a negotiation of Mr. Searles without authority from the board and without consultation with you up to the point where he had agreed upon the amount which the stockholders of the four companies would take in certificates and declared upon at a meeting of the board of directors without further consideration, the certificate holders then present constituting a majority of the whole certificates, and the directors consummated or directed the consummation of that transaction?—A. I would rather tell you what transpired, in answer to the question.

Q. Have you any objection to answering the question? I want simply to narrow it down to a statement.—A. In answering the question now I might include something that did transpire.

Q. Now, make your own statement in lieu of answering the question categorically.—A. Mr. Searles knew about what the stock of these different companies could be exchanged for in certificates, and he talked it over with different members of this board, but not in an official way.

Q. Not at a meeting of the board?—A. No, sir. When the thing had been settled that a majority of the scrip holders would give that for the stock, they met and did take action to exchange the certificates and to instruct Mr. Searles to draw the necessary papers.

Q. So that the final action was the result of consultation between the individual members of the board and the certificate holders in advance of the meeting of the board?—A. Yes, sir.

Q. Have any of the refineries of these various companies ceased work, with the exception of the De Castro and Donner Sugar Refining Company, of which you have already testified, since the signing or the completion of this arrangement?—A. I believe only one.

Q. Which one is that?—A. In New York.

Q. One in New York?—A. Yes, sir.

Q. Which one in New York?—A. The Moller, Sierck & Co.

Q. Any others?—A. Two in Boston.

Q. Which are those?—A. The Boston Sugar Refining Company and the Bay State Refining Company.

Q. How large a capacity has the refinery of Moller, Sierck & Co.? What amount is its usual output?—A. I should say 500 barrels a day.

Q. About how many employes has it?—A. Sixty.

Q. When it is running full?—A. Yes, sir. I understand that by the testimony given by Mr. Sierck in the State investigation. I do not know anything about it.

Q. What is the capacity of the Boston Sugar Refining Company?—A. I believe it is 1,800 barrels a day.

Q. What is the capacity of the Bay State Sugar Refining Company?—A. About 800.

Q. The refinery of Moller, Sierck & Co. at the time of the execution of this agreement was in process of repair?—A. Yes, sir.

Q. And as part of that system of repairs did they contemplate an increase of capacity?—A. Yes, sir.

Q. To what extent was that increase to go, or how much of an increase was there to be?—A. I can not state that.

Q. Do you recollect what was said about it, or agreed about it?—A. I was told that they were increasing their capacity.

Q. When did they close down?—A. I believe about the first of February.

Q. Of this year?—A. Yes, sir.

Q. Was there any discussion at the meeting of the board, or between the members of it, about the closing down of that refinery in advance of its shutting down?—A. Yes, sir.

Q. Was that at the meeting of the board?—A. Yes, sir.

Q. Was any opinion expressed at any of those meetings as to the propriety of the closing down of that refinery?—A. Yes, sir; all recommended it.

Q. By whom was the propriety of that course advocated or recommended in your board?—A. I believe by the whole board.

Q. In the opinion of the board, then, it was desirable that that refinery should close down?—A. I am mistaken entirely about that. I would like to correct that.

Q. If you have any corrections to make, you can make them to conform to your best recollection.—A. What was called the mercantile committee discussed that matter and sent them a letter recommending that pending their improvements they had better discontinue work, so that the amount, I believe, would not be confused, or something of that kind.

Q. Now you have spoken of the mercantile committee; is that a committee of this board?—A. They have an advisory function in the mercantile department,

Q. Is it a committee of the constituted members of this board?—A. As far as this board has power to constitute any committee, I should say they were.

Q. I ask you if the membership of that committee consists of persons who are members of the board?—A. Yes, sir.

Q. Who are the members of that mercantile committee?—A. Mr. John Jurgeson, Mr. Jules S. Stersberg, Mr. William Dick, Mr. John E. Searles, Mr. H. O. Havemeyer, and Mr. J. B. Thomas.

Q. This mercantile committee, as you call it, was selected or assumed its functions with the consent of the board?—A. There was no consent about it. The gentlemen connected with this board are either refiners or mercantile men, and the refiners established themselves in one committee and the mercantile men established themselves in the other.

Q. And that arrangement met with the approbation of the members of the board?—A. I do not think there was any action of the board taken.

Q. Without any action, was the approbation expressed by members of the board at the board meeting?—A. No, sir; I do not think anything of that kind occurred.

Q. Was there any discussion of the question at all by the board?—A. Yes, sir. There were discussions on these questions at all times, but there has been no formal discussion in the board. These gentlemen meet as much out of the board as they do in the board. Whether it was arranged in the board or out of the board I can not tell.

Q. Was it arranged by the members of the board, either in or out?—A. It was not arranged by the members of the board that I know of, and yet it may have been. We did not anticipate such a rigid investigation into the action of all these gentlemen. My memory is not clear as to how the thing actually transpired.

Q. Yet, in some way or other, with the knowledge of all the members of the board, there is a committee of gentlemen, whom you named, who act as the mercantile committee?—A. Who act in the capacity of advisory members in the mercantile department of the business.

Q. You have designated them as the mercantile committee. Is that the style they are known among their associates?—A. That is the style.

Q. And among the things that this mercantile committee has done has been to authorize the writing of a letter to Moller, Sierck & Co., recommending that they close down their factory?—A. Yes, sir.

Q. And that under that recommendation Messrs. Moller, Sierck & Co. did close up?—A. That is what they have done.

Q. There is another committee which seems to have acquired a name, if nothing else, as I understand you?—A. In the sense that they are a committee. I do not wish to evade that or avoid it.

Q. I say in whatever sense it is, there is another committee?—A. Yes, sir.

Q. And known among the members of this board of trustees?—A. Yes, sir; it is styled the refining committee, to whom anybody can go for advice.

Q. Upon what subjects are they specially advisory?—A. All subjects appertaining to refining—everything appertaining to refining.

Q. Now, I would like to understand the distinction which exists in the minds of the trustees of this organization between the manufacture and the refining business—where one begins and the other ends?—A. The sugar business involves two things: the purchase of sugar and paying for it; the selling of refined sugar and getting the money.

Q. That is one branch of it?—A. That is one branch of it, and the members of that branch, as a general thing, do not know anything about refining. The other branch is the man who takes the sugar from the dock as it is sent him, refines it, and puts it in a barrel and delivers it upon orders. As a general thing, he knows nothing about the mercantile part of it.

Q. Then, the closing down of the Moller, Sierck & Co. refinery, or the recommendation that it should close down, came under the province of the gentlemen who are advising with regard to the mercantile part of this business?—A. Yes, sir.

Q. And not under the province of the gentlemen who are advising with regard to the manufacturing part of it?—A. That is a correct statement.

Q. Can you give the names of the gentlemen who are supposed to constitute the manufacturing committee?—A. Theodore A. Havemeyer, F. O. Matthiessen, Charles H. Senff, and C. O. Foster.

Q. Mr. Senff, before this instrument was signed, was a member of which one of these organizations?—A. Havemeyer's & Elder.

Q. The Bay State Sugar Refinery has shut down, I believe?—A. Yes, sir.

Q. About when did that occur?—A. I can not say whether it was during the month of January or later.

Q. Was there any discussion in the board, or in either of these committees, or among the members of the board, preceding the closing of that refinery, with regard to the advisability of its closing?—A. No, sir; I think that matter was discussed between the president of that refinery and myself in my office.

Q. Who is the president of that refinery?—A. E. Atchison. I think his first name is Elisha.

Q. He was not a member of this board, then?—A. No, sir.

Q. The discussion which preceded the shutting down of that refinery was with you personally?—A. Yes, sir.

Q. Was any recommendation made to this gentleman by you with reference to its closing?—A. I agreed with him. He told me that he had been in the habit of closing for repairs during the winter season, as all refineries do. He thought now was the time to do it, and I agreed with him.

Q. And the discussion upon that subject was not extended to the other members of this mercantile committee?—A. No, sir.

Q. In advance of the closing of the refinery?—A. No, sir; I do not think it was.

Q. So that that refinery closed up after the talk between you and the president of the company, in which you both agreed that it was wise that it should be closed at that time?—A. The refinery did close after the talk.

Q. The question does not involve anything more than the chronological order of the events, if you will listen to it. Now the other sugar refinery at Boston which is closed is the Bay State Sugar Refining Company?—A. It is the Boston Company. You have been already inquiring about the Bay State Company.

Q. When did that close?—A. My impression is that that closed before this agreement went into practical effect—before December 1.

Q. After the Boston Sugar Refinery Company had signed it or had agreed to sign it?—A. I believe after they had signed it.

Q. I call your attention to the fact that in Mr. Parsons's examination, his recollection was that this instrument was completed by or

about November 1.—A. He is wrong there. The instrument itself was completed, I believe, but the affair did not go into practical effect until the 1st of December.

Q. His testimony related rather to the time when the signing of the instrument by the original parties was completed?—A. He is correct as to that.

Q. That was about October 24?—A. October 24.

Q. So that the Boston Sugar Refining Company had signed this agreement before ~~it~~ closed down?—A. Yes, sir; and without any consultation or conference with any member of the agreement, to my knowledge.

Q. Can you give me the names of the officers of that company?—A.

C. O. Foster is president. He is the only gentleman I know.

Q. That Foster is the gentleman who is on the manufacturing committee?—A. Yes, sir; the same.

Q. Now, was there any discussion between the members of this mercantile committee, or between any of the members of the board, concerning the closing down of this refinery, in advance of its closing?—A. Not that I am aware of; no, sir.

Q. Had you any information of the purpose of closing that refinery before it closed?—A. No, sir.

Q. Has it re-opened yet?—A. No, sir.

The CHAIRMAN. I think at this point I will suggest to the members of the committee that any of them who desire may examine this witness.

By Mr. McKINNEY:

Q. This company in Boston, you say, was closed when?—A. I think it was closed in November.

Q. And has not yet re-opened?—A. No, sir.

Q. Do you know whether that was closed or not because of some advantages that New York had in rates of freight, or anything else, over Boston?—A. No, sir.

Q. It was not?—A. No, sir. As I understand it, it was the usual time of closing every year.

Q. Is there any truth in the statement that the importation of raw sugars into the port of New York can be made upon more favorable terms than importations coming into the port of Boston?—A. Yes, sir.

Q. Had that anything to do with the closing down of this Boston firm?—A. No, sir; not that I am aware of. It is the Louisiana crop that shuts the refinery up in the winter.

Q. Is there any other of these refineries closed at the present time; that is, in this trust?—A. I think Møller, Sierck & Co. is closed. The North River refinery is closed. It closed, as I understand it, before the trust went into effect. The Oxnard refinery is closed. And, as I have testified, the Bay State and Continental refineries are closed—the Bay State and Continental of Boston; the Bay State since the execution of the paper, and the Continental before, as I understand it.

By the CHAIRMAN:

Q. Then your testimony with regard to the Boston Sugar Refinery Company was meant to apply to the Continental, or are both of them closed?—A. Both of them are closed now, and both of them were closed before that agreement went into practical effect. The only refinery in New York which has closed since is the Møller & Sierck. It is my understanding that the Oxnard and the Møller & Sierck closed before that went into practical effect, the 1st of November.

Q. And after the signing of the agreement ?—A. Yes, sir.

By Mr. McKINNEY :

Q. Has this Bay State refinery closed for any specific time ?—A. Not that I am aware of.

By Mr. SMITH :

Q. How many stockholders are there in the organization ?—A. I have never learned.

Q. Is Mayor Hewitt, of the city of New York, a stockholder ?—A. Not that I am aware of.

Q. What is the name of the bank that this organization does its business through ?—A. It has not any. It has an organization for the transaction of business.

By Mr. CROUSE :

Q. In the examination in chief there was one point dwelt upon which I did not see the exact occasion for, but it may come out hereafter ; therefore I wish to get a clear understanding of it. I refer to the different grades of raw sugar, and I ask it simply for my own information, and that is this: No. 13, I understood you to say, marked the dividing line between raw sugar and partially refined sugar. Am I right about that ?—A. You are.

Q. So that lower numbers than 13 have more impurities in them, and as you approach 13 you approach the line of refined sugar ?—A. Yes, sir.

Q. And the number above 13 is partially refined, and takes its class among refined sugars ?—A. You are correct.

Q. And as you still go higher up the list you finally reach pure sugar ?—A. A perfection of refining.

Q. And no matter what the process has been, No. 14 has undergone at least a partial process of refining ?—A. It is so considered. It is the fact in sugar-producing countries.

Q. No. 15 has undergone more of the process of refining ?—A. A step further.

By Mr. BUCHANAN :

Q. Who, if you know, took the leading part in forming this consolidation or so-called trust ?—A. I believe Mr. John E. Searles, jr.

Q. Alone and unaided ?—A. As to matters within my personal knowledge he is the only one. If the committee would like to know how it was originated, I would be very glad to tell them.

Q. My only purpose is to ascertain who were the leading ones in originating it, but I have no objection to your stating it in your own language, of course.—A. After conference with Mr. Parsons on the subject I agreed to become a party to the trust. I had no consultation on the matter with any other gentleman at any time.

Q. Who of the parties named in the deed produced here conferred with you in relation to the formation of this trust before the final consummation of the project ; any or all ?—A. Mr. Parsons is the only one I have ever met on the subject.

Q. And you were aware, were you not, that during that time the other gentlemen named in the deed also conferred with Mr. Parsons ?—A. No, sir.

Q. You so understood it, did you not ?—A. No, sir ; my understanding was that Mr. John E. Searles was representing all the others, and had for his counsel Mr. Dos Passos, who conferred with Mr. Parsons.

Q. It was understood at the time that there was unity of purpose or concert of action, was it not?—A. I do not know anything about what the transactions were. I only know what I knew about it.

Q. And what you knew was that there was a proposed consolidation of these interests, or rather I should say a unification?—A. Unification under terms of agreement to be approved by Mr. Parsons.

Q. Now tell me what the purposes were that were to be subserved by such consolidation, as they existed in your mind?—A. The general benefits arising from what we considered the aggregation of capital.

Q. And what were those general benefits? Please specify them.—A. The most particular one was the influence of the Louisiana crop upon the sugar-refining industry of this country.

Q. Was it a desire to counteract that influence?—A. It was a desire to limit the losses, during the marketing of that crop, to a minimum.

Q. How does the marketing of that crop create losses in the sugar trade?—A. The marketing of the Louisiana crop, representing about 40 per cent. of the consumption of the entire country, during the four months that it is marketed, formerly required a reduction on the part of some refineries and complete stoppage on the part of others. This arrangement enables the better refineries to continue work and the absolute stoppage of the others. The economy is in the absolute stoppage, representing the tonnage marketed by Louisiana, as against a pro rata reduction of the entire refineries.

Q. I do not understand exactly what you mean by reduction. Do you mean reduction in price or reduction in the production of the refinery?—A. Reduction of the production.

Q. So that your object was, that while the Louisiana crop was upon the market, thus augmenting the supply of sugar, a proportion of the production equivalent to that crop should cease?—A. Yes, sir.

Q. Maintaining an equilibrium in the supply all the year around?—A. Yes, sir; instead of the disastrous overproduction which always occurred at that time of the year.

Q. Which disastrous overproduction was disastrous in what respect?—A. All that was left was lost.

Q. Please state what loss, and how accruing?—A. If you carry to market the entire production you break the price.

Q. In other words, the result of the throwing of the Louisiana crop upon the market was a reduction of the price of sugar?—A. To a certain point.

Q. And it was to avoid this reduction of the price that this consolidation was formed?—A. To avoid the loss attending such a reduction Louisiana reduced the price.

Q. If no reduction of the price takes place there would be no loss to the refinery?—A. If you could market your product there would not be.

Q. Now I see stated in this deed certain objects:

(1) To promote economy of administration and to reduce the cost of refining, thus enabling the price of sugar to be kept as low as consistent with a reasonable profit.

Will you explain how this consolidation resulted or was supposed to have resulted in a reduction of the cost of refining? I ask that because I have no knowledge upon the subject?—A. There are people of varied knowledge in this business who thought that by giving the benefit of what each knew it would result in better refining and perhaps less cost.

Q. In other words, that community of interest would result in a community of knowledge, and the knowledge of one would thus be in the knowledge of all?—A. Yes, sir.

Q. Has the plan been tried far enough as yet to demonstrate whether it is a fact or not? Has that object been attained to any extent?—A. There has been some conference as to how far that could go.

Q. My question is whether the plan has been tried far enough to ascertain whether that object is capable of being demonstrated into fact?—A. To the satisfaction of some, it has.

Q. The second object is—

To give each refinery the benefit of all appliances and processes known or used by the others, and useful to improve the quality and diminish the cost of refined sugar.

Was it a fact that while these refiners were in active competition with each other that some of them were in the knowledge of secret processes which the others knew nothing of?—A. We believed it to be.

Q. Has this object been accomplished to any extent as yet—the impartation to each other of the knowledge of their secret processes?—A. In a measure.

Q. The third is—

To furnish protection against unlawful combinations of labor.

When you signed that deed what did you understand that language to mean?—A. I thought if the occasion of a strike or anything else should occur, I would have to take legal action on that matter.

Q. But it refers to unlawful combinations of labor. There is no law to compel a man to work if he does not wish to.—A. There are lawyers to tell us what unlawful and lawful combinations are. I am guided by my counsel in regard to those matters.

Q. I am endeavoring to ascertain the meaning of the parties who formed this combination. You are one of those parties. I am seeking to know your object, and an object is here formulated, and I would like to know what unlawful combinations you had in your mind at the time of the execution of that paper?—A. I can not tell you what was in my mind. It was my opinion that a strike which occurred at Havemeyers & Elder's some time ago was an unlawful combination of labor. Mr. Parsons said it was not.

Q. And Mr. Parsons being your legal counsel, you bowed to his decision?—A. I did.

Q. The next object here is:

To protect against inducements to lower the standard of refined sugars.

Please explain what that means—what inducements and by whom likely to be put forth?—A. In my experience, which is not very extensive, I have found that the invariable results of disastrous competition is the debasement of the property. What they can not do legitimately they undertake in another way.

Q. Can not you state it approximately—you stated to the chairman you could not accurately—the number of men employed in the Havemeyers and Elder Company's refining works?—A. I understood from my brother when the chairman put the question that it was 2,000.

Q. Can you give me approximately the number of men employed by the refineries represented in this deed? If you have no personal knowledge, I do not ask you to obtain it from others. On the instant, I thought perhaps you knew approximately.—A. I do not. I have understood it to be 25,000.

Q. Are there any sugar refineries shut down to-day that are not included within this consolidation or so-called trust?—A. Not to my knowledge.

Q. Give me your best judgment as to the number of employes that were employed in the refineries embraced within this trust at the time of the execution of the deed, and the number that are so employed to-day; I mean actively employed in each case.—A. I understand the difference to be 160 men.

Q. Which way—more or less?—A. Less.

Q. The net result, then, of this shutting down has been the employment of 160 men less than it was before?—A. As to the number of men, 160 less; as to the hours of labor, greatly increased.

Q. From what to what?—A. The other thousands of men had continuous and steady work, which to them, at this season, was tantamount to higher wages.

Q. Has the number of hours been decreased or diminished under the present arrangement?—A. The number of hours that each man works during the month has been increased; that is, the number of hours per day. I had better state that during the winter, when the market suffered from the Louisiana crop, every refiner had to reduce his production from 25 to 35 per cent. and at that time he laid off a certain percentage of his men. That has been corrected under this arrangement; with the exception of those 160 men, the men have either been given employment or have been paid when they were not employed.

Q. I want you to take in a season which is fair by comparison, because I wish to get at the exact facts. Compare the present time with the same time of the year preceding, and what is the comparative employment of the men? Is it greater or less?—A. The number of men employed has been reduced by 160.

Q. I understand that. But how are you going to draw a comparison between the men who lay off 25 per cent. of their time, and the discharge of 160 men absolutely? What I am trying to get at is, taking a season when the Louisiana crop affected the refineries as much as it is to-day affecting them, what is the comparison as to the amount of employment then and under the present arrangement?—A. If the number of men is assumed to be, in this industry, 25,000, and I think it ought to be, and the reduction is 25 per cent., then 6,000 men were laid off. At this season these men have been paid whether they worked or not, and 160 men have been discharged.

Q. Under this arrangement, are the men in the refineries which are shut down given compensation for labor; are they being paid?—A. With the exception of the North River refinery, which has been condemned as a park and which will be dismantled, and the Oxnard Refining Company, which will probably be dismantled, and the Moller, Sierck & Co. refinery, which is undergoing repairs and will not be able to run until May or June, the men, as I understand it, in all the refineries have full month's pay whether they work or not.

Q. Then you claim that the present arrangement is of benefit to the workmen during the season when the market suffers from the Louisiana crop.—A. Yes, sir; undoubtedly 25 per cent. in his monthly wages.

Q. Is there any one connected with this organization who could furnish us the exact figures in regard to this subject?—A. I think Mr. Theodore A. Havemeyer could obtain them for you.

Q. What proportion of the product of this consolidation is exported?—A. Now, none.

Q. Formerly how much?—A. In 1885 I think it was 10 per cent. of the entire capacity of the refineries of the country.

Q. What is to become of that 10 per cent. at present? Is it consumed in this country in addition to what was previously consumed or non-produced?—A. Non-produced to a great extent. There has been a slight increase in the production which would offset the diminished exportation in a measure.

Q. Have you, in your refineries, made any experiments with beet-root or sorghum sugar?—A. We refine beet sugar in the winter. The culture of that which you refer to is probably an agricultural experiment, not a sugar-refining experiment.

Q. Whence is that beet sugar obtained which you refine?—A. From Germany. The tariff discriminates against it and it is an unimportant quantity that comes here.

Q. Can you approximate the proportion of beet-root sugar that the refineries of this country consume during the winter months—the percentage approximately?—A. You mean the refined product of the beet sugar. No beet sugar is used direct. It all involves a refining.

Q. I mean the percentage of the production?—A. I think the importations last year were 100,000 tons; I am not sure. That would represent, say, 10 per cent. of the total consumption.

Q. Do you find any difficulty in re-refining beet-root sugar?—A. Yes, sir.

Q. More than that from cane sugar?—A. Yes, sir.

Q. What is the difficulty?—A. The potash salt is an obnoxious one and difficult to remove. The expense of refining it and in relieving it of the unpleasant taste, has very much deteriorated.

Q. About what per cent. greater, approximately?—A. I suppose you mean on the average?

Q. On the average, approximately?—A. I should say 15 per cent. It runs from 5 to 25, according to the quality of beet sugar.

Q. In answer to Mr. Smith you stated that this combination or trust had no bank through which its business was done. I notice that the deed provides:

The profits arising from the business of each corporation shall be paid over by it to the board hereby created, and the aggregate of said profits, or such amount as may be designated for dividends, shall be proportionately distributed by said board at such time as it may determine to the holders of the certificates issued by said board for the capital stock as hereinbefore provided.

Has occasion yet arisen for the use of that article of the deed?—A. No, sir.

Q. And that perhaps is the reason that the aggregation or combination has as yet selected no bank through which to do its business?—A. Your question has not come out naturally.

Q. I see, also, on page 16 of this copy, that—

This deed shall not be shown or delivered to any corporation, firm, person or persons whatsoever, except by express direction and order of the board.

Please state to me why that language is inserted in the deed.—A. I never paid any attention to it, except that somebody had been made custodian and that the lawyers put it in that shape.

By Mr. BRECKINRIDGE:

Q. You have been connected with the sugar-refining business for twenty years, I believe you stated.—A. Yes, sir.

Q. What branch of that business do you devote your attention to, or have you devoted your attention to, principally?—A. Principally the mercantile.

Q. The financial part of it?—A. Yes, sir; including the purchasing of sugar and the sale of sugar.

Q. More to that branch of it than to the refining part of the business?  
A.—Yes, sir.

Q. Are you on the mercantile committee of this association or trust?  
—A. Yes, sir; so called.

Q. What do you understand to be the practical objects and purposes of that association?—A. As far as the mercantile committee is concerned?

Q. No, sir; as far as the association is concerned.—A. They are set forth in the deed. They are expressed there better than I can express them.

Q. You simply refer to the deed?—A. Yes, sir.

Q. What, in your opinion, is the effect of this union of the corporations upon the consumers of refined sugars in general?—A. It has cheapened it so far.

Q. Am I to understand from that that refined sugars have been cheaper since this trust was formed than they would have been if it had not been formed, in your opinion?—A. Yes, sir.

Q. Have refined sugars been cheaper since this trust went into operation than they were for the corresponding period a year ago?—A. No, sir.

Q. What leads you to believe that they would not have been as cheap this year as they were the year before?—A. Cheapness is a relative term, and since the trust has been in existence sugar has advanced 1 cent in England and only half a cent here. If the trust had not been in existence sugar would have advanced a cent here in sympathy with them.

Q. Have raw sugars been higher in value in this country and abroad since this trust has been in existence than they were for the corresponding time a year ago?—A. For the corresponding period a year ago I am unable to state.

Q. Are you prepared to say that they have been higher during the period of the existence of the trust?—A. I would prefer to speak by the record if you will allow me, and refer to the record.

Q. I have no objection.—A. As compared with what time?

Q. With the same period a year ago.—A. They have been very materially higher.

Q. Raw sugars have?—A. Yes, sir.

Q. What is that to which you are referring?—A. To the evidence of the Commercial Bulletin man, whom you examined previously.

Q. That is his statement of quotations taken from the Commercial Bulletin, is it?—A. Yes, sir. The average per month.

Q. Do you attribute the advance in refined sugars in Europe to the advance that has taken place in raw sugars principally?—A. Yes, sir.

Q. Will you please look at the table you have and state what was the price of the grade given of raw sugars, say, the 1st of November.—A. What year?

Q. The past year.—A. Five-sixteenths of a cent.

Q. What grade is that?—A. It is called fair refining.

Q. What was the price at the same time in 1886?—A. Four and fifty-six hundredths cents.

Q. Where was that price?—A. In New York, November 1, 1886.

Q. New York was the market in both instances.—A. Yes, sir.

Q. What were the prices in Havana, at those periods, for the same

sugar?—A. They were that, comparatively the same, less the expense of getting the sugar here.

Q. What was the price of that grade of sugar in New York at the last date you have there?—A. February 21, 4.86 cents.

Q. What was the price on the same day and at the same place, of the same grade, in 1887?—A. Four and fifty-six-hundredths cents.

Q. The first quotation was what?—A. Four and eighty-six hundredths.

Q. And the latter four and fifty-six hundredths?—A. Yes, sir.

Q. What was the price of refined sugar at the period given in 1887?—A. Refined is not given.

Q. What effect do you think your union will have on the strikes?—A. I think the union will be the reconciliation between the workman and his employer.

Q. Do you think your union will occasion the necessity of labor organizing to secure men fair wages?—A. No, sir; just the reverse.

Q. In case the men should differ with you in that agreement as to what constitutes fair wages, would an organization on their part possess as much force and effect with reference to the refineries in this association as such an organization had before your consolidation?—A. Just as much and no more.

Q. And no less?—A. And no less.

Q. I understood you to say that all so-called raw sugars up to 13 Dutch standard have to be refined before they can be used by consumers?—A. Yes, sir.

Q. Do you remember how much raw sugar up to No. 13 Dutch standard is imported into the United States?—A. 1,200,000 tons a year.

Q. And all of it, I believe, is refined?—A. Yes, sir.

Q. What grade of sugar constitutes the bulk of refined sugar; that is, the most that goes into consumption after being refined?—A. The grade known as hard grade, which embraces granulated, cut-loaf, and all descriptions of hard sugars as distinguished from soft sugars.

Q. They usually run from what color up?—A. The finishing color of refined soft sugar is 20. Hard sugars are all considered in the category above that, although 20 is very white.

Q. Am I to understand from you, then, that pretty much all the sugars which are consumed are above No. 20?—A. No, sir; only 50 per cent. You ask me the greater proportion.

Q. Your belief, then, is that 50 per cent. of the sugars that enter into consumption is above No. 20?—A. Yes, sir.

Q. Will you please state between what two numbers the remaining 50 per cent. generally goes?—A. Twenty-five per cent. of the whole between 16 and 20, and about 25 per cent. between 15 and 16.

Q. The sugars above 20, I believe, usually go into domestic use and the manufacture of confectionery products, does it not?—A. Yes, sir; although it applies more particularly to confectionery consumption than it does to domestic purposes. What proportion goes to one and what proportion goes to another I can not name. I have seen the most expensive sugars, such as cut-loaf, in the poorest families, and I have seen the worst kinds of sugar used in the richest families. There is no way of determining where that consumption is made.

Q. What grade of sugar is principally used by the people who preserve fruits, such as peaches, plums, and fruits of that character?—A. Where a perfectly white solution is required white sugar is used.

Q. They generally use a high grade of sugar?—A. Yes, where a perfectly white solution is required. When the coloring solution in which

the fruit is to be preserved is not material they use the cheapest they can get.

Q. You have not an accurate or thorough knowledge of the manner in which sugars are distributed in consumption, I suppose?—A. Not to indicate it by percentages.

Q. You do not understand that as thoroughly as a man in the grocery business?—A. Yes; I think I understand all about sugar and its consumption a little more than a man in the grocery business; but I can not fix the percentage.

Q. You only sell to jobbers, do you not?—A. We sell to everybody, but not less than 10 barrels of one grade of sugar, and he puts his money up.

Q. Is there a market for your best refined sugar in England?—A. Granulated sugar, which constitutes nearly the entire exports of this country, was a product originated in America and introduced into England and established there. Now, since they have removed the drawback, the Englishman has it.

Q. You speak of the removal of the drawback. What do you mean by that?—A. The law prescribes that the sugar refiner shall have in drawbacks the equivalent of the duty paid. The determination of the Department on that subject has been to keep reducing it, and then they get it down to what they think it ought to be. That has been the operation of the different Treasury officials until it has culminated in an inadequate drawback.

Q. And there it rests?—A. And there, unfortunately for the interests of the people of this country, it rests.

Q. I understand you to say that the granulated sugar is made extensively in England at this time?—A. Yes, sir.

Q. How long has that been the case?—A. Extensively for about two years.

Q. What kinds of sugar have we exported abroad when we did export?—A. Prior to the manufacture of granulated?

Q. Of late years?—A. The bulk of the sugar, as I have stated, has been granulated. There has also been a slight exportation of what is called the cube sugar, and to the South American States of crush and cut-loaf.

Q. What was the price of granulated sugar in New York on February 1, 1888?—A. I believe 6½ cents. I have not got those figures and I prefer not to answer except by the record; I can not carry them in my head.

Q. Do you know what was the price of the granulated sugar in England on the 1st of February last?—A. Yes, sir. On February 3, the date of the circular, it was 19s. 6d., equivalent to 4 cents.

Q. Nineteen shillings and six pence for how much?—A. One hundred and twelve pounds, equivalent to 4 cents per pound.

Q. That was on the 3d of February last?—A. Yes, sir.

Q. Will you please state to me what was the price of the same sugar in New York upon the same day?—A. Six and five-eighths cents net.

Q. Per pound?—A. Yes, sir.

Q. Sold in lots?—A. Sold to the jobbers.

Q. That includes discounts, and all that?—A. No, sir; it is net.

Q. What do you mean by "net"?—A. Sugar that is sold at 6½ cents less ½ per cent.

Q. So that the actual money the jobber would pay would be 6½ cents?—A. Yes, sir.

Q. Suppose he deducted the duty on granulated sugar. How would the price here compare with the price in London?—A. It would be the same at that particular time.

Q. Will you please give me the same figures for the 1st of February, 1887?—A. Seventeen shillings.

Q. In London?—A. Yes.

Q. That is equivalent to how much per pound?—A. 3.70 cents.

Q. That is 3.7?—A. Yes, sir.

Q. Is that 3 cents or 3 pence?—A. Three cents. I have reduced that to American money.

Q. That was the price in London for granulated sugar for the 1st of February, 1887?—A. Yes, sir.

Q. What was the price in New York for granulated sugar at that time?—A. I have not that. We were not informed that we would be asked as to prices. I would be very glad to furnish the gentlemen that.

Q. Have you any rate for 1887?—A. No, sir; I have not. Will you allow me to make a statement in reference to the difference in price?

Q. Yes, sir.—A. There has been no time in five years but what the price of granulated sugar, leaving off the duty, has not been cheaper to the American people than in England. That is likewise the case of every product of sugar of the American refinery.

Q. Will you please explain to me how that comports with the statement you made a moment ago—that the price now of granulated sugar in New York is the same as the price of granulated sugar in London, with the duty added to it?—A. Simply because under this so-called arrangement refiners, knowing exactly what it costs to produce sugars, do not over-produce so as to require them to sell it at a quarter of a cent less.

Q. To recur once more to that fact. What was the price at the latest period reported of the granulated sugar in London?—A. Four cents. The latest period was February 3, 1888.

Q. Tell us what that is?—A. I have given that—4 cents.

Q. What was it on the same day in New York?—A. With the equivalent of the duty taken off?

Q. I mean what was the actual price in New York to the consumer on the same day?—A. 6.62 net. If you take 1 cent off the English price it is only 4 cents net. If you take only 1 cent off the New York price it is 6½.

Q. You are giving the prices upon the same basis?—A. Precisely.

Q. Now, am I to understand you that 4 cents is more than 6.62?—A. It is about the equivalent, allowing for the duty.

Q. Of course you will not dispute the fact that 6.62 is more than 4 cents?—A. Now I know what you mean. I thought you wanted to show the parity between the different countries using the duty. The price in America has been greater than that of London, with the duty added, or including the duty. The price in America, in consequence of the duty, has always been greater than the price in London.

Q. Does it cost more to refine sugar here than it does in Europe?—A. Yes, sir.

Q. How much more does it cost here than in England?—A. I should think a quarter of a cent per pound.

Q. How much more here than in Germany?—A. A little in excess of that; a little more than a quarter of a cent.

Q. How much in Belgium?—A. I should say that was similar with Germany.

Q. Could American refineries compete with European refined sugars if all kinds of sugars were free of duty?—A. No allowance being made for protection against the difference of labor?

Q. I am talking about all sugar being put on the free-list?—A. I think it would annihilate the industry and be a terrible blow unless there was some protection.

Q. There is no protection when they are on the free-list?—A. I do not think it could exist.

Q. Could sugar be refined cheaper under this trust or union than heretofore?—A. Yes, sir.

Q. Who benefits by the saving of expense?—A. The consumer.

Q. Was this union organized in his interest?—A. Partially in the interest of the consumer. The more he eats, the more we work.

Q. And the cheaper he gets it?—A. The more he will eat, the more profit I will make.

Q. And the cheaper it is?—A. And the cheaper it is.

Q. Will there be as many men employed in sugar refining under the union as before?—A. There will be more, considering the time.

Q. Are the wages of the workmen as high since the union as before?—A. Yes, sir.

Q. What guaranty has the consumer that the price of refined sugar will not continue as high as the foreign price plus the freight and tariff duties?—A. There are a number of guaranties for that. First, as I said before, the cheaper we can furnish sugar to the consumer the more he will eat and the more we will refine. If we attempted to advance the rate of sugar we would increase the competition, and the consumer, if he did not like the product, in view of the tariff which Congress has kindly prepared for them, he can import his refined sugar at a cheaper rate than the manufacturer can get his raw, strange as it may be in this era of protection. There are three guaranties.

Q. I understand you to say there is a higher tax now upon raw sugars than there is upon refined?—A. There is a higher value ad valorem upon the raw than there is on the refined.

Q. Then you are discriminated against?—A. Sadly. On that account you may account for the twenty-two failures in the sugar business that have been testified to here.

Q. If you are discriminated against, then under the present construction of our law you have no protection?—A. No, sir; and under the proposed Mills bill we will not have as much.

Q. If you have run, then, under a system that discriminates against you, you have been running upon a worse basis than if you had been a free trader, have you not?—A. Yes, sir. When you ask me this question I am speaking here as the representative of a direct interest.

Q. You are speaking the truth. I do not care what you call yourself so long as you are stating the truth. Have you made any money in your business in the last ten years?—A. Do you mean Havemeyers & Elder?

Q. Yes, sir.—A. Yes, sir; lots of it. I do not believe anybody else has. I know that the Donner and De Castro Company, of which I am a stockholder, has lost under my management, too.

Q. How much sugar was exported from this country during the fiscal year ending the 30th of last June, or the 1st of July?—A. It is my impression about 100,000 tons. I would rather consult the record published by the Department.

Q. Did you or any of the concerns in which you are interested export any of that sugar?—A. The bulk of it, I believe.

Q. What countries did you export it to?—A. The bulk of it went to England.

Q. What grade of sugar was it?—A. The bulk of it was granulated.

Q. You exported it at a profit, I suppose?—A. The result of the exportation diminished the cost of my work, and in that way produced a profit.

Q. You say that most of it went from New York?—A. Yes, sir.

Q. Can you make granulated sugar cheaper relatively than you can any other grade of sugar that you turn out from that refinery?—A. It depends upon what you make it out of.

Q. Do you find it more profitable to run upon other grades of sugar than you do upon granulated sugar as a general thing?—A. In the winter time we make a great proportion of our product granulated, and in the summer time, when the demand is for soft sugars, we run low; and the run of the refinery upon this grade depends upon how cheaply we can buy the sugar in the raw material—one raw material against the other.

Q. Do you make the different grades of sugar out of the more general character of raw material?—A. No; every raw material results generally in its own grade of refined.

Q. You would select with care, then, from among the lower grades that which you wish to make the best of any particular high product?—A. Yes, sir; I would buy the sugar according to the product required, considering the margin between the two.

Q. What would be the determinative point in buying, say No. 12, where you designed one for granulated sugar and the other for the yellow sugar?—A. The yellow sugars are only made and can only be made from the low sugars.

Q. You would select, then, a higher grade of sugar as respects its saccharine strength for granulated sugar?—A. Yes, sir.

Q. Is that the only point of difference in making the selection, the only material one?—A. Yes, sir; the only material one.

Q. You have spoken about a policy of the Government in reference to drawbacks. I understand you to say that at present you do not get as great a drawback upon your exported sugars as you paid upon the raw sugars that entered into their manufacture?—A. That is true.

Q. When did you first experience this unfavorable discrimination on the part of the Government?—A. When they fixed the rate of drawback at 2.60.

Q. When was that?—A. The 1st of November, 1886.

Q. Has it been at that same figure ever since?—A. Yes, sir.

Q. How much does this discriminate against you?—A. There I draw the line. That would require a disclosure of my business to my competitors, and I would rather do without any drawback than to have my whole business disclosed to the advantage of another.

Q. Is there any remedy that you would like Congress to provide to protect you against that discrimination?—A. There is; yes. There is an enormous industry——

Q. Pardon me as to that.—A. I thought perhaps you would like to know about the remedy.

Q. You were describing the industry and not the remedy.—A. The drawback on sugar should be fixed by Congress and not by a Secretary of the Treasury, who may be an able man and may not be.

Q. I am very glad to have your opinion on that point.—A. We do not want our interest disturbed by whoever may happen to get into the Secretary's chair. We would like to have it fixed, stable,

Q. What do you think the drawback should be?—A. Equivalent to the duty paid.

Q. But if it is to be fixed by Congress, there must be a specification.—A. Then I would have an investigating committee to determine that matter.

Q. I will ask you now, as an investigating committeeman, a question on that point.—A. Until the subject comes up differently than is assumed now, I must state to the committee that the disclosure would involve me in more injury than the allowance of any drawback whatever.

Q. It seems a little inconsistent to a man in his representative capacity to meet a gentleman who asks that we adopt a policy to benefit him in his business, the bearing and effect of which must be on the great body of the people, and then when we ask him for information by which we may measure with exactness the burden that we put upon those who buy from him, that he should take refuge in the plea that it is a private matter and of its being injurious to his business to disclose this.—A. The only information I could give you on the subject of yield, which would enable you to determine what the equivalent duty was on granulated sugar, would be from my own knowledge of my own refinery, and it would be to the injustice of every other man in the business, I think, if I gave that testimony, upon which the drawback would probably be fixed to his disadvantage, he not obtaining the same yield.

Q. I shall not urge the question, but I wish to find exactly what your position is as a refiner?—A. My position would be to determine what the yield was of all the refineries, and to give that under oath to the committee having the matter in charge.

Q. What was the amount of the drawback; I mean the rate of the drawback prior to the ruling of the Department that you operate under now?—A. Immediately preceding, it was 2.81.

Q. Has it ever been higher?—A. Yes, sir; very materially.

Q. When was it higher than that?—A. The drawback was 2.81 for a number of years preceding the reduction. I could not state the successive steps of this reduction. If you can tell me when John Sherman was Secretary of the Treasury I can locate it to the day, I think. He swept it off without any consultation with the interests whatever.

Q. Secretary Sherman swept off the drawback from 2.81 to what figure?—A. Oh, no; he reduced it to 2.81.

Q. And from the time of that decision until a later period?—A. Until the present incumbent, Mr. Fairchild.

Q. Made it what?—A. 2.60.

Q. And he made it at what time?—A. November 1, 1886. It is shown by his order, which I have here.

Q. What is the date of that order?—A. September 25, 1886.

Q. When was that last shipment of granulated sugar made?—A. I can not recollect, but I think it was a long time ago.

Q. How long ago?—A. I can say, some time last summer. It may have antedated that.

Q. Did you ship extensively last summer or spring?—A. I can not say; I am not familiar with the dates when these shipments took place.

Q. Can you give a general idea?—A. The information I get on that idea is not out of my office. It is out of that book.

Q. I am speaking of shipments from your refinery.—A. It is safe to conclude that the bulk of the shipments are from our house. But when they were made I can not tell you without referring to the data which is on my own books.

Q. I would like to have you state to me, approximately, when your last shipments of that character were made?—A. I have it not in mind at all.

Q. Is there any particular season of the year when you have been in the habit of making a shipment of that grade of sugar?—A. You mean previously?

Q. Yes.—A. Through the whole year, according to the market. Sometimes there would be a large exportation if the market favored it, while seasons would very much reduce them.

Q. I understood you to say awhile ago that at the approach of summer you manufactured more largely of the yellow sugars than you did during the winter months?—A. That begins about the first of April or May.

Q. Has it been your custom to make your shipments to England during periods of the year when you were principally making granulated sugars?—A. We have never shipped any sugars to England. Sugar is bought in the New York market for exporting.

Q. Is there any shipped by you?—A. Never.

Q. It is simply your sugars that are bought by other parties in the course of business as they buy for this market here?—A. Yes, sir.

Q. And you do not remember now, with any degree of accuracy, when you last made considerable sales to exporters of granulated sugar?—A. I do not. I can furnish it to the gentlemen if they would like it.

Q. I would be glad to have you furnish that.—A. Would you like to have it by the month?

Q. Yes.—A. How far back?

Q. Say the last three years?—A. Yes, sir; I will furnish that.

Q. Or two years.—A. Do you want it of my particular refineries or of the whole industry.

Q. I would like it to cover your entire industry.—A. Do you mean by "industry" then the whole industry?

Q. The whole industry; I do not wish to put you to trouble.—A. It is in the Treasury Department.

Q. I am speaking of your sales. They are not in the Treasury Department. Of course I can get from the Treasury Department all of the whole industry.—A. I understood you to say you wished me to furnish you with a statement of the entire sugars of the United States for the last three years.

Q. No, sir; I would not trouble you to do that. I spoke of the sales that you had made to importers. If you have no objection to doing that I would be glad to receive it; I do not ask you for the price.—A. I will furnish it with great pleasure, the prices included if you would like it.

Q. You can use your discretion about that. You have stated that the consumers of sugar in this country have got a guaranty against your putting sugar up to the price that it is in Europe with the freight and duty added, founded upon the unwisdom of you gentlemen making your business too profitable and thereby bringing on competition.—A. I said it was one of the guaranties against our putting the price above what he could import it for—the price above what he could bring it in for, plus his expense.

Q. You said, then, that sugars would be imported?—A. Yes, sir; that is one reason. The stimulation of the industry would be another.

Q. That, of course, would be a manifest protection to him?—A. Yes, sir,

Q. Whenever your price is advanced above what it can be laid down at, it invariably comes in?—A. Yes, sir.

Q. What guaranty has the consumer of refined sugars that you will not keep the price to him up to about the price at which refined sugars can be laid down?—A. The cost of manufacture here as compared with the cost of manufacture in England would be a guaranty.

Q. I do not see that that has any relation to the subject. You do not seem to comprehend my question. If a given grade of sugar can be imported, say at 6 cents, duty paid, laid down in New York, I understand very well from what you say as well as from my own apprehension that if you charge  $6\frac{1}{2}$  or  $6\frac{1}{2}$  cents that sugar would be imported, because that would be higher than the import price, duty and freight added?—A. Yes, sir.

Q. The question I now ask is not what guaranty the consumer has against your charging him more than it can be imported for, but only a little less than it can be imported for. You would not dare charge more than 6 cents if you could not get it. But what is to keep you from charging  $5\frac{7}{8}$  cents?—A. How can I buy raw sugar, pay greater duty ad valorem on it and refine it at a greater cost of expense for manufacture per pound and have anything left as against the Englishman? Where is the margin you speak of between the cost, including the price of sugar and the duty, and this imported price, the duty and expense added? We make no money to-day, and I have told you the price was the same, and I have told you the price during the last five years has been cheaper.

Q. The price has been cheaper?—A. The price has been cheaper in America than it has been in England, to the great advantage of the consumer. Now he gets it at the same price and still he makes no money.

Q. I understand from you then that the consumer has but one guaranty, and that is that you won't charge more than the price of sugar abroad with the duty and freight added?—A. I can not. I would if I could.

Q. I am speaking about what guaranty he has. He has a guaranty that you won't charge him more than that, but he has no other guaranty that you know of as to what you would charge him?—A. That is the most effectual guaranty. Of course there comes the outside stimulation, the production of refineries not in the trust.

Q. Such an effect, I understand you to say, would be produced by an unwise enhancement of price, if the duty permitted it?—A. Yes, sir.

Q. Therefore his guaranty is a wise discretion on your part?—A. A wise discretion on our part, so far as our own interest is concerned, from the increased production of the refineries outside of the trust.

Q. The exercise of what you consider a wise discretion in placing your prices upon your commodities?—A. Yes, sir.

Q. You speak as a sugar refiner?—A. Yes, sir. I do not speak in any representative capacity.

Q. I am asking you individually for facts.—A. Yes, sir.

Q. What is the waste of saccharine strength in refining a pound of raw sugar?—A. It varies from 3 to 15, according to the grade.

Q. If it runs 90 degrees or above, the loss is very small, I suppose?—A. It is more at 90 degrees than below.

Q. You mean to say that if your raw sugar is of a very high degree of saccharine strength, your loss of saccharine matter is a larger per cent. than if it be a pound of raw sugar of low degree?—A. The loss of saccharine strength would be less.

Q. Do you mean what you state or what I state?—A. I mean what I state.

Q. I want to know whether it is a fact?—A. The loss in crystallizing it is proportionately less in a sugar of high saccharine strength than one that is below.

Q. It will run as high even as 15 per cent. in loss upon low grades of sugar, I believe you stated?—A. We have had it as high as that.

Q. I only want to get at the facts.—A. Yes, sir.

Q. Is it often that it runs a less degree of loss than the one you stated for high grades? What was that you stated?—A. Three.

Q. Well, then, three?—A. Seldom.

Q. The loss, then, is about three for the higher grades of raw sugar?—A. Yes, sir.

Q. What was the cost of refining a pound of raw sugar into a pound of refined sugar, granulated sugar?—A. You mean the mere matter of operation of it, the mere physical operation of it to refine it?

Q. Yes, sir; I would like to have it first on that basis.

(At this point. 2.30 p. m., the committee took a recess for three minutes.)

The recess having expired, the further proceedings of the committee were resumed.

By Mr. BRECKINRIDGE:

Q. I understood you to say that under the prevailing system of drawbacks you are a loser—it is unjust to discriminate against you?—A. Yes, sir.

Q. You do not desire, however, to state how much you are a loser?—A. Not at present.

Q. What is the cost of refining a pound of raw sugar into, say, granulated sugar. I mean "cost" based upon what would be called the current expenses of operating it?—A. The cost of refining a pound of sugar into the different products varies from one-half a cent to a cent and a half, according to the sugar used and the degree of operation to which the refining process brings it.

Q. From one-half a cent to a cent and a half?—A. Yes, sir.

Q. What are the various products?—A. Fifty per cent. of granulated sugar, soft sugars of different descriptions, and sirup.

Q. Three?—A. Yes, sir.

Q. But if you take a pound of raw sugar with a view of making granulated sugar, do you not convert it all into either granulated sugar or sirup.—A. No, sir; we resolve it into granulated sauce and sirup.

Q. You evidently make out of it more or less of three articles?—A. Yes, sir.

Q. What percentage of the product would be granulated sugar?—A. We don't figure those things in percentages. We never calculate it in percentages.

Q. How do you calculate it?—A. When the margin between granulated sugar and the cheapest raw sugar is greater we take the raw sugar and make the product out of it. In other words, we determine what is the cheapest raw sugar in the market and work that. Some refiners work exclusively the higher grade, because they can not work the lower. Our refinery works almost exclusively the lower grade, because we find more margin of profit in that than in the other.

Q. You find the lower grade more profitable to you than the higher grade?—A. The saccharine strength of any lower sugar is always better

to possess than the higher, and with one exception we are without competition for the lower grades of sugar, and always have been.

Q. Do you mean less competition among the buyers of that grade of sugar?—A. Yes, sir; I speak now of ten years past.

Q. You mean for the past ten years?—A. Yes, sir.

Q. During the past ten years?—A. Yes, sir.

Q. I presume, of course, you work a low grade because you consider it more profitable to do so?—A. Yes, sir; I believe we are the only ones, with one exception, that have the appliances for making it.

Q. Does it take special appliances to work it?—A. It takes an investment of five times the capital required to work the high grade.

Q. What grade of sugar do you usually work?—A. The work commences with the highest grade, small percentage, small proportion; likewise a small proportion of the intermediate, and then the bulk is of the lower grade of sugar, 85 and 100.

Q. Do you buy as low as 75?—A. The market does not vary a great deal. We buy all that comes here.

Q. Taking 100 pounds of sugar at 85 degrees of saccharine strength and working it with a view of making granulated sugar, what products would you get out of that 100 pounds of raw sugar? How many pounds of granulated and how many pounds of any other product, as the case may be?—A. I cannot tell you now. I would have to ascertain that.

Q. It belongs more to your brother's province?—A. He has no data different from what I have.

Q. Can he not calculate it?—A. He don't do the calculation.

Q. Who does?—A. I do.

Q. Then I come back to you. If you want to turn out 50,000 barrels of granulated sugar don't you know just how much raw sugar you must buy to produce those 50,000 barrels?—A. It might depend upon the different grades of sugar.

Q. Assuming that you can buy the grade 85, can not you tell about how much you would have to buy to make 50,000 barrels of granulated sugar?—A. Of course I must say, yes.

Q. And in making 50,000 barrels of granulated sugar would you not know about the number of barrels of sirup that would also be incident in the manufacture?—A. The purchase would be made on my knowledge of the subject.

Q. Would you not know the number of barrels of sirup which would be produced in the manufacturing of these 50,000 barrels of granulated sugar?—A. Yes, sir.

Q. And would you not know whether there would or not be any brown or yellow sugar incident to the process?—A. Yes, sir.

Q. And about how much?—A. Yes, sir.

Q. Then why can not you state the extent of the proportion of the products?—A. It is not a question of whether I can state it or not. I admit that I can state it.

Q. I understood you to say that you can not state what per cent. of the product would be granulated sugar.—A. I have not calculated the exact percentage. Of course the percentage could be easily determined.

Q. Is there any secret about it?—A. That is the secret.

Q. In stating the amount of the product?—A. Yes; that is the secret of the business.

Q. I imagined the secret was in the process and not in the result?—

A. That shows there must be some process. The other process is not patented.

Q. In other words you prefer not to state it?—A. Yes, sir; it only has a bearing upon the drawback, and I would rather sacrifice the drawback than to reveal our secret to our competitors.

Q. The drawback is a claim you make against the Federal Government? Do you propose to make the claim a secret from the Government?—A. I have not made a claim against the Government.

Q. You have not only made a claim, but a complaint.—A. I have declared to you that if my business is to be disclosed, between revealing my business and the drawback I would let the drawback go. The drawback is inadequate now. It protects the Government because no sugar is exported, and they probably will not push that investigation any further.

Q. The question of the drawback comes up incidentally and not intentionally at this point of my inquiry. The cost of conversion or of refining is a very material question in determining the amount that by a combination or any other mode you gentlemen going into a trust may be able to exact in the way of profits, that under a competitive system you would not be able to exact from the consumer.—A. I do not think it has any bearing upon this matter.

Q. I see no bearing on this matter except it be a matter of public policy to ascertain what effect it will have upon the whole body of the people when you gentlemen enter into a commercial combination. If you choose to enter into a combination for private theatricals or anything of that kind we care nothing about it; but if you enter a combination, under protective duties or otherwise, to exact from the people their earnings, we are here to find out the extent of that exaction.—A. That is just what the combination is not to do.

Q. That is your impression. But we are here to find out whether it is a fact or not, and I prefer to submit to the committee in executive session whether or not we shall insist upon Mr. Havemeyer revealing to us the cost of refining sugars?—A. I have stated that. The question which I have declined to answer, if my statement was tantamount to an objection, is the yield of the different products from the raw sugar which I melt. That varies according to the classes of raw sugar melted. If I told you of the best grade I would have to tell you of the intermediate and low grade; and the result of that would show that I was losing 10 cents on the best grade, and I was getting square on the next grade, and was making 60 cents a hundred on the low grade—a business which nobody in the world can manufacture but two. The exposition of those yields would be the basis upon which the Treasury Department would figure what the drawback should be.

Q. I am not speaking of the drawback.—A. I would rather do away with the drawback, as I have stated, than to reveal the secret.

Q. This committee is not dealing in drawbacks. That is entirely irrelevant and immaterial. It has just come up. It has nothing to do with our line of investigation. The reply, as I understand it, that Mr. Havemeyer makes, is that the cost of conversion is from a half cent to a cent and a half a pound on sugar?—A. According to the raw sugar used and the operation of the refining of the different grades.

Q. That is so general that it does not amount to anything, and I would like the committee to determine for itself whether or not it is satisfied with that character of reply.—A. I can not give them any more definite information if I spent four years at my books.

The CHAIRMAN. The question you have asked, of course, is the one the committee will have to consider, and I suggest before we reach that point that the question be read, that we may see what it does cover.

Mr. BRECKINRIDGE. What I have embraced in my interrogatories bearing upon the matter of conversion or refining are these points: First, to know what are the products of a given grade of raw sugar, and the proportion to the whole that each product will bear; second, what is the cost upon a given basis of calculation of refining the raw sugars, respectively, into these products. [To the witness.] Do you prefer not to answer these questions?

The WITNESS. I will answer that with great pleasure.

Q. I will be very glad to have you do so.—A. The refined products of raw sugar depends upon the grade of sugar from which it is made, and the price varies according to the quality of sugar used. A more specific reply, in my opinion, no man who has been in any sugar business could give you. There is no way known to me of telling you how much sugar in different products can be got out of 96, 90, 85, and 80.

Q. I will not dispute any statement which you make as a statement of fact. I understand you then to say that if you have raw sugar of 85 degrees of saccharine strength you can not tell what per cent. of granulated sugar you will be able to produce from that grade of raw sugar. Is that correct?—A. I can tell you, chemically, how much you can get out of it.

Q. I want to know if you can tell me as a matter of fact. I do not care whether you go into it chemically or otherwise. I only want to know what the result will be?—A. You mean in a business way, consistent with business.

Q. Of course, I want a practical reply.—A. I doubt if I could give that information.

Q. Do you doubt your ability, or willingness?—A. I am perfectly willing, but I doubt my ability. For instance, there is a sugar that would not make granulated sugar.

Q. I have not asked you that question.—A. Yes, you have. You asked me what proportion of granulated I could make out of these different grades of raw sugar.

Q. From what grade of sugar can granulated sugar be made?—A. All made from the finest.

Q. Name one?—A. Ninty-six centrifugal sugar.

Q. Take it, then, on a basis of 96 per cent. of saccharine strength. If you bought a cargo of that sugar and ascertained the weight of it, could you not tell how much granulated sugar you might expect to get out of it?—A. My business is done on my experience.

Q. I am asking you for facts?—A. My experience is between 96 centrifugal and the price I get for my granulated I must have 1 cent a pound in order to make me whole; otherwise my business is going on at a loss. I can not tell you how much I get out of granulated, and there is no man living who could do it. It has never been done in any refinery.

Q. If you bought 1,000 pounds of 96 sugar you would not be able to tell, with any degree of accuracy, then, how many pounds of granulated sugar you might expect that, refined, would make, with a view of producing granulated sugar?—A. No; you could not. It would cost as many pounds in gold as the sugar you melted.

Q. You have never been able to find, in the course of your whole experience, what is the ratio that exists, then, between raw material and a given amount of refined sugar?—A. No, sir.

Q. All I want is your statement that certain things are facts.—A. When you ask me a question I do not want to appear as not answering it. Sugar at 20 standard, containing 98 per cent., can not be resolved into granulated. If we spent \$20 a pound it might be. Our business is done on a margin as to the price between granulated and the price to be paid for the different grades of sugar.

Q. I understood you to say a moment ago that you bought a certain grade of raw sugar for producing granulated sugar; that you desired to get a cent a pound more for your granulated sugar than you paid for your raw sugar in order to make a profit?—A. No, sir; I said in order to make me whole. I said I would have to buy centrifugal sugar at a cent a pound less than that paid for granulated sugar in order to get my money back.

Q. That is the cost of refining raw sugar into granulated sugar?—A. Not at all.

Q. What is included in it except cost?—A. Suppose you buy sugar testing 96, and you want sugar testing 100. Now, if you get at the equivalent there would be 4 per cent. loss there; that is, you would only be buying 96 pounds, and you would be selling 100 pounds. That would reduce that margin that I have named at a cent a pound by 22 cents. That has not anything to do with the cost of the refining. It is the difference between saccharine in raw and saccharine in refined products.

Q. Suppose you buy a cargo of raw sugars testing, say, 95 degrees or 96 degrees, and you propose to work it as far as possible into granulated sugar, and you have selected the raw sugar with special reference, to your entire satisfaction, to the making of granulated sugar, and you have laid it down at your warehouse, or at your refinery, 3 cents a pound for that raw sugar, what would you consider a fair and profitable price for the granulated sugar that you make out of it?—A. On the basis of 3 cents for raw and 4 cents for the granulated.

Q. Suppose you had paid 4 cents for the raw, what would you expect for the granulated as necessary for a fair profit?—A. I do not think that the price, the difference, would be affected by the change.

Q. You would want about 5?—A. Yes, sir.

Q. Now, that 1 cent between 3 and 4, and 1 cent between 4 and 5, has covered all the cost of refining, and embraces also profits?—A. There are no profits. I have already stated that we needed 1 cent a pound in order to make us whole.

Q. You are now entirely escaping the question I asked you. I asked you what price you would need in order to yield you a fair profit?—A. Anything over a cent a pound.

Q. Anything over a cent a pound would be in the nature of a profit?—A. Yes, sir.

Q. But up to a cent a pound you would consider that you were being made whole?—A. Yes, sir.

Q. What do you mean by being "made whole"?—A. The expense of working it; the difference in the amount of saccharine sold and saccharine bought, interest on capital, depreciation of plant, and everything entering into the literal expense of the business as an expense.

Q. Suppose you wanted to fill a contract for 100,000 barrels of granulated sugar, and you desired to make it from sugar of 96 degrees. How much raw sugar would you buy in order to fill that contract?—A. To start my works and make that sugar I could not do it at a dollar a pound. That sugar would be made in the ordinary operation of my works, which I have already told you involved a slight proportion of

high sugars, intermediate sugars, and the best grade of low sugars. The first product would be granulated and that would go towards the contract.

The CHAIRMAN. I do not think that that is an answer to that question.—A. I can not answer it, and I do not think any man can answer it. If I should ask a chemist to-day how much granulated sugar he could turn out of raw sugar he could not come within 10 per cent. of it. No science can demonstrate it.

By Mr. BRECKINRIDGE:

Q. Can you calculate it within 10 per cent?—A. On the basis of your question, no, sir.

Q. How far does your experience go in working up say, No. 96, if the product varies?—A. I do not think in all my experience we ever set out to show how many different grades of sugar we got out of a specific grade of raw.

Q. You have covered the cost of refining by your statement as to what composed that 1 cent margin, and you state that you are unable to give the other information. So I have nothing further to insist upon in that line.—A. An effort was made by the English, French, German and Belgium Governments a number of years ago to demonstrate the yield in refined sugar from a given raw sugar. The refinery was bought and equipped at Cologne and the operations extended over a long period with a result satisfactory to none of the countries.

Q. I understand that in this association that these gentlemen have formed the profits of the various refineries are deposited, to be divided out upon the basis of the certificates outstanding pro rata?—A. The profits of any one corporation is declared, or a dividend on the stock is handed over to these trustees, who divide it among the certificate holders according to their interest in the whole.

Q. That is to say, that if two-thirds of your refineries were operated at a profit and one-third were operated at a loss every holder of the certificates of this trust would receive some profit, provided the profits of the two-thirds exceeded the losses of the one-third?—A. That is practically it.

Q. What means have the two-thirds of the refineries to determine that the one-third who report a loss have not made a profit and pocketed it and not made a fair return to the trust?—A. I don't know that I can answer that. That covers the rights of stockholders to examine into their own affairs. It is more of a legal than a practical matter.

Q. Does it cover the rights of those who are stockholders?—A. Under this agreement?

Q. Yes.—A. The board hold the stock, as I understand it, and the certificate holders have their interest in it.

Q. That covers the right of the trust to examine into the operations of the different refineries?—A. No, sir.

Q. If it does not cover that, what does it cover?—A. It covers the right on the part of the trustees to vote that stock for whomsoever they wish.

Q. I am not talking about voting stock.—A. It covers the right on the part of the trustees to vote that stock for the directors of those different corporations, and those directors will probably ascertain the actual condition of the business.

Q. In other words, I understand you to say that the trustees would have the power to examine into the operations of any one of these corporations to see that they had not fraudulently disposed of profits or funds?—A. They have no such powers.

Q. Will you state where the power resides?—A. The power of any corporation, as I understand it, resides in the officers of the corporation. They carry it on, and they undoubtedly have the power to investigate it.

Q. I want to know whether or not this association, from which emanates every piece of these certificates of stock, has any power as the trustee of all the stock to see that frauds are not perpetrated by one class of holders of certificates against another class of holders of certificates?—

A. Other than their power as stockholders which has been conferred upon them by the deed by which they get the power, I know of no such power that they have to ascertain fraud or not.

Q. I am not inquiring as to the source of the power, but as to the fact of the power?—A. I do not know anything about the fact of the power.

Q. As a matter of fact—and I ask you to give an answer as a business man having some money invested in this enterprise, as I understand you have—have these trustees any power to prevent fraud?—A. Not the slightest, outside of their powers as stockholders.

Q. Is that effectual?—A. It certainly is effectual.

Q. Then they have the power?—A. They have the power at the end of the year to change the direction.

Q. Of the whole affair?—A. Of every corporation.

Q. They hold the stock in trust, and they have the power to vote all of the stock?—A. Yes, sir.

Q. And, therefore, these trustees have only got the power that any stockholder would have to examine into the frauds that may exist in any part of the combination?—A. So I understand it.

Q. You speak of the distribution of these profits. I understand from you that no profits have come into the hands of the trustees yet?—A. No, sir.

Q. When will the period arise when these refineries may be expected to account to you for their profits, if they have any?—A. When I expect it?

Q. No, sir; I did not ask you when you expected the profit, but I ask you when the time will arise when it will be their duty to account for a profit, in case one of these corporations has made a profit, and to turn it into these trustees?—A. That would depend entirely upon the directors as to when the profit, if any had been made, would be declared as a dividend.

Q. You have then no fixed period for turning in profits?—A. No, sir. If the functions of this board are expressed in the deed, the deed will show it. Now, whether they exceed it or do not live up to it is a matter that I can not foretell.

Q. Except as a stockholder?—A. I can not foretell it as a stockholder. I propose to do my duty according to the deed. There may be some legal matters which I do not understand.

Q. As a party who is interested in this combination, do you expect there will be considerable profits to divide?—A. It is not a combination.

Q. Have not these corporations put their goods into the hands of what you call trustees?—A. We have not.

Q. What have they done with the stock?—A. They have no stock.

Q. What have the holders of the stock done with it?—A. They have, according to that deed, united it.

Q. What you claim, then, is that the union is not a combination?—A. No, sir; it is not. The stockholders have a community of interest in the whole.

Q. And you deny that it is a combination?—A. Yes, sir.

Q. It is a union at least. That is the word you employ, and you gentlemen are the trustees under and in this union?—A. Pursuant to this deed.

Q. I am not speaking of what it is pursuant to. You are the trustees?—A. We are the trustees of the stock.

Q. And you expect considerable profits to come into your hands as trustees?—A. There is no profit in the business now. Other witnesses have testified that there has been no profit.

Q. You have testified that you have made a good deal of money out of your business?—A. If my business was distributed among these stockholders there would not be any left.

Q. Do you mean to say, then, that with a profitable business you have deliberately formed what you call a union with a lot of stocks that you do not expect any profit from?—A. Business is getting finer every year. Our business has been increasing every year, and we thought it much more desirable that the money to be expended in the sugar business as a whole should be expended in point of fact where it could be most advantageously employed, and not be spread over every refinery with no advantage to any one.

Q. That is your opinion?—A. It is my opinion.

Q. Was it your desire to help the refineries, which you state were losing money, or to help yourselves?—A. Both.

Q. Did you expect the universal results would be that their losses would absorb your profits, or that there would be a common profit to all the certificate holders? Did you expect your profits to be absorbed by their losses?—A. I do not expect any refinery to make any material losses if they confine themselves to the sugar business.

Q. Did you or not expect the result of this union to be a source of profit or loss to the gentlemen engaged in it?—A. A profit, as compared with what had been in the business, certainly. What you call a profit and what I call a profit might be different.

Q. Did you or did you not expect to make greater profits by the investment of your interests in this union?—A. I thought the profits of the firm of Havermeyer & Elder would be increased by such an arrangement.

Q. Then, as a matter of course, if your profits would be increased, and you have just stated that you had profits before, there would be considerable funds coming into this trust or to these trustees to be divided among the certificate holders. Was not that your expectation?—A. That is my expectation; yes, sir. A man can look a great ways sometimes and not see what he is looking for; but the intention under this arrangement was to increase my profits in the sugar industry.

Q. And your expectation was that you gentlemen would have funds to pay to the certificate holders?—A. Let me explain it.

Q. Why not say "yes" or "no"?—A. That a fund would be received from these different companies?

Q. That profits would be received from these different businesses to be paid to the holders of these certificates?—A. Undoubtedly that is the expectation.

Q. You gentlemen, who are the trustees, are charged with the proper distribution of these profits, are you not?—A. Yes, sir.

Q. How do you expect to keep a proper account of the funds that are coming from these various sources, and to distribute those funds properly among this multitude of certificate holders, without having any cer-

tificate books?—A. We have certificate books; when we get any cash we will deposit it and open a cash-book.

Q. You will open some books, then?—A. Yes; and when we pay these certificate holders we will credit their account.

Q. You will keep a systematic account?—A. As far as necessary we will.

Q. You will at least keep a cash-book that will show the action of these trustees?—A. I do not know what form it may take. The trustees have a certain duty to perform in reference to moneys received and paid. How they will do it I can not tell.

Q. You propose that these trustees, as a whole, shall keep a systematic account with the holders of these certificates?—A. If necessary I should think they would.

Q. When do the refineries usually close for repairs—what has been the customary period in past years?—A. Between November and March.

Q. How long do they usually stay closed?—A. From a month to six months, according to the business.

Q. Are there any Boston refineries not in this trust?—A. Yes, sir.

Q. How many?—A. One.

Q. Is that operating now?—A. Yes, sir.

Q. You spoke of Mr. Searles consummating various transactions and of there being no objection made to their confirmation by these trustees. How did Mr. Searles get power to commit you gentlemen to a business transaction?—A. He never had any.

Q. How did he do it?—A. He never did.

Q. You stated that he did.—A. I beg pardon.

Mr. BRECKINRIDGE (to the chairman). You remember, Mr. Chairman, the testimony on that point, that Mr. Searles had consummated certain negotiations.

The CHAIRMAN. I think the statement of the witness was equivalent to this: That Mr. Searles, acting on his own responsibility and without authority from the board of trustees, entered into negotiations, and when he reached the point of agreement in those negotiations he reported the nature of this agreement to the members of the board of trustees and the stockholders concerned, who thereupon ratified what he had done.

The WITNESS. Precisely.

The CHAIRMAN. My inquiry was directed to seeing what authority he had incident to those negotiations, and the statement of Mr. Havemeyer is that he had no authority.

Mr. BRECKINRIDGE. That is all right. That covers the point that I wanted to know about.

The examination of Mr. Havemeyer was resumed by Mr. Breckinridge.

Q. Mr. Havemeyer, you speak, or I believe the deed does, of improving the knowledge that is possessed by some of the refineries and the means of refining sugars. That is one of the purposes of your union?—A. Yes, sir.

Q. If those refineries were to remain independent refineries would they not be less formidable as competitors if they did not possess the best facilities and the highest degree of information about refining sugars?—A. Not as competitors, no.

Q. The more ignorant the competitor the more formidable he is. Is that your statement?—A. If he is backed with cash, that will go a long way towards making up for ability.

Q. If he has cash and ability both, would he be more formidable than

if he had cash and not ability, or would he not?—A. Cash and ability as against cash and no ability?

Q. Yes.—A. The former would prevail.

Q. Suppose he had cash and poor abilities, or cash and good abilities, in which state would he be the more formidable competitor?—A. Cash and good abilities.

Q. Therefore, I understand you to say that when you supply those who are deficient in ability with good ability and those deficient in facilities with good facilities, that if they were still in an independent position they would be more formidable as competitors?—A. Yes, sir.

Q. Therefore, I understand you to say that one of the purposes of your union was to lessen competition between refineries?—A. Oh, no.

Q. You have then purposely made them able to compete with you more nearly than before?—A. Yes; that is the intention.

Q. Before they were perfectly free to compete with you?—A. Except the difference between intelligent and stupid competition.

Q. I am not speaking about degrees of competition.—A. That constitutes what you want to get at.

Q. I am the judge of what I want to get at. They were perfectly free to compete with you before?—A. And are now.

Q. And now?—A. Yes, sir.

Q. And you have then entered into an agreement by which their facilities are improved?—A. That is the intention.

Q. You have entered into an arrangement by which you consider the ability and management will be improved?—A. Yes, sir.

Q. You have left them with equal freedom to compete with you as the owners of independent refineries that they had before?—A. Yes, sir.

Q. Did you expect any other elements of competition to be increased by this union than those you have already added to your competitors? Have you also provided for divided counsels between the management of these concerns and yours?—A. Only so far as we, the managing officers of these different corporations, no matter what our capacity in each, have the privilege to consult with each other as to appliances and methods of refining.

Mr. BRECKINRIDGE (to the chairman). Did you question Mr. Havemeyer about the functions of the finance committee?

The CHAIRMAN. There was no finance committee developed. It was the mercantile committee.

Mr. BRECKINRIDGE. Mr. Parsons spoke of it as the finance committee once.

Mr. PARSONS. Refining committee, I believe, was the name.

Mr. BRECKINRIDGE. No; I am speaking of the finance or mercantile committee.

Q. (To the witness.) You are a member of the mercantile committee?—A. So called; yes, sir.

Q. What do you consider to be your functions and duties as a member of that committee?—A. To afford anybody connected with these different refineries all the knowledge in connection with sugar refining that I may have.

Q. What kind of knowledge are you supposed to have?—A. A great deal more than I have got.

Q. Will you give me a more specific statement than that?—A. Well, the probable course of the sugar market as far as a year hence, for instance.

Q. Have you anything to do, as a member of that committee, with advising the members of different refineries what lines of credit they are to extend to their customers?—A. That is to be considered. Nothing has been done as yet. We have not got the functions of the mercantile committee systematized, as it will turn out to be.

Q. But you expect that will be embraced among the functions and duties of that committee?—A. To do what?

Q. To advise them as to the commercial credits they shall extend?—A. Yes; to give them the benefit of all knowledge I may have.

Q. Are you expected to advise them about the prices they shall ask for the products they sell?—A. No, sir.

Q. Why not?—A. Because all advice as to products I propose to keep to my own organization.

Q. You propose, then, to give them the benefit of your wisdom and information about accepting good credits or bad credits, pursuing a wise or unwise commercial policy or credit policy, and to withhold it on the question of charging for the sugars they turn out?—A. Yes, sir.

Q. What do you propose to do about that?—A. Let them take care of themselves.

Q. Are you letting them take care of themselves when you advise about commercial credits?—A. That is hardly against the law. That is the distinction between a man subservient to the law and one who is not.

Q. So that you never expect to advise them as to the price they shall ask for any of their refined sugars?—A. No, sir.

Q. You do not expect to intimate that to them in any manner, shape, or form?—A. No, sir.

Q. And that is not understood to be one of the functions of the committee?—A. Not at all.

Q. Is it understood that it is a part of your duties and functions to advise them as to what they shall pay in making their purchases of raw sugars?—A. No, sir.

Q. Then this mercantile committee—I believe that is the term employed—is limited to advising them as to the credits they shall extend to their customers?—A. To all those matters pertaining to the different corporations and various branches which are not in conflict with the law.

Q. Will you enumerate what there is beside credits?—A. I will have to refer you to our lawyer, because since the time of this howl in the papers about trusts I have never taken a step without his advice.

Q. You have denied these functions?—A. I deny that the purpose of this trust was to do anything in contravention of law.

Q. I was not asking you about purposes. I was asking you as to the fact whether or not you did, or were expected to, advise the buyers of raw sugars and the sellers of refined sugars for these various refineries who are in what you call your union as to the prices they should pay, or that it would be wise to pay, and the prices they should charge, and I understood you to say no.—A. No, emphatically.

Q. And you say it is expected, however, that you will advise them as to the credits they shall extend to their customers?—A. That is a very immaterial matter, and I can see no objection to furnishing it. We will furnish anything not against the law.

Q. Why not advise as to purchases and sales?—A. Because I have been told that is against the law. That is not my function as a trustee.

Q. Can you name any activity in which you are likely to be employed as a member of this mercantile committee except as to advising these

various refineries as to credits they shall extend?—A. Well, a man might come to me and say, "I would like to raise \$100,000; where can I get it?" I would give him that information.

Q. Well, that is one of them.—A. You see, the thing is not developed as to what we can do or can not do.

Q. You are feeling around, are you?—A. Well, we want to do what we can lawfully, and to avoid what we may not do, and what it was not the intention to have us do.

By Mr. MCKINNEY:

Q. Do you, as a member of the mercantile committee, buy raw sugars?—A. No, sir.

Q. That is not part of your functions?—A. No, sir.

Q. Is there a committee or any individual persons connected with the trusts who do buy the raw sugars?—A. Not connected with the trust.

Q. Of these eleven men?—A. I buy raw sugars for my own company, as an officer of my own company.

Q. There has been, of course, raw sugar sold to be refined in these various companies, since this trust went into existence, purchased by the corporations?—A. Yes, sir.

Q. Has each corporation purchased its own sugars for refining?—A. Yes, sir.

Q. And has there been any cargo of sugar sold in New York to any of the various refineries where there was only one competitor—where there has been no competition?—A. There is no competition on the low grade, and very seldom has been. The competition on the other grades continues and always has.

Q. That is, there are as many buyers in the market now who are ready to purchase a cargo of sugar since this trust was formed as before?—A. Yes, sir; and a great many more now, because it has induced what we have never had before—outside speculation in raw sugar.

Q. And in regard to selling sugar, there is no committee or individual connected with the trust who has anything to do with the sale of sugar of the various corporations?—A. In no way whatever. The trustees have taken no other action under this trust than if the United States Trust Company had been the trustee; and I wish it was.

By Mr. CROUSE:

Q. I understood you to say that there was a certain kind of sugar that was an original product of the sugar refineries of the United States.

The WITNESS. Original product?

Q. Not an original product, but they learned how to do it first.—A. Oh, granulated.

Q. Yes, granulated. There was a time when only the refineries of the United States made granulated sugar for the United States, and, for that matter, for the world?—A. Yes, sir.

Q. And you exported for a time large quantities of that sugar?—A. Yes, sir; 10 per cent. of the entire product. Ten per cent. of the entire foreign sugar imported was exported in the shape of granulated sugar.

Q. I understand you to say that you could do that at a profit under the existing tariff laws as originally interpreted?—A. I could do that under the old rate.

Q. As originally interpreted?—A. As originally fixed by the Secretary.

Q. The Secretary interpreted the law in such a way as to enable you to do that?—A. The law empowers the Secretary to fix the drawback.

Q. Have you anything to do, as a member of that committee, with advising the members of different refineries what lines of credit they are to extend to their customers?—A. That is to be considered. Nothing has been done as yet. We have not got the functions of the mercantile committee systematized, as it will turn out to be.

Q. But you expect that will be embraced among the functions and duties of that committee?—A. To do what?

Q. To advise them as to the commercial credits they shall extend?—A. Yes; to give them the benefit of all knowledge I may have.

Q. Are you expected to advise them about the prices they shall ask for the products they sell?—A. No, sir.

Q. Why not?—A. Because all advice as to products I propose to keep to my own organization.

Q. You propose, then, to give them the benefit of your wisdom and information about accepting good credits or bad credits, pursuing a wise or unwise commercial policy or credit policy, and to withhold it on the question of charging for the sugars they turn out?—A. Yes, sir.

Q. What do you propose to do about that?—A. Let them take care of themselves.

Q. Are you letting them take care of themselves when you advise about commercial credits?—A. That is hardly against the law. That is the distinction between a man subservient to the law and one who is not.

Q. So that you never expect to advise them as to the price they shall ask for any of their refined sugars?—A. No, sir.

Q. You do not expect to intimate that to them in any manner, shape, or form?—A. No, sir.

Q. And that is not understood to be one of the functions of the committee?—A. Not at all.

Q. Is it understood that it is a part of your duties and functions to advise them as to what they shall pay in making their purchases of raw sugars?—A. No, sir.

Q. Then this mercantile committee—I believe that is the term employed—is limited to advising them as to the credits they shall extend to their customers?—A. To all those matters pertaining to the different corporations and various branches which are not in conflict with the law.

Q. Will you enumerate what there is beside credits?—A. I will have to refer you to our lawyer, because since the time of this howl in the papers about trusts I have never taken a step without his advice.

Q. You have denied these functions?—A. I deny that the purpose of this trust was to do anything in contravention of law.

Q. I was not asking you about purposes. I was asking you as to the fact whether or not you did, or were expected to, advise the buyers of raw sugars and the sellers of refined sugars for these various refineries who are in what you call your union as to the prices they should pay, or that it would be wise to pay, and the prices they should charge, and I understood you to say no.—A. No, emphatically.

Q. And you say it is expected, however, that you will advise them as to the credits they shall extend to their customers?—A. That is a very immaterial matter, and I can see no objection to furnishing it. We will furnish anything not against the law.

Q. Why not advise as to purchases and sales?—A. Because I have been told that is against the law. That is not my function as a trustee.

Q. Can you name any activity in which you are likely to be employed as a member of this mercantile committee except as to advising these

various refineries as to credits they shall extend?—A. Well, a man might come to me and say, "I would like to raise \$100,000; where can I get it?" I would give him that information.

Q. Well, that is one of them.—A. You see, the thing is not developed as to what we can do or can not do.

Q. You are feeling around, are you?—A. Well, we want to do what we can lawfully, and to avoid what we may not do, and what it was not the intention to have us do.

By Mr. McKINNEY:

Q. Do you, as a member of the mercantile committee, buy raw sugars?—A. No, sir.

Q. That is not part of your functions?—A. No, sir.

Q. Is there a committee or any individual persons connected with the trusts who do buy the raw sugars?—A. Not connected with the trust.

Q. Of these eleven men?—A. I buy raw sugars for my own company, as an officer of my own company.

Q. There has been, of course, raw sugar sold to be refined in these various companies, since this trust went into existence, purchased by the corporations?—A. Yes, sir.

Q. Has each corporation purchased its own sugars for refining?—A. Yes, sir.

Q. And has there been any cargo of sugar sold in New York to any of the various refineries where there was only one competitor—where there has been no competition?—A. There is no competition on the low grade, and very seldom has been. The competition on the other grades continues and always has.

Q. That is, there are as many buyers in the market now who are ready to purchase a cargo of sugar since this trust was formed as before?—A. Yes, sir; and a great many more now, because it has induced what we have never had before—outside speculation in raw sugar.

Q. And in regard to selling sugar, there is no committee or individual connected with the trust who has anything to do with the sale of sugar of the various corporations?—A. In no way whatever. The trustees have taken no other action under this trust than if the United States Trust Company had been the trustee; and I wish it was.

By Mr. CROUSE:

Q. I understood you to say that there was a certain kind of sugar that was an original product of the sugar refineries of the United States.

The WITNESS. Original product?

Q. Not an original product, but they learned how to do it first.—A. Oh, granulated.

Q. Yes, granulated. There was a time when only the refineries of the United States made granulated sugar for the United States, and, for that matter, for the world?—A. Yes, sir.

Q. And you exported for a time large quantities of that sugar?—A. Yes, sir; 10 per cent. of the entire product. Ten per cent. of the entire foreign sugar imported was exported in the shape of granulated sugar.

Q. I understand you to say that you could do that at a profit under the existing tariff laws as originally interpreted?—A. I could do that under the old rate.

Q. As originally interpreted?—A. As originally fixed by the Secretary.

Q. The Secretary interpreted the law in such a way as to enable you to do that?—A. The law empowers the Secretary to fix the drawback.

The rate of drawback, in my opinion, should be fixed by Congress, and not left to an executive officer. Every succeeding officer in the Treasury Department has lowered the drawback. He will take up the paper in the morning and notice that there has been a large importation of sugar. He says immediately, the drawback must be excessive—down goes the drawback by stroke of the quill. John Sherman shut up a house over night without notice, that caused a loss of \$700,000.

Q. What was the draw-back fixed by the Secretary before this cutting down?—A. 2.81 per 100 pounds.

Q. I understood you to say before that that was the rate fixed by Secretary Sherman?—A. Yes, I think that was the rate.

Q. What was the rate prior to that?—A. I think 3, or 3.18, I believe.

Q. Subsequently it was fixed at 2.81?—A. Yes, sir.

Q. And still more subsequently at 2.60?—A. Yes, sir; under Secretary Fairchild.

Q. So that the drawback now fixed by the Secretary of the Treasury is such that it no longer enables you to export this kind of sugars?—A. Precisely.

Q. When the export trade was at it highest how large an amount of sugar was exported?—A. I can not exactly tell during what time this 10 per cent. of the whole, which I have mentioned, was exported in the greatest volume.

Q. In tons, what was the highest point reached probably that the American refineries exported?—A. In one year it was 120,000.

Q. And that was the highest point?—A. Yes, sir.

Q. What amount do they export now?—A. Well, literally none.

Q. Then I understand you to say that the American refineries, by reason of that being cut off, are really producing about that amount of sugar less than they formerly did?—A. That is the fact, making allowance for the enormous increase of consumption by the American people. The industry was stimulated by the opportunity to export sugar under what we all thought was a fair and legitimate drawback as fixed by the Department. Then it was reduced. Hence this depression, disaster, extinction of firms, etc. After a long period of years it began to revive. No sooner was it in a thrifty condition again than the Secretary makes the law and shuts up the houses and extinguishes the industry.

Q. At what period of time in the last three or five years, whenever it was, was the industry depressed to the greatest extent?—A. I think in 1887.

Q. That was the worst?—A. Well, we can not tell that. There were previous years when there were a great many more refineries and older plants. I can not draw the line between what you call depressions, because the ruin of one man who has five millions of capital represents the ruin of ten men of \$500,000 each; and you might think that the ruin of ten represented greater depression than the ruin of one; and yet it might be just the reverse—the ruin of one man with \$10,000,000 would be the greatest.

Q. I want to get at the period of greatest depression, and then ask you whether it was during that period that these failures, that several witnesses have testified to, took place?—A. Yes, sir; that has not been due entirely to the cessation or change of the drawback. That has been due to improved methods of manufacture largely.

Q. To what do the sugar refiners of the United States attribute this period of depression in their business?—A. Well, the price of refined

sugar has been a great factor in it. It has declined steadily for ten years, until last year it reached a point which represented about 30 per cent. below the cost of production, owing to the enormous production of all. That was one factor; improved methods another; cutting down the drawback another; labor strikes another; and the expenses attending them, such as increased cost of fuel, etc. All these aided in demoralizing the business.

By Mr. BUCHANAN:

Q. You stated in response to a question, I think by Mr. Breckinridge, that the increased cost in labor in America over that of England in producing a pound of sugar was about a fourth of a cent. If raw sugars were put upon the free list and refined sugars were charged with the duty of one-fourth of a cent per pound, would that afford you protection?—A. Only so far as the labor in the refineries was concerned. But when you take into consideration the labor that enters into every article that goes into a refinery in the shape of material, the protection would have to be at least one-half cent a pound.

Q. Additional, do you mean?—A. No; in all.

Q. You think, then, that with raw sugars on the free list and a duty of one half cent a pound on the refined sugar, you would be placed on a par with the refineries of England so far as labor is concerned?—A. I must admit that so far as labor is concerned that will be adequate.

Q. Would that put you on a par with the refiners of England so far as all the considerations are concerned?—A. No, sir.

Q. What would be the difference? What other elements enter into the calculation?—A. Oh, everything; take coal, for instance. Before the strike, it was \$1.50 a ton; now we pay \$4. Now, if the American refiner is to add in his prices the difference he pays on his coal, and the price of sugar is raised to that extent, we would be deluged with English sugar. Is that the intention of the Government? It costs twice as much here to erect a refinery as it does in England. I must make twice as much money proportionately. That must be compensated for. So that if the refining interest would be protected against outside competition, we need a cent a pound of duty—probably three-quarters of a cent would cover it. A half a cent a pound would represent labor not only in the refinery but all other branches.

Q. You mean not only the labor directly employed in the refinery itself, but the labor used in connection with all the material composing the refinery, etc.?—A. Precisely.

Q. I see by this deed, as represented in it, and having consented to it subsequently some eighteen firms and corporations located in New York, New Jersey, Massachusetts, Missouri, Louisiana, and, perhaps, one other State. Did each of those corporations have a capital for which capital stock certificates were issued to the stockholders, and did those stockholders upon entering into this union, as you call it—combination as it seems to me—surrender their certificates of stock in their respective corporations to these trustees, and these trustees in turn issue to the parties thus surrendering certificates under this deed, and in pursuance of its terms?—A. Precisely.

Q. And those certificates of capital stock thus surrendered, are they destroyed or are they held by the trustees?—A. They are held.

Q. And in whose custody are they?—A. I believe they are in the custody of Mr. Searles.

Q. Acting in what capacity?—A. Well, we left them with him. There has been no action taken to establish some person as the custodian of those certificates.

Q. And at the time of the meeting of the stockholders of these respective corporations for the election of directors, these trustees, taking the certificates thus surrendered, vote upon the certificates thus surrendered the names of those whom they would have to compose the board of directors of each corporation?—A. Precisely, qualifying them by issuing to the individual stock necessary for his qualification.

Q. Has this organization which exists in pursuance of this deed any corporate existence under the laws of any State of this Union?—A. No, sir.

Q. Is the sole charter or source of right to act by this combination contained in this deed?—A. Yes, sir; except as the law might indicate was their province as stockholders. These trustees are the stockholders.

Q. Is there any law of any State in the Union, that you are cognizant of, that authorizes any body of gentlemen to frame a trusteeship of this character, and to issue in their collective names as trustees certificates of the kind intended in this deed?—A. I believe that is a perfect document, and I believe that stockholders of these companies had the right to do as stockholders just exactly as they did.

Q. Have you been pointed by your counsel, or anybody else at any time, to any statute of any State of the Union which authorizes you to do what this deed contemplates shall be done, and what you have testified has been done in pursuance of its provisions?—A. I never was so informed by my counsel. I should prefer rather than to talk about legal matters to refer the matter to him.

Q. Each stockholder in each of those corporations then, as I understand it, to sum the whole matter up, holds to-day not the certificates of which he was the owner in his respective corporation, but the certificates of this board organized under and in pursuance of this deed. Is that true?—A. That is as I understand it. You know I am very unfamiliar with the legal aspects of the case.

Q. I am not asking now as to the legal aspect, but as to the fact—whether it is a fact that each of the stockholders of these respective corporations holds to-day, in lieu of his original certificates of stock in such corporation, these certificates issued by this so-called board?—A. Yes, sir.

By the CHAIRMAN:

Q. What was the rate of drawback at the time of the exportation of the sugar?—A. 2.81.

Q. Now, is there any arrangement for paying out of the funds which come into the hands of these trustees from the profits of any of these corporations the losses on the business of any other corporation?—A. No, sir.

Q. You were sworn, Mr. Havemeyer, before the committee of the senate of the State of New York, were you not, upon an investigation in relation to this so-called sugar trust?—A. Yes, sir.

Q. Do you recollect being inquired of during the progress of that investigation as to whether anything had been done by your board of directors to fix the prices of raw sugars, or of the refined product?—A. No, I have no recollection of it.

Q. I will read to you from the reported testimony in that case on page 77:

Q. Has there on these several times when the board has met been any discussion as to prices?—A. In a general way.

Q. Has the result of that discussion been that a majority of the board has felt the prices of products should be so and so?—A. They have felt that the production should be limited.

Q. Have they stated that they felt that the price of the commodities, of the product, should be at that time a given amount?—A. No, sir.

Q. They have not had any such feeling as that?—A. No, sir; not that it should be fixed.

Q. And there has been no agreement of feeling at which raw material should be purchased should be a given sum?—A. There has been no fixed price.

Q. What do you mean by fixed?—A. No fixed price.

Q. But when they met on a given day there has been no agreement of feeling that the price that ought to be paid on raw material should, for that day or the next, etc., be a given sum?—A. They talked over it generally, but there has never been any price.

Q. Do they get an expression of the opinion of the majority of the board on that subject?—A. There is an opinion of the board on that subject. It is generally expressed.

Q. Whatever is talked over in that respect is not binding in that respect?—A. No binding force on the members of the board.

Q. Do you recollect those questions and answers?—A. Yes, sir.

Q. And is the statement contained in them substantially true?—A. Except as to what I may have said as to the organization of the board. What I mean by the majority of the board is that it was talked over by the gentlemen who, collectively, may have represented the majority of the board. I do not wish to have that construed as saying that the majority of the board made it. I will stand by that just as it has been read, however.

Q. There has been, then, discussion between members of this board, or a majority of them, as to questions of prices, I take it.—A. Their opinion as to prices generally.

Q. And have you ever known a case since this trust was formed where the price paid for raw sugar has differed from that which was the generally expressed opinion of those gentlemen as to the value of raw sugar?—A. Repeatedly.

Q. At the port of New York?—A. New York and Boston.

Q. By corporations whose stockholders had surrendered their stock to this board?—A. Yes sir; there are some of them who do not regard the opinion of the board in any shape or manner.

Q. But I ask you whether as a question of fact you know of any instance?—A. Yes, sir; I do.

Q. Will you state when and where it was?—A. I know of an instance where parties in New York and Boston did pay higher than was the general opinion of those in the board that the sugars could be bought for.

Q. Higher than it was generally understood between the members of the board was the market price?—A. Yes, sir.

Q. When was that?—A. I can not fix the date exactly.

Q. In what month?—A. I could furnish it exactly, but I do not recollect now.

Q. By whom was it paid?—A. I think by Dick and Meyer in one instance, Moller, Sierck & Co. in another, and the Standard Sugar Refinery in another.

Q. Do you know of any other instance?—A. I know that it repeatedly occurs. It has been demonstrated that even if these gentlemen wanted the price controlled they could not do it.

Q. I understand you to say that at this time, or up to this time, no books have been kept by this company except a stock-book and transfer-book.—A. That is all.

Q. And that no by-laws—that question has not been put to you, I believe, and I will ask it now—have any by-laws been adopted?—A. No, sir.

Q. The Havemeyer Sugar Refining Company was the owner at one time of two refineries, I believe?—A. It owns at the present time two refineries.

Q. At the time this deed was executed they had two?—A. Yes, sir.

Q. One of them, however, had been destroyed or injured by fire?—A. One of them had been partially injured.

Q. And was not in operation at that time?—A. No, sir.

Q. Has it come into operation since?—A. No, sir; they are closed up preparatory to building.

Q. So that at the time you took it into the trust they had but one in operation?—A. But one.

Q. Is that one in operation now?—A. I believe it is.

Q. I call your attention to the following questions and answers from the stenographer's minutes of the examination before the senate committee of the State of New York:

Q. Now, in these discussions where you were feeling of each other, did the members ever feel to see how they felt about the closing of any refinery?—A. Yes, sir.

Q. And they from time to time found that a majority of them felt that it was a wise thing to have certain refineries closed, did not they?—A. They felt that it would be wise to recommend the closing of certain refineries, and the suspension of work in others.

Q. And that was done by the board?—A. That was done at the recommendation of the board.

Q. I mean its recommending, the board recommended it?—A. Yes, sir.

Q. Well, now, was there no records made or record kept of what the board did in these respects?—A. I know of no record.

Q. Do you recollect the asking of those questions of you and your making those answers?—A. I do not recollect it, but that of course states what transpired.

Q. Is that a correct statement of the fact?—A. It was either done by the board or the committee. My recollection is now that the so-called mercantile committee made the recommendation.

Q. Will you state now whether, after hearing this testimony read, you recollect that you were examined on the subject by this committee in New York?—A. Yes, sir.

Q. You recollect the fact that you were examined on the subject?—A. Yes, sir.

Q. And having heard the questions and answers, are you satisfied that they are substantially correct?—A. Yes, sir.

Q. As you then stated it?—A. Yes, sir.

Q. You desire to be understood as saying that, and your recollection now is that the recommendation came from the mercantile committee, and not from the board?—A. I believe it came from the mercantile committee.

Q. The recommendation in those cases, I think you stated, referred to Moller, Sierck & Co.?—A. I believe that was all.

Q. Only one?—A. Yes, sir. The other was the result of conferences between Atkins and myself only.

Q. I will read you further from that testimony:

Q. Do you remember that at certain of these meetings you felt of each other, and you found a uniform feeling, at least of a majority, that it was wise to recommend a discontinuance of the running of certain refineries? Is that so?—A. Yes, sir.

Q. Well now, which refineries?—A. The Oxnard refinery, and the Moller-Sierck refinery; they were the only two, I believe.

Q. After hearing that, sir, do you recall the fact that the closing of the Oxnard refinery was due to the recommendation of this board?—A. No, sir; I am satisfied that refinery was closed before this agreement went into practical effect.

Q. By practical effect do you mean before it was signed?—A. I will not say that. My recollection is that I signed this deed about October 24. It may have been prior to that, but nothing was done under the deed, and no steps taken until the schedules annexed were examined, and it took a month to examine them.

Q. And the Oxnard refinery closed during that month?—A. Either that month or before that. It had nothing to do with it in any practical way. It had no reference to this trust.

Q. So that your testimony on that subject in New York was erroneous as regards the Oxnard refinery, as you now recall it?—A. I am quite confident it was. The Oxnard refinery employed about sixty men.

Q. Do you recollect, Mr. Havemeyer, of being interrogated on that occasion with reference to the purchase of the stock of other companies?—A. I recollect being examined, but I have no recollection of my testimony whatever.

Q. Well I will read to you from the record to refresh your recollection :

Q. But if they could agree with the stockholders of the other corporation; was absolute, unlimited power given to the board to make such an agreement without reference to limit of amount or price?—A. As I understand it, the board had the power to exchange certificates for the stock of other sugar-refining companies upon terms and conditions which should be agreed upon.

Q. Between them?—A. Between them.

Q. And that board subsequently did agree substantially with stockholders of other companies for such exchange of stock as you speak of?—A. They did.

Q. And you are a member of that board?—A. Yes, sir.

Q. As a member of that board you have taken part in such an arrangement, have you not?—A. I have.

Q. As a member of that board what else have you done?—A. Oh, I have convened and talked.

Q. You have convened and talked?—A. And adjourned.

Q. Well, you have convened and talked?—A. And adjourned.

Q. Well, what have you talked about?—A. Statistics.

Q. Did you pass any resolution?—A. No, sir.

Q. Did you take any votes?—A. No, sir.

Q. Did you make any decisions?—A. No, sir; I think not.

Q. How, then, if you had agreed to issue certain amount of stock of your certificates for the stock in any other corporation, how was that agreement arrived at by the board?—A. Well, we generally followed the recommendation of the majority.

Q. How did you get at the recommendation of the majority except by vote?—A. Well, we felt the sense of those who were there.

Q. How did you feel it?—A. Asked them how they felt.

Q. Was there any record kept?—A. I know of no record.

Q. Then you asked a majority of your board how they felt, and when they said how they felt on buying the stock of another corporation that was all that was done, was that it?—A. And the resulting recommendation.

Q. Well, who then carried out this recommendation; who then went to the other stockholders of the other company and said, "We will give you so much for your stock"? Who did that, how was that done?—A. I did not do it.

Q. Well, don't you know how that was done? Was there somebody designated to do it?—A. The secretary generally did that business.

Q. The secretary was directed to do it? Did the agreement contain any provision for filling vacancies in the board?—A. I believe it did.

Q. After hearing that testimony, Mr. Havemeyer, I ask you whether you recollect that the transaction with regard to the purchase of the other stocks took place in the way described in the testimony which I have just read to you, or whether your recollection remains clear that it was as you have said here to-day?—A. I think they are substantially the same.

Q. Then what I have read in your opinion states the correct fact in regard to how that transaction was consummated?—A. Yes, sir.

By Mr. BUCHANAN :

Q. The certificates of stock which were issued upon the surrender of the certificates of the corporation stock, was that transfer made dollar for dollar ?

The WITNESS. You mean face value of the stock as against face value of the certificate ?

Mr. BUCHANAN. Yes, sir.—A. No, sir.

Q. How was it made ?—A. By agreement.

Q. A person surrendering a face value of \$1,000 in one of the corporations received a face value of how many dollars in the trust certificates ?—A. Well, that varied necessarily.

Q. What caused the variance ?—A. Sometimes the property was capitalized for one-fifth of what it cost, and if the man got that cost in certificates, although he got full value, he might have received two or three times as much as the face value of the stock. In other words, the face value of the stock has nothing to do with the value of the property.

Q. The certificates were issued then according to the value of the real and personal property of each corporation ?—A. They do not exactly correspond. It has appeared through the testimony of another witness that the value of the entire property was about 70 per cent. of the outstanding certificates, and the rest was accounted for.

Q. What was the rest ?—A. Good-will, patent processes, improved machinery, etc. It represented a certain amount of skill also.

By the CHAIRMAN :

Q. Mr. Havemeyer, have you the prices in your mind so that you can tell me ? I see a statement here [referring to a report of testimony taken before New York State senate committee] which attracts my attention, that the price of fair refined sugar in New York was  $4\frac{7}{8}$  on the 1st of October, or about that time.—A. I can not confirm it. I see no reason to doubt it.

Q. And since that time it is less than that, as I understand. What is the price of refined sugar ?

The WITNESS. Fair refining ?

The CHAIRMAN. Refined granulated.—A. Six and five-eighths net.

Q. And what was it on the 1st of October ?—A. Not less than that. I think it was the same. I think the raw sugar is a little higher to-day than it was then.

By Mr. BRECKINRIDGE :

Q. How much sugar is consumed in the United States ?—A. Three thousand million pounds.

Q. How many men are employed in the refineries in this country ?—A. I understand about 25,000.

Q. That is, those in the trust ?—A. Yes, sir.

Q. Do you know how many are employed outside of the trust ?—about half as many, I suppose.—A. I should say about 5,000 in round figures.

Q. Then there are something like 30,000 men altogether employed in the sugar industry in this country ?—A. Yes; but that does not take in men employed in the industries collateral to the sugar industry, such as cooperage, staves, lumber, coal, etc., not to speak of the commerce or vessels employed to carry this product.

Q. What is the usual freight rate on sugar from Havana to New York ?—A. An eighth of a cent a pound.

Q. Do you know what is the usual rate of freight from Havana to London?—A. It is very high; more than twice that.

Q. What is the usual rate on exports of sugar from New York to London?—A. Seldom less than a quarter of a cent a pound.

Q. Is the rate from New York to Havana higher than from London to New York?—A. Yes, sir; for the reason that there are no regular lines of communication.

Q. Do you know whether it is twice as high?—A. More than that.

Q. Do you know whether it is three times as high?—A. Very nearly; yes, sir.

Q. The combined expense of reaching London from Havana, by way of New York, is, then, a little more than reaching London direct from Havana?—A. Yes, sir.

Q. The combined freight to London, by way of New York, is a little more than the freight from Havana to London?—A. About the same, I think.

Q. Additional charges are incurred in handling in the port of New York if this product is refined there and shipped again to London?—A. Yes, sir; and the most important of those would be under the regulation of the Treasury Department, whereby they charge 3 cents per hundred for weighing, when it does not cost them 3 cents per 10,000 pounds.

Q. How much do you estimate the additional charges amount to on a pound of sugar considering the insufficiency of the allowance of drawback, the handling and charges of all kinds incurred in and about the port of New York?—A. The 1 per cent. on the drawback is 2½ cents.

Q. On what?—A. On the 1 per cent. allowed. The drawback is 2.60 less 1 per cent.

Q. You do not comprehend my question; what I mean to get at is the amount of expense incurred, not the amount of drawback given you. If you bring sugar from Havana to New York, and refine it in New York, and then ship it to London, you have incurred certain expenses on that sugar independent of the mere process of refining?—A. Yes, sir.

Q. Those expenses consist of freight and of handling at the wharf, and of some fees, perhaps?—A. Lighterage—

Q. Of lighterage?—A. Marine insurance—

Q. And of certain losses by reason of insufficiency of drawback?—A. Yes, sir.

Q. Now, leaving out the element of freight, how much would you say these losses, charges, and all, amount to per pound when placed, say, upon refined sugars?—A. I think one-eighth of a cent would cover them all. It depends somewhat upon the amount of sugar involved.

Q. Then there is some discrimination against you upon the score of freight—one-eighth of a cent on the score of these other items—and in the face of this discrimination— —A. (interrupting.) The difference in freight I have not stated. I told you that was about the same.

Q. Assuming that to be so, there is a net discrimination of fully one-eighth of a cent a pound, and yet, although handicapped by charges amounting to one-eighth of a cent more than the English refiner has to stand, you send your sugars over there and undersell him?—A. I have not given that one-eighth as the difference. I gave it as the charge incurred here in preparing sugar for export; but what relation that charge bears to the charge the Englishman has to pay I do not know. I should not think they differed much.

Q. The Englishman does not lose anything on account of drawback ?  
—A. But he has to store his sugar and pay lighterage fees, etc., the same as I have.

Q. Assuming he has some harbor charges and all that, he only has the charge incurred in bringing the sugar to the refinery, and not in carrying it back to the ship. There is, you say, some discrimination against you ?—A. No, sir ; there is not any in fact. The transportation of sugar for export from my refinery has no more charge upon it than there is on a similar amount for the domestic trade.

Q. Then you do not have to export under any disadvantage ?—A. Nothing, except as to the——

Q. Insufficiency of drawback ?—A. Yes ; and the regulation which exacts 3 cents per hundred for weighing sugar. In other words, the Treasury Department charges me about 9 or 10½ cents per barrel according to the weight for doing what could be done for a quarter of a cent.

Q. How much do you estimate that discrimination amounts to in money ?

The WITNESS. As against England, you mean ?

Mr. BRECKINRIDGE. Yes.

A. Not over 5 cents a hundred.

Q. Well, it is that much ?—A. Yes, sir.

Q. Then you are discriminated against, as you now say, to the extent of 5 cents a hundred ?—A. Besides the inadequate drawback.

Q. And that amounts to how much a hundred ?—A. I have not got as far as that.

Q. Something considerable ?—A. Yes, sir.

Q. That is additional discrimination against you ?—A. Yes.

Q. Now, you do not deny the fact that for a number of years you have sold those sugars freely in the English market ; that is a matter of official record ?—A. I would do it rather than stop our works ; I would rather lose a quarter of a cent a pound that way than by stopping our refinery increase the expenses on the whole of our product a quarter of a cent a pound ; that is the advantage of a drawback ; it permits a man to market his surplus and not close his works.

Q. Do you reveal to the Government what you ought to get as drawback ?—A. No, sir ; I do not.

Q. Then how do you get a just basis ?—A. We do not.

Q. How do you expect to get it unless you reveal the facts ?—A. I would like to get it out of the hands of the Secretary of the Treasury, with all due respect to the present incumbent, for whom I entertain the highest respect, into the place where I think it belongs, Congress ; if they are going to legislate on this subject they might as well include that.

Q. The Secretary of the Treasury does not know precisely what the drawback ought to be, and if, as you tell us, you do not reveal those facts which form the basis of an estimate, what protection has the Secretary of the Treasury against frauds in drawbacks ?—A. Well, he has the protection which he has arbitrarily assumed, of making it so low that there can be no fraud.

Q. And that is all the protection you know of ?—A. Yes. Remember, I do not wish to say anything to reflect upon the Secretary of the Treasury. I am only trying to point out that, in my judgment, Congress should fix the drawback, and that it should not be left in the discretion of one man.

Q. You would have Congress fix that drawback at a given figure?—

A. I would have Congress, by a proper committee, ascertain what the drawback should be and fix it definitely.

Q. At a specific amount?—A. Yes, sir.

Q. At present you see no means the Treasury Department possesses, except by the exercise of its discretion in limiting the amount of the drawback, to prevent fraud?—A. That is correct.

Q. And you mean to say that in the face of the losses and expenses that have been incident to your export business—the discrimination against you—you have for many years maintained an extensive export trade, and yet you could not afford to manufacture, to refine sugars into granulated sugars, if there were free trade in sugars?—A. That is pretty complicated, I think.

Q. Suppose there was free trade in sugar and all sugars should be free, would it kill you?—A. It would obliterate us.

Q. How do you explain, then, this export trade?—A. I am talking now of the whole sugar industry, not of one or two refineries.

Q. Would it obliterate your refinery?—A. How do I know? I have never worked under free trade.

Q. You are talking about rates and margins, and this is the whole basis of this inquiry, as a matter of course. It is the limit the law will permit you to fix upon consumers.—A. The limit the law would fix as the limit to the consumer in the event of free trade would be all I could get between what I could manufacture my sugar at and what he could buy it for elsewhere, whether a quarter of a cent or what it might be, and I would take it out of him.

Q. Will you explain how your own business would fail to maintain itself in the face of the fact that you conduct an export business under the conditions that you now say you do if there were no tax upon the raw sugars and no tax upon the refined?—A. If it was conducted in the same way, probably in the next few years more refineries would go out of business.

Q. Are you not evading? I was talking about your own individual business.—A. My individual business is to take the lowest quality of sugar—the lowest raw material—and refine it to the best of my ability; and, with one exception, I am the only refiner in the world who does it.

Q. Is that the only answer you have to give to the question I asked you?—A. Under free trade I am not prepared to admit that Havemeyers & Elder alone could not hold their own, although they would do it at a great disadvantage. Now, the other refineries I do not think could. It would obliterate them.

Q. You think that perhaps your own refinery could possibly hold its own?—A. I will not deny that it could.

By Mr. BUCHANAN:

Q. Are you anxious to try the experiment?—A. Why should I? Certainly not. I do not see why, when I have an ability that may be better than my competitors, the United States should obliterate that, and give the other man the benefit of the best means, knowledge, and skill. I would not shut up my refinery on account of free trade until I had demonstrated that Havemeyers & Elder could not refine sugar anywhere in the world.

Mr. BRECKINRIDGE. I am only seeking industrial facts, not discussing the merits of the proposition.

(The witness was then dismissed.)

Mr. BUCHANAN. I want to know what effect this combination has had upon the employment of labor.

Mr. McKINNEY. They have offered to send that.

Mr. BUCHANAN. Before they go I would like to have that information.

Mr. SMITH. And I would like to have the average rate of wages paid.

The CHAIRMAN. I think if the committee will go into executive session we can dispose of these questions.

The committee then went into executive session, and after fifteen minutes spent therein, adjourned until 11 a. m. on Monday, March 12, 1888.

---

WASHINGTON, *March 12, 1888.*

The committee met at 11 o'clock a. m., pursuant to the adjournment of Saturday. Present, the Chairman and Messrs. Breckinridge, McKinney, Grimes, Hopkins, Smith, and Buchanan.

### TESTIMONY OF GEORGE H. MOLLER.

GEORGE H. MOLLER, being duly sworn by the Chairman, testified as follows:

By the CHAIRMAN:

Q. What is your full name, please?—A. George H. Moller.

Q. Where do you reside?—A. In the city of New York.

Q. What is your business?—A. Sugar refining.

Q. How long have you been engaged in that business?—A. I have been actually engaged in that business about thirty years.

Q. Are you now engaged in it?—A. No, sir.

Q. When did you go out of it?—A. We sold out about the 1st of December.

Q. Were you one of the officers of the North River Sugar Refining Company?—A. Yes, sir.

Q. Was that the only concern with which you were connected in the sugar refining business up to December last?

The WITNESS. How the only refining business?

Q. Was that the only concern in which you had any interest?—A. Yes, sir.

Q. For how long a time had the North River Sugar Refining Company been carrying on business?—A. Since 1865.

Q. Prior to that time what concern were you connected with?—A. Prior to that time the business was carried on under the firm name of Moller & Martin.

Q. For how long before?—A. From 1858 to 1865.

Q. And then the firm of Moller & Martin was succeeded by the North River Sugar Refining Company?—A. No. I am afraid I am a little mixed there. The North River Sugar Refinery started in 1866, but the Moller and Martin Company still went on, and in 1873 the North River Sugar Refining Company bought out Moller & Martin, and it was amalgamated into one company.

Q. So that the North River Sugar Refining Company succeeded to the business of your firm, and that occurred in 1873?—A. Yes, sir.

Q. Whereabouts was the refinery of the North River Company?—A. In New York, at the corner of Water and Corlear streets.

Q. Had it always been there?—A. Moller & Martin had always been there, but the North River Company started in Roosevelt street, but

when the North River Company bought up Moller & Martin they gave up the Roosevelt-street business, and went over to the Moller & Martin refinery and enlarged it.

Q. So that up to 1873 the North River Company had carried on business at this place?—A. Yes, sir.

Q. Had it been in continuous operation up to that time?—A. Except for a month or two, when we stopped.

Q. When you stopped, was your stoppage for repairs? A. Not always.

Q. Had you ever stopped for any other reasons?—A. Yes, sir.

Q. Do you recollect when they were?—A. If I recollect right we stopped in December, 1886, and went to work again in 1887.

Q. And that was not for repairs?—A. No, sir; we did make repairs, but we did not stop for repairs.

Q. You stopped because the business was not profitable, did you?—A. Yes, sir; and what repairs were necessary we did in that time.

Q. Do you remember any other occasion that you stopped for any other reasons than to make repairs?—A. No, I do not remember exactly.

Q. This North River Company had but one refinery?—A. Yes, sir.

Q. What was the par value of the capital stock of your company?—A. Three hundred and fifty thousand dollars.

Q. And they owned the entire property?—A. Yes, sir; that is, they owned it. I do not know what you mean by entire property. Do you mean all the property used in sugar refining?

Q. They owned the refinery, did they not?—A. Yes, sir; but they leased some property, which they used for warehouses, stables, etc., but the refinery itself and the ground was the property of the North River Refining Company.

Q. And the plant?—A. What do you mean by plant?

Q. I mean machinery?—A. Yes, sir.

Q. Were these leases you speak of for long terms of years?—A. Yes, sir; they were made in 1873 for ten years, and when that was up they were renewed for ten years longer.

Q. How much property did you hold in 1887 under lease?—A. Six small lots, 20 or 22 by 75.

Q. Were they covered by warehouses and stable buildings?—A. There were houses on them, I think, for storing raw sugars, milling purposes, etc.

Q. Were they in connection with your refinery?—A. They were across the street.

Q. Something has been stated here during the progress of this examination about the property of your refining company being taken, or about to be taken, for a public park. As I understand it, the legislature of the State of New York, in the session of 1887, passed an act requiring or authorizing the city of New York to lay out certain small parks in the lower part of the city?—A. I think it was prior to 1887 that such a statute was passed by the legislature of the State of New York.

Q. And that law authorized, as you understand it, the board of street improvement, or street openings, to locate those parks, and the parks were to be laid out within certain limits?—A. Yes, sir.

Q. And acting under that authority, did the board of street improvements of the city of New York lay out a park which included the property of the North River Sugar Refinery?—A. I am so informed.

Q. Did that take in your leasehold property as well as what you owned in fee?—A. Yes, sir.

Q. So that all the property which you had came within the boundaries of that park ?—A. Yes, sir.

Q. Had not all the stock of the North River Sugar Refining Company been sold within a year prior to December, 1887 ?—A. No, sir ; oh, you mean prior to 1887. Yes, sir.

Q. Some of it had been sold ?—A. Yes, sir.

Q. At what price ?—A. I think the last was at 106.

Q. Do you remember when that sale was made ?—A. As far back, I think, as 1882 or 1883.

Q. Then there had been no sale in the year preceding December 1, 1887 ; that is, no sale since December 1, 1886 ?—A. No.

Q. Now, Mr. Moller, you had been familiar with the course of the sugar business, of course, over all the years you have been engaged in it ?—A. Yes, sir.

Q. And familiar with the kinds of sugar used by refiners ?—A. Yes, sir.

Q. That is, the kinds bought by them ?—A. Yes, sir.

Q. And the kinds imported into the port of New York ?—A. Yes, sir.

Q. Will you state, please, with reference to these raw sugars, what varieties or kinds of sugar are imported into the port of New York ?—A. In the first place, centrifugal sugars. They are sold always at 96 test. That is the standard ; and when it is over 96 you have to pay so much more, say, 4 or 6 cents a hundred, as agreed upon, and when it is below that you have to make the ratio accordingly.

Q. Are centrifugal sugars sold by the polariscope test ?—A. Yes, sir.

Q. That is, they contain 96 per cent. of saccharine matter ?—A. Yes, sir.

Q. Then what other sugars are there ?—A. Then there is the muscovado ; that is also sold.

Q. What is the test as applied to good or fair refining sugar ?—A. From 88 to 90 or 91 ; the average is about 89.

Q. Is there any other ?—A. Yes. Then there is what they call common refining.

Q. Is that a muscovado ?—A. Yes, sir. You get West India sugars of that grade, and Manilla sugars ; they are considered as common refining sugars. There is a large amount of that imported.

Q. Now, the distinction, as I understand it—it probably is plain enough, but we will put it on the record from you—the distinction between centrifugal sugars and muscovado sugars is in the process of manufacturing ?—A. Yes, sir.

Q. The centrifugal sugar has been freed of its molasses by the use of a machine known as the centrifugal machine ?—A. Yes, sir. If you will allow me to explain, I will state that the centrifugal sugar, so called, is boiled in a vacuum-pan.

Q. That is, the sap is poured into a vacuum-pan ?—A. Yes, sir ; and that enables you to make sugar of a far larger grain. You have it under your complete control there. You can make it large or small. By that process the molasses is thrown off until the sugar is dry, and then it is a large crystalline mass of sugar—pretty nearly all pure sugar.

Q. What proportion of the whole importation during the past year has the centrifugal sugar been ?—A. I would not be able to state exactly ; I could only guess at that.

Q. What is your best information ?—A. I might say 40 per cent. ; I might be wrong in that.

Q. And the balance, I presume, is muscovado sugar ?—A. Yes, sir.

Q. In the ordinary process of a refinery—making sugars—as you make them, and your competitors in business make them, which do they use the most of in each melting?—A. That all depends upon what grades of sugar a refinery would make. For instance, we would use about 30 per cent. of centrifugal sugars and 55 per cent. of fair refining, the balance common refining.

Q. And from that what do you make?—A. All kinds of sugar; cut-loaf sugar, granulated sugar, white A, small A, yellow sugars, and sirup.

Q. The higher the grade of the product the more centrifugal sugar there is used, the higher the average grade of the product given to the refiner the more centrifugal sugar is needed?—A. Well, it would be very impracticable if you used low-grade sugar for a high-grade product. It would be impracticable to do it.

Q. The loss would be too great?—A. The expenses would be too great.

Q. About what, averaging it, is the cost of manufacture, taking the ordinary raw sugars and producing refined sugars; what is the average cost per pound?—A. We have never operated in that way, and I do not believe any refiner does, for when he refines his sugars he always uses good sugars in conjunction with poor sugars. I do not believe any refiner would use common muscovado sugar of that kind and work with it exclusively.

Q. I did not ask you that. But I mean in estimating your business?—

A. You mean what it costs us to refine sugar the way we refine? If we use 30 per cent. centrifugal, 55 per cent. fair refining, and 15 per cent. of common sugar, and we work our house to its fullest capacity, it would cost about 50 cents a hundred.

Q. You have paid some attention, I suppose too, noticing the course of the sugar market in the last six months in New York?—A. Yes, sir.

Q. The price of refined sugars has increased during that period?—A. Yes, sir.

Q. So that in the month of February, 1888, it was  $7\frac{1}{4}$  to  $6\frac{3}{4}$ ?—A. Yes, sir.

Q. In February, 1877, it was  $5\frac{1}{8}$  and  $5\frac{3}{8}$ ?—A. Yes, sir.

Q. Do you know any reason why the price in February, 1888, exceeded the price in February, 1887?—A. You mean of raw sugars?

Q. No; refined sugars.—A. Well, it is largely owing to the regulating of the production. In 1887 there were a great many more refineries at work than in 1888.

Q. So that it was a decrease of the production of the year ending February, 1888, to which, you think, the increase in price was due?—A. Undoubtedly.

Q. At what season of the year, in your experience in the sugar-refining business, has the price of refined sugar ordinarily been the highest?—A. Generally in the summer.

Q. I call your attention to the fact that the price of sugar in February, 1888, was between 1 cent and 2 cents higher per pound than in the months of June, July, and August of 1887. Do you know any reason for that unusual condition of things?—A. I do not quite understand.

Q. I will repeat, then. In the months of January and February, 1888, the price of refined sugar was higher than in the months of May, June, July, and August, 1887, and I ask you whether you know any reason for that difference. You may state what the reason is, if you know it.—A. One reason is that raw sugars are higher than they were last June, July, and August.

Q. Is there any other reason?—A. Another reason was, as I have stated, the curtailment of production.

Q. Now, I call your attention to the fact that fair refining sugar in February, at its highest, sold at 5 cents a pound, and its highest price in the months of May, June, July, and August last year was  $4\frac{1}{6}$ ¢. Bearing that in mind, Mr. Moller, will you state, please, whether the increase in the price of raw sugar between those periods was, as you understand it, greater or less than the increase in the price of refined sugars?—A. The reason why was that the sugar market generally rose, that is, the raw sugar market, especially in England.

Q. I understand that is the reason why the raw sugar rose.—A. Yes, sir.

Q. But the raw sugar rose less than the refined sugar?—A. The reason for that was that they regulated the output. They did not produce any more sugar than the people wanted.

Q. The reason, therefore, why there was a greater rise in the price of the refined sugar per pound than in the price of raw sugar, was due to the fact that the production was curtailed?—A. That is my opinion.

Q. And that curtailment of production was in the operation of the refineries connected with this so-called trust agreement?—A. So I judge.

Q. You signed this deed, I believe?—A. Yes, sir.

Q. The signature "North River Sugar Refining Co., George H. Moller, secretary," was made by you?—A. Yes, sir.

Q. Do you recollect when that was done?—A. I could not recollect the date, but I think it was some time in the fore part of October.

Q. At the time you made that signature had there been a figure agreed upon between you and the other persons signing the paper as to the amount of certificates you were to receive?—A. Yes, sir.

Q. How much was it?—A. \$700,000, less 15 per cent.

Q. The subject of your executing this deed and entering into this arrangement had been discussed, I take it, before you made this signature?—A. Discussed between whom?

Q. Without saying between whom, there had been discussion about it, to which you were a party?—A. Yes, sir.

Q. With whom had you talked about it outside of the stockholders and officers of your own company?—A. Principally with John E. Searles, jr.

Q. He is a member or officer of which one of the corporations?—A. He was one of the eleven trustees.

Q. Oh, he was one of the eleven trustees?—A. He was secretary and treasurer, I think, of the Havemeyer Sugar Refinery Company.

Q. For how long a time prior to your signing this instrument had there been talk between you and Mr. Searles on this question?—A. For more than a year before.

Q. And had the discussions been renewed from time to time along through the year?—A. Yes, sir.

Q. Had there been talk about the matter in your board of directors?—A. Yes, sir.

Q. And with the stockholders of your company?—A. Yes, sir.

Q. Was this proposition from Mr. Searles, that the stock of your company should be surrendered to these trustees?—A. Yes, sir.

Q. Were they named to you? Did you understand who they were?—A. Not at first. The arrangement was that we were to come into this arrangement and that we were to receive \$700,000 for our stock, but how that was to be done was not stated.

Q. It was not discussed at the beginning?—A. No, sir.

Q. Afterwards, were the names made known to you before the signing of this paper?—A. We were told we had to assign our stock to a certain committee called trustees, composed of Mr. Dos Passos, Mr. Parsons, and Mr. Bartlett. To those people we were to turn over our stock and they were to receive our certificates for it.

Q. Were the names of the persons in that deed made known to you?—A. Yes; they were in the deed at the time the deed was signed.

Q. This deed was signed, I believe, before the precise locality of this park was agreed upon or settled?—A. Yes, sir.

Q. And after the park was agreed upon your stockholders or company withdrew, or notified these people you would not carry out that arrangement?—A. Yes, sir.

Q. That was in advance of the actual surrender of any of these certificates?—A. Yes, sir.

Q. Now, will you state, Mr. Moller, whether or not the stockholders and officers of your company were satisfied with the amount of \$700,000 in certificates from these trustees as compared with the amounts given to other people.—A. No, sir; they were not.

Q. In your opinion, and in the opinion of your stockholders and board of directors then, you were not receiving as large a proportion of these certificates as you thought you were entitled to rightly with others?—A. No, sir.

Q. And that had something to do, in connection with the location of this park, with your withdrawal from the arrangement?—A. Yes, sir.

Q. As I understand it, the authority to execute this deed was given by your board of trustees to the president and secretary of the company?—A. Yes, sir.

Q. And the president never did execute the paper?—A. No, sir.

Q. Subsequently to your refusal did you receive any communication from any of these other gentlemen upon the subject?—A. Yes, sir.

Q. From whom?—A. Mr. Searles.

Q. Did you also receive a communication from Mr. Parsons?—A. Yes, sir.

Q. Did Mr. Parsons in that communication assert that your company was legally bound to carry out this arrangement?—A. He intimated so much.

Q. Did you write in response to that?—A. I sent my lawyer to him.

Q. The conclusion which you reached, as I gather, was that you would rather take your chances of what you would get out of the city on account of the condemnation of your property for a public park than to take \$700,000 in these certificates?—A. Our stockholders were not satisfied with the arrangement. They thought our property was not valued as highly in proportion as other properties which were taken in. They felt aggrieved about it, but under the circumstances they considered that our chances as a corporation, if we wished to continue in the sugar business, would be better in going in even at that valuation than to stay out alone; but afterwards, when the park matter was discussed, our people said, "We have not been treated as we ought to have been treated, and we will take our chances and see what we can get out of the city."

Q. So the conclusion you reached was that if you were going on with the sugar business you had better take \$700,000 than compete with this combination?—A. Yes, sir.

Q. But if you were going out of the business, you would rather take

the chances with the city than accept this award?—A. Yes, sir; that is the conclusion we came to.

Q. Now, Mr. Moller, in these years in which you have been engaged in the sugar-refining business, I suppose you have seen some periods of prosperity and some of adversity?—A. Yes, sir.

Q. Generally, taking the thirty years together, has the business been a profitable one?—A. Yes. I might say it has.

Q. Averaging it all through?—A. Yes, sir.

Q. During the year 1882—or 1883, was it not—the Havemeyers & Elder refinery burned down?—A. Yes, sir.

Q. During that year was, or was not, the business profitable?—A. It was profitable then.

Q. Their refinery was rebuilt, I believe?—A. Yes, sir.

Q. And went into active operation at what time?—A. About eighteen months afterwards, I think.

Q. Some time in January, 1885?—A. I think it was in 1884.

Q. Was the capacity of that refinery increased by that rebuilding?—A. It was.

Q. From the time that that refinery went into active operation up to the time you sold out, what was the condition of the sugar trade?—A. Poorer and poorer, every year.

Q. Did the output of that refinery, added to the other production of the country, diminish the profitableness of the business?—A. Yes, sir.

Q. You were examined in New York, were you not?—A. Yes, sir.

Q. One other question, Mr. Moller, before we pass to that subject. Did you talk with anybody, except with Mr. Searles, upon the subject of going into this trust?—A. I had a conversation with Mr. Matthiessen.

Q. Of Matthiessen & Weichers?—A. Yes, sir.

Q. After you received this letter from Mr. Parsons, and sent your lawyer to see him, I understand your claim was that, as this instrument had not been signed by your president, your corporation was not bound?—A. I think my lawyer stated that to him. I do not know how they fixed it.

Q. You made that claim, any way, through your lawyer?—A. Yes, sir.

Q. And after it was made, did Mr. Searles call upon you?—A. Yes, sir.

Q. And as the result of interviews with Mr. Searles thereafter, was the stock of your company transferred to Mr. Searles?—A. Yes, sir.

Q. At what price?—A. \$325,000.

Q. And did that carry all the stock?—A. It carried all the stock.

Q. The whole capital stock?—A. Yes, sir.

Q. That is the only sale of the stock of your company you know of since 1882?—A. Yes, sir.

Q. And Mr. Searles paid you in cash?—A. Yes, sir; I would remind you, Mr. Chairman, that a number of people think that when we sold out our stock at \$325,000 we sold out everything; we did not. We only sold the plant and machinery; but the personal property of the company we retained.

Q. What kind of personal property?—A. Sugar in the sugar-houses, and all debts collectible, and everything else of that kind the company retained. It did not give up its books, showing money outstanding, to Searles. We only sold to Mr. Searles the plant and the machinery, and the ground; but all the material in the sugar-houses, bone-black sirups, sugars, and everything of that kind, was retained.

Q. But the stock of the sugar-refining company went to Mr. Searles?—  
A. Yes, sir.

Q. Was an exception made in the sale as between you and Mr. Searles of any part of the property of the North River Sugar Refining Company?—A. Yes. When we first wanted to go into the trust we had made out a schedule of all the property, and in that schedule were these six lots, and we were under obligation in going into this arrangement to buy those six lots and give the trust or combination, or whatever you want to call it, a deed for it. In making this arrangement with Mr. Searles we sold the sugar-refining business for \$350,000, and we allowed him \$25,000 for those six small lots, and in that way we obviated the necessity of deeding the property, and in that way the net proceeds of the sale were \$325,000.

Q. That leaves it much as before. You transferred your property just as it was, subject to the lien on those lots, for \$325,000?—A. Yes, sir.

Q. And did you understand, in doing that, that Mr. Searles was making this purchase in the interest of those people who had gone into this trust?—A. I can not say that; I suppose so, but I do know for certain that Mr. Searles gave us the money.

Q. I understand; you do not know it as a fact, but that is your understanding?—A. That was my impression.

Q. Now, Mr. Moller, you testified in New York as to the amounts received by some of these other gentlemen who went into the organization?—A. Yes, sir.

Q. Without asking you to amplify that testimony, I call your attention to what it was in New York. You stated in New York that the Havemeyers & Elder Company were taken in at between sixteen and seventeen millions. Is that correct?—A. I testified as to that.

Q. It is a correct statement, is it not?—A. Yes; according to my best knowledge and belief.

Q. You testified that the Decastro and Donner Company was taken in at a little over three millions?—A. That is correct.

Q. And the Matthiessen and Weichers Company at \$6,500,000?—A. Yes, sir.

Q. The Oxnard refinery at \$7,500,000?—A. Yes, sir.

Q. And the Moller and Sierch Company at \$1,150,000?—A. Yes, sir.

Q. And the Dick and Meyer Company at three millions?—A. Yes, sir.

Q. The Standard Refinery of Boston at \$2,700,000?—A. Yes, sir.

Q. The Bay State Refinery at \$900,000?—A. Well, I do not know that I exactly stated that. There are two in Boston, the Continental and the Bay State, and one of them, I think the Bay State, was taken in at \$900,000.

Q. Either the Bay State or the Continental?—A. Yes, sir; I think the Bay State was taken in at \$900,000, and the Continental at \$1,900,000.

Q. The subsequent signers of this agreement—one in Portland, one in Saint Louis, and two in New Orleans—you did not know about?—A. No; they were not in when I signed it.

Q. Do you recollect when it was that you notified the other gentlemen connected with this agreement that you would not enter into it?

A. It must have been some time in the fore part of November.

Q. And about how long a time elapsed between your giving them that indication and the closing of the transaction with Mr. Searles?—A. I should say about three weeks.

Q. I take it, of course, that Mr. Searles, in his talk with you, before you signed this paper, laid before you some arguments to show that

you would be benefited by entering into this combination?—A. Well, I do not know exactly that he did, but he probably could have done better by us if he had wanted to.

Q. When he first talked with you about going into this arrangement he must have given you some reason why such an arrangement would be of benefit to you?—A. I think it was hardly necessary for him to give me any reason. I could see through the affair just as well as he could, and see that if all the refineries came together and worked together it must be a benefit.

Q. How?—A. They would not make any more sugar than the public wanted.

Q. That is, the object of each refinery running to its fullest capacity, and making all the sugar it could, would be removed?—A. Yes, sir.

Q. And the advantage was that that sort of competition would become unnecessary?—A. Yes, sir.

Q. The effect of that, as you understood it, as a sugar refiner, would be that the price of refined sugar would advance?—A. Yes, sir.

Q. And if there would be as large a difference between the prices of raw and refined sugars as heretofore it would give you a fair profit?—A. Yes, sir.

Q. Mr. Searles took your stock at what time?—A. About the fore part of November.

Q. And about how soon after he took your stock was it that your refinery closed down?—A. Well, we were not running full at this time, and I stipulated with him that we should retain the refinery until the first of January, so that we could work out our stock on hand and get rid of our raw sugars and clean up everything; and we agreed that that should be done by the first of January, and it was. We then gave up the refinery.

Q. And the refinery then stopped, and the raw sugars that were left were sold?—A. Yes, sir.

Q. About what was the output of your refinery?—A. About 800 or 1,000 barrels a day.

Q. How many men did you employ?—A. In the neighborhood of two hundred men.

Q. How many men are employed in the sugar-refining business in and about the city of New York; I mean employés who labor?—A. Well, I will count them up. I calculated the number of men employed in the whole industry in the United States this side of the Rocky Mountains, and I think it was about ten thousand; that is, people who actually work in the sugar refineries, what they call sugar-bakers, etc. I did not calculate the coopers and people who live out of the business, and, of course, there are many men who have families consisting of four or five persons, and I have not calculated them either.

Q. Only those who labor?—A. Yes; they will not exceed ten thousand?

Q. In addition to that each sugar refinery buys barrels?—A. Yes, sir.

Q. That gives employment to more people?—A. Yes, sir.

Q. Are those barrels made by particular persons?—A. There are persons who make a business of it.

Q. But they are not made by the refineries?—A. I think Havemeyers & Elder have a large interest in one of these barrel factories.

Q. But they are not made in the refinery and as part of the refinery business?—A. No, sir.

Q. If they have a separate concern that makes barrels, that is another matter?—A. Yes, sir.

Q. After this combination was complete, was there any buyer of raw sugar left in the sugar market outside of the persons signing this agreement?—A. No, except Harrison & Frazier and E. C. Knight & Co., of Philadelphia, and the Revere Company, of Boston.

Q. What is the capacity of the Revere Company?—A. I never have been in it, but from my best knowledge and belief I should say that they make 1,000 barrels a day.

Q. That would be the utmost?—A. Yes, sir.

Q. What was the capacity of Harrison & Frazier's refinery?—A. Harrison & Frazier's is, I think, a pretty large house. I have been told that they refine as much sugar as any of them.

Q. About what?—A. Six or seven thousand barrels a day.

Q. What is the capacity of Knight & Co.?—A. It does not amount to much more than 800 barrels a day, to my knowledge.

Q. Some raw sugars go to the port of Philadelphia and to the port of Boston?—A. Yes, sir.

Q. What proportion of raw sugars have those gentlemen in the past, so far as you know, bought in the port of New York?—A. Harrison & Frazier bought a good deal. They are, on and off, all the time in the New York market. Knight & Co., I guess, buy very little, and the Boston people only buy periodically. They import most of their sugars themselves, but sometimes they buy in the New York market, but very little.

Q. So that the only considerable buyer in the New York market, outside of this trust, is Harrison & Frazier?—A. Yes, sir.

By Mr. SMITH :

Q. You testified that the reason of the price of sugar having advanced 1 cent a pound was that the people did not want more. Is that so?—A. No, I did not say so.

Q. The reason the trust did not put more sugar on the market was that the people did not want more?—A. I did not say so.

Q. So I understood. What did you say on the subject?—A. I said that the trust would not produce more sugars than the people needed.

Q. Who should be the judge of that?—A. I should say the refineries would be the judge of that.

Q. If sugars were lower in price than at present, would the people use more?—A. It generally has that tendency.

Q. With the improved machinery now in use in sugar refining is there as much manual labor employed as there was ten years ago on each grade of sugar?—A. Ten years ago they had about the same appliances as they have to-day. If you should go back forty years it would be different.

Q. Well, say fifteen years; that is about half your time in sugar refining.—A. No, I have been at it since 1856. Well, fifteen years might make a difference, but not a very material one.

Q. There was testimony given here that with improved machinery as they have it now in use, manual labor was dispensed with.—A. I did not think improved machinery had so much to do with labor.

Q. Before this centrifugal machine came into use how much time was used to do the same thing which it does now?—A. What now can be done in forty-eight hours took then twenty-one days.

Q. Did you have to employ more labor at that time, before you had that machine?—A. Yes, sir.

Q. About what per cent.?—A. Well, I am not able to state that.

Q. How much labor employed is skilled mechanical labor?—A. Very little.

Q. What are the average wages of skilled laborers and unskilled laborers in sugar refineries?—A. We paid our workmen by the month. I think the lowest was \$36, and from that up to \$40, \$50, \$80, \$100, and \$150 a month.

Q. Those \$150 a month men were generally chemists, were they not?—A. No, sir.

Q. Were they skilled mechanics?—A. They were what we called sugar-boilers or superintendents of works mainly.

Q. So you can not state what percentage of skilled labor is employed—skilled mechanical labor?—A. I do not understand what you mean by skilled labor. For instance, a sugar-boiler might call himself a skilled laborer. I suppose you mean carpenters, machinists, and such men.

Q. I mean a mechanic who has taken an apprenticeship of a number of years to become skilled.—A. We had a very few of such men. We might have one carpenter, one machinist, one engineer—

Q. That is not in the sugar-refining business?—A. They help to make sugar. If the engineer does not run the machine the sugar will not be made.

Q. How long will it take you to drill an ordinary laborer in your works to perform a certain amount of labor, or attend to a certain piece of machinery?—A. That is hard to tell. Some people are apt, and learn quick, and others will not learn in a life-time.

Q. Thirty-six dollars per month was the lowest wages you paid?—A. As far as I know, that was the lowest paid.

Q. Do you admit that with all these improved appliances for refining sugar that less labor is employed than formerly?—A. You mean than when it took twenty-one days to make sugar?

Mr. SMITH. Yes.—A. Undoubtedly.

By Mr. McKINNEY:

Q. Mr. Moller, you were to have \$700,000 from the trust, minus 15 per cent., for your plant?—A. Yes, sir.

Q. You did not go into the trust, and yet sold your plant for \$325,000?—A. Yes, sir.

Q. Was the property for which you received \$325,000 the same property for which you were to receive \$700,000 in certificates, minus 15 per cent. for the trust?—A. As I stated before, in our schedules there were six lots which were to go in, and those six lots added to what we got, \$325,000, made up the property for which we were to receive \$700,000 in certificates, less 15 per cent.

Q. The two transactions then were not identical? They did not involve the same property?

The CHAIRMAN. I think I can explain it to you. Under the original arrangement by which they were to receive \$700,000, as this witness testifies, these lease-hold properties they were to acquire the fee of. Now, instead of acquiring the fee they turned over the lease-hold interest and allowed \$25,000 as the difference between the value of the lease-hold and the fee. That is the substance of it.

The WITNESS. Yes, sir; that is it.

By Mr. McKINNEY:

Q. Do I understand by your testimony that this trust really limits the competition in the purchase of raw sugar?—A. Do you mean if that is my opinion?

Mr. McKINNEY. Yes, sir.—A. Yes; that is my opinion.

Q. You mean by that that raw sugars would probably bring a less price in the market under this arrangement than before?—A. I won't say that, but I say it lessens competition. If you and I and some others were partners, one of us would not bid more than the others.

Q. Do you think the tendency of this trust is to keep up the price of refined sugars?—A. Yes, sir.

Q. And also on the other hand to keep down the price of raw material?—A. I won't say that.

Q. The principal object of this trust was to control the market?—A. Well, the way I look at that is they were going to better their situation. It was a poor business, and they wanted to make it so that at least they should have a profit.

By Mr. HOPKINS :

Q. Mr. Moller, do you know of any of these certificates having been offered at any banks in the cities of Boston, New York, and Philadelphia as hypothecations for loans?—A. Not that I know of.

By Mr. BUCHANAN :

Q. Have you at any time learned from any of the parties to that deed of any effort being made by them, or by any one in their interest, to secure as members of their combination refineries in countries other than this?

The WITNESS. Do what?

Mr. BUCHANAN. I say, do you know of any effort being made by the members of the trust to secure as members of their combination refineries in other countries?—A. I do not know of my own knowledge, but Mr. Searles went to San Francisco, Cal., and I suppose he went for the purpose of seeing if the refineries there would come in.

Q. I said countries other than this; I mean European countries.—A. No, sir.

Q. You have heard nothing of that kind?—A. No, sir; you need not be afraid, it won't go there.

Q. Please explain why we need not fear that contingency.—A. It would be uncontrollable.

Q. Please explain how and why it would be uncontrollable.—A. Well, if you take in all the sugar refineries in Germany and England and Scotland and France, that would be an unmanageable body, in my opinion. It would be impossible.

Q. Why would it be unmanageable?—A. Well, the interests would be so different.

Q. And those are the reasons why you think this trust will be limited in its operations to the United States?—A. Undoubtedly.

Q. You were examined, were you not, by the committee of the senate of the State of New York some little time since?—A. Yes, sir.

Q. Did you, in the course of that examination, state that after Mr. Searles made a proposition to you, you told Mr. Searles that you had lost confidence in the proposed combination?—A. Yes, sir.

Q. Please state what was the reason in your mind for losing confidence in that proposed combination.—A. Because I thought that they had not put our property in at the right valuation.

Q. In other words, you felt they were trying to play a sharp game upon you?—A. Yes, sir.

Q. You gave in the early part of your examination here the cost of refining a pound of sugar. Let me ask you whether the cost remains the same at all seasons of the year and under all conditions, or whether

it varies?—A. It varies immaterially; it is about the same, unless there might be a rise in coal, and that would not alter it very materially.

Q. Do wages remain the same from year to year?—A. Yes, sir; pretty nearly.

Q. What would be the extreme extent of the variation on account of variation in the price of your fuel?—A. You mean in reference to the cost of refining?

Q. Yes.—A. I can not tell that. I would have to figure it out first. But it would be very small.

Q. You gave the price at which you employed your labor at from \$36 to \$100 and \$150 a month. Please state what proportion of your workmen are paid \$36 a month.—A. The best part of them. I can not give the exact number.

Q. The larger number?—A. Yes, sir.

Q. What do these men do—what actual duties do they perform?—A. Any ordinary duty a man can do without being skilled. They have to steam out the hogsheads, roll barrels, and fill barrels, and put them in the carts, and do what a laboring man probably would do in a store-house.

By the CHAIRMAN:

Q. Mr. Moller, what became of the employes in your refinery when it was shut up?—A. Some of them went over to Brooklyn and got work for a few days, and when those refineries stopped they got out of employment; most of them are out of work.

Q. So far as you know, they are out of work?—A. Yes, sir.

Q. And not under pay for anybody?—A. No, sir.

By Mr. McKINNEY:

Q. Would they, in your opinion, have been in the employ of a sugar refinery had it not been for this organization?—A. We would probably never have stopped our refinery, and, if we had, we would probably have kept most of them under pay.

Q. So that on account of the organization of this trust those men were thrown out of employment?—A. Yes, sir; practically so.

By the CHAIRMAN:

Q. I believe the custom of your refinery requires that when you close down temporarily you keep the better men on your pay-roll?—A. Yes, sir.

By Mr. BRECKINRIDGE:

Q. You say that this proposed consolidation that was offered to you was discussed from time to time?—A. Yes, sir.

Q. What was the mode of operating the consolidated refineries that was held out to you?—A. To go into the consolidation, you mean?

Q. I mean how did they propose to operate the consolidated business?—A. I do not think that matter was discussed at all.

Q. Was it not attempted to show you how the new plan would work?—A. No, sir.

Q. Nobody attempted to prove to you that it was a practical mode of doing business?—A. Well, so far, of course, that if the refineries all came under one arrangement they would naturally stop overproduction and produce only so much sugar as the community wanted, and by that means keep up prices so that they could make a profit.

Q. That was the conclusion to be reached?—A. That was the object.

Q. I am not asking as to the conclusion, but as to the manner in which they were going to reach that conclusion. You would naturally ask,

how is this thing going to work? It seemed to be a very good thing, but as a practical man of business, I suppose you would ask yourself and those who presented the proposition to you, how are you going to make the thing work?—A. I did not discuss that matter with any of them. As far as we were concerned we were all practical men, all sugar refiners, and each one thought he knew as much as his neighbor; and as far as we were concerned, we did not consider any discussion necessary. We all knew that the only way to make sugar-refining pay was to stop overproduction.

Q. A discussion as to the modes of refining sugar would not naturally arise in talking of the subject I am asking you about?—A. Well, that has never been discussed, so far as I know—not with me.

Q. You did not discuss how you would regulate production—how the order was to be made effective?—A. I do not know that that was much discussed. It was self-evident, and every refiner knew that all the refiners would be benefited by it; but how they would be benefited, I do not think was discussed with anybody.

Q. Of course you know that under the new arrangement, the new consolidation of stock would have to have some executive organization. There would have to be some way of keeping the run of the funds turned in?—A. Yes, sir.

Q. There would have to be some way of enforcing discipline with the refineries?—A. Yes, sir.

Q. And those are what I would call the practical details of the proposed scheme. I understand you to say that you had no discussion about that matter.—A. No, sir; we never discussed that matter.

Q. Was it understood or agreed that that would be all settled by the trustees?—A. Well, you might say so. There was no agreement and no consultation on the subject with the people who had this matter in hand. We were confident that whatever they agreed upon would be acceptable to us.

Q. Very well. That was all taken for granted and assumed, was it?—A. Yes, sir.

Q. As far as your negotiations were concerned?—A. Yes; as far as we were concerned.

Q. Mr. Moller, what margin of profit have you generally considered existed between the cost of refining your sugar and the selling price that would induce imports?—A. We would consider that if we had a difference between centrifugal sugar—sugar of 96 test—and granulated sugar, if the difference was 70 cents a hundred we would lose no money.

Q. You are talking now about the cost of refining, are you not?—A. No; I am talking about the difference the refinery ought to have between raw sugar and granulated sugar so as to get whole.

Q. That was not my question.—A. I misunderstood it then.

Q. If your raw sugar of a given grade cost you, say, 3 cents—I take any price so as to get a basis—I understand from what you have stated that if you could then sell your granulated at 3.70 you would be made whole?—A. Yes, sir.

Q. That brings me to the question that I asked a while ago. Your cost price, then, would be, under a fair and liberal construction, 3.70; how much would you have to advance that price above 3.70 to invite imports from London, say?—A. Oh, you could do that considerably. Under the present tariff there is  $3\frac{1}{2}$  cents duty on centrifugal sugars.

Q. Have you never figured on what you might call the danger line?—A. No, sir; I have not.

Q. You are not prepared to state how much you could advance the price?—A. I have never calculated that exactly.

Q. Have you ever known English sugars to run in upon our market?—A. Never.

Q. Even at our highest advance, the largest margin that we maintain between raw and refined at any time?—A. I think at one time there was a small quantity of low-grade yellow sugars brought in through Canada. I think it came from Glasgow, but the amount was insignificant and hardly worth counting. And it was so low as to be nearer raw sugar than refined.

Q. Suppose your raw sugar cost you 3 cents—and I take any price as a basis to start upon—and instead of turning out granulated sugar, which I believe is what you call sugar above No. 20—A. Yes, sir.

Q. Instead, then, of turning out granulated sugar, you turn out, say, a good yellow sugar about the grade of 16, how much would you consider necessary to make you whole on that grade?—A. I could not answer that question understandingly, because we have never worked low-grade sugars all alone. I believe no refinery does. It would be a disadvantage to it. The refiner generally commences in the morning with hard grades and so grades down until afternoon, until he reaches the poorest he wants to use. If he were to use low-grade sugars altogether, I think it would not work.

Q. Do cargoes of sugar generally run of uniform grade?—A. Well, cargoes of sugar are often mixed; some have part muscovado and part centrifugal. But centrifugal sugars generally run about the same grade.

Q. Well, these centrifugal and muscovado sugars can all be below No. 13, can they not?—A. Oh, yes.

Q. Suppose they are below No. 13 and are of the same saccharine strength; are they equally valuable to you for refining purposes?—A. Not always; it depends a good deal upon what test is made and how it is made. For instance, you might take molasses and boil it in a vacuum-pan, and you can make out a test of 91 or 92. You might take a muscovado sugar and bring out a test of 88. That sugar, testing 88, would be worth more in the market than a molasses testing 91 or 92.

Q. Why is that?—A. Because, although the polariscope gives you a certain quantity of sugar that will granulate, it will not show you what quality it will be, nor how long it will take you to refine it. With one grade it might take forty-eight hours, while on another you might spend three months.

Q. Please describe the vacuum-pan process of refining sugar.—A. By the vacuum-pan process you boil at a very low temperature, and there are several coils of steam which make the sugar-mass boil. As soon as it boils up and the water evaporates into steam the air converts the steam into water as soon as it arises, and that keeps the mass cool. So the temperature is kept even during the operation, the water taking off the steam and thus keeping the mass cool, and that keeps it from burning, and you get your color better.

Q. You have perfectly uniform heat, then?—A. Yes, sir.

Q. And it is by the slow process of evaporation instead of the fast-boiling process of the open-air kettle?—A. Well, I think you can boil quicker in a kettle.

Q. But this is the more conservative mode?—A. Yes, sir.

Q. If you buy centrifugal sugars, testing say No. 90, how much of the saccharine strength would you expect to lose in the process of refining?—A. Testing 90?

Q. Yes; I am not talking now of the weight of the sugar, but of the saccharine matter that is in it.—A. I am not able to tell you that, because you get, for instance, sirups out of that which would test 40 or 50 per cent. sugar that you can not do anything with. The test is still there, but the sugar which is in the molasses might take you six months to get out.

Q. The sugars which you turn out, Mr. Moller, whether good grades of yellow or granulated, are almost 100 degrees, are they not?—A. Yes, sir.

Q. Quite so?—A. Well, they ought to be 100 degrees. But after they are dried and exposed to the air they will absorb some moisture. It ought to be 100, but it is not always 100, and it runs from  $99\frac{1}{2}$  to  $99\frac{3}{4}$  and in that neighborhood.

Q. But the element of weight that is not saccharine matter is generally moisture acquired by absorption?—A. Yes, sir.

Q. Allusion has been made in the course of our examinations to sugars being debased when competition is very great. Will you please state how it is understood in the trade that sugars are debased—sugars which are meant for consumption?—A. Well, some years ago people made a kind of sugar out of glucose. I do not know that any of it was done by refineries; but people made a business of buying yellow sugars and mixing with glucose, and they would then sell it for better prices because the color was advanced. But I never heard that any refinery had done such a thing. But it has been done, I know.

Q. That article has been on the market at certain times?—A. Yes, sir.

Q. You do not know who produced it?—A. There was a concern not far away from us that did that business, but they were not refiners.

Q. What is understood to be the saccharine strength of glucose?—A. That I do not know.

Q. I see on page 8 that fair refining sugar in New York—and these figures from the Commercial Bulletin are, I believe, intended to be the New York quotations—averaged 4.69.

The WITNESS. Would it be all the same to you to quote centrifugals? The New York refineries always base their calculations on the 96 basis of centrifugals.

Q. Well, you understand what this means better than I do. I understand it as a trade expression. The heading [reading it] is "Raw sugar fair refined." You know what that means?—A. Yes, sir.

Q. What does it mean?—A. Fair refining sugars are not made in vacuum-pans, but in the open air, and those sugars test by the polariscope from 88 to 90 at the outside. These sugars and Dutch standard No. 12 are what we call fair refining.

Q. This is considered a standard of raw sugars for refining purposes?—A. By the name everybody knows what they are.

Q. They make granulated sugar out of this, I believe?—A. Yes, sir.

Q. Is it customary to do so?—A. Yes, sir.

Q. I see that the average price of this grade of raw sugar was 4.69 for the month of September, and 4.72 for the month of October. Now, we have had testified to us here that granulated sugars have advanced in that market since the early part of October over a cent. Now, raw sugars have advanced during the succeeding months to 5.16 for November, 5.12 for December, 5.12 for January, and 4.87 for February—the print had it 4.86. I perceive an error of one point. The correct price is 4.87. They extended the average incorrectly. I am reading from the reprint. Now, the highest advance there at any time is 48 points. In

other words, a little less than half a cent a pound. If raw sugars advanced half a cent a pound, how much should granulated sugar have advanced, as influenced by the fact that raw sugar has advanced half a cent a pound?—A. What date?

Q. Any date. It makes no difference about the date. I am just asking as a general proposition—if raw sugars advanced half a cent, how much should the refined sugars advance to keep even?—A. They ought to advance in the same ratio.

Q. No more, no less?—A. It all depends. A man might have been working at a loss. He would be just as well off if raw sugars advanced half a cent and refined half a cent as he was when he started.

Q. And if he were working at a profit and raw sugar advanced half a cent and refined sugar advanced half a cent, he would make the same profit as before?—A. Pretty nearly; but the higher you go the less the profit would be in proportion.

Q. But practically it would be the same?—A. Yes, sir.

Q. Have any of your sugars ever been exported?—A. Yes, sir.

Q. Have you sold them upon orders from abroad? That is, did your customers live abroad, or did you sell to customers in New York?—A. We sold to parties in New York, with rare exceptions.

Q. Therefore you were not the shipper yourselves?—A. No, sir; we never shipped any goods ourselves.

Q. Do you know how the basis for the drawback was determined?—A. No; I have troubled myself very little about it, because we exported very little sugars. We did most of our business in New York.

Q. You do not know whether the Government had any grounds upon which to base the knowledge or the belief that your raw sugar which had entered into this sugar which you exported was domestic raw sugar or imported raw sugar?—A. I have not studied that matter much.

Q. This is a matter that does not call for study, it is a matter of fact. In other words, were you called upon when you exported sugars to say that the raw sugars used in that sugar was imported raw sugar?—A. Oh, yes; we swore to that in the custom-house.

Q. You were universally called upon to swear to that?—A. Yes, sir.

Q. Were you called upon to swear how much imported raw sugar there was in the refined sugar you wished to export?—A. No, sir; we only swore that we had used nothing but raw sugar on which the duty had been paid.

Q. You do not know how the Government determined how much imported sugar you had used or how little?—A. No, sir.

Q. You then swore to the single fact you have related, and left the custom-house officers to figure out the amount?—A. Yes, sir.

Q. Will you explain to the committee how the polariscope is used; just give a practical explanation of this polariscope business?—A. I do not know whether I can explain it very clearly, but I will do the best I can. You have to take a given quantity of raw sugar, for instance, determined by weight, and you have to dilute that with a certain given quantity of water, so that you dissolve the sugar thoroughly, and then it is put in a glass tube, on which there are screws on each end, and the top of it also is glass, and fastened by these screws, so that the liquid will not run out, on both sides. When you have it in this glass tube you can look through it from one end to the other.

Q. It is glass all round, then?—A. Yes; glass all round. Then you put it into the instrument. On one end you have light. You put that instrument so that it comes right parallel with the light and from one end to the other you can look through this mass of solution of sugar.

Then there is a machine which consists of quartz ground to some certain consistency, but how I do not know ; but, at any rate, in turning this machine, it gives you a disk to look through, about as large as an American dollar, and you are enabled to see all sorts of colors of the rainbow by turning the machine, so that you can use any color your eye is most sensitive to. In the middle there is a black line, and you have to turn this machine so that the color on one side of this line is just exactly the same as on the other, so that if blue is shown on one side it shall be just the same as the other. That gives you just the amount of saccharine matter in 100 pounds.

Q. You are describing the test now with reference to-ascertaining the amount of saccharine matter ?—A. Yes, sir.

The CHAIRMAN. That is all the polariscope is used for.

Q. Is blue the color most used ?—A. You can use any color your eye is most familiar with, blue, green, or yellow ; and any man using that machine can take any color his eye can see best. One man's eye is more sensitive to blue, another man's to red, another man's to yellow, and whatever color suits him best he can use. That is the nicest point—to turn the machine until the color on both sides is exactly alike.

Q. You have an exact proportion between the amount of water and the sugar in this tube ?—A. Yes, sir.

Q. The deepness of the color, whatever the color may be, the deepness of the shadow cast, determines the test ?—A. The color has nothing to do with the solution whatsoever. The color is only necessary to get the shadows on each side of this line exactly alike.

Q. You understand that it is possible to change the color with very slight cost of sugars above No. 13 to the color of No. 13 and below 13, is it not ? Have you not heard that importers of raw sugar have bought sugars of a higher grade of color in Cuba and elsewhere than No. 13 and by artificial means reduced the color to below No. 13 ?—A. Do you mean in the United States ?

Q. No, I do not. I mean is it done outside of the United States by importers to escape the duty ?—A. Well, that was supposed to be done heretofore.

Q. What was the object in doing that ?—A. That was before the polariscope was introduced and all duties were imposed by color, and therefore it was necessary to bring sugars in under No. 13.

Q. Then there is no object in doing that now ?—A. No, sir ; there is no object in doing that now.

Witness dismissed.

### TESTIMONY OF WILLIAM H. MORRIS.

WILLIAM H. MORRIS, having been duly sworn by the chairman, testified as follows:

By the CHAIRMAN :

Q. Give your full name, please.—A. William H. Morris.

Q. Where do you reside ?—A. In Orange, N. J., a suburb of New York, 14 miles distant from the city. I go in and out every day.

Q. Where is your place of business ?—A. New York City.

Q. And what is your business ?—A. I am a broker—a merchandise broker.

Q. Especially in sugars ?—A. Yes, sir.

Q. How long have you been engaged in that business?—A. I have been in that business twenty-five or twenty-six years.

Q. Prior to that time what business were you engaged in?—A. Sugar refining.

Q. Where?—A. In New York.

Q. How long were you in that business?—A. Eleven years.

Q. Eleven years prior to what date?—A. From 1851 to 1862.

Q. And from 1862 to the present time you have been a broker?—A. Yes, sir.

Q. That is, you buy for others?—A. Yes, sir.

Q. Raw sugars and refined?—A. Yes, sir.

Q. And to some extent sell for others?—A. Well, the operation unites both—unites both buyer and seller. But more distinctly I represent the buyer than the seller.

Q. And where, speaking generally, has your clientage come from, Mr. Morris?—A. In the purchase of raw sugars from Boston and Philadelphia, with some few exceptions in New York.

Q. And in the purchase of refined sugars?—A. The whole West, Northwest, and Southern country.

Q. Your purchases of sugar for the West, Northwest, etc., have been made from what refineries?—A. From all the refineries in the United States.

Q. What proportion of them have you made from New York refineries?—A. More from New York than elsewhere.

Q. Do you also buy from Philadelphia?—A. Yes, sir.

Q. And Boston houses?—A. Yes, sir.

Q. You know the refineries included in this trust arrangement?—A. Yes, sir.

Q. Do they include all the refineries now in operation and from which you can purchase sugar in and about the city of New York.—A. Yes, sir.

Q. And all Philadelphia refineries but two?—A. There are no other refineries in Philadelphia that are out; there are only two refineries there.

Q. Was there not another there?—A. Oh, yes, there was another; but it was abandoned about a year ago.

Q. You are familiar with what is known as the Louisiana sugar crop?—A. Yes, sir.

Q. What portion of the country is that marketed in principally?—A. The local trade contiguous to New Orleans, in the first instance, and after that in the West and Southwest.

Q. And during what season of the year does the Louisiana sugar product enter into and become a factor in that business?—A. From the 1st of December to April or May.

Q. What is the effect upon the quantity of sugar called for by that section of the country?—A. The requirements from the Eastern market are much less.

Q. What has been the effect, omitting this winter, upon prices during these months?—A. The fact is, when a so much larger supply was upon the market the price was less.

Q. Was that the general effect, taking a series of years back, and omitting this year, that the price on the product of the refineries of New York has been diminished during these months generally?—A. As a general thing, I should say it was; but I can not decide, without reference, what other influences may have come in.

**Q.** I am not asking about the influences, I am talking about the effect.—**A.** I would not like to state that as a fact unless I consulted the record.

**Q.** Without looking to the reasons for it, I ask you whether it is practicable? The prices of sugar have ordinarily diminished during the months when the Louisiana crop was in the market.—**A.** That would be the natural effect.

**Q.** Has that result varied usually in the trade?—**A.** My impression is that it has, but I am not positive about it. Perhaps I can make an explanation and give you some good reasons why I do not want to be positive about it.

By Mr. WILSON:

**Q.** Do I understand you to mean, unless there are some counteracting influences that would be the natural effect of it?—**A.** Yes, sir.

By the CHAIRMAN:

**Q.** I am asking you if the general rule, as you have observed it during fifteen years, has been that the price of refined sugar has been less during the months when the Louisiana product is being marketed than it was at other seasons of the year?—**A.** Yes, sir.

**Q.** You have observed the course of the sugar market in New York since the 1st of last December?—**A.** I have.

**Q.** And know something of the range of prices?—**A.** Yes, sir.

**Q.** Have the prices since the 1st of December been higher, say from the 1st of December to the 1st of March, than they were in corresponding quarters of previous years for the refined product?—**A.** I think they have been.

**Q.** Has the price of raw sugar been less or greater within the corresponding quarters?—**A.** Greater.

**Q.** What has been the average increase in the price of raw sugars?—**A.** Excuse me; taking what period?

**Q.** Taking the quarter from the 1st of December to the 1st of March in this year, and the quarter from the 1st of December to the 1st of March of last year.—**A.** I can not answer that question without the record, because I haven't it in my mind.

**Q.** Has the price of raw sugar advanced as much per pound as the price of refined sugar in the last three months?—**A.** No, sir.

**Q.** Has there been any deficiency in the supply of raw sugar in the port of New York?—**A.** What do you mean by deficiency?

**Q.** Has it been less than in any corresponding period of last year?—**A.** Yes, sir; the stocks have been less for the past three or four months.

**Q.** I am not inquiring about stocks, I am inquiring whether the amount of raw sugar offered for sale in the port of New York was less from the 1st of December to this past 1st of March than it was from the 1st of December, 1886, to the 1st of March, 1887.—**A.** I can only answer that in this way, sugar was only offered for sale in the New York market in two ways; one, by the actual stock existing there, and the other by goods to be shipped from all parts of the world.

**Q.** But as to actual stock, and the offerings on the spot, have they been very much smaller during the three months?—**A.** Yes, sir.

**Q.** That is the past three months as compared with the corresponding three months of the year before?—**A.** Yes, sir.

**Q.** The price as given in the market reports cover the prices of sugar "sold to arrive" as well as prices of sugars "spot cash"?—**A.** I think the quotations which you have had presented here are simply of exported

goods, because goods which arrive in a very large proportion are cost and freight. That is, the price of the goods delivered at the dock in New York, including the freight. The duty, insurance, and freight on the goods that arrive at New York are all at the cost of the buyer.

Q. And the duty to be paid by the purchaser?—A. Yes, sir.

Q. Would this price include the duties?—A. Those are duty-paid prices.

Q. Have you heard in the trade of sugar coming here and not finding a ready sale during the three months?—A. I have heard it; yes, sir.

Q. Now, do you know of any reason for the greater discrepancy between the price of raw and refined sugar within the past three months at the port of New York, as compared with the price of raw and refined sugar during the past year, than the reduction of production at the refineries?—A. I do.

Q. I am asking why the difference between raw sugar and refined sugar should be any greater now than it was before?—A. The primary reason is that the production has not been in any excess of the demand.

Q. The production has not been as large as heretofore?—A. No; I can not answer that way, because I think the meltings, which are shown on the table I saw just before I left New York, and which gives the meltings in the three ports of Boston, New York, and Philadelphia, are equal to those of last year.

Q. You know that some of these refineries are not producing at all?—A. I do; but I do not know that others are making up the deficiency. The tabulated report of the meltings of what passes into consumption are taken from the custom-house reports, and it is presumed that whenever a duty is paid on a cargo of sugar it is going to a refinery to be melted. They do not pay a duty before they want to use it. These tables of the melting of sugar show that the meltings have been just about or a trifle in excess of last year. There is very little difference which is noticeable, that is, a few thousand pounds.

Q. Then, is it your idea that the demand is larger this year than it was a year ago?—A. Yes, sir.

Q. Even at this higher price?—A. Yes, sir.

Q. Have you bought refined sugars for your customers in the West and Southwest during the last three months?—A. Yes, sir.

Q. From what house did you obtain them?—A. I bought them from the New York refineries; from Harrison & Frazier; E. C. Knight & Co.

Q. Have you bought more generally from one than the other?—A. More in New York than in Philadelphia.

Q. Is there a difference, or has there been a difference, in the price paid by you between the New York sugars and the Philadelphia sugars?—A. At the same time?

Q. Yes; at or about the same time?—A. No; because I bought in Philadelphia, for the reason that I could buy cheaper.

Q. You bought in Philadelphia because you could buy cheaper?—A. Yes, sir; and having better freight facilities.

Q. Better freight facilities for the shipment to the point where you wanted to make your shipments?—A. Yes, sir; Philadelphia has a differential freight.

Q. Notwithstanding this differential freight, you bought the sugar cheaper in Philadelphia?—A. Yes, sir; during this interval.

Q. How much cheaper?—A. One-sixteenth of a cent a pound.

Q. Those purchases were made of houses not in this combination, were they not?—A. Yes, sir.

Q. Why did you buy of the New York houses, then?—A. Because some of the trade would have New York sugars at any cost.

Q. Was there any other reason?—A. None; only that I buy what my people want.

Q. You buy New York sugars in obedience to orders to buy from New York sugar refineries?—A. Having known these people for twenty-five years I know what they want, and I get it where I can. If I can not get it in New York I try Boston, or Philadelphia, or try anywhere. I know the wants of the people, and am very much in the position of a resident buyer for those houses. Many of them I buy for without orders. They check me if I am buying too fast, and hurry me up if I am not buying fast enough.

Q. Do I understand you to say that in your opinion the excess of the difference in the prices of raw and refined sugars at that time from the prices of raw and refined sugar in 1886 or 1887 is not in any way due to the reduction of the production?—A. No; I think my answer was that I thought it was due to diminished production.

Q. Then, in your opinion, there has been a diminished production?—A. I beg your pardon—I must correct myself; the general impression in my mind was that there had been a reduced production; but when I thought of those tables that opinion was changed.

Q. When did you think of those tables?—A. When you asked me the question.

Q. To-day?—A. Yes, sir; about the supply of sugar in the New York market and the quantity used. The table of Willett & Hamlin is considered a very good authority. It is a circular, published once a week, and shows the distribution from three ports.

Q. In that table of Willett & Hamlin does the expression "distribution" mean the meltings or the amount sold?—A. It stands for meltings; that is, it is supposed to. You have seen one table here, in which they speak of it as meltings.

Q. There is a table upon the back of it; one labeled "Receipts," and the other "Distribution"?—A. That essentially represents the meltings.

Q. Does the receipt mean the amount brought into port?—A. Yes, sir; entered at the custom-house.

Q. And does distribution mean the amount taken out of bond?—A. Yes, sir; duty paid.

Q. Distribution does not mean the sales to the country by the refineries?—A. No, sir; there are no sales of raw sugar; I say none, but there may be possibly 2 per cent. of raw sugar that is used by manufacturers. Tobacco men use unrefined sugar; at least some of them do; but my opinion is that it does not amount to 2 per cent. of the whole importation. Now and then a manufacturer will try an experiment in making medicine, or ginger ale, or something of that kind.

Q. Then you think there has been more melted during the past winter than there was during the previous winter?—A. I think there has been as much; I won't say more.

Q. Not any more?—A. I think not.

Q. Then, if the amount of raw sugar melted and the corresponding amount of refined sugar made is the same during this winter as it was last (which is your impression), will you tell me why, from your knowledge of the sugar market, it is that the price of raw sugars is proportionately so much less than the price of the refined product?—A. Because I think that the demand and supply or offerings of sugar—to use that term—has been more in sympathy with each other than heretofore.

Q. The Louisiana product has been marketed right through this winter?—A. Yes, sir.

Q. In your own business have you found that the amount of orders and the requirements of the country into which that sugar goes diminishes through the winter as compared with demands in the summer?—A. Yes, sir; we always feel that effect.

Q. And you think that that peculiar condition of the trade, or novel condition of the trade, resulting from this agreement, is not all chargeable with the differences, which I have indicated to you, existing between the prices of sugar at that time?—A. Not altogether chargeable to it.

Q. Is it at all chargeable to it in your opinion?—A. I have answered that it has followed a method pursued by the refiners of accommodating the supply, or offerings of sugar, I should say. We have no definite means of ascertaining what the supply is, except we judge it by the offerings. Our refiners may carry stock and may reserve large quantities of goods and not offer them freely. If the market went up a little the goods would come out.

Q. The offerings of sugar have been from these people, and the price has been what they put upon it?—A. Yes, sir.

Q. And do you know any reason which would enable them to fix and hold the price, with this discrepancy between the price advanced in raw sugar and that advanced in refined sugar, except this agreement?—A. No, I do not.

By Mr. WILSON:

Q. I would like to have you tell us a little more about the practice in New York of trading in raw and refined sugar. Is it done through the brokers mainly?—A. Yes, sir; almost entirely. The large city dealers, for example Mr. Thurber, Mr. Nicholls, Mr. Leggett, and other large local buyers, have their own men on the street every day. They go into a broker's office and consult with him, but they do their purchasing direct.

Q. They do their purchasing direct from the refiners?—A. Yes, sir; but the great bulk of business outside of New York is done through brokers.

Q. From whom do the refiners buy their raw sugars?—A. From brokers in New York who represent spot stock, and from the agents or partners of Cuba houses who are on the market with their cables every day, having what are termed offers to sell certain tons of sugar at a certain price, cost and freight. Having secured his charter-party in the place from which it is to be shipped, he cables to Europe to sell so many tons of beet-root sugar, cost and freight, to be delivered in New York, including freight charges. But from the Philippine Islands and all parts of the world these people are represented generally by an agent rather than by a broker.

Q. Then I understand the case to be something like this: That when the exporter from Cuba, or abroad, starts his cargo from his country, he cables his resident agent here to go upon the market and to offer it upon arrival, freight paid.—A. He does it in case of near-by places, frequently before the market is lower. The factor in Havana or Matanzas, or the shipping ports in Cuba, finds he can buy so many bags or hogsheads of sugar at a certain price. He then goes to a ship-broker and ascertains at what rate he can obtain freight to New York, or it maybe to London, or some other point in the United Kingdom. He makes his calculations and sends his cable to the two places—for instance, to New York or to London.

Q. That is to find out which will be the best market?—A. Which will be the best market, what is known as a firm offer; that is, "you are at liberty to sell at such a price, cost and freight." He may give one-half a day's notice ahead of the other; he may send to London and get a reply from there in time to send it to New York, and then to determine which is the better market to sell in. Or he may accept them both, knowing that he can obtain the goods and fill the orders.

Q. Now, these men go on the market, as I understand it?—A. Yes, sir; they go around among the refiners.

Q. Do the brokers sell raw sugar to any large extent in New York?—A. Yes, sir.

Q. Do you sell raw sugar?—A. Yes, sir; spot stock.

Q. What is "spot stock"?—A. Sugar that has already arrived there at the warehouse or at the dock ready for landing.

Q. That is, sugar on the spot?—A. Yes, sir; those sugars as a general thing are sold duty paid; that is, when the owner or agent has the entire management of it.

Q. Take this case: A large merchant from an inland city visits New York to buy his sugar. He may have a large retail trade, and may have some wholesale trade in the particular locality in which he conducts his business. Does he go to the broker to buy or does he go to the refiner?—A. He may go to the refiner and he may go to the broker, or both of them. But as a general thing he will go to the broker, because if he goes to a broker he will know in a few minutes the condition of the market at Boston, New York, and at Philadelphia. He can find out their prices, the qualities and grades of goods that they are offering, and which they have in stock and are very anxious to sell. It saves him a great deal of time; besides that, he wants the broker's advice if he has confidence in him.

Q. Has it been the custom of the exporter, knowing that during four or five months of the year we have a local source from which to draw a considerable part of our sugar supply, during that time to turn his attention to other markets for the sale of his raw sugars than to ours?—A. No, sir.

Q. I understand the line of testimony to be that during the four or five months when the Louisiana sugar was brought into our market that there was a decline in the price of raw sugars?—A. Yes, sir; as a general thing.

Q. That decline affects the general sugar markets of the world as well as our own?—A. I can not say it is always so. But I will tell you another effect that comes in about the time the Louisiana crop comes in. The Cuba crop, which is practically the largest available crop in the world for use, comes in within thirty days of the Louisiana crop. So that in many instances the effect of the approaching Cuba crop has had a depressing influence upon the New York market, equally as much as the Louisiana market, because the Louisiana crop is so small compared with the consumption of the world that it is local. But the effect of the Cuba crop is universal.

Q. Which of those crops is first thrown upon the market, the Cuba crop or the Louisiana crop?—A. The Louisiana.

Q. Will you give me your opinion as to what is the reason of the stiffening of the price in raw sugar within the last four or five months?—A. I will give it to you in a few words. For eight or ten years the effect of the bounties paid by the French, the German, and the Russian Governments upon all beet sugars that were exported had a demoralizing or debasing effect upon the prices of sugar in all other sugar-producing

countries. Large stocks of sugar that were bought at high prices were carried by bankers. The accumulations increased until the losses were frightful. The bankers could not recoup themselves at all. There was no way of getting out, and they had to carry these high prices. I think the greatest period of depression was until the end of 1885; so much so that it became a serious matter to many growers of sugar whether it was worth while to retain their plantations, or, even then, before the crop production had begun, to make it into sugar, or turn cattle into it and feed it to them and raise cattle. The bankers, to get out of it, used a great deal of skill. They carried the thing along and gradually worked the stock down, and the effect was that after that depressed period there was a gradual rally, beginning almost imperceptibly in 1886, and running along down to July, 1887. Still we had very low prices. The price of beet sugar in July was quoted at 10s. 3d. in London, and it is at this time 16s. Java sugar rose from 12s. 10½d. to 16s. 4½d., and about November a large speculation began in beet sugars, which caused a very rapid advance in those markets, and a corresponding advance in the Island of Cuba just preparatory to their marketing their crop. So that the main cause of the advance in raw sugars which has occurred in the last four or five months, you may say, is owing to a large speculation in beets in Europe. They got up the prices so high that raw sugars were taken in that way.

Q. Let me see if I understand that last remark. Do I understand it is speculation in the beet sugar in Europe that has carried up the price of raw sugars?—A. It has carried up the price of raw sugars.

Q. Then it is simply a temporary rising, not a permanent one?—A. I think it is simply a reaction from an over-speculation. The speculation terminated in January. I take beets merely as a standard, because all the others were in sympathy with them. In January it was 16s. and a half-penny, and it has declined to 14s. 3d. I saw the table in New York on Thursday.

Q. In your judgment will that decline continue?—A. No; as I stated I think it is a natural reaction from an over-speculation.

Q. Then that general rise in the price of the raw material the world over would have caused a corresponding rise in our refined sugar in this country in the last four or five months?—A. Yes, sir.

Q. I understand from the testimony given here by other witnesses that the rise in the refined sugar has been a little more, or somewhat more than can be explained by the rise in the lower sugar?—A. It has.

Q. And I further understand from your recent testimony that under your observation there has been more sympathy, as you express it, I believe, between supply and demand in the sugar market in the past four or five months, than in previous seasons?—A. I think you go back too far. I think since this trust or arrangement was formed—say December, or January, or February; three months.

Q. There has been more sympathy between the supply and the demand?—A. Yes, sir.

Q. And while the actual meltings have been as large as heretofore, they have been more gauged to the actual demand of the market than heretofore?—A. Yes, sir.

Q. In other words, I suppose there is a gradual increase in the demand for sugar because of increased population and increased consumption in the country?—A. Yes, sir; there is a gradual ratio of increased consumption in this country.

Q. And while the actual meltings might be as great as in previous years, they might not be as great in proportion to the demand as in previous years?—A. Yes, sir.

Q. And the inference would be that there has been some intelligent control of the supply of the market the present season which has been lacking heretofore?—A. Yes, sir. Perhaps I might explain to you, if you would like to have it explained, what I mean by the sympathy between the supply and demand.

Q. You expressed it in two or three different ways. I thought it was a proper mode of expression, and I used that instead of any other one. A. Yes, sir.

By Mr. BRECKINRIDGE:

Q. You keep well informed as to the quotations of sugar throughout the world, do you not?—A. Yes, sir.

Q. You are in the habit of watching the prices of English refined sugars upon the English markets?—A. Yes, sir; I see the cables every day.

Q. It was testified in the course of our recent examinations that the export trade in refined sugars has ceased?—A. Yes, sir.

Q. But I find upon referring to the official records that they have rather grown than ceased?—A. What period do you refer to?

Q. The export trade during the last fiscal year ending June 30, 1887, was uncommonly large?—A. Yes, sir.

Q. Are you frequently or ever called upon to buy refined sugars for parties who desire to export them?—A. Yes, sir.

Q. Do you remember when you made your last considerable purchase of that kind?—A. I think I have not bought any considerable amount for export for more than a year. The export trade which I have bought for has been to South America, about the Isthmus of Panama and the West India Islands. But that is a small trade; that is going on constantly.

Q. Has that been the export trade that usually in the course of your business experience you have bought for?—A. No, sir; formerly I bought for England. I bought a long time for the Hudson Bay Company; but they have not bought since the Canadian tariff was modified.

Q. When was that?—A. I think it was five or six or seven years ago. I don't remember exactly; some years ago.

Q. You have not bought considerably, then, for the English market for several years?—A. No, sir.

Q. So you have had no part in the export trade that has obtained during the last fiscal year, no considerable part in the English export trade?—A. No, sir. I have indirectly taken a part in advising friends of mine who are exporters who came to me for information; but having no business transactions as a fiscal agent.

Q. Have you ever calculated how much an English shipper would lose if he sent granulated sugar from London to New York?—A. No, sir; I have not.

Q. Do you know the usual margin that obtains upon the prices of granulated sugar in London and in New York?—A. By following the quotations I have seen that it could not be shipped and get your money back.

Q. There is, you know, in certain commodities—for instance, in cotton from New Orleans to Liverpool—generally a margin, which margin represents freights and charges, and that margin is very stable. It varies only upon the basis of temporary and small fluctuations?—A. Yes, sir.

Q. There is great stability in the margin, for instance, upon cottons of given grades, at Liverpool and New Orleans?—A. Yes; sir.

Q. Now what I want to know is, if such a margin as that usually obtains upon granulated sugars as between London and New York?—

A. I believe that the margin is less than any other known commodity of use or consumption. All my experience tells me that. It has been made, for various reasons, a specialty, and the people who have done the business have done it upon the most inconceivably small amount. I know it has been done where the profit was not 2½ cents a barrel.

Q. What has been done?—A. Exports from the United States to England. I could not see the object in doing the business, actually.

Q. I understand you, then, to say that parties have shipped granulated sugar from New York to Liverpool when they couldn't expect to get in the Liverpool market a greater profit than, say, 25 cents a barrel; is that what you mean to say?—A. Yes; but they didn't get 25 cents. They didn't get 2½ cents.

Q. I am inquiring as to the facts of the statement. I am not speculating about the matter. It is just a question of figures.—A. I know.

Q. That would indicate, then, that substantially the only difference between granulated sugars in London and New York would be about freights; not much difference except freights—a very small margin?—

A. Freights and the rate of exchange.

Q. Then I understand you as saying that the margin upon granulated sugar between New York and London is exceedingly small, as a general thing?—A. Yes, sir; all the elements are taken into consideration; all the elements of freight, insurance, and exchange figured down to the minutest part of the thing.

Q. The exporter would have the benefit in his transaction of his drawback?—A. Yes, sir.

Q. That drawback is supposed to enter, as I understand it, to an equal extent in the domestic sale on the part of the refiner, and to simply cover the cost of his raw material?—A. The refiner has nothing to do with the drawback. He sells it at an enormous price, and the exporter gets it from the Government.

Q. That is not my question. You do not apprehend my question. The refiner would sell his sugar at a price above the London refiner, having the benefit of drawbacks, freight, insurance, and charges?—A. I do not think the refiner takes the drawback into account at all. He judges by his own market.

Q. Does he take into account what he has paid upon his raw sugar?—A. Yes, sir.

Q. That is, the exact measure of his raw sugar?—A. Yes, sir. What I mean to say is—

Mr. BRECKINRIDGE. I understand perfectly well; I see what you mean.

By Mr. CROUSE:

Q. I may not be able to express, in the terms that you are familiar with, the different kinds of sugar. We who use sugar know it as brown sugar, coffee A sugar, B sugar, granulated sugar, powdered sugar, cut-loaf sugar, and so on. Now, then, of these different kinds, in the course of your business, which has the largest sale to the country at large?—

A. The consumption of granulated sugar has been steadily growing. The American people are beginning to learn that it is cheaper to buy that sugar at a higher cost than it is to take the lower grades, what are called soft sugars, at a less price.

Q. First, get at the quantity as near as you can. Which of these different grades of sugar goes out in the larger quantities from the center to the people all over the country?—A. I think now about half the production of the refined sugar—what is known as dry sorts—not soft sugar.

Q. Granulated sugar?—A. Yes, sir; powdered, cut-loaf, etc.

Q. About half of that kind; the other being what you people know as soft sugar?—A. Yes, sir; I think fully half.

Q. At this time what is the price of the first half of the best article of soft sugar?—A. The best article now would be, in my opinion—

Q. I don't want an opinion; I want a fact.—A. I will not take up the time of the committee to go into an explanation; 6 cents.

Q. What is the price, to-day, of granulated sugar?—A. Six and five-eighths cents net.

Q. In the course of your answers you spoke of a period of eight or ten years. I wish to inquire whether this price to-day, namely, 6 cents for a good article of soft sugar, and 6½ cents for granulated, taking a period of eight or ten years, is a high price or a low price or a medium price?—A. It is a low price. If you go back six or eight years it is a very low price. Refined sugars have been sold, without any regard to the duty, cheaper in this country for the last ten years than they ever were before, saying nothing about the duty.

Q. That reply is as to refined sugar?—A. Yes, sir.

Q. Now I want to get at what some people commonly believe, and what I believed until you corrected me, was the general sugar of the country that is used. Has it been brown sugars and soft sugars?—A. I spoke of refined sugars of all descriptions.

Q. Cheaper than ever before?—A. Yes, sir.

Q. You don't mean cheaper "than ever before?"—A. With one or two exceptions. In 1854, there was a very low price prevailing for a few months, and a great many people broke.

Q. What year was that?—A. I think 1847 or 1848, some where in that period. I know I was keeping a grocery store in that period, and I know that it was the lowest sale ever made.

Q. What was the price of granulated sugar, as near as you can remember, eight years ago?—A. I can not say; it may have been 9 cents or 10 cents.

Q. But it was considerably higher than now?—A. Yes, sir.

Q. Was it a little less seven years ago, not accounting now for fluctuations, but generally?—A. The general cost has been down. It went down with other sugars.

Q. Until it reached its lowest point, I think you stated, in 1885?—A. I think December, 1886, was about the lowest point. It kept along down with different variations until the fall of 1886.

Q. And the prices are now generally on the rebound?—A. Yes, sir.

Q. And you have given all the reasons in answers to other questions from gentlemen of the committee—you have given all the reasons that you can think of why these prices have gradually declined and are now on the rebound?—A. I have. I think it occurs in almost every production in the world that an advance follows an undue depression. When an article arrives at a point below which it can be produced, it holds at that price for awhile, and then reacts.

Q. You gave, if I am not mistaken, as a reason for the declining prices the bounties paid by foreign governments to induce their citizens to raise and export beet sugar?—A. Yes, sir.

Q. In the course of your answer to a question you spoke of speculators. I desire to ask you whether in the New York market that is a business that has obtained within the last eight or ten years of speculating in sugars; I mean by men who are not necessarily in the sugar business, but who speculate in sugars; has not that been a business?—A. It has not obtained; an effort was made and a sugar exchange was

established some years ago. I think there was a call of sugar made, and it continued for a long time; some sales were made of futures. Cotton would be sold or other goods would be sold on exchange; but they were small amounts; and my impression is that those sales were merely nominal sales for the purpose of getting people to deal on the exchange.

Q. I want to know whether it is a custom for anybody not in the sugar business to make actual purchases of raw sugars with a view of speculating in the article?—A. I would not call it a custom; it is done, but not, in my opinion, to a sufficient extent to say it is a custom; I think probably in New York you can find at any time a few lots of sugar that have been bought and held on speculation.

Q. Is that true at the present?—A. Yes, sir; I know some that have been bought in December for speculation by a man who occasionally buys sugar because it is a good investment.

Q. He bought it because the price was extremely low?—A. Yes, sir. Now in London there is a regular exchange and transactions in sugar, paper transactions, futures, certificates representing sugars for delivery have been going on for months just as regularly as they are upon our stock exchange of Central Railroad stock. The quotations come twice a day. We say there is nothing of that sort here that has any relation whatever to those speculations in Europe.

Q. In your opinion state whether or not the transactions that are entered into in New York in the shape of speculating in sugar materially affect the price of sugars?—A. I should say not. It is not of sufficient magnitude to affect the whole market.

By the CHAIRMAN:

Q. I call your attention to these figures which I extract from this table. The highest price of raw sugar in February, 1888, was  $5\frac{7}{8}$  cents, and the highest price of refined sugar was  $6\frac{8}{16}$  cents, making the difference between them during that month of  $1\frac{1}{16}$  cents. In 1887 the highest price of raw was  $4\frac{9}{16}$  and of refined sugar  $5\frac{3}{16}$ , making a difference of  $1\frac{3}{16}$ . In 1888 for February, the highest price of raw sugar was 5 cents and the highest price of refined sugar was  $7\frac{1}{16}$ , making a difference of  $2\frac{1}{16}$  cents. Now can you afford me any explanation why there was that discrepancy between the price of raw and refined sugars in February, 1886, and February, 1888, except what may be furnished by the fact of the existence of this organization?—A. Yes, sir; I think I can explain it to you very clearly. In January, 1888, a very sudden advance occurred in England.

Q. Advance in what?—A. Beet sugar, raw sugar. The refiners, who had been rather indifferent to buying for some reason or other, went into the market and took everything that was offered.

Q. Here or there?—A. In New York—offered in Cuba, cost and freight at the highest prices that have been reached this year,  $5\frac{1}{2}$  cents fair refining and  $6\frac{3}{16}$  cents for 96 centrifugal sugars.

Q. The highest price for fair refining in February, 1888, was 5 cents. I call your attention to the February quotations.—A. I am explaining the difference why it occurred then. It was just before February came in. The refiners were working on high stock, so that their operations were based upon sugar that they just bought at a very high price, and before they got the sugar in or began to work much out of it, the market dropped off again, and they held the refined sugar up as long as they could.

Q. They held the refined sugar up to  $7\frac{1}{16}$  when the raw was selling at 5

cents?—A. There was a decline of three-eighths of a cent in a very short time—from  $7\frac{3}{8}$  to  $6\frac{3}{4}$ .

Q. Then you say the explanation you give of the extraordinarily high price of refined sugar— $2\frac{1}{8}$  cents above the price of raw sugar in that month—was that the refined sugar was being made from the high-priced raw sugar of January?—A. Yes, sir.

Q. And there was a drop of three-eighths of a cent during February?—A. Yes, sir.

Q. Then I call your attention to this fact, that allowing for the drop of three-eighths in refined sugar, the price of refined sugar was  $1\frac{1}{8}$  above the price of raw sugar in February, 1888, as compared with  $1\frac{1}{8}$  in February, 1886. Can you afford me any explanation of that difference other than that the production and sale of raw sugar was under the control of the gentlemen in this deal?—A. I must answer that on account of the greater sympathy between the offerings of sugar and demand.

Q. Does not that sympathy result from the combination caused by that deal?—A. Yes, sir; I am willing to incorporate that. There has been more uniformity in the trade.

Q. Now I understand you to say that this table of distribution here represents the amount of raw sugar which went into the hands of the refiners?—A. Yes, sir.

Q. It does not necessarily represent the amount which they put out?—A. No, sir.

Q. And they put out more or less in accordance with what they supposed their interest was, I take it?—A. Let me explain.

Q. There is no explanation necessary.—A. Do you use the words "put out?"

Q. I mean what they put upon the market. They control the amount put upon the market, do they not?—A. Yes, sir.

Q. So that these figures given in this table of distribution afford no explanation of the amount these gentlemen put upon the market necessarily.—A. Not necessarily.

Q. When did you say this depression, of which you have testified, culminated?—A. About the middle of 1887; I think it was in July, the lowest quotations we have.

Q. The middle of 1887?—A. Yes, sir.

Q. I have it, in answer to Mr. Wilson, the end of 1885.—A. Yes; that was the general depression throughout the world. There were some parties who, owing to the operation of these figures, wanted to get out the sugars which they had advanced upon. They were transferred to other parties, and they carried them over for a good while, and then there was a little reaction until, I think, the lowest quotation we had for foreign markets was July, 1887, when we had that extraordinary quotation which I have mentioned of 10 shillings and 3 pence for this sugar.

By Mr. BRECKINRIDGE:

Q. I have been carrying out some calculations here, Mr. Morris. I find that in 1887, during the month of January, there was a margin between average fair refining and granulated sugar, taking the averages for both grades, of  $1\frac{1}{8}$  cents.—A. Yes, sir.

Q. I believe 1 cent is considered a very liberal allowance to make a refiner whole?—A. That I can not answer. I have not been a practical refiner for a long time, and can not answer that question.

Q. I think that was testified to by Mr. Havemeyer.—A. I can tell you from my knowledge that it depends upon the sugar made, usually.

Q. Mr. Moller testified that a small amount would cover the cost of refining.—A. A smaller amount on centrifugal.

Q. The margin in February was  $1\frac{1}{100}$ ; in March, 1887,  $1\frac{1}{100}$ ; in April of 1887,  $1\frac{1}{100}$ ; in May,  $1\frac{2}{100}$ ; in June,  $1\frac{4}{100}$ ; in July,  $1\frac{4}{100}$ ; in August,  $1\frac{4}{100}$ . Now, I have read there a pretty good margin for June, July, and August. I understood you to say that that was a period of uncommonly low price for raw sugars, along last summer?—A. Yes, sir.

Q. And on account of the unusual depressions of raw sugars, I presume it is fair to expect that refiners would have had a pretty fairly profitable business?—A. Yes; foreign markets.

Q. When did raw sugars begin to rally? They rallied in September, did they not?—A. Yes, sir; in September they rallied.

Q. In October they got a little better. It was not until November that they got above 5; then they were  $5\frac{1}{100}$ ; having begun to rally in October.—A. Excuse me, September was the rally on this table. The lowest here is "September, 81."

Q. What do you mean by "81?"—A. Four and eighty-one hundredths.

Q. These are supposed to be the same tables?—A. Yes, sir.

Q. I have looked them over pretty thoroughly, and I think they correspond. I find that in September it rallied to  $4\frac{6}{100}$ , that being the average price of the month, and since then there have been  $4\frac{3}{100}$ ,  $5\frac{1}{100}$ ,  $5\frac{1}{100}$ , and  $5\frac{2}{100}$ , as far along as down to the 1st of February.—A. Yes, sir.

Q. Now, prior to September, you would expect good profits because of the unusual depression in the raw sugars?—A. Yes, sir.

Q. We find, then, that during that period of marked depression the margin between the grades ranged from  $1\frac{1}{100}$  to  $1\frac{1}{100}$ , and along there to  $1\frac{4}{100}$  and  $1\frac{4}{100}$ .—A. Yes, sir.

Q. And in the month of September, when that condition, namely, of unusual depression in the raw material, ceased, you would expect, I suppose, that the margin of profit would cease to some extent, would you or would you not?—A. No; I think if they had kept the same profit by selling raw sugar, the raw sugar went down.

Q. You are not talking about a depression now; you are talking about the rally, the advance, that began in September?—A. Yes, sir.

Q. Is it customary for the advance of the refined article to instantly go up with the advance of the raw material?—A. They would follow each other pretty closely.

Q. You stated, however, that the depression in the raw sugars during the summer months was very great, uncommonly great, did you not?—A. I am saying that the period extended and that the reaction did not take place until after July.

Q. Do the facts bear you out?—A. Yes, sir.

Q. I understand you to say that, considering the exceptional cheapness of raw sugars, you are not surprised that a good margin existed during that period of depression between the raw and refined?—A. No, sir.

Q. You mean by "no" that you are not surprised?—A. I am not surprised; no.

Q. I would be glad to hear your reason.—A. Because, beginning from the middle of April, extending over a period of four months—May, June, July, and August—or you may say more particularly from May to the 1st of September, the fruit season, what is known as B sugar and C

sugar is largely consumed, owing to a great deal of preserving being done in the country, when the demand is materially increased; and unless there has been overstocking previous to that time, the general course of the refined product is upward during the sugar season.

Q. What period are you speaking of.—A. The sugar season, say from May to October.

Q. That was a season when raw sugars, as you state—and I see you are borne out by the official quotations—were very low; a season, as you state, when the demand for sugars is usually uncommonly good?—A. Yes, sir.

Q. And you stated that it is considered a good season for the refining?—A. Yes, sir; known as the sugar season.

Q. And therefore you are not surprised at there being a good margin between raw and refined during the months that I have read—June, July, and August; and I assume from what you stated that the margin that obtained during April, May, and June is what would commonly be called a good margin,  $1\frac{15}{100}$ ,  $1\frac{28}{100}$ , and  $1\frac{42}{100}$ ?—A. A fair margin.

Q. When does the season begin that is considered the depressed season with the refiners?—A. November is the beginning of the "rainy season," I may call it.

Q. I find that in September the margin, instead of being  $1\frac{15}{100}$  as in April, and  $1\frac{28}{100}$  as in May, was  $1\frac{56}{100}$ . Is that an unexpected difference? Would you expect it to be much different in September from in May, June, and April?—A. That would probably be owing to some other causes which do not appear.

Q. Now let us compare it and see how it is maintained. In November it was  $1\frac{42}{100}$ , as compared with  $1\frac{15}{100}$  in April. In December it was  $1\frac{7}{100}$ , as compared with  $1\frac{15}{100}$  in April and  $1\frac{15}{100}$  in May, which are usually considered profitable months?—A. Yes, sir.

Q. In January you would expect the business to be running rather close, would you not?—A. That would depend upon circumstances. Yes; it would, generally.

Q. I find there the margin has advanced to  $1\frac{77}{100}$ .—A. Yes, sir.

Q. In February it was  $1\frac{53}{100}$ . How do you account for the higher margin obtaining during what you tell me is the poorest season of the year to your refiners? They seem to have outdone themselves in the matter of making money.—A. I think that the New York market did not sympathize fully. They were slow in appreciating the fact that it was getting at an advance. We had some stock of spot goods there that kept our market down.

Q. Do you know of any cause except the power to control the sales that arose from this union of refiners?

The WITNESS. Do you mean the difference in the margin at the time you have been reviewing?

Mr. BRECKINRIDGE. Yes.

The WITNESS. I should say that was the main fact.

By the CHAIRMAN:

Q. I call your attention to this paper shown you, and ask you whether that is one of the recognized trade circulars issued in New York and accepted there as a standard?—A. The statistics presented by this paper is considered as nearly correct as they can be obtained. The main facts are taken from the custom-house.

Q. I call your attention to this particular statement there. In this column of figures headed "Actual meltings of raw sugars," does that

mean the actual amount melted and refined in the refineries?—A. Yes, sir.

Q. You will observe that that amount in December, 1887, was much less than it was in December, 1886.—A. Yes, sir.

Q. In that respect, then, if you have testified differently you have been mistaken?—A. For that month. I understood the question covered the time from the 1st of December up to the 1st of March. I thought you took in three months.

Q. As to the month of December it was not?—A. No, sir; there were certain things that were required in the formation of this arrangement. The refiners had to make out a schedule of their property and show their position; that was compulsory. No refiner could make a satisfactory statement of his condition without doing that. It was necessary to do so.

Q. Yet you understand from the testimony of the witnesses here that that was all done and completed when this trust went into operation, before the 1st of December, 1886?—A. I do not know that they said it was completed.

Q. That is their testimony. If that be true, then the fact that they were making up schedules would not account for this discrepancy?—A. No, sir.

By Mr. BRECKINRIDGE:

Q. Are you familiar with the calculations for determining the amount of drawbacks that ought to be paid on the exports of sugar?—A. Somewhat familiar with it.

Q. That has not been a matter of special supervision on your part?—

A. I have assisted them when some mistakes were made in regard to it.

Q. You do not consider yourself an expert on that?—A. I do not.

By Mr. BUCHANAN:

Q. As a broker have you dealt in sirups as well as sugar?—A. Yes, sir.

Q. Sirup is sold by the gallon and not by the pound?—A. Yes, sir.

Q. Can you tell me from your knowledge of that subject, without taking the time to go into an elaborate calculation, which is worth more per pound, fair refined sugars or sirups, turning the gallons into pounds.—A. Sugar is worth a great deal more, because sirup is supposed to contain and does contain a large amount of water.

Q. Sirup, then, is the lowest-priced per pound product of the refiners?—A. Yes, sir.

(After fifteen minutes spent in executive session, the doors were reopened, and the chairman announced that the committee had adjourned until Friday, March 16, at 10.30 a. m.)

WASHINGTON, D. C., *March 23, 1888.*

The committee met at 11 o'clock a. m., pursuant to adjournment.

Present, the chairman, Mr. Breckinridge, Mr. McKinney, Mr. Wilson, Mr. Bynum, Mr. Buchanan, Mr. Bunnell, Mr. Crouse, and Mr. Smith.

The CHAIRMAN. There is some business to be transacted in executive session, and Mr. Spreckels is here as a witness. I submit to the judgment of the committee whether we should hold our executive session in advance of the examination of the witness, or afterward. If there be no objection, as Mr. Spreckels is here present, we will go on with the examination.

There was no objection.

**CLAUS SPRECKELS SWORN AND EXAMINED.**

By the CHAIRMAN:

Q. What is your full name?—A. Claus Spreckels.

Q. Where do you reside?—A. San Francisco, Cal.

Q. What is your business?—A. Sugar refining.

Q. How long have you been engaged in that business?—A. Since 1864.

Q. Where have you been located in carrying on that business?—A. San Francisco.

Q. Have you been continuously engaged in the manufacturing of sugar since that time?—A. Yes, sir.

Q. When you commenced business in 1864 were there any other refineries in San Francisco?—A. Yes, sir.

Q. How many?—A. There was one called the San Francisco Sugar Refinery Company. Then another was built adjoining, and they called it the Pacific, and both were merged into one, and they called it the San Francisco and Pacific Sugar Refinery Company.

Q. That was the only one there when you began?—A. That was the only one.

Q. Is that San Francisco Refinery in operation now?—A. No, sir.

Q. When did it go out of operation?—A. I can not state exactly.

Q. State approximately.—A. About 1878; I won't be positive; it may have been 1876.

Q. Somewhere between 1876 and 1878?—A. Yes, sir.

Q. Have there been any others since, except yours?—A. Yes, sir.

Q. Name them, please.—A. There were four in fact. First the San Francisco and Pacific; then what is now the American, called "The Bay;" and the Golden Gate. There were four at certain times; the Golden Gate was the smallest, with a capacity, perhaps, about 30,000 or 40,000 pounds, not more.

Q. How many are there now?—A. There are two; that is to say, there is the California, the old one, but of course it is closed up. I built a new one. The San Francisco and Pacific stands there, and there is the American; but the Golden Gate has ceased some years ago.

Q. Is this what you call the San Francisco and Pacific, that has not been in operation since 1878?—A. Yes, sir; it has not been in operation since that time.

Q. Is the building there?—A. Yes; the machinery is there.

Q. But it is not in operation?—A. No, sir; it is out of date.

Q. Has the Golden Gate entirely suspended?—A. Yes, sir.

Q. What was the other one?—A. Now the American Refinery; used to be called The Bay.

Q. What is its capacity?—A. They say about 500,000 or 600,000 pounds; of course I can not tell exactly, but from 500,000 to 600,000 pounds daily.

Q. In the testimony which we have taken in New York, the amount of sugar has been estimated by the barrel, and the barrel at 300 pounds; is that about the way in which you take it?—A. Yes, sir; some varies a little more. For instance, cube sugar weighs a little less, perhaps 225 or 250 pounds.

Q. What is the capacity of your refinery?—A. About 1,200,000 pounds a day.

Q. What kind of sugar do you manufacture principally?—A. Do you mean the import from Manilla?

Q. No ; I mean the product, the refined sugar ; what kinds of refined sugar ?—A. All kinds, except what you call cut loaf. We make all kinds except that.

Q. Do you make hard sugars ?—A. Yes, sir ; we make crushed sugar and make loaf sugar.

Q. And is the majority of the product of your refinery hard sugars, crystallized sugars ?—A. What you call hard sugar has, perhaps, different terms. It is called mold sugar, cube sugar, or crushed sugar. Now the most that is sold is what we call granulated sugar, that is dried in the machine ; it is crystallized and run through the centrifugal, and then goes to a machine and is dried and put into barrels. That is the sugar that is mostly consumed in America.

Q. That is, the principal product, then, is granulated sugar ?—A. Yes, sir.

Q. The terms hard and soft sugar as we have used them, or the witnesses who have been here have used them, is distinguished between crystallized sugar or dried sugar and the soft sugar ?—A. Yes, sir ; what they call soft sugar is not dried. There is so much per cent. of moisture in there, and the other is all dried up. They are of course not white ; they turn a little yellow.

Q. They are not so thoroughly crystallized ?—A. No, sir.

Q. The greater part of the product your refinery, as of the New York refinery, is the crystallized hard sugar ?—A. Just about the same.

Q. What raw sugars do you use ?—A. The Hawaiian, Central American, and Manilla.

Q. What proportion of your raw sugar comes from Hawaii ?—A. I think about 40,000 tons.

Q. Forty thousand tons of Hawaiian sugar ?—A. Yes, sir.

Q. Is that your average per year ?—A. No, sir ; about 115,000 or 120,000 tons. I understood you to ask me how much I used.

Q. I asked you how much you used in your refinery, not what you produced.—A. I have about 40,000 tons bought from the Sandwich Islands. We get likewise nine or ten or maybe twelve thousand tons from Central America.

Q. How much from Manilla ?—A. Forty thousand tons so far ; I may have 50,000 tons before the year is out.

Q. Will you explain the method of doing business in the San Francisco market with relation to the purchase and sales of raw sugars ? I will state to you what information I want. The testimony here shows that in New York the raw sugars are sold by brokers, either in cargoes which have already arrived, which they call spot sugar, or upon orders received from other places, authorizing them to sell cargoes of sugar. Will you state how, in relation to that subject, the business or traffic in raw sugar in Central America is done.—A. We get from Manilla our quotations every day by cable ; they make a certain offer.

Q. You say "they ;" whom do you mean ?—A. Somebody in Manilla ; there are several houses there, and we get from them, say, a quotation of sugar, 3,000 or 4,000 tons, to be delivered to us, we providing the vessels, under a letter of credit to buy the sugar from them. If we accept that offer, that letter of credit is either cabled to them or sent by mail to the parties who sent the sugar to us and they draw on us.

Q. How is it done with Central America ?—A. My sons are the agents for the principal houses in Central America—John D. Spreckles & Bros.

Q. In the city of San Francisco ?—A. Yes, sir ; they are selling it for the Central American refineries. It is very strange that the father and

sons, who are interested together, should be so trusted as the agents for that product; but the Central American people are perfectly satisfied. They also sell coffee, and they are better satisfied now than before.

Q. How long has that arrangement been going on?—A. About four or five years.

Q. Now, how is it done with reference to sugar from the Sandwich and Hawaiian Islands?—A. I had for several years a contract with the Hawaiian planters based on Manilla prices.

Q. With whom?—A. With the planters direct.

Q. In the Hawaiian Islands?—A. Yes, sir; at Manilla basis. They started in No. 10 Dutch standard; to pay for that sugar they added duty, commission, freight, and insurance; at that day the Hawaiian Island sugar would be sold at the ruling quotation of Manilla sugars.

Q. So that under those contracts the price was determined by the price of the Manilla sugar on the arrival of the cargo?—A. Yes; when the vessel came in.

Q. Came in where?—A. San Francisco. There might not have been any change in Manilla.

Q. Then the sugar was paid for at the last quotation preceding the arrival of the vessel at San Francisco?—A. The vessel from the island when it came in to San Francisco.

Q. I will show you a set of samples, Dutch standard, of sugar. Will you indicate, please, from them what the grade of the sugar is as it ordinarily comes from the Sandwich Islands?—A. We have sugar darker than that No. 6; we have No. 15. The island sugar is not compared with this dark sugar, and you can not make a standard of it at all.

Q. Is the island sugar yellow?—A. Yes, sir.

Q. Instead of gray?—A. This is more gray.

Q. You say it runs all the way from a sugar as dark as No. 6 to a sugar as light as No. 15?—A. Yes, sir.

Q. Is there any sugar which comes from the Sandwich Islands in such condition of purity as would enable you to put it directly upon the market without refining?—A. It has been done.

Q. How much of such sugar comes?—A. Very little. You can sell but little of such sugar on the market. They only want little of that. For instance, they have the saw mills, and certain people want that sugar the same as they want the New Orleans molasses; they want the raw sugar.

Q. That is the only purpose for which the unrefined sugar is used?—A. Yes, sir; and we pay more for that sugar when of the same color as we would sell our soft sugar, just so the color and looks and cleanliness is there. The people only buy for certain purposes this island sugar.

Q. You say this sugar varies all the way from No. 6 to No. 15?—A. Yes, sir.

Q. Can you say what the average, the general grade is?—A. Yes, sir; I can tell that. Generally, No. 1 would be what we consider No. 15. Of course, some plantations don't have as good machinery as others, but they get from 72 to 76 per cent. of No. 1.

Q. Does it come to you in 72 per cent. or 72 and 76 per cent. of the entire importation, as good as this?—A. Yes, sir; we have there from 72 to 76 per cent. of that grade.

Q. And how much of it, if any, comes between this very low grade and grade No. 15?—A. You have No. 2 sugar.

Q. No. 2 is high sugar?—A. No. 2 comes next to No. 1.

Q. No. 1, as you call it, is about equivalent to No. 15?—A. Yes, sir.

Q. And No. 2 is about equivalent to No. 13?—A. Some may be. They make it different in some plantations.

Q. Is there more of No. 2 than there is of No. 3?—A. Yes, sir.

Q. And the dark sugar is the least in quantity?—A. Yes, sir.

Q. Now, what is there about the importation from that island; what is the amount of it?—A. The average, I think, this year will be 115,000 tons.

Q. Do you remember what it was last year?—A. About 110,000 or 112,000 tons; in that neighborhood.

Q. How much the year before?—A. A little less.

Q. So that it is increasing?—A. Yes, sir; this year I think they will have fully 120,000 tons; that is my estimate.

Q. The amount coming in is increasing year by year?—A. Yes, sir.

Q. Is that due to the fact that more sugar is being produced there, or to the fact that the market is being open, and it comes this way instead of going somewhere else?—A. It can not go anywhere else. Suppose they wanted to sell it to England; they could not ship it there. They would not get any more than Cuba. The planter has the benefit of this duty now; the refiner has not. The planter has the benefit entirely of this duty.

Q. What difference, if any, is there in the price paid for Sandwich Island sugar and the sugar from Central America or Manilla, or any other place where the duty is paid?—A. As I have stated to you before, I have been buying for three or four years at the rate of Manilla, but with duty, insurance, and everything paid. That would be the price. Then they say, no, we want at the cost of centrifugal only; and the New York market has been higher than the Manilla. We say we will allow half a cent off, and you must take the sugar at the time of arrival at what the New York sugar is. So you have to take the sugar whether you want it or not, and at that price. I have lost some money by that operation.

Q. I believe I understood you, but I wish to be sure that I do. You pay the same price for the sugar from the Sandwich Islands to the planter as you pay for the Manilla sugar?—A. No, sir.

Q. Then the planter gets the duty?—A. There is half a cent off on the Cuba basis, of sugar they sell in New York, duty paid. With the exception of that half cent off the planter gets the duty.

Q. You pay the same price?—A. We buy the whole crop for the year and we are responsible for that sugar, no matter if it goes down.

Q. You pay for the Sandwich Island sugar the price which is paid in New York for Cuban sugar less half a cent difference in freight?—A. Yes, sir.

Q. Is that half a cent a pound?—A. Yes, sir. The most of the sugar comes there in three or four months, and you have to store that sugar and run the risk. For that risk you get that off. They sell you the whole crop.

Q. You buy the whole crop on those terms?—A. Yes, sir.

Q. And it is all delivered during what period of the year?—A. The first will come there about January—a little. The most comes now in April, May, and June; these are the heaviest months. They grind there from four to five months and get it off as quick as they can. Some plantations can do it quicker than others.

Q. Now, how long has it been that you have paid for the Sandwich Island sugar, Hawaiian sugar, upon the basis of the New York price?—A. About three years now, I think.

Q. Now, with reference to the Manilla sugars; those sugars pay duties?—A. Yes, sir.

Q. Upon what basis are they sold?—A. We must buy them ourselves. I explained, I believe, Mr. Chairman, that we buy them in Manilla. When they come to San Francisco they are polarized, and we pay the duty accordingly.

Q. That is, you buy them less the duty?—A. We buy them less the duty; when they come to San Francisco we pay the duty.

Q. Is there any relation or arrangement similar to that of the Sandwich Islands by which the price at Manilla is fixed with reference to the New York price or the London price when you buy at Manilla?—

A. Of course there is. It sometimes makes a quarter of a cent difference. Sugar has been up to 16; now it is about 14.4, or something like that. I have not looked at that. We go in there and buy that, and pay half a cent more. We generally look out for ourselves. We buy cheap, and get our offer. There is a difference sometimes of 1 cent a pound in buying. If the market is weak we watch our opportunity and buy cheap.

Q. How are these Central American sugars sold?—A. Sold on the basis of New York.

Q. Any allowance there for freight?—A. How do you mean?

Q. Differential rate, I mean. You say the Sandwich Islands allow you half a cent. I want to know what they allow.—A. We buy at Cuba basis, at one-quarter of a cent less.

Q. By Cuba basis you mean the price for Cuban sugar in the port of New York?—A. Yes, sir; duty paid.

Q. Now what grade is the sugar that comes from Central America?—A. A great deal of it has a color similar to that of the Hawaiian sugar.

Q. Most of it is as high as this No. 15?—A. No; there is not much of that in Central America. It is a little darker.

Q. The testimony here shows that the sugar coming into the New York market is as far as possible kept below 13.—A. Yes, sir; there is a good reason for that.

Q. The reason for it is apparent in the tariff?—A. Yes, sir.

Q. Now is that arrangement attempted with regard to the Central American sugar brought to San Francisco?—A. Under 13.

Q. So far as possible the crop is kept below 13?—A. Yes, sir.

Q. Of course that is true also of the Manilla sugar, as I take it?—A. Yes, sir.

Q. The Manilla sugar also goes to the port of New York?—A. Yes, sir.

Q. Do you know what the difference in freight is to New York and to San Francisco?—A. I know it is in favor of San Francisco in some cases, where in other cases it is in favor of New York. At present I think the freight is less from Manilla to New York than from Manilla to San Francisco. We have too many vessels lying in San Francisco waiting for freight. If there is a good price for wheat the vessel wants to go to San Francisco to make freight. Then you can get it very low.

Q. As a general rule for the past ten years, have the rates of freight been in favor of San Francisco or New York?—A. San Francisco; but I think not now.

Q. At present that is not the situation, you think?—A. I do not think so now.

Q. The present situation is due to the fact that there is no freight from San Francisco out?—A. No, sir.

Q. The prices of wheat are such that they can not get a freight?—A. That is it.

Q. Now, about how much sugar comes from Central America to San Francisco?—A. I think from 9,000 to 11,000 tons.

Q. And how much from Manilla?—A. As I said, about 40,000 tons.

Q. That is, that you have?—A. Yes, sir.

Q. There is another refinery there.—A. They can not refine the isl- and sugar. They have not capacity enough to refine that. They do not import any.

Q. Then is there more raw sugar brought to the San Francisco market than the refineries there can refine, or more than they do refine?—A. No, sir: I won't say that. Say the American refinery has 80,000 tons of the sugar; they can not refine that 80,000 tons of sugar, so they have to send it away.

Q. What becomes of that surplus?—A. It is sent to New York.

Q. Do you buy any of it?—A. No, sir.

Q. Is there a commercial or business arrangement existing between you and the American refinery?—A. No, sir.

Q. You are strictly competitors?—A. Yes, sir.

Q. Both in the purchase of raw sugar and in the sale of refined sugar?—A. Yes, sir.

Q. What portion of this country furnishes you the market for your refined sugar?—A. I do not understand the question.

Q. Where do you sell your sugars?—A. In all the Territories and as far as the Missouri River. If we have a surplus we have to bring it through.

Q. Do you sell up and down the Pacific coast from San Francisco?—A. You mean by Portland, Oregon?

Q. Do you sell to Oregon?—A. Yes, sir.

Q. And you sell along the line of the Southern Pacific?—A. Perhaps, the Southern Pacific coast, likewise shipping to Missouri by different railroads from one to another.

Q. You cover New Mexico and that part of the country?—A. Yes, sir.

Q. Do you come in competition, at any time, with the Louisiana sugar crop?—A. I think not, that is providing they send to the Missouri River; but we don't ship any when the Louisiana people are there.

Q. Then they do during a portion of the year when their crop is marketed?—A. We do not ship at all then.

Q. Have you come in competition at any point with the New York, Philadelphia, or Boston refineries?—A. They have shipped to San Francisco.

Q. Much of it?—A. Sometimes.

Q. When?—A. Years ago; now we can hold it against them. They can not ship it like they used to. They would like to have the whole market, but they can not.

Q. How far west of the Missouri River, if at all, do you find the Louisiana crop interfering with your sales?—A. I can not say; I have no information.

Q. I mean competing with you?—A. We did not have any sugar this year. California did not have any to spare this year. We were short. The American refinery does more shipping. They buy very little. Now we ship to Portland, Oregon, Denver, Salt Lake, and supply the entire Sacramento Valley. They all send their orders in. Of course, the price is what the price would be on the Missouri River. The American refinery, when they ship to the Missouri River, make the price at San Francisco in accordance with the price at the Missouri River; whatever we can get at the Missouri River.

Q. Will you explain more fully why the price at the Missouri River regulates the price at the city of San Francisco?—A. We have there the surplus. We have to get rid of the sugar, and the price in San Francisco is what the refiner can get at the Missouri River. That equalizes that.

Q. Then that equalization comes as the result of the competition between the two refineries?—A. Yes, sir.

Q. Now, can you tell me approximately—and I would prefer you would answer the question by giving the price per pound—what the price per pound of raw sugar has been in the San Francisco market during the last year or two, averaging it?—A. It is pretty hard for me to state, because there has been sometimes a difference of three-quarters of a cent a pound in those two years.

Q. What was the highest?—A. I can not state. I have so much to think about that I forget those little details. You could find that out by statistics here in Washington.

Q. Now, with regard to refined sugars, what has been the price?—A. The price last year has been, say, from 6 up to 6½; and still we were short; we could not supply the customers. The American refinery, I believe, had 7½ cents. We sold ours for 6½. Of course, we could not supply the market, so that they had the benefit. They sold theirs at 7½ cents. Our Manilla vessels did not come in for, sometimes, one hundred and one days. Of course, we would expect it sixty days on an average. Of course, we could not run enough; we had not enough to supply.

Q. What was the price in February for refined sugar in San Francisco?—A. I think it was 6½.

Q. What was the price for raw sugar at that time—February of this year?—A. Manilla sugar is now half a cent higher than what we bought last June, duty paid; cost a little over 4 cents a pound—the cargo we got on last June. Now, as to the other sugar, I could not tell. I am not positive of it.

Q. That was under a contract by which the price was fixed last June?—A. Yes, sir.

Q. Raw sugars have increased in price since that time?—A. Yes, sir; it varies.

Q. What difference in price between raw and refined sugar is necessary in order to make business of refining profitable?—A. That is a hard question to answer. Do you mean here in New York?

Q. No; in San Francisco.—A. There is, for instance, at present—when I left there, coal was selling at \$14. Generally it should be \$6 and \$7. Now you have to pay \$14 for coal.

Q. I mean averaging it. I do not mean exceptional times or exceptionally low prices.—A. I have not figured on it, and can not be positive. Perhaps from 60 to 75 cents per hundred pounds for refining.

Q. From 60 to 75 cents a hundred?—A. Yes, sir.

Q. Is it more expensive to refine sugar at San Francisco than it is in New York?—A. Yes, sir.

Q. Why?—A. We pay first \$2 for our common laborers a day. Our coal is high. Our barreling is more expensive. We get that all over there. Our people get more wages than you get here. You pay here perhaps \$1.20 or \$1.25 a day. I never pay less than \$2 a day. Another reason, perhaps, if I would go over the last month my manufacturing expenses would be higher. For instance, as I stated to you, while waiting for the vessel to come in, I do not dock my men. I pay them off. That is quite a different thing where you can—

Q. I do not ask that question to apply to an extraordinary condition of things, such as you speak of, resulting from the detention of the vessel; but I mean on the average?—A. I think about that.

Q. You think it is more expensive?—A. It is more expensive than in New York.

Q. More expensive in San Francisco than in New York?—A. Yes, sir; where I pay \$2 to a common man you pay \$1.30 or \$1.25, which makes a difference. The labor and likewise the fuel you get here for about half price.

Q. What is the difference between the New York and San Francisco market as to the price of refined sugar, and which is the higher?—A. I think, if I am not mistaken, we have it at  $6\frac{1}{2}$  now; you have it at  $6\frac{3}{4}$  now.

Q. You are talking about granulated sugar?—A. Yes, sir.

Q. Take the business during the period, say of the last two or three years, and how has it been?—A. It has generally been below the New York price, or even with it, just as the case may be.

Q. Have you within three years been above them at any time?—A. No, I do not think so. The American has been above them. I want you to understand that when I say in three years that the American had  $7\frac{1}{2}$  and New York had  $6\frac{3}{4}$ .

Q. Confine it to your own case.—A. My case was  $6\frac{3}{4}$ .

Q. In the last three years the price at which you have sold refined sugar has been below the New York market price ordinarily?—A. Ordinarily it has been either the same price or a little below. The shipping to the Missouri River, as it now is, costs us about 62 or 65 cents a hundred. The New York price is perhaps 30 cents, or may be less; I do not know. The freight, too, is against us.

Q. Now prior to, say, three years ago, how was the price?—We had a bigger price.

Q. Your price was better than the New York price?—A. Yes, sir.

Q. How long has this American refinery been running at its present capacity?—A. I suppose about two or two and a half years.

Q. Before that how large was it?—A. Perhaps it would run about 100,000 pounds a day.

Q. Do you use any beet sugar in your San Francisco refinery?—A. Not as yet. We will have some this year though. The beet raising was such that they never made a success of it. I will have between four or five thousand tons of it this year.

Q. Then you are about to engage in the beet culture and the manufacture of beet sugar?—A. Yes, sir.

Q. In what part of the country are your beets to be grown and your sugar to be made?—A. The beets will be grown on farms, and the factory must be where you grow the beets.

Q. Where is that?—A. In Santa Croix County; a little town called Watsonville.

Q. Santa Croix County, Cal.?—A. Yes, sir.

Q. Is this sugar that comes from the Sandwich Islands under our treaty grown upon plantations principally by the natives there?—A. Very few; I believe there is only one.

Q. Who are the owners of the plantation; of what nationality are they?—A. Well, there are Chinamen, Germans, Englishmen, Scotchmen, Portuguese, and so on—different nationalities.

Q. Is the Yankee represented there?—A. Yes, sir; we have some. I do not know what you would call me.

The CHAIRMAN. I guess you are a Yankee. [Laughter.]

The WITNESS. I think I have done more for that country than any living man.

Q. Have citizens from the United States gone there?—A. Yes, sir.

Q. What proportion of the persons now managing the plantations are Americans?—A. Let us go over the firms. Take my firm there. We have there, as I have already said, 35,000 to 40,000 tons. Now, we say the whole crop is 120,000 tons; it will not exceed that. Now, let us see the other firms. We have an English firm.

Q. Do you mean your firm?—A. Our firm is named Irwin & Co., and I have a bank there which is called Claus Spreckles & Co.

Q. That concern you say makes how much?—A. 35,000 or 40,000 tons from my own plantation and a plantation we have lent money on.

Q. What other Americans are there there?—A. Then you have a big firm there of Hackfeld & Co.; they are Germans entirely; they came from Bremen; it is an old firm there. Then you have an English firm there, Theodore Davis & Co.—purely English. Then you have a firm there of Waterhouse & Co., Englishmen. Then there is Cassell & Cook; a missionary went there and went into business with the Americans.

Q. Are they sugar planters now?—A. Yes, sir; and commission merchants. Then you find Brewer & Co.; they have one Scotchman in the firm.

Q. And the rest are Americans?—A. Yes, sir; Henry Carter is one of the firm, and Andrew Welsh, now president of the American refinery, is now in the firm, and there is in the firm Bishop and Jones; I think they constitute the firm; there are four of them.

Q. Do you know of any other American there, actual planters?—A. Yes, sir; I am speaking of these. Now, Cassell & Cook, for instance, are American planters. Theodore Davis, I do not think he is an American; but all the planters, I think, are Englishmen. The firm of Hackfeld & Co. may have some Americans.

Q. Have you any idea of the number of American who are engaged in the sugar-planting business there?—A. If you had asked me that question while I was in San Francisco I could have answered it; but I can not keep that information in my head.

Q. Can you get the information?—A. Yes, sir; there may be an almanac here that would give the information. Last year I gave the President and Mr. Bayard the whole history of that—last fall I stated the whole thing fully; what it was.

By Mr. BUCHANAN:

Q. We are here for the purpose of investigating at present this sugar trust that has been formed in New York. What information have you to impart to the committee upon that subject?—A. I don't know anything about it. They wanted me to become one of the trust, and I refused, and said no. That is all the information I have on that subject.

Q. Then upon the main subject that we are here to investigate you have absolutely no knowledge?—A. None whatever.

By Mr. WILSON:

Q. I do not know that I caught exactly your statement as to your purchase of the Hawaiian sugar. If I caught it correctly it is this, that you have a standing contract or agreement that you will take the sugar when it happens to arrive in San Francisco?—A. Yes, sir.

Q. At the same rates that Manilla sugar would bring, duty and charges paid, less half a cent a pound?—A. No, sir, not the Manilla;

on the Cuban basis. When I made the contract with them—I am sorry I did not bring the contracts with me, as I did not expect to be examined as to that—they thought if they run the sugar up a little higher they would do better by making a contract at half a cent off on the Cuban basis. One firm, Hackfeld & Co., would not sell on that basis. They would get the same money on the Manilla, duty paid. They did for a time get three-eighths of a cent better than the other planters on the basis of Manilla, but it soon changed around and went the other way again; so that they had the choice of what they wanted.

Q. Another thing I would like to ask is this: This sugar trust has been in operation for the last few months. During that time there has been an advance, as testified here, both in the raw and refined sugars, but not as much in the raw as in the refined sugars. Has that ruled in your part of the country as well as in New York?—A. It has not ruled in Manilla, because the Manilla market is generally ruled by England. Here they have their own way of buying. The combination will say that they are going to give so much for raw sugar and if you want to sell raw sugar you have to sell it at that price. It don't make a particle of difference whether it is more in Manilla or England. They have the power to buy it and so you must pay that much for it.

Q. My question related to whether the same rise in the price of both kinds of sugar has prevailed in San Francisco as in New York.—A. No, sir.

Q. Are raw sugars higher than they were six or eight months ago?—A. In San Francisco?

Q. Yes, sir.—A. Yes, sir; that is to say, Manilla. You are speaking about the island basis of what they buy here and what the Cuba price is. That would not affect the island sugar at all. The island sugar, with the duty added to it, or in fact whatever the centrifugal sugar 96 would bring in this market duty paid, when the refiner would buy from the importer and the importer pays that, would be the price in the island sugar, or what the price here was. If they squeeze down here they squeeze down there.

Q. Are not the prices of refined sugars higher to-day than they were in last December and some time previous to that?—A. They are higher.

Q. Have you any reason to believe that that has been brought about by the combination in the East?—A. There is nothing else. When you have competition unquestionably everybody wants to sell and to bring it down just as low as it can to make interest and expenses. It is always the supply and the demand, as I look at it. If they hold the market so that you want more refined sugar you have to pay what they want for it, if there is no competition. That is natural; it can not be otherwise.

Q. Then by remaining out of the trust you have reaped the same benefits as those who have gone into the trust?—A. That is correct.

By Mr. McKINNEY:

Q. Then the trust has been a good thing for you?—A. We do not know yet. I am going to start a refinery here. When they are fighting me there they may say, "We will undersell him and crush him out," and they may hold the sugar at 5 cents a pound. I will come here and start a factory, so that I will get my share here.

By Mr. CROUSE:

Q. There is no duty paid on sugars from the islands?—A. No, sir.

Q. How long has that arrangement existed?—A. Since 1876, when the treaty was made.

Q. What is the duty?—A. The duty on 96 is supposed to be 2½ cents a pound. You can find that all out. I do not keep it in my memory.

Q. But the sugars that come from the islands sell in this country at the same price that raw sugars do from other countries, duty paid?—

A. Yes, sir; the planters make that money.

Q. And the planters get that benefit?—A. Yes, sir.

Q. By what arrangement do they get that benefit?—A. Under the treaty with the United States that it comes in free.

Q. I want to know by what arrangement it comes about. Does the planter in that country get just as much for his sugars here as the other?—A. They could not get it if we did not want to give that price. Then they would ship it to New York, Boston, or Philadelphia. Undoubtedly they have more than one market here in America. They could not ship it to England.

Q. Is it not true that sugars shipped from the islands to New York would also come free?—A. Yes, sir; I say they can ship it here; therefore they get what the market price is; they get the duty, whatever that may be.

Q. Who is it that has made that arrangement whereby from that country they get just as much for sugars—in fact they get 2½ cents a pound more for sugar raised on the Hawaiian Islands than in any other foreign country, do they not?—A. The planter does; yes, sir. He receives so much more for his sugar on account of it coming in free of duty, whereas Manilla or Central America has to pay the duty. Cuban sugar has to pay duty. Hawaiian is admitted free.

Q. Now, if I understand you correctly, notwithstanding you are a sugar refiner, you are also a sugar grower?—A. Yes, sir.

Q. About one-third of what is grown on the island?—A. Yes, sir; that is to say I have there, not alone, but I have people interested with me in a stock company.

Q. Are there any other American refiners that are interested in the production of raw sugars on the island?—A. The planters have the other American refinery.

Q. The planters have 80,000 tons and your company has 40,000 tons, and that is the entire crop?—A. Yes, sir.

Q. So that the sugar refiners of the United States are the sugar growers on the Hawaiian Islands, and they get 2½ cents a pound more for their sugar than for sugar grown in any other country?—A. No, sir; but some of the planters on the islands are interested in sugar refineries in San Francisco.

The CHAIRMAN. Mr. Hermann, who is present, would like to ask a few questions. He is not a member of this committee. In the earlier stages of these proceedings a certain portion of this work was assigned to certain gentlemen, and that particular business on the Pacific coast was assigned to Mr. Hermann.

By Mr. HERMANN:

Q. What is the surplus now on the Pacific coast after the demand has been satisfied by the supply? I am just taking your market west of the Missouri River, including the Pacific coast?—A. That would take more than we manufacture there.

Q. Then your entire output is exhausted?—A. Yes, sir.

Q. How does that correspond with the American refineries there?—A. I include them likewise.

Q. So, then, I understand you to say that the entire output, the entire production of all the refineries on the Pacific coast, is consumed by the demand of that coast?—A. Yes, sir.

**Q.** The following is a dispatch which was recently received from San Francisco by the New York World:

SAN FRANCISCO, *March 21.*

The American Sugar Refinery, now a member of the New York Trust, has secured a market at the East for its surplus. The company has chartered the ship *Arabia*, at a reported rate of \$4 the short ton, to load a cargo of raw sugar for New York. She will load at once, and as she is quite a large vessel, registering 2,024 tons, will be able to take away about 300 tons of the expected surplus of 60,000 tons. Other ships will follow the *Arabia*.

Is there any foundation for this statement?—**A.** I do not understand that. It says 60,000 tons; is that so?

**Q.** Yes, sir; that is claimed to be the expected surplus?—**A.** I do not know. I do not think they would ship away 60,000 tons and only have 20,000 tons. That is more than I am aware of.

**Q.** Now I understand you to say that there is substantially no difference between the prices prevailing on the Pacific coast and those prevailing in New York for like grades of sugar?—**A.** No, sir.

**Q.** You have, I understand, undertaken to give reasons why sugars are cheaper, or as cheap, on the Pacific coast as on the Atlantic?—**A.** The reason is that there is greater competition.

**Q.** As I understand, you have also given, as an additional reason, the increased cost in the matter of labor, material for barreling, etc.?—**A.** Yes, sir; the cost is more.

**Q.** The trust combinations claim that you are more highly favored—referring now to the sugar refiners of the Pacific coast, not to yourself individually—by reason of certain combinations with the Pacific railroads, and that owing to the discrimination in your favor they are shut out from competition west of the Missouri River?—**A.** We pay, by the hundred pounds, either 62 or 65 cents to the Missouri River. I do not think they pay over 30 or 35 cents. I am sure they only pay half of what we pay on the railroads. There is no shut out about that. We are the ones that are shut out. The boot is on the other leg.

**Q.** Have sugars, as a whole, within your territory, been any higher for the months since last October than for corresponding months in previous years?—**A.** I can not answer that very well. I have been in Europe; started in May and came back in October. I could not very well answer that. Those details I did not look over. If I had known you wanted them I would have had them written out.

**Q.** It is claimed that by reason of the trust combinations in the East sugars have perceptibly advanced in price. Would this, if true, not have a corresponding effect within your territory?—**A.** That would be, provided the trust would say, "We are going on the Pacific coast and we do not care what it costs us there to bring the sugar down to a cent a pound. Here in the Eastern States we can control our market, and make it up there." That may be their idea. Of course I can not tell. If they have the sugar higher here undoubtedly the sugar will be higher in San Francisco and the Territories. But where they have their American refineries what will they do with that sugar? Will they give me that market, or will they try to force me out of it? That is the question. I do not know, and I do not care.

**Q.** The purpose of this investigation is based upon the idea that these trust combinations are injurious to the interests of the great mass of people who consume sugars, and the object of the investigation is to ascertain whether the tendency of these combinations is in this direction. Now, I desire to ask you whether it is not true, in your opinion and from your observations as a competitor with these combinations, that as a matter of fact their effect has been to produce competition, and in pro-

ducing competition to lessen the price of sugar instead of producing an opposite effect?—A. I do not agree with you there; I do not think so.

Q. Did I not understand you, in your previous testimony, to express the opinion that such was the effect as you have experienced it on the Pacific coast?—A. Do you mean by competition?

Q. Yes, sir.—A. We have experienced that.

Q. Will not such combinations and the contest which will follow have the effect in the future to cheapen the prices of refined sugars and so benefit the consumers?—A. I do not think so; it will be higher, in my opinion. They ain't going for the trust. They will not work for the people.

Q. Will not this be the effect, that you gentlemen, who are now testing your strength in the competition, will be either driven from the market or will be merged within the trust combinations?—A. I do not think I will ever be merged in the combination. These gentlemen know something about it. If they are going to form a trust, of course only one or two men will rule it. How about all the stock in there? They virtually hold that stock, and they would not acknowledge that Spreckels or anybody else has anything to say. You give all your property, say, to one or two men. I came to this country from Germany for liberty, and liberty I shall maintain. (Applause.)

Q. You consider, then, as I understand, that the so-called sugar trust is an injury to the consumer rather than a benefit, even at the present time?—A. That is what I believe.

Q. It is stated, and you also, I understand, have stated, that you are proposing the erection of a refinery in the Atlantic States in opposition to the so-called trust?—A. Yes, sir.

Q. Now, if you do, and the other refiners not at present in the trust join you in the combination to fight the trust, there will be one combination fighting the other, will there not?—A. Yes, sir; but then, perhaps, there will not be any fighting to speak of. The trust will have to take care of it. They have enough on their shoulders; but when they get more powerful and can make some \$15,000,000 or \$20,000,000 more, in a year or two I do not know what they will do. So I want to make myself felt. I do not know what they are going to say. They may put sugar at 5 cents and run Spreckles out. I am not going into the trust. I am coming here. If they make money here I will likewise; so I will balance it; that is my idea.

Q. If this combination becomes powerful in the near future, as it has in the past, aggregating to itself more than two-thirds of the sugar refineries of the United States, will this not in the end drive you, the weaker, from the market if you don't unite in the trust combination?—A. Very likely, it may be; but I do not think so. It would not drive me from it. I have another source to depend upon, what I have commenced and what I will go on with. We are going to raise our own sugar here in America, and this is about the time to do it.

Q. Do you not understand it to be one of the leading principles in the organization and in the development and aggregation of these trust combinations to drive out all competition, or to compel competitors to unite with them at their own price and figures?—A. I think that is so; I can not say personally; I do not know, because I have not known the inside of what they are going to do.

Q. You have said that sugar is to be cheaper, or as cheap on the Pacific coast as on the Atlantic?—A. It is cheaper.

Q. Should this trust combination grow in the future as they have in the near past, will they not in the end monopolize the markets of the

Pacific coast so as to make that market entirely tributary to their own price and commands?—A. There is no question in my mind but that they would do it.

Q. If you have the figures at your command, what is the percentage per year increase in the gross consumption of sugar in the United States?—A. I think from 10 to 12 per cent.

Q. About what is the number of employes in the sugar industry of the United States?—A. I have no idea.

Q. About what is the gross production of sugars in the United States?—A. You mean what is raised here, or the production of refined?

Q. Of the raw material?—A. I should judge from 130,000 to 150,000 tons. Of course I am not so familiar with it; it may be that amount.

Q. State the price of skilled and unskilled labor, if you know, of the refineries in Europe and for the same classes in America, in order that a comparison may be had.—A. I think the skilled labor would not equalize it in Europe and America.

By Mr. McKINNEY:

Q. Do you mean to say the wages of employes would average in Europe what they are here?—A. The comparison, I think, is one-third of what they are here in America.

Q. They are two thirds greater here than in Europe?—A. Yes, sir; about two-thirds greater here; over half, I am sure.

By Mr. HERMANN:

Q. If the differences in labor were equalized, would it be possible for you as a refiner to compete in your production with the refineries of Europe, taking into account the present existing duties upon foreign sugars?—A. If the labor and the fuel and everything else were equalized we could uphold with any nation, I do not care who they are.

Q. Despite the present existing tariff rates?—A. Say, for instance, we had sugar at 3 and the tariff taken off, we could compete if we had the labor and the fuel; the American people could compete with any nation.

Q. The trust combination is reported to have said that you proposed, or endeavored to propose, to Congress the enactment of a law making sugar free. Is it true, or has it any foundation in fact?—A. I have not stated anything about it. I say if you take off the duty, you must protect—excuse me for using that strong term—you must protect the home industry. Louisiana I do not think could live if you took the duty off. It would be her ruination. It would not be justice to the people to take the duty off and to take that trade away from Louisiana. If I go into a beet factory, where we have to pay more for labor and fuel, there must be some protection. We can not uphold against Germany, with 1,000,000 of tons raised there, and 600,000 tons exported, where the labor is very cheap, and the same with the fuel.

Q. Would not the removal of the duties from foreign sugars give to the trust combination such an advantage as that it would be difficult if not impossible for you to further compete with them?—A. If you would take the duty away they would not have any more advantage than I would have. There are 35,000 to 40,000 tons that I am interested in on the plantation. You can have the 2 cents or 2½ cents, and you see what you take away from me. But I say, amen; take it, gentlemen; I don't care. I go on the other lay-out over here, and raise beets and make my own sugar. What I do not make in one I make in the other.

Q. These trust combinations are also reporting that the object of your stating it to be your intention of building an Atlantic refinery is a mere pretext, and that it is to secure from the trust the abandonment of their intention of invading your sugar territory. Is that so?—A. No, sir. You will see there has been some talk in the papers, but it is only bluff. You will see what I do before I am through. I think it will be found out that something is done. I am not bluffing, but when they bluff I make them show their hands.

Q. You have referred to the great future which is before the sugar consumers in the matter of the beet-sugar production; will you have the kindness to state to the committee about what proportion of the present consumption of sugar in the United States the beet-sugar production in the course of a short time, if properly encouraged, would represent?—A. If we were sure that we would have a certain protection there would be no question in my mind that, say, in eight or ten years we would raise all the sugar that America would consume. You can raise beets anywhere. I really don't know whether you can raise them in Louisiana. The climate is such that the beet will not ripen, in my opinion. I have no knowledge on that subject. But take the West, and I am sure it will be a success. Now, I have made a contract with one hundred and sixty-three farmers for raising beets for this factory. The seed is there. I have sent 25 tons of seed, and the machinery is on its way. I will not lose a year's time in sending that machinery by sail, but I have shipped it by steamer and rail. If I did not do that I would lose one more year of my life in seeing the beet growing. I have started it in, and the foundation of the building was going on when I left. The plant can run through 250 tons of beets in twenty-four hours. The factory is built double the size. One side will be left empty to put in double the quantity. So the following year I will run 70,000 tons of beets, which will make 10,000 tons of sugar. Now that is a little different thing from getting 1,000 tons a year. That don't amount to anything.

Q. The Agricultural Department of the Government up to within the last year or so had almost despaired of making a success of the production of beet sugar?—A. Yes, sir.

Q. But recently new appliances have been discovered which will lead in the direction of success. Do you understand this to be a fact as to your own experience?—A. Yes, sir; there is a patent called the Steffens process. That patent was purchased by Ull & Co., and I have purchased that patent for the United States. That patent is very simple, and I will explain it to you. Cane sugar has about 1 per cent. of salts, and the balance is gum, or molasses, or sirup, whichever you may prefer. The beet has only the cane sugar and salts of potash. So when you have number 1 or 2, after going through this process you have what we call molasses in common terms, which is this sugar and these salts. Now, that is put in connection with lime, and water is used to keep it cool. Now you have it in the vats; then put through a press with faucets, and the faucets are open, and you see a liquid run off which is the salt of potash. Now you have a solid cake of what we call sugar of lime. In that sugar of lime is 99 pure. You lose 10 per cent. of what goes away. Of course you can not save everything. If you have 100 pounds in there you get out of it 90. Then that is used again with the liquid of the beet. After you have gone through the diffusion tanks to clarify you use this lime again to purify it, and you put it through the press again and open your faucet, and the liquor of sugar will run out, and you then have a solid cake of lime.

Q. What proportion of the area of California do you consider from your investigation as suitable for the growth of the sugar beet?—A. I think you can raise a million tons. You can perhaps in Ohio raise a million tons. I don't know how much you can raise in Kansas. You can raise enough sugar here to supply the world.

Q. And in the end do I understand you to say as a superior article it will take the place of these imported sugars?—A. As I say, the beet sugar is nothing but cane sugar and salt; has no molasses. If you give it to a chemist, he can not tell you which is beet and which is cane.

Q. The people of my own State have been hoping that you would establish your enterprise there. I will ask you from your investigation if you find that State to be as well adapted for the growth of the sugar beet as California?—A. I do not see any difference, although I have not been there. I have some friends there, and I hear a great deal from them as to Oregon and Washington Territory, which they say is very good.

Q. If the reciprocity treaty under which we are now governed should be abrogated, what effect would it have upon your industry, or upon the sugar refining industry of the United States?—A. Nothing at all, as a refiner.

Q. Would you not be compelled to impose an additional duty upon your customers which would be imposed by the abrogation of the treaty?—A. We have no benefit from the treaty; the people have no benefit from the treaty.

Q. Then I understand that the difference between duty and no duty goes entirely to the planter?—A. That is it.

Q. And not to the refiner?—A. That is so; as a planter, I gain; as a refiner, I do not.

Q. Your prices and those of the American refiner are always the same; or is there any difference upon the same grade of sugar?—A. There is, for instance, a big firm of Allen & Lewis which has existed since I have had a refinery. The American refinery made a contract with them by which they sold to them one-eighth of a cent less. I said, Go on, take it, it won't last long. There was a lawsuit, and they didn't want to sell it any more.

Q. In conclusion, and looking to this subject from the stand-point of the consumer, and not from the independent refiner—by "independent" I mean those who are not in the trust combination—would it not be to the benefit of the consumer to allow this trust combination to exist; and would it not be rather the policy of this Congress not to enforce the power they have of destroying these trust combinations or preventing their further existence?—A. That is a hard question to answer.

By Mr. BUCHANAN:

Q. You say you were asked to go into this trust. By whom were you so requested?—A. I was requested to go into the trust by Mr. Searles.

Q. John E. Searles?—A. Yes, sir.

Q. Did he see you personally?—A. Yes, sir.

Q. What inducements, if any, did he place before you to have you go into the trust; what advantage did he state it would be?—A. We had but very few words to say about it. He was at the Hoffman House, New York.

Q. Did he state any advantage would accrue to you by your joining this combination?—A. Yes; there was something said, but I don't know what it was. I was not well. I had been under the weather in New York and had been quite a sick man. He was there twice.

Q. How recently has he been there; how recently have you seen him there?—A. I think about three or four days before I came to Washington.

Q. That would be about five days ago?—A. Five or six days ago, I think.

Q. You do not remember what particular inducement he stated?—A. Not particularly, only he said when you are in the trust you are in the trust. That is all I know about it. I asked him what benefit it would be to me. He said when you are in the trust, you are in the trust and you can not get out. [Laughter.]

Q. You immediately declined the proposition?—A. Yes, sir.

By Mr. HERMANN:

Q. It will be very interesting news to the sugar consumers of this nation to know if you are willing to state about when and where and what portion of the nation your contemplated refinery is to be established.—A. I will visit from this city Baltimore, to see what facilities are there. I will go back to Philadelphia, and very likely establish myself there. I am not positive about that, of course. I have looked at some property in New York, so I have not decided which place I will select.

Q. Philadelphia I understand to be the seat of one or more independent sugar refineries?—A. There are two there, yes, sir; Mr. Knight and Harrison & Fraser.

Q. Do you contemplate associating directly or indirectly with any of the existing refineries of that city?—A. I do not know yet. Mr. Knight's refinery can be bought. I have corresponded with the old gentleman, and I have been there with him. Mr. Knight is an old man. They wanted him to go into the trust. He said, No you can buy the refinery for coin; and that, I think, the trust refused.

Q. I understand that these Philadelphia refineries aggregate from \$30,000,000 to \$40,000,000 capital in their business, and that their output constitutes a large proportion of the refined sugars of the United States. I will ask you if you expect the plans which you are now contemplating to successfully compete in the output as well as in the competition of the price of those refineries?—A. I think I can; I believe I can.

Q. From what market do you purpose procuring the raw sugar for your refinery?

The WITNESS. You mean here?

Mr. HERMANN. Yes, sir.

A. We would take it from Cuba, from the Phillipine Islands, and from Manilla; from the same source that the refinery is drawing from now.

By Mr. BUCHANAN:

Q. On land of ordinary fertility, what number of tons of beets is the average yield?—A. It depends entirely upon the soil. In California they raise as much as 42 tons to the acre.

Q. Tell us what soil is generally exceptional?—A. We will find out how this will be. Now, if you have soil rich, you want the rows about 12 inches apart and the beets about 6 inches apart. A pound beet would give 42 tons, if they only weigh 1 pound. Now, if the soil is not as rich, you want to sow 12 by 8, so your 1-pound beet would give 22 tons.

Q. What is the probable average price to the raiser of the beet per ton for the beet?—A. Four dollars.

Q. Four dollars per ton?—A. Yes, sir.

Q. Then the producer of the beet would receive, if he raised 20 tons per acre, \$80?—A. Yes, sir; the pulp is worth two-thirds of the beet after the sugar is taken out. We don't take the albumen out; we only take out the sugar and salt. What is left is good feed for cattle.

Q. Mr. Havemeyer testified here that beet-root-sugar was very refractory in refining, because of the presence of these salts that you speak of. Is that your experience as a refiner?—A. The beet sugar is a great deal easier refined than the cane sugar, but they do not get the best sugar here; they take the lowest molasses sugar with the salt in it; it goes from 16 Dutch standard.

Q. The best quality of the cane sugar is refractory, whereas the beet-root sugar you produce is not refractory?—A. Of course not. In England they pay more for the beet-root sugar than for the cane sugar. It is so easily refined; for instance, it is very easily refined with charcoal.

By Mr. HERMANN:

Q. How is it with regard to the German bounty paid by the German Government to the beet-sugar producers? Will not that, to a certain extent, meet with healthy competition anywhere in the United States?—A. No, sir; you see we have the duty. Now I am perfectly satisfied to make it a success, but if you want to take the duty off and give a bounty, give the people a chance to go ahead. I am only one individual out of 65,000,000. As I say, I am willing to do all I can, if you will help me; but it is impossible to have one man do everything.

Q. When does that German bounty expire?—A. They get one-quarter of a cent a hundred.

Q. Is not there a limitation in time when that bounty is to cease?—A. Oh, no. When they first gave them this bounty they only made 6 or 7 per cent. of sugar; last year they made 14 per cent. of sugar. Gentlemen say you can not get over 10 per cent. in cane sugar; beet sugar has gone to 14 per cent.; they have to grade the seed the same as a man would grade his cattle—pick out the very best.

By Mr. CROUSE:

Q. Is a protective tariff very essential, reasonably so, to this industry that you are talking about?—A. It would not make any difference to me; the only thing you take from me is \$1,500,000.

Q. I am speaking now of beet-root sugar only; is a protective tariff necessary to start this industry in this country?—A. You have either to keep the tariff or give a bounty, and if you can not do that you have to do something else.

Q. If the duty on sugar should be removed, what effect would that have?—A. Then we could not live; we would have to give it up.

Q. I am speaking of beet sugar only?—A. We would have to give it up; we would have to have the bounty or duty.

By Mr. BUCHANAN:

Q. I understood you to say something about a bounty paid by the German Government to the manufacturers of sugar; I want to ask you whether that bounty is paid to the manufacturer in the first instance or to the farmer?—A. To the manufacturer.

Q. Do you know how much it is?—A. I have the data here, but I haven't it in my mind.

Q. Can you approximate it?—A. I will tell you how that is. Two-thirds of the beet factories belong to the farmers individually. They are rich. Now, they get together and form a stock company, according

as they raise an acre of beets. They build a factory and go to the banker and borrow money. They start the plant, and accordingly as they bring the beet to the factory they get for so many acres so much stock. You can not get a share of stock from that company for love or money.

Q. You are speaking of the German raisers?—A. Yes, sir; they ought to do it here if they can get enough capital. In the beet raising they have made as much as 100 per cent. profit in one year—from 60 to 80; but of course you know raw sugar then was  $7\frac{1}{2}$  cents per pound. Of course it depends entirely upon the price of sugar.

By Mr. HERMANN:

Q. This bounty which you speak of paid by the German Government is paid for the exported sugar?—A. Yes, sir; but it comes in the same category——

Q. Answer the question. I want the fact; what they pay bounty on is the sugar exported, so much a pound?—A. Yes, sir.

By Mr. BRECKINRIDGE:

Q. What do you estimate to be the present population of California?—

A. I suppose about one and a half millions; I do not know, really.

Q. The State is growing rapidly, is it not?—A. Yes, sir.

Q. I believe your Pacific coast is increasing very rapidly in population?—A. Yes, sir.

Q. Have you any idea of the present population of Oregon or Washington Territory?—A. I have not; they are increasing likewise.

Q. But all three, California, Oregon, and Washington Territory, have increased very much since the census of 1880?—A. Yes, sir; very much.

Q. You get your raw sugars on the Pacific coast from what source, the Hawaiian Islands?—A. Yes, sir; Manilla and Central America.

Q. These are your three points?—A. Yes, sir; we have in certain years received some from Batavia, but we have not lately.

Q. Is the fruit-preserving industry a very extensive one in your State now?—A. Very extensive.

Q. What kind of fruits do they preserve principally?—A. All kinds; peaches, pears, cherries; almost all kinds of fruits.

Q. Is the jam industry an extensive one there?—A. I think it is; but of course I couldn't answer that question as to that exactly.

Q. I am told that in England the jam industry is a larger industry than sugar refining. Do you know whether that is true or not?—A. I could not say that.

Q. Is sugar used very extensively in the fruit-preserving industry of this country?—A. Very much; yes, sir.

Q. What kind of packages are used in shipping your fruits?—A. They are generally tin cans made from tin-plates.

Q. Do you use glass?—A. Not a great deal; the most is thin tin-plate.

Q. So, what may be called the raw material of your fruit-growers and preserving establishments consists of fruit, tin-plate, and sugar?—A. Yes, sir.

Q. Do these countries from which you get raw sugar produce more sugar than you need on the Pacific coast?—A. Do you mean the Philippine Islands, or just mean Hawaii.

Q. I mean those that are in a convenient shipping attitude to you.—A. They produce more.

Q. Some of them do not send all of their sugar to you?—A. Oh, no; we don't get half from Manilla; about one-third.

Q. What do you estimate to be the consumption of raw sugars on the Pacific coast?—A. There are perhaps 60,000 to 70,000 tons, about 140,000,000 pounds.

Q. Is that all the raw sugar you refine out there?—A. Well, perhaps about 120,000 tons; there has been no more, I think, refined.

Q. That is about the extent of the refining of raw sugar on that coast?—A. Yes, sir.

Q. There is no refined sugar consumed out there except that which is refined on the coast.—A. No; it is all refined there.

Q. You speak of the refineries getting no benefit from the introduction of Hawaiian sugars, unless it chanced to be the planters alone; and you speak of the consumer getting no benefit. If all the sugars that are tributary to the Pacific coast were made free, what would be the effect then as regards the consumer in this country?—A. The effect would be this: If there was enough free sugar coming in there it would be cheaper; but the other way, if you had not enough of that sugar and had to go to Manilla and pay duty on sugar, of course it would not make any difference.

Q. In other words, I understand you to say that if sugar is introduced to an extent less than the demand of the country, so that some dutiable sugar will still be imported, the benefit would not accrue to the consumer of this country?—A. If you had 13 sugar, and would take the duty off, the sugar would undoubtedly be very cheap.

Q. To whom?—A. The consumer; it could not be otherwise. You would have to pay 2 cents a pound less for the sugar with the duty off than with the duty on.

Q. The reason, then, that the consumer in this country does not get the benefit of the remission of duty on Hawaiian sugar is that the duty is not remitted on enough sugar to supply the market?—A. Yes, sir; the consumer don't get a bit of benefit of that; it is just the planter.

Q. The Hawaiian planter is in the same attitude as the Louisiana planter?—A. Yes, sir.

Q. If the Hawaiian planter, however, produced a great deal more sugar than we needed in this country he would not get any benefit?—A. That is correct.

Q. Then my statement is correct?—A. Yes, sir.

Q. I was astonished that there could be any doubt on this point.—A. There is no question about it.

Q. How many refineries have you on the Pacific coast?—A. There are now two in working order.

Q. Are they competitors of each other?—A. Yes, sir.

Q. Can sugar be raised more cheaply in Hawaii than in Louisiana?—

A. I have no idea what it will cost in Louisiana to raise sugar.

Q. Is it very profitable in Hawaii?—A. In certain plantations it is not, and in others it is; one is successful and the other is not successful. I had a manager and a big plantation, and it has already saved me over \$100,000 in labor; that is, the management.

Q. A well-managed plantation in Hawaii is very profitable?—A. Yes, sir.

Q. How often do you have to replant your cane in Hawaii?—A. In some places they plant perhaps between two and three years; in others only one year; it depends upon how the water question is—in fact not over three years in any one place. They take one ratoon and find it profitable to plant again for the reason that they take the same water and use it on the plantation.

Q. Do you have to irrigate?—A. Yes, sir; but not entirely.

Q. Do you have to replant oftener than they do in Cuba?—A. Yes, sir; I think Cuba can raise the cheapest cane as I understand. We have to replant.

Q. How much raw sugar can be generally produced to the acre in Hawaii on a good plantation?—A. The average would be, say, from  $4\frac{1}{2}$  to 5 tons an acre.

Q. How much in Louisiana?—A. I don't know. I suppose about a ton and a half. They know more about it than I do. They average it, you may say, from 5 to 6 tons. The cane growing there is about fifteen months; you know we have cane there 22 feet high.

Q. Do you get more than one crop off of it?—A. In Louisiana they take a crop off every year. We have to raise it fifteen and sixteen months. They have no frost there.

Q. You can keep a larger per cent. of land in Hawaii yielding than in Louisiana. You have to replant every three years?—A. Yes, sir; the cane will grow about fifteen months. Now the planters calculate to get through with the grinding, say, in June. They will then commence planting, and some plant in April. In some localities if you plant before June it will tassel or flower. So you have to plant later there. In September the cane flowers or tassels. In November the cane is ripe and will not grow more of any consequence. When it is in good condition it has a kind of horn jumping out. Your cane is then ripe. In some plantations they can plant in April or May. In others you have to wait until June before you start in, and in November you have a little flower on the cane.

Q. You get about three crops from each planting?—A. About two, and some three, of course.

Q. So that you only have to replant from one-third to one-quarter of your ground each year?—A. Yes, sir.

Q. Do you know how much raw sugar they can get off of an acre of good ground in Cuba?—A. I have no personal knowledge of that. As a general thing there, I think, about three and a half or four tons; I do not know exactly; that is only guess-work.

Q. Speaking of the sugar beet, what per cent. of sugar is there in a ton of beets?—A. I have examined the beet from the Santa Marie where they are planting on their own account, and 6 tons of beet would make a good ton of sugar. They had 18 per cent. of saccharine and the purity was  $93\frac{3}{10}$ .

Q. It had 18 per cent. of saccharine matter?—A. Yes, sir; by the polariscope.

Q. Would you consider that an average test?—A. If that be the case that it had 18 per cent. of saccharine and was 93 pure, it would show a difference as I figure now; but whether the beet be all that way, I do not think we could average 18 per cent.

Q. You can not generally depend on that?—A. No, sir; when I make my figures, I make them very low. It is a great deal better; in the end you have more sugar.

Q. Your mode of cultivating sugar in Hawaii is substantially the same as in this country—mules, plows, etc?—A. Yes, sir; I have in that country three steam plows, plowing land all the time. Then we have a mold-board plow to scoop out and plant your cane. Then we have to irrigate the land.

Q. What do you pay for a plow-hand—a man that can use two mules?—A. In the island we generally give him \$30 and \$35 a month and board.

Q. Are most of your plow-men white men?—A. They are all white men.

Q. Are most of the field laborers in the island white people?—A. They are natives—Chinese, Portuguese, and Japanese.

Q. What is paid to the Chinese?—A. They don't plow; they only go in and irrigate.

Q. They only do the lighter work?—A. Yes, sir.

Q. What other nationality besides the American plows?—A. White people entirely.

The WITNESS. You mean the nationality?

Q. Yes.—A. Mostly American.

Q. Then pretty much all the plowmen are American?—A. Yes; of course there are foreigners amongst them, Swedes, Spaniards, etc.

Q. But all belong to the Caucasian race?—A. Yes, sir.

Q. So that the plowmen of that country are nearly all of the white race?—A. Yes, sir; and of the common laboring people there will be gangs of perhaps thirty or forty going into the cane-field who will have to irrigate and look after and strip the cane. A man having a gang of this sort under him is always a white man.

Q. Of what are these gangs composed?—A. Chinese, Japanese, and Portuguese.

Q. What pay do you give these Chinese and Japanese?—A. Sometimes we have to pay them on the scale of \$28 a month and board themselves; sometimes \$18 a month, as the case may be. In the case of the Japanese, the Hawaiian Government made an arrangement—made a treaty with them, in which it was agreed that the Hawaiian Government should pay their passage over. The contract is, I believe, \$14 for a man and \$12 for a woman, that they pay for them. That is a three years' contract. Then the Government has contracted to deliver them over again to the Japanese Government, but the Government must save \$4 each month for each man and keep it for him and ship it to his family, so that he can not spend it all.

Q. Is that sort of provision also made for Chinamen?—A. No, sir.

Q. The Japanese are more likely to spend all they earn than the Chinese?—A. Yes, sir; I believe so; that is more their disposition. The Chinese sent a man over to make a treaty with the Hawaiian Government, which I opposed, and of course it did not go into effect, because I thought it would be very dangerous, for the Chinese might very easily overrun us, and might have the island. You see they are very quick fellows. They keep together, and they have their societies. You talk about the white men wanting more wages, but they are just as quick about that; they know how to do it.

Q. They have learned the art of striking, have they?—A. Yes; they know what they are about.

Q. With what crop will the planting of sugar beet compare, to give a general idea of the labor and difficulties which are involved; for instance, how does it compare with planting, cultivating, and gathering the corn crop?—A. It would be about the same.

Q. It would be about as much expense and trouble to plant and gather a sugar-beet crop as to plant and gather a corn crop?—A. I should judge it would be about the same. Now, in California they will plant the beet in the latter part of March when there is hardly any more rain to come, and no weeds coming up. They will just run through with the cultivator once. The only trouble is when they have to thin them. You ought to have them about 6 inches apart, and thin them out in the row. That is the greatest trouble there is.

Q. Just like thinning out corn ; you can either do it with the hand or the hoe?—A. Yes, sir.

Q. That thinning out labor is labor that can be done largely by the lighter farm force?—A. Each family cultivates a certain number of acres. Some families only have 10 acres and make a good living out of it ; some have 5 acres, some 15 acres, some 20 acres. Now, the whole household, including children, can help them in doing that.

Q. In refining sugar you estimate that with your high cost of labor and coal it will run some 60 or 70 cents a hundred to cover costs and make it profitable?—A. You mean 6 or 7 cents a pound.

Q. No ; I mean 60 and 70 cents per hundred. You made an answer to the chairman on that point, as to the cost of refining sugars upon the Pacific coast.—A. You are coming to the refinery now.

Q. Yes ; with your expenses out there you can not convert raw sugars into refined sugars short of some 60 or 70 cents per hundred ; will it cost any more to convert beets into refined sugar than it will cane sugar?—A. No, sir ; it is easier.

Q. Therefore, when it comes to treating both as raw material, is it about as favorable as cane?—A. Yes ; I would rather have beet sugar to refine.

Q. Mr. Spreckles, there are a good many statements made about the German, the Austrian, and the French policy of giving bounties upon exports of sugar ; they make a payment for each ton of refined sugar that is exported, I believe?—A. Raw sugar likewise ; raw and refined beet sugars.

Q. Upon all sugar exported?—A. Yes.

Q. Take the German nation, for instance ; I suppose you are most familiar possibly with that, it being your native country, and it is considered, I believe, to be a model for this policy ; they have an internal tax upon the sugar beet, I believe?—A. Yes, sir.

Q. What is the amount of their tax per ton expressed in American money?—A. I have not paid sufficient attention to that to give you an exact answer what it is per ton. The beet is weighed there by the Government and they pay the internal taxes on that.

Q. In speaking of a ton of the sugar beet, do you mean a long ton or a short ton?—A. I mean a short ton.

Q. Both of the beet and of the refined sugar?—A. I mean short tons.

Q. Do you remember what is the bounty that the Government pays upon the sugar that is exported?—A. I could not tell you.

Q. You do not know whether it is in excess or whether it is less than the internal taxes that have been previously charged?—A. I could not answer you that exactly. I have the new tariff with me, too, but I have not looked into it carefully.

Q. You are not certain, then, whether the producer of the sugar beet is helped more than he is hurt by that?—A. Oh, he gets more bounty than he pays.

Q. If so, how much?—A. I do not know.

Q. How do you know he gets more?—A. I am pretty sure he does.

Q. Are you sure it is not a source of Government revenue rather than an expense?—A. No ; they have paid many millions to the Treasury, but they receive more from it than they pay in. One year they got about eight millions.

Q. Do you remember also how much the Government collected, on the other hand, as charged upon the beet?—A. I do not know ; something less than eight millions.

Q. That is the excess paid in marks over the marks that were collected by the direct internal tax?—A. Yes, sir.

Q. You speak of the imported sugars always being kept below No. 13 Dutch standard in color?—A. Yes, sir.

Q. I infer from that that a good many grades would come in considerably fairer in color than No. 13 if it were not for the duty?—A. That is right.

Q. If they come in below No. 13 they are considered, I suppose, unfit for consumption?—A. Yes, sir.

Q. Unpopular, at least; not much affected by the people?—A. Yes, sir.

Q. If they had been permitted to come in of a fairer grade they would have been fit for consumption?—A. Yes, sir; that is, cane sugar, not beet.

Q. I am speaking of cane sugar.—A. Yes, sir.

Q. Now when that sugar is debased or changed to a lower or darker hue and the refiners of this country get it, they proceed to produce a fairer color again, do they not?—A. Yes, sir.

Q. The refiner proceeds, then, out of this dark sugar, to produce to a large extent the very color that it was before it left home?—A. It would be better in color, because raw sugar would not be the color of refined; it would be quite different.

Q. I know that, but it would be near the color it was before it was discolored?—A. They have in former years, I understand, given this color to sugar and sent it over to New York and then washed it. The test was then simply by color. Now it is by color and by the polariscope, and you know just how it is; whether it is correct.

Q. I understand you, then, that the way in which sugar is fixed at a color that enables it to come in below No. 13 is, that when the juice of the cane is treated they just refuse to make a brighter color than No. 13?—A. Yes; that is it.

Q. Have they facilities in Cuba, in the Hawaiian Islands, the Philippine Islands, or Central America, for refining sugar on the plantation to as high a degree, upon the average, as they do in Louisiana in their sugar-houses?—A. I do not think so. I think in Manilla, where they have very dark sugars, they are doing a great deal in sun-drying and in molds. That is not the centrifugal process. By the centrifugal process you can get it white with water and charcoal.

Q. Then, if they are treating sugar on the plantation and bringing it to No. 9 or 10, instead of continuing their treatment up to Nos. 16, 17, 18, and 20, they find it cheaper just to stop at that dark color, ship it to this country, and treat it afresh, and bring it up to these yellows that we use?—A. Well, when we speak of Manilla sugars they could not improve in color. Their process is not a centrifugal process.

Q. Come to the centrifugal process.—A. The centrifugal process is one that can only be done in the pan. If they have the first use and clarify well there will be a very good sugar produced. As for the crystalline, like this No. 18, it is not the nature of this kind of sugar to become white, yet you could make a white sugar out of it by just using water and by washing away the dark sugar, but I do not think there would be much profit in that.

Q. Which is the most expensive sugar for you to produce out of your refinery?

The WITNESS. You mean which costs us the most to refine?

Q. Yes.—A. The lowest grade. The higher grade does not cost so much to refine, and it has already the bleaching.

Q. Suppose you are working with No. 12 or No. 13 sugars and you turn out, say, No. 18?—A. That would be cheapest sugar to refine. You can refine that grade cheaper than the other.

Q. Suppose you produce No. 20, and granulated, and cubes. How much would you consider that No. 20 costs you more—what per cent. would you consider that No. 20 costs more than No. 18 to manufacture?—A. There would be very little difference between No. 18 and No. 20.

Q. How much between No. 18 and the granulated sugar?—A. Granulated? Of course you do not want to put that through the refinery

Q. No, you are putting only No. 13. You are beginning on a raw sugar and producing various grades of sugars, and you are producing cubes. Cubes I believe are about your highest production?—A. No. 20 is about the same as the cubes. All that sugar is just the same, except they have what they call an A sugar, which may be a little yellower.

Q. Very well; when you are producing those dark sugars into these refined grades, your least expense would be in the No. 16.—A. Yes.

Q. Your next degree of expense would be in the No. 20?—A. We do not understand each other. What I mean is this: You want to know, I see now, whether if you make a No. 16 it costs you less than to make a No. 20, the higher grade?

Q. Yes.—A. That is it exactly; but if you start from No. 13 you could not make hard sugar; it would be too soft. But when you want to make soft sugar you take only low grades.

Q. When you want to make hard sugars only?—A. Oh, in this hard sugar you take only the refined. There is very little impurity and you must put in a poor sugar.

Q. Then you would start with different grades of raw sugar to make different grades of refined sugar?—A. Yes.

Q. And you would incur different degrees of expense on your raw sugar in turning it into 16s?—A. Yes, sir.

Q. And having selected your grade of raw sugar you would incur additional expense to turn it into No. 20.—A. No; when you start in with your sugar it is melted and goes over animal charcoal and is bleached and made white. Now, that [indicating] would make white sugar, but you don't get as much out of this [indicating] as out of that [indicating]. But this [indicating] will take more charcoal, and filtering will get the color out of it and bleach it. This [indicating] would make just as much white sugar as that, only it would need more charcoal.

Q. But I am talking about what it will cost to do it.—A. This [indicating] will cost more than that [indicating].

Q. That is to say, if you take this sugar [indicating] it will cost you more than if you take this [indicating]?—A. Yes, it will take more charcoal.

Q. If you take that sugar, what would you refine into—any grade you pleased?—A. Yes, any grade I pleased; but still I would have a percentage of what you call soft sugar.

Q. Suppose you had a thousand tons of this sugar, would you work it into different grades of refined sugar or into one uniform grade?—A. The profit would be in the highly-refined sugar. Granulated and cube sugar would sell for more than the other. I would try to make as much as possible of that kind of sugar, because I would get, say,  $\frac{3}{4}$  of a cent more a pound than for the other grade.

Q. I do not seem to be able to make myself understood. Is this sugar suitable to refine into any grade of refined sugar you want to produce?—Yes, sir.

Q. Is it more suitable for refining into some grades of refined sugar than in others?—A. It will have less of the white sugar. You could not make but so much of it into white sugar. The last tailings or the last sugar must be soft sugar. When this, which is pure sugar [indicating], will go 99.9 that sugar [indicating] goes into yellow and makes, say, 84.

Q. Could you take this sugar No. 10 and make all granulated sugar out of it?—A. No.

Q. Could you make all No. 20 sugar?—A. Twenty is about granulated. This is a different kind of sugar.

Q. You have No. 20 in yellows?—A. Yes, to be sure.

Q. Could you make No. 20, if you wanted to, out of this grade of sugar [indicating]?—A. I think so; yes.

Q. The whole of it?—A. Not the yellows; you could not make it all into No. 20. The sugar gets always weaker. For instance, you can take that sugar [indicating] and make a soft sugar out of it that will make 96, while what is left of it will only make 82, which is the lowest product from that grade of sugar.

Q. What do you call it, then?—A. O yellow.

Q. In other words, when you are working up a given grade of sugar you turn out different kinds of refined sugars from it?—A. Yes, sir.

Q. Now, about what per cent., taking the average run of these sugars below No. 13, do you turn out of granulated, say out of 100 tons?—A. We would have about 76 or 77 per cent.

Q. Seventy-seven per cent. would be granulated?—A. Mind you, when you say No. 13, I want you to show me what crystals there are in it; I want to analyze it. No. 13 may be of that color, but I can not tell, until I put it into the polariscope, what it will polarize.

Q. Speaking now in a general way, without taking this into account, sometimes favorable and sometimes unfavorable, letting them offset each other, what will be the result?—A. We would get about 72 per cent. of granulated sugar.

Q. And the balance the yellows?—A. Yes, sir.

Q. Now, that 72 per cent. of granulated sugar has cost you more in the refining than the 28 per cent. of yellows; that is, more per pound?—A. No, the lowest do not cost any more, because the last left from the granulated you have in yellows.

Q. Would you charge up against them as cost of refining as much to the yellows as to the granulated?—A. Yes; you can consider that it costs as much per pound for the yellows as for what goes into the hard sugars.

Q. Suppose having worked up 72 per cent. of 100 tons of this sugar into granulated sugar and you estimate that it costs you 6 cents a pound, what would you estimate 28 per cent. of yellows cost you; if the granulated cost you 6 cents, what would you say the yellows cost?—A. Figuring the whole thing, that sugar costs us so much per hundred pounds to run it through. We take the whole thing; so much for charcoal, so much for labor, so much for barrels, and so on.

Q. But you have to give more treatment to the granulated sugars than to the others?—A. No, sir; you have here two sugars to refine. This sugar, No. 19, don't cost as much to refine as that No. 13, but this sugar would be worth more after refining than that.

Q. Precisely; but what I wanted to get at was whether you take this or that—whatever you take, you produce two products?—A. Three.

Q. Or half a dozen, only they are all white and yellow. I want to know whether you consider the yellows cost you more or less to refine than the whites, or the same.—A. I can not tell you that, because they go together; and these sugars, No. 19 and No. 13, are put together and turned out, so much yellow and so much granulated.

Q. In other words, when you turn out granulated you have put your raw sugars to the same amount of expense as when you turn out the yellows; you have incurred the same expense and put your sugars to the same amount of manipulation as when you turn out granulated, and the margin for the one is the margin for the other?—A. Yes, sir.

Q. Is that correct?—A. Yes, sir.

Q. Mr. Spreckles, what is the difference between the sugar beet and the ordinary table beet?—A. The table beet is ordinarily red. This was the offspring, but then they brought this beet to the highest point of cultivation. It came originally, they say, from a turnip; but every year the quality improves.

Q. It is very much like the table beet?—A. It has gradually sprung from that, but we have brought it now to a high state of perfection.

By Mr. BUCHANAN :

Q. I have no desire to ask any question which would seem to be particularly appropriate to an investigation before the Committee of Ways and Means, but I would like to ask the question because it is of some interest to the people in my own State. Have you experimented in any of your refineries with the product of sorghum?—A. No, sir; I could not state that. I had a correspondence with Senator Plumb on that subject, and I tried to go to your State (New Jersey) last fall. Sorghum I don't know that I can speak of, whether it would be a success or not. You see there are different reports about it. As to the beet we know it is a success, and where you can raise sorghum you can raise beets.

By Mr. BRECKINRIDGE:

Q. What will be the effect, speaking of the relevancy of these questions to the Ways and Means Committee, of reducing the protection on refined sugars upon the trusts in the East?—A. If you reduce it entirely, take the duty off.

Q. I said reduce, I did not say take it off entirely.—A. If you reduce, it would have no effect; but if you take it off, there is no question about it that Germany and England can then ship sugar here, they having cheaper labor, material, etc.

Q. Would that break up the trust?—A. Yes, it would break up entirely the manufacturing interest in this country; there is no question about it, because England and Germany can refine that sugar cheaper. In Austria they only pay about a gulden for a ton of coal, that is about 40 cents; that is, of course, soft coal.

Q. Suppose, instead of abolishing the duty, you reduce it low enough to leave them no margin to make it worth while to combine, do you think that would have the effect of breaking up the trust?—A. Undoubtedly, with the exception that, as I say, I do not know how strong they are. I do not think they are so very strong. But if they come to make fifteen or twenty millions a year they would become very powerful. I do not say they could do it.

Q. Do you believe that that trust could exist except for the tariff on sugar?—A. And have the same tariff on the refined? They do not care whether there is any duty on the raw or not; that would not affect them.

Q. I am talking about the refined.—A. If you take the tariff off the

sugar would come free, no matter what color. Undoubtedly the refineries would be wiped out. It could not be otherwise.

Q. In other words, they can not exist but for the tariff. If it were not for the tariff that would be the end of the trust?—A. They could not live.

Q. The point is this: That under one mode of adjustment or another the trust derives its existence from the tariff, and could not exist if the tariff were wiped out. That is the connection between the Committee of Ways and Means and this question.

By Mr. BUCHANAN :

Q. Am I correct in understanding you to say that to wipe out this trust, so far as the effect of the tariff upon its continuance is concerned, it would be necessary to make sugars free?—A. That would wipe the whole thing out.

Q. It would wipe out the combination by destroying every member of the combination, would it not?—A. Yes; you would destroy every factory.

Q. And you think a simple reduction of 1 or 2 cents a pound in the tariff on sugars would not wipe out that combination?—A. They could not then. For they have just so much profit, and if they should charge the full difference the sugars would come from England and Germany here. They could not raise above that price.

Q. I understand. But my question is whether a simple reduction in the amount of duty would wipe them out?—A. Oh, no.

Q. And you understand that is all that is proposed by the bill of the Committee of Ways and Means—a reduction; is it not?—A. There is such a bill, but I have not read it; I leave that to you. When you come and ask me certain questions I keep nothing back; I am candid about it. If you take the duty off, you take a million and a half from me and my associates. If it is to be for the benefit and good of the American people, why should Claus Spreckels alone be favored and not the other people? It is silly. I have got plenty. I can not take anything along with me. I have worked for Claus Spreckels all my life, and now I am going to work for the people. I am not the man as you may have thought me, not having seen me. You may have thought that Claus Spreckels is the man to swallow brown-stone houses and digest cobble-stones; but I am not that kind of a man.

By the CHAIRMAN :

Q. I wish to ask one question. Mr. Spreckels, I understand the substance of your testimony to be that this American refinery in San Francisco is in the trust?—A. So far as I know.

Q. That is your understanding of it?—A. So far as I understand it they are in the trust.

Q. Was that fact stated to you by Mr. Searles in his interviews with you?—A. Yes, sir.

Q. So that the situation is that the American refinery in San Francisco being in the trust, the only refinery out of the trust on the Pacific coast is your own?—A. Yes, sir; the California refinery. And I will not go in the trust; you need not be frightened.

Q. What, if any, paper is there published in San Francisco which keeps the daily or monthly market reports of the sugar market?—A. I do not know; I will ask my son and will send it to you; I can not remember.

The committee then went into executive session and adjourned subject to the call of the chairman.

**Comparative statement of rates of labor of sugar operatives (unskilled) in the United States and in the different countries of Europe.**

(This statement is based upon ten hours for a day's work. In Germany, Holland, and Poland the time is twelve hours.)

	Per day.
New York, at 15 cents per hour .....	\$1.50
England, at 18 shillings per week .....	.75
Paris, at 2 francs per day .....	.40
Belgium, at 1.50 francs per day .....	.30
Holstein, Hanover, and Northern Germany, at 2 marks per day .....	.49
Madgeburg, at 1.75 marks per day .....	.42½
Germany, women (who do the same work in the field and factory as men), 1.10 to 0.80 marks per day .....	.24½
Russian Poland, at 2.50 marks per day .....	.60
Holland, at 2 guildens per day .....	.80

**Rate of unskilled labor employed in sugar refineries in the United States at different periods.**

1880, per hour .....	\$0.12½
1882, per hour .....	.13½
1888, per hour .....	.15

Skilled labor has advanced in the same proportion.

Expenses of refining 100 pounds fair refining sugar, testing 90°, not above No. 13 D. S., to soft sugar, No. 13 to No. 20 D. S., making no allowance for loss of weight, calculated from actual average results:

Wages .....	\$0.17
Coal (80 per cent. labor) .....	.1050
Cooperage (at least 90 per cent. labor) .....	.1436
Cartage (95 per cent. labor) .....	.0351
Bone-black (80 per cent. labor) .....	.0440
Insurance .....	.0267
Brokerage .....	.0193
Repairs and expenses (90 per cent. labor) .....	.0640

H. O. HAVEMEYER.

NEW YORK, July 19, 1888.

**STATE OF NEW YORK, Attorney-General's Office, as:**

I, Charles F. Tabor, attorney-general of the State of New York, do hereby certify that I have compared the annexed copies of the petitions of Richard Croker, Hugh J. Grant, and others, answer of Henry O. Havemeyer and others, answer of John E. Searles, jr., and opinion of the attorney-general of the State of New York, with the originals thereof on file in this office, and that the same is a correct transcript therefrom and of the whole of said originals.

In testimony whereof I have hereunto set my hand and affixed my official seal this 10th day of July, 1888.

[SEAL.]

CHAS. F. TABOR,  
Attorney-General.

Attorney-general's office.

**In the matter of the petition of Richard Croker, Hugh J. Grant, and Thomas F. Gilroy.**

Your petitioners respectfully show upon information and belief as follows:

I. That the North River Sugar Refining Company is a domestic corporation, duly incorporated under chapter 40 of the laws of 1848, entitled "An act to authorize the formation of corporations for manufacturing, mining, mechanical, or chemical purposes," and the several acts amendatory thereof and supplementary thereto.

II. That the certificate of the incorporation of the said company was filed in the office of the clerk of the city and county of New York on or about the 11th day of February, 1865.

III. That in and by the said certificate of the said company it appeared that the objects for which the company was to be formed were "the business of sugar refining, the manufacture of sugar, sirup, and molasses from materials to be purchased by and for the use of the company in their said business, and the sale of the productions of such operations."

That the number of trustees who should manage the concerns of the said company should be five, and that the names of such trustees for the first year were Adolphus F. Ockershausen, Petter Moller, jr., George H. Moller, Cord Moller, and Peter Hogg.

IV. That heretofore and after the formation of the said corporation it offended against the provisions of the act by or under which it was created, and the acts amending the same and applicable to it, and violated provisions of law whereby it has become liable to be dissolved by the abuse of its powers, and has also forfeited its privileges or franchises by a failure to exercise its powers, and has done and omitted acts which amount to a surrender of its corporate rights, privileges, and franchises, as will hereinafter more fully and at large appear.

V. That heretofore and after the formation of the said corporation, it offended and still offends against the provisions of the act by or under which it was created, in that it does not carry on the business for which it was stated to have been incorporated, nor does it perform or fulfill or attempt to perform or fulfill the objects for which it was stated to have been formed, but that, on the contrary, it has become amalgamated with and a part of an unlawful combination for the monopoly of the refining and manufacture of sugar in this State, and for the regulation and control of the prices to be paid for the same, to the injury of the people of the State.

And further, in that the concerns of the said company are not managed or controlled by the persons mentioned in the certificate of incorporation of the said company or their successors, as required by the said act under which said company is formed, but that, on the contrary, they are managed and controlled by a board or body of men styling themselves the "Sugar Refineries Company" and consisting, as your petitioner is informed and believes, of the following named persons, viz: Harry O. Havemeyer, F. O. Matthiessen, John E. Searles, jr., Julius A. Stursberg, Theodore A. Havemeyer, Joseph B. Thomas, John Jurjensen, John E. Parsons, Charles H. Sneff, and William Dick, which said persons, or a majority of them, assume to and do control the said corporation and regulate its affairs.

VI. That heretofore and after the formation of the said corporation it violated and still does violate provisions of law whereby it has become liable to be dissolved by the abuse of its powers, in that it has violated the Penal Code of this State, and has entered into, carried out, and is still carrying out, as the sole purpose of its existence, certain contracts which are injurious to trade and commerce and illegal and void as against public policy and the law of the land, and in that it has entered into a contract, agreement, understanding, combination, confederation or conspiracy with certain individuals and corporations by which it is agreed that the parties to the said agreement, and who compose, as your petitioners are informed and believe, all the refiners of sugar in the State of New York—that they, the parties to the said contract, agreement, understanding, combination, confederation, or conspiracy, shall not compete with each other in the purchase or sale of sugar or any other article purchased or sold by them, or any of them, in the course of their business; but that, on the contrary, they, the parties to the said contract, agreement, understanding, combination, confederation or conspiracy, should buy and sell at prices to be fixed by a certain board, consisting, as your petitioners are informed and believe, of thirteen persons, some of whom are non-residents of the State, and known as "The Sugar Refineries Company." That the said combination, of which the said North River Sugar Refining Company forms, as aforesaid, a part, controls the production of refined sugar in this State, and regulates the price thereof; and that it has secured, by reason of the premises, and the action of the said North River Sugar Refining Company, a virtual monopoly of the sale and production of refined sugar in this State; and that the said monopoly or combination so entered into by the North River Sugar Refining Company was, and is, illegal, void, and against public policy and the well being of the people of the State, and a public nuisance, and was and is prohibited by section 168 of the penal code as an act injurious to trade and commerce, and that the conduct of the said North River Sugar Refining Company in the premises has been most harmful to the people of the State.

VII. That heretofore, and after the formation of the said corporation, it forfeited, as your petitioners are informed and believe, its privileges or franchises by a failure to exercise its powers, in that it is not engaged in the business or manufacture for which it was stated to have been incorporated, and in that it suffers itself to be controlled by a certain body of men who are not the trustees of said corporation, but are the co-conspirators who have formed and still continue the said illegal combination in restraint of trade and competition.

VIII. That heretofore, and after the formation of the said corporation, it did and omitted acts which amount to a surrender of its corporate rights, privileges, and

franchises, in that it ceased to transact its business as a corporation for the purpose of manufacturing, but amalgamated itself with and became a party to a certain confederation or combination of companies and firms organized and doing a similar business as itself, and submitted itself to the control of the said confederation or combination, and ceased to maintain its identity and its distinct existence and independent relations towards the people and to compete with the other corporations and firms composing the said combination, and that said corporation has ceased to exercise its proper functions, perform its duties, and transact business as designed and required by the acts under which it was incorporated.

And your petitioners further show that heretofore, and on or about the 16th day of February, 1888, the senate of the State of New York passed and adopted a certain resolution in the words following, to wit:

"Whereas it is alleged that many individuals, corporations, associations, and partnerships engaged in manufacturing, buying, selling, and dealing in various commodities, and especially in articles of general consumption and the necessities, are entering into and have entered into combinations and agreements among themselves, by which monopolies are created, commonly known as "trusts," the general purpose and effect of which is to control the supply of such commodities and necessities, destroy competition, regulate the quality and keep the cost to the consumer of such commodities at prices far beyond their fair and equitable value; and

"Whereas there is a popular demand for the suppression or regulation of such combinations or "trusts," so far as the same are injurious to the public interests, and so far as they can be fully suppressed or regulated by legislative action;

"Resolved, That the committee of the senate on general laws be, and hereby is, authorized to investigate fully all matters relating to the manner of the formation of the aforesaid combinations and agreements, commonly known as "trusts," and the effect of the same upon the public interests, etc., and with power to call for persons and papers, and to hold sittings in any part of the State."

That thereafter the said committee, in pursuance of the said resolution, held divers sittings in the city of New York, and examined various persons and took testimony, and had produced before them in evidence the instrument in writing whereby the aforesaid combination, the "Sugar Refineries Company," was formed, and to which the North River Sugar Refining Company was a party, and it took proof of the facts attending the formation of the said combination and the manner in which the said North River Sugar Refining Company became a party thereto, and the conduct of the said company in the premises, and such proceedings were thereupon had that the said committee made its report in the premises, in and whereby it found, among other things, that the combination so entered into by the said North River Sugar Refining Company was injurious to the public and against public policy, and that the actions of the several corporations and parties to the said combination, including the North River Sugar Refining Company, was injurious to the public interests, to which resolution of investigation and the testimony taken thereon, and the report of the said committee, these petitioners beg leave for greater certainty to refer.

And your petitioners further show that they are citizens and residents of the State of New York.

And your petitioners further show that by reason of the premises, the public interests require that an action should be brought by you, in behalf of the people of the State, to procure a judgment annulling the existence of the said corporation, the North River Sugar Refining Company, upon the grounds mentioned in subdivisions 1, 2, 3, 4 of section 1798 of the code of civil procedure.

Wherefore your petitioners pray that you may institute such action, and they will ever pray, etc.

RICHARD CROKER.  
BERNARD MARTIN.  
THOS. F. GILROY.  
JOHN COCKRANE.  
HUGH J. GRANT.

STATE OF NEW YORK, *City and County of New York*, ss:

Thomas F. Gilroy, being duly sworn, deposes and says that he is one of the above-named petitioners. That he has read the foregoing petition by him subscribed, and knows the contents thereof; that the same is true to his own knowledge except as to the matters therein stated to be alleged upon information and belief, and that as to those matters he believes it to be true.

THOS. F. GILROY.

Sworn to before me this 16th day of April, 1888.

JOHN C. MUNZINGER,  
*Commissioner of Deeds, New York City.*

## Attorney-general's office.

In the matter of the petition of Richard Crocker, John Cockran, Bernard F. Martin, Hugh J. Grant, and Thomas F. Gilroy.

## CITY AND COUNTY OF NEW YORK, ss:

John E. Searles, jr., president of the North River Sugar Refining Company, under oath answers the petition in this proceeding as follows:

First. I deny that the company has offended against the provisions of the act under which it was created or of the acts amending that act or applicable to it, or that it has violated any provision of law, or that it has done or omitted acts which amount to the surrender of its corporate rights, privileges, and franchises.

Second. It is untrue that the company has become amalgamated with or become part of a combination for the monopoly of refining sugar in this State, or for the regulation or control of prices to be paid for the same.

It is untrue that the concerns of the company are not managed or controlled by the successors of the persons mentioned in its certificate of incorporation, or that the said Harry O. Havemeyer and others, or a majority of them, assume to or do control the company or its affairs, or that it has entered into, carried out, or is still carrying out contracts which are injurious to trade and commerce, or illegal and void as against public policy and the law of the land.

It is untrue that it has entered into any contract, understanding, or arrangement by which it is agreed that individuals and corporations interested in sugar refining shall not compete with each other in the purchase or sale of sugar or other articles purchased or sold by them or any of them; or by which it is agreed that prices shall be fixed by the board known as the Sugar Refineries Company.

It is untrue that the Sugar Refineries Company or the individuals known by that name, control the production of refined sugar in this State, or regulate the price thereof, or that it has secured a virtual monopoly of the sale and production of refined sugars in this State.

It is not true that the North River Sugar Refining Company is not controlled by its trustees; or that it has done or omitted acts which would amount to a surrender of its corporate rights, privileges, or franchises; or that it has amalgamated itself with or become a party to a combination of other sugar refining companies and firms; or that it has submitted itself to any such confederation or combination; or that it has ceased to retain its identity and distinct existence and independent relation towards the people; or that it has ceased to exercise its proper functions or perform its duties.

It is untrue that the North River Sugar Refining Company was a party to the instrument in the petition mentioned. One George H. Moller did, on behalf of the stockholders of the company, sign that instrument, but the parties interested denied his authority and refused to ratify his signature.

Third. The sugar refinery of the North River Sugar Refining Company is situated on Water and Corlears streets, in the city of New York. It is not possessed of the best and most economical appliances for sugar refining. To fit it for refining sugar economically would require a large expenditure of money.

On June 14, 1884, an act was passed providing for the laying out of a park in the city of New York, the area of which embraces the property of the company. From the passage of the act it has been generally understood that proceedings would be taken to condemn the property for the purposes of the park.

On or about February 25, 1888, the counsel to the corporation of the city of New York published notice of an application to be made on March 29, 1888, for the appointment of commissioners of estimate and assessment for the purpose. That application has been made.

The company has in consequence been compelled to abstain from making the improvements necessary to the economical working of its refinery, and in view of the immediate appropriation of its property for a park, has been compelled to cease operations.

All this is well known. It is, as I am informed and believe, known to the petitioners. I charge that their proceeding is not taken in good faith, but for political effect. I maintain that to punish the company for not continuing its business when it has been prevented from doing so by the legislature and the public authorities, would be most unjust and oppressive.

JNO. E. SEARLES, JR.

Sworn to before me this 4th day of May, 1888.

[L. S.]

W. McMASTER MILLS,  
Notary Public, N. Y. C. No. 2.

## Attorney-general's office.

In the matter of the petition of Richard Croker, John Cockrane, Bernard F. Martin, Hugh J. Grant, and Thomas F. Gilroy.

Your petitioners respectfully show, on information and belief:

I. That heretofore, to wit, on or about the 16th day of August, 1887, Harry O. Havemeyer, F. O. Matthiessen, John E. Searles, jr., Julius A. Stursberg, Theodore A. Havemeyer, Joseph B. Thomas, John Jurgenson, John E. Parsons, Charles H. Senff, and William Dick associated themselves together under the name of the "The Sugar Refineries Company," and thereafter assumed to and did act as a corporation and performed pretended corporate acts, and did exercise within the State certain corporate rights, privileges, or franchises not granted to them by the law of the State, to wit: that of having a corporate name; that of having a common seal; that of contracting obligations in such name; that of granting and receiving in such name; that of making by-laws or private statutes for their government, and that of perpetual succession.

That the said persons were not and are not incorporated nor chartered by any act of the legislature of this State, nor by the regents of the University of the State of New York, nor by any authority.

That the said persons under said name are still assuming to act as a corporation and to do corporate acts as aforesaid, and to exercise within the State the aforesaid corporate rights, privileges, or franchises not granted to them by the law of the State, to the prejudice and damage of the people of the State of New York.

II. That heretofore and for the space of eight months now last past and upwards, at the city of New York and State of New York, Harry O. Havemeyer, F. O. Matthiessen, John E. Searles, jr., Julius A. Stursberg, Theodore A. Havemeyer, Joseph B. Thomas, John Jurgenson, John E. Parsons, Charles H. Senff, and William Dick have used and still do or charter the following liberties, privileges, and franchises, to wit: That of being a body corporate and politic in law, fact, and name, by the name of "The Sugar Refineries Company," and by the same name to hold meetings, elect officers, make by-laws, use a common seal, acquire property, to hold property by succession, to contract obligations, and to issue negotiable certificates of stock, all of which said liberties, privileges, and franchises the said Harry O. Havemeyer, F. O. Matthiessen, John E. Searles, jr., Julius A. Stursberg, Theodore A. Havemeyer, Joseph B. Thomas, John Jurgenson, John E. Parsons, Charles N. Senff, and William Dick, under the name of "The Sugar Refineries Company," during all the time aforesaid have usurped and still do usurp upon the State of New York, to its great prejudice and damage.

III. And your petitioners further show that the said Harry O. Havemeyer, F. O. Matthiessen, John E. Searles, jr., Julius A. Stursberg, Theodore A. Havemeyer, Joseph B. Thomas, John Jurgenson, John E. Parsons, Charles H. Senff, and William Dick have and exercise a monopoly of the business of refining sugar in the State of New York, and have and exercise a control of the production of refined sugar, and have and exercise the power of artificially and arbitrarily regulating and fixing the price of such sugars in the State of New York, and that, as your petitioners are advised and believe, such monopoly and power so asserted and exercised by said Harry O. Havemeyer, F. O. Matthiessen, John E. Searles, jr., Julius A. Stursberg, Theodore A. Havemeyer, Joseph B. Thomas, John Jurgenson, John E. Parsons, Charles H. Senff, and William Dick constitute a public nuisance.

Wherefore your petitioners complain and pray that you may institute an action in behalf of the people of the State to have it adjudged that the said Harry O. Havemeyer, F. O. Matthiessen, John E. Searles, jr., Julius A. Stursberg, Theodore A. Havemeyer, Joseph B. Thomas, John Jurgenson, John E. Parsons, Charles H. Senff, and William Dick are guilty of usurping or unlawfully holding or exercising a franchise or privilege and ousting and excluding them therefrom; to wit, to have it adjudged that the said Harry O. Havemeyer, F. O. Matthiessen, John E. Searles, jr., Julius A. Stursberg, Theodore A. Havemeyer, Joseph B. Thomas, John Jurgenson, John E. Parsons, Charles H. Senff, and William Dick are not legally incorporated, and that the said pretended "The Sugar Refineries Company" is not an incorporated company; that the said Harry O. Havemeyer, F. O. Matthiessen, John E. Searles, jr., Julius A. Stursberg, Theodore A. Havemeyer, Joseph B. Thomas, John Jurgenson, John E. Parsons, Charles H. Senff, and William Dick are acting as a corporation and doing pretended corporate acts without authority of law, and all others acting with or under them be enjoined and restrained from acting as a body corporate and from doing acts as a corporation, and that you institute such proceedings or prosecution or suit for injunctive relief as in your judgment may be proper.

Your petitioners beg leave to refer to the testimony of the Senate committee on trusts and make it a part of this petition,  
And your petitioners will ever pray, etc.

RICHARD CROKER.  
JOHN COCKRANE.  
BERNARD F. MARTIN.  
HUGH J. GRANT.  
THOMAS F. GILROY.

STATE OF NEW YORK, *City and County of New York, ss.*

Thomas F. Gilroy, being duly sworn, deposes and says that he is one of the above-named petitioners. That he has read the foregoing petition and knows the contents thereof, and that the same is true to his own knowledge, except as to the matters therein stated to be alleged upon information and belief, and that as to those matters he believes it to be true.

THOS. F. GILROY.

Sworn to before me this 16th day of April, 1888.

JOHN C. MUNZINGER,  
*Commissioner of Deeds, N. Y. City.*

---

Attorney-general's office.

In the matter of the petition of Richard Croker, John Cockran, Bernard F. Martin, Hugh J. Grant, and Thomas F. Gilroy.

CITY AND COUNTY OF NEW YORK, *ss:*

Henry O. Havemeyer, F. O. Matthiessen, John E. Searles, jr., Julius A. Stursberg, Theodore A. Havemeyer, John Jurgenson, John E. Parsons, Charles H. Senff, and William Dick, for answer under oath to the petition in this matter, depose and say as follows:

First. It is not true that we either individually or associated together or with others, whether under the name of the Sugar Refineries Company or at all, have assumed to act or have acted as a corporation, or have performed corporate acts or exercised corporate rights, privileges, or franchises.

In our individual capacity we, with Joseph B. Thomas and Charles O. Foster, of Boston, are the holders in trust of stock of incorporated sugar-refinery companies. For convenience, and to save the necessity of using a large number of names on every occasion, we are called the Sugar Refineries Company. It is only a name and is understood to be only a name. The interest of the parties whom we represent appears in certificates. The only use by us of a seal is to seal those certificates. It is used for safety and to make the certificates sealed instruments. The name "Sugar Refineries Company" is not a corporate name. It is untrue that in that name or otherwise obligations are contracted or that the privilege is exercised of granting and receiving in that name, or that in that name or otherwise we make by-laws or private statutes.

Second. It is untrue that we either individually or jointly, or associated with others, have used, or that we do use, the liberty, privilege, or franchise of being a body corporate either in the name of the Sugar Refineries Company or at all; or that by that name we hold meetings, elect officers, make by-laws, use a common seal, acquire property, hold property by succession, contract obligations, or issue negotiable certificates of stock. We have used a seal for the purpose previously mentioned and not otherwise. As individuals and in trust we hold stock as above mentioned. As individuals we have met occasionally, and of our number one has been designated to be president (he signs our certificates and has presided when we have met), one vice-president, and one to be secretary and treasurer. We receive the earnings on the stock held by us and distribute it. That is the only occasion for a treasurer.

Third. It is untrue that we, either individually or jointly, or associated with others, have or exercise a monopoly of the business of refining sugar in the State of New York, or that we have or exercise the control of production of refined sugar, or that we have or exercise the power of artificially and arbitrarily regulating and fixing the price of such sugar in the State of New York. Our only relation to sugar refining is that we are holders of stock in sugar refinery companies.

Fourth. Sugar refining is a large and important industry. It is extensively carried on in the State of New York. It is done by a number of sugar refinery corporations. A large number of persons are interested in the stock of these corporations. By arrangement made by them, we, with the said Joseph B. Thomas and Charles O.

Foster, hold their stock in these corporations in trust for their benefit. In no other way have we anything to do with sugar refining. Each corporation carries on its own business for its own account. We are advised and believe that everything which has been done by us in the premises is strictly in accordance with law. We believe that it is in the interest of employes and of consumers. So far from preventing competition, it has invited it.

Fifth. As we are informed and believe the petitioners are members of a political organization called "Tammany Hall." We charge that this proceeding is for the purpose of oppressing the interests of the sugar refiners, and for political effect. We believe that it is the first time that an attempt has been made by a political body to use the office of the Attorney-General for such a purpose. Our organization has been publicly known since it was created. We respectfully submit that if there existed any necessity for action by the attorney-general "Tammany Hall" would not be required to procure him to take it.

H. O. HAVEMEYER.  
F. O. MATTHIESSEN.

— — —  
Before the attorney-general.

In re The North River Sugar Refinery Company. In re Sugar Refineries Company.  
Opinion.

There are two applications before me in the above-entitled matters, based upon petitions of Richard Croker and others, and verified by Thomas F. Gilroy.

In the matter of the North River Sugar Refinery Company it is alleged in the petition that this company is a domestic corporation, organized under the laws of this State; that its object was the manufacture of sugar; that its trustees were five in number, and that its certificate of incorporation names them; and that it has offended against the provisions of law in the following particulars:

1st. It does not carry on the business for which it was incorporated, but on the contrary, it has become amalgamated with and a part of an unlawful combination and monopoly.

2d. The concerns of the company are not managed by its trustees, but are managed by a body of men called "The Sugar Refineries Company."

3d. It has violated the Penal Code, section 168, by engaging in an unlawful combination or conspiracy with others, constituting the Sugar Refineries Company, for the purpose of advancing and controlling prices.

4th. It has ceased to maintain its identity and to exercise the functions for which it was incorporated.

The attorney-general is asked to commence an action for the purpose of annulling the existence of the corporation, under section 1798 of the code of civil procedure, subdivisions 1, 2, 3, 4, and 5, which read as follows:

"The attorney-general, upon leave being granted, may bring an action against a corporation created by or under the laws of this State, to procure a judgment vacating the charter or annulling the existence of the corporation, upon the ground that it has, either—

"1st. Offended against any provision of an act by or under which it was created, altered, or renewed, or an act amending the same, applicable to the corporation; or,

"2d. Violated any provision of law whereby it has forfeited its charter or become liable to be dissolved by the abuse of its powers; or,

"3d. Forfeited its privileges or franchises by a failure to exercise its powers ;

"4th Or done or omitted any act which amounts to a surrender of its corporate rights, privileges, and franchises ; or,

"5th. Exercised a privilege or franchise not conferred upon it by law."

Before this action can be commenced, it is necessary, under section 1799 of the code, that leave should be granted by the court, and the court may, in its discretion, require such previous notice of the application as it thinks proper to be given to the corporation, or any officer thereof, and may hear the corporation in opposition thereto.

In the matter of the Sugar Refineries Company it is alleged in the petition that certain parties have associated themselves together under the name of the Sugar Refineries Company ; that they assume to be a corporation in the following particulars : First, having a corporate name ; second, having a common seal ; third, contracting obligations in such name ; fourth, making by-laws ; fifth, having perpetual succession ; sixth, holding meetings and electing officers ; seventh, acquiring property, and holding it by succession ; eighth, issuing negotiable certificates of stock ; and generally that they exercise a monopoly in the production of sugar and that such monopoly is a public nuisance.

The relief asked for in this application is that the attorney-general bring an action to restrain the parties from acting as a corporation and from doing pretended corporate acts without authority of law, under section 1798 of the code of civil procedure, which provides as follows :

"The attorney-general may maintain an action upon his own information, upon complaint of a private person, in either of the following cases :

"Subdivision 3. Against one or more persons who act as a corporation within the State, without being duly incorporated, or exercise within the State any corporate rights, privileges, or franchises not granted to them by the law of the State."

Upon the hearing before me most of the allegations contained in the petitions in the above cases were denied by the respondents.

It was admitted in the matter of the North River Sugar Refinery Company that it had not been in operation for several months, but since a time prior to the formation of the so-called trust, and in the matter of the Sugar Refineries Company it was admitted by the respondents that they call themselves by the above name upon their certificates, and that they authenticate such certificates with a seal.

The only evidence before me as to the truth of the issues joined by the petitions and answers was the different allegations contained in these papers, and the evidence taken before the Senate investigating committee.

If the attorney-general was compelled to try these cases upon the conflicting statements contained in the petitions and answers, no very satisfactory conclusion could be arrived at.

I have therefore assumed that upon the trial of any action brought by me it will be possible to prove that the allegations contained in the petitions are true.

The question then is, under the law and the decisions can the actions asked for here be maintained ?

As bearing upon some of the questions involved, section 168 of the Penal Code has been called to my attention, which reads as follows :

"Subdivision 6. If two or more persons conspire to commit any act injurious to the public health, the public morals, or to trade or commerce, or for the perversion or obstruction of justice, or the true administration of the laws, each of them is guilty of a misdemeanor."

By 1 Revised Statutes, seventh edition, page 476, section 1, it is provided : "It shall be the duty of the attorney-general to prosecute or defend all actions in the event of which the people of the State shall be interested."

In the case of the *People vs. Ingersoll* (58 N. Y., 16) Judge Allen says : "The prerogatives of the Crown, except as affected by constitutional limitations, exist in the people as sovereign, but to what extent this prerogative is committed to the public officials, either by the legislature or by the common law, is a question worthy of grave consideration, and not to be lightly decided, and should only be determined when necessary to a judgment and decision. Whenever the legislature, by statutory enactment, has conferred upon State officers or public bodies authority to represent the body of the people in the exercise of any prerogative right no question can arise, for in these matters, except as restrained by the constitution, the legislature is supreme. If there were no other remedy for a great wrong, and public justice and individual rights were likely to suffer for want of a prosecutor capable of pursuing the wrong-doer and redressing the wrong, the courts would struggle hard to find authority for the attorney-general to intervene in the name of the people."

It has been held that "an association among the whole or a large portion of the proprietors of boats on the Oswego and Erie Canals, under an agreement to regulate the price of freight and passage by a uniform scale to be fixed by a committee chosen by themselves, and to divide the profits of their business according to the number of

boats employed by each, with provisions prohibiting the members from engaging in similar business out of the association, is illegal. The tendency of such an agreement is to increase prices, to prevent wholesome competition, and to diminish the public revenue. It is, therefore, against public policy, and is void by the principles of the common law." (See *Stanton vs. Allen*, 5 Denio, 434; *Hooker vs. Vandewater*, 4 Denio, 349; *Clancy vs. C. F. S. M. Co.*, 62 Barb., 395.)

It was also held in the case of *The People vs. Fisher* (14 Wendell, page 9) that a conspiracy of journeymen workmen of any trade to raise their wages by entering into a combination is indictable as a misdemeanor. This has been changed by section 170 of the Penal Code.

It was also held in the case of *Atcheson vs. Mallon* (43 N. Y., 147) that "an agreement between parties designing to make bids, tending either directly or indirectly to restrain or lessen rivalry or competition between them, is void as against public policy, even although it may appear that such an agreement did not result in detriment to the public interest."

In *Arnot vs. Pittston and Elmira Coal Company* (68 N. Y., 558) it was held: "Where one producer of a commodity, for the purpose of enhancing the price, enters into a contract with another producer, binding the latter to hold and keep out of the market his supply, the contract is against public policy and void." (*Morris Run Coal Co. vs. Barclay Coal Co.*, 63 Pa. St., 173; *Central Ohio Co. vs. Guthrie*, 35 Ohio St., 666; *Craft vs. McConoughy*, 79 Ill., 346.)

The following propositions may also be assumed to be well settled in this State:

First. A statute restraining any person from certain acts applies equally to bodies politic or corporate. (See 15 Johnson, 358; Penal Code, section 718, subdivision 15.)

Second. The exercise of corporate powers without legal authority may be prevented and punished by the State. (Section 1948, Code of Civil Procedure; *Morawitz on Corporations*, sec. 29; *People vs. Utica Ins. Co.*, 15 John., 358; *People vs. Dispensary*, 7 John., 304.)

Third. Where there has been a misuser or nonuser in regard to matters which are of the essence of the contract between the association and the State, they constitute a just ground for forfeiture. (*People vs. Phoenix Bank*, 24 Wend., 431; *Commonwealth vs. Com. Bank*, 26 Pa. St., 389.)

Fourth. Corporations are political trustees. Whether they have fulfilled the purpose of their trust or acted in good faith in regard to their fulfillment is the question to be asked when they are called upon to forfeit their charters, either for acts of omission or commission. (*People vs. Turnpike Co.*, 23 Wend., 236; *People ex rel. Bishop vs. R. R. Co.*, 23 Wend., 193.)

Fifth. The franchise of acting in a corporate capacity can not be assumed without the permission of the State, and if a company attempts to exercise this franchise without having authority it may be prevented from so doing and dissolved by the State through proceedings in *quo warranto*. (*State vs. Bradford*, 32 Vermont, 50; *State vs. Central Ohio Rwy. Assn.*, 29 Ohio St., 399.)

Sixth. The suffering an act to be done by a corporation which destroys the end and object for which the corporation was instituted must be regarded as equivalent to a direct surrender. (*Slee vs. Bloom*, 19 Johnson, 456.)

It is confidently claimed by the petitioners that the testimony taken by the Senate investigating committee last winter shows that most of the allegations alleged in the petition are true. This committee, in its report to the Senate, says:

"The combination known as the Sugar Trust, with a capital represented by stock certificates amounting to \$45,000,000, came into existence by virtue of an agreement dated on or about October 24, 1887, by and between the stockholders of eight sugar refineries corporations of this and other States on the eastern coast of the United States (one, however, was located in Saint Louis), by which they agreed to surrender the stock of their several corporations to certain persons, as trustees, called the Sugar Refineries Company, and who were to hold the same for the benefit of all; and in exchange for such stock so surrendered the several stockholders so surrendering receiving stock certificates in the Sugar Refineries Company in amount at least four times the nominal value of the stock surrendered. This stock of the several corporations in the hands of the trustees, called the Sugar Refineries Company, gave them the absolute control of all the refineries in the combination, and enabled the trust to run all the refineries exclusively for the profit of all, and without any competition between them. By such surrender the several corporations became the mere satellites of the trust (being the Sugar Refineries Company), and all their affairs are dominated from the central body. A system of reports containing statements of raw material purchased, refined sugar on hand, the daily output of each refinery, together with the funds in the treasury, is established between the trust and its vassal corporations. The Sugar Refineries Company 'recommended' when a refinery shall shut down and when it shall run, but, work or idle, it receives its share of the general earnings. The trust exercises absolute control of all the industry, and in its discre-

tion takes in new corporations which surrender their stock at a valuation agreed upon, and in turn receive certificates of stock in the Sugar Refineries Company, for which reception of new corporations the original trust agreement made full provision. It is obvious that in effect this combination, representing as it does 85 per cent. of the sugar-refining capacity of the Atlantic coast, and all the sugar refineries in the State can greatly affect and for a time at least control at once the price of the raw material and of the refined product, and this without regard to the interest of the consumer.

" \* \* \* "It appears that the price of sugar has largely advanced since the trust's formation, and no satisfactory explanation was given of the cause of such advance, aside from the combination complained of of 85 per cent. of the sugar refiners of the Atlantic coast to put up prices. \* \* \* The attention of the attorney-general is respectfully called to the testimony taken before your committee, showing a violation of the laws."

In conclusion, it may be said, in view of the allegations contained in the petitions before me and of the report of the committee of the senate, that it is important to ascertain by judicial investigation whether these things alleged against these respondents are true. If they are, a great public wrong has evidently been committed by them.

The law seems to be amply sufficient to secure the redress necessary in such a case. The necessary papers will be at once prepared for presentation to the court for the purpose of obtaining leave to prosecute an action against the North River Refineries Company; and in the matter of the Sugar Refineries Company, no leave being necessary, an action may be commenced at once.

Albany, June 29, 1888.

CHAS. F. TABOR,  
*Attorney-General.*

---

NEW YORK DAILY COMMERCIAL BULLETIN AND THE REVIEW, 32 BROADWAY,  
*New York, April 24, 1888.*

DEAR SIR: Inclosed herewith please find the comparisons of London prices of raw and refined sugars, which you desired included in the writer's testimony before the trust investigating committee. They are forwarded later than intended, because of attention to other matters and because of the difficulty of obtaining a satisfactory and complete record amongst the trade here. We endeavored to make the comparison correspond with the New York statement of prices already handed you as closely as possible, viz, a statement of highest and lowest quotations each month from 1885 (inclusive), based on the daily published prices; but after a thorough search we find no acceptable record of this kind, and are obliged to present a statement compiled from the London circular of C. Czarnikow, a weekly publication, considered high authority by the New York trade. This circular is wanting in the quotations for refined in 1885, and only gives the bid and asked price at the close of each week, the bid prices being selected for comparisons in the accompanying inclosures. Possibly, therefore, the prices given do not fully cover the widest extremes; but, as we were unable to obtain any continuous daily or weekly record, and it would be undesirable to use more than one authority, these figures are the completest obtainable. Should you require a more exact compilation I would suggest your writing to London; though for all practical purposes you will probably find these comparisons will answer your purpose.

The grades selected, "strong Java" and "Lyles granulated," correspond as closely as possible to the New York grades quoted in previous testimony.

Very respectfully, yours,

J. W. DODSWORTH,  
*Mang. Ed. Com. Bulletin.*

Hon. HENRY BACON,  
*Chairman Committee on Manufactures, Washington, D. C.*

# THE STANDARD OIL TRUST.

---

COMMITTEE ON MANUFACTURES,  
HOUSE OF REPRESENTATIVES,  
*Friday, April 6, 1868.*

The committee met at 2 o'clock p. m. Present, the chairman, Mr. Breckinridge, Mr. Wilson, Mr. Bynum, Mr. Grimes, Mr. Hopkins, Mr. Smith, and Mr. Crouse.

## STANDARD OIL TRUST.

The CHAIRMAN. I have present here some witnesses subpoenaed by a deputy sergeant-at-arms to attend at this time and be examined with relation to some features of this Standard Oil Trust matter. I will call the names of the witnesses:

J. R. Goldsboro, David Kirk, Henry Webster, I. N. Bennett, and E. F. Howes.

All answered to their names except Mr. Howes.

The CHAIRMAN. As far as I am concerned, I am ready to go on with the examination of these witnesses, if that is the judgment of the committee.

Mr. BRECKINRIDGE. I suppose the regular order is for you to proceed.

The CHAIRMAN. It is a little out of its order, but if agreeable to the committee, I will call some witnesses who are here, and who are anxious to return home, and whose examination will be shorter, possibly, than some of the other witnesses.

## TESTIMONY OF HENRY WEBSTER.

HENRY WEBSTER, sworn and examined.

By the CHAIRMAN:

Q. Where do you reside?—A. Bradford, Pa.

Q. What is your occupation?—A. Contractor in the business of drilling oil wells.

Q. Are you a practical operator of the drill yourself?—A. I am, sir.

Q. How long have you been engaged in that business?—A. I have been engaged in that business twenty-two years.

Q. In and about Bradford?—A. Not all the time; no, sir.

Q. Do you know an association known as the Oil Well-Drillers' Union?—A. Yes, sir.

Q. Where is that union located?—A. In Butler County and part of Allegheny County, north of the Ohio River; Crawford County and part of Warren County; Venango County; Clarion County; Armstrong County; Forest County; Elk County; Allegany County, N. Y.; McKean County, Pa., and Cattaraugus County, N. Y.

Q.

A. sir.

to a man's occupation in

all walls, or tool dresser.

any of any.

in one of these counties?

A. No, sir.

the whole territory of the

organization? Does each dis-

they combined?—A. They

are of any State?—A. No,

have they a charter?

A. I do not know of any.

I don't know how it is about

do mean have they officers?

A. Yes, I guess.

A. I think they have;

could like to state to the com-

that our order is a secret

are obligated not to tell the

anything to tell you anything

of that in any way, but

and their names I have

committee will really insist

insist upon it.

I ask you now whether

set of officers that are over

ents?—A. No, sir.

who they are?—A. I think

know them.

a set of men who are off-

for the whole union author-

the whole union?—A. They

mean. I suppose they are

thing they do has to be ac-

so-called Producers' Assn-

general officers, has to be

separately before it becomes

thirds vote of each lodge.

Two thirds of all the lodges

the lodges, by a two-thirds

it binds them all?—A.

A. I take it?—A. Yes, sir.

the organization?—A. I

think we have got somewheres between 2,200 and 2,400; I don't know exactly.

Q. When did the organization come into being; when did it begin?—

A. Eighth of December, 1887.

Q. Prior then to the 8th of December, 1887, there was no such organization?—A. No, sir.

Q. You have been a member of it since that time?—A. I have been a member since the 17th day of December, 1887.

Q. Does this organization cover the oil-producing territory of Pennsylvania and New York?—A. It does, the most of it. Yes, I think it covers the whole. There may be one that it does not cover. Yes, I gave you Allegheny County, that I think is wrong. I do not think it has been organized yet; I do not believe there is any lodge there; but still it is down on our books.

Q. Do your separate lodges have charters of organization from the general officers?—A. No, sir; we have no charter.

Q. I do not mean a State charter. Do you have authority from the general officers to organize lodges?—A. Oh, yes, sir.

Q. Are there any contractors, or men skilled in driving wells for oil, in that country that are not embraced in these lodges?—A. Yes, sir.

Q. About how many?—A. I don't know that I could give you an estimate of that. It would be pretty hard for any one man to do it.

Q. Are all the prominent contractors and persons who have been engaged largely in this business in these lodges?—A. The majority of them are.

Q. Do you recollect anybody that has been particularly prominent or active in this business that is not in it?—A. Yes, sir.

Q. Name any person of that sort you can recollect.—A. I can tell you one man, William Fitzgibbons.

Q. Where does he live?—A. In Bradford; but he is now operating on the Ohio for himself.

Q. He is no longer in the business in that field?—A. No, sir; he is doing no business in this field.

Q. When did he go out of this field?—A. About a year ago.

Q. Can you name anybody else?—A. No, I don't know of any one else.

Q. Were you active in helping to organize this union?—A. No; not more than anybody else.

Q. Did you take an active part in it, whether other people did or not?—A. No, sir.

Q. Then you came into it, I take it, at the solicitation or request of somebody?—A. I came into it voluntarily.

Q. Somebody talked to you about it before you came in, did they not?—A. I heard of it.

Q. I have heard of it, too, and yet I would not know how to get into it. Somebody had talked to you, had they not?—A. It had been mentioned among drillers, and men talk about such things always when a thing of that kind is started. I did not talk to anybody any more than our own class of men.

Q. I mean your class of men.—A. Yes, sir.

Q. In that talk what was said about the reason or advantage to be obtained by forming this association?—A. Simply, we thought by forming it—there was some oil set aside by the producers when they shut down—and, by forming it, we would get a share of that, whatever it was, and when we stopped drilling we would stand in with the men,

that is, we would be good friends with those men who had been doing the work, and we would still get their work.

Q. Then before this was formed there had been a producers' association formed; that is, before your association was formed?—A. I heard of such a thing.

Q. You heard such thing commonly talked about?—A. Yes, sir.

Q. And it was commonly reputed that the producers' association had made a contract by which the amount of oil produced was to be diminished?—A. Yes, sir.

Q. And had the driving of wells, or the cleaning out of wells, the business of contractor, diminished?—A. Yes, sir; of course, there was nothing to do hardly.

Q. The producers were not driving any new wells, or cleaning out new wells?—A. No, sir; not of any account.

Q. And you had also heard that a certain amount of oil had been set apart to compensate the labor which was thrown out of work by this arrangement to reduce the production of oil?—A. Yes, sir.

Q. And the object in forming this organization then, as I take it, was that you might get the benefit of this oil that had been reserved by these parties?—A. Yes, sir.

Q. Now where was this oil, as you understand it, that had been reserved?—A. The producers had it.

Q. It was above the ground?—A. I suppose so.

Q. It was stored somewhere?—A. I suppose so.

Q. You understood it was in the possession of the Standard Oil Company or the Standard Oil Trust?—A. I can not say really that I did understand it that way.

Q. Where did you understand that the oil was?—A. I understood the producers had it.

Q. The producers had it in their possession?—A. That is the way I understood it.

Q. And now what quantity of it did you understand had been set apart for the labor element?—A. Two million barrels. May be I may have made a little mistake about that; I guess I did, too. I am positive now that I understood that the Standard Oil Company had set aside one million barrels and the producers had set aside one million barrels; that should have been my statement.

Q. Since the formation of this Drillers' Union, on the 8th of December, 1887, what has been the condition of affairs out there, as to work being done in your line?—A. There has been none scarcely; there has been, of course, some little going on.

Q. Nothing like there was before?—A. Oh, no.

Q. Take it a year before; there was nothing like as much work done as there was the year before?—A. No, sir.

Q. And of course that has thrown you and the other persons engaged in this Drillers' Union out of work, has it not?—A. Yes, sir.

Q. I take it that a majority of the people belonging to this Drillers' Union are laboring men, are they not?—A. They are all, sir.

Q. And have your members of this Drillers' Union received any funds?—A. Yes, sir.

Q. From time to time?—A. We have.

Q. That was not paid you as compensation for work done?—A. Yes, sir; that is right.

Q. You have been paid without doing any work?—A. Yes, sir.

Q. About how much money in the aggregate has been paid out in that way?—A. Do you mean in the whole?

Q. Yes; from the 8th of December until now?—A. Indeed, I could not tell you. I know how much I have received.

Q. How much have you received through the Drillers' Union, or the Producers' Union, I mean?—A. I have received \$75.

Q. In all?—A. Yes, sir; that is what I have received.

Q. For that you did no work?—A. No, sir.

Q. Have you done any work at drilling this winter?—A. Not a thing.

Q. Have any of these outside drillers or contractors been doing any work this winter?—A. They have been doing some in Butler County and Washington County; occasionally there was a well drilled in McKean County. Now there have been a couple of wells drilled; that is, oil wells.

Q. Were any of these wells driven or cleaned out by members of this Drillers' Union?—A. There has been some where they had permits from the Producers' Association for drilling them.

Q. Have there been any cases in which the Drillers' Union have done any boring or digging of wells or cleaning out of wells, except where permission has been granted by the Producers' Association?—A. Not that I know of.

Q. Is it a part of your arrangement that you shall not do any work without a permit from the Producers' Association?—A. That is in our contract.

Q. Have you a copy of that contract?—A. It is here. I think we have one here. [To Mr. Bennett: "Have you one, Mr. Bennett?" Mr. Bennett here handed witness the agreement.] Here it is; Mr. Bennett had it.

Q. Just look at that and see if you recognize that as being the contract? Just satisfy yourself as to whether or not it is the contract.—A. Yes, it is the contract [handing it to the chairman].

The CHAIRMAN. I will just read it, so that the committee may know what it is:

Agreement made and entered into this 22d day of December, A. D. 1887, by and between the executive board of the Producers' Protective Association of the first part, and the executive board of the Well-Drillers' Union of the second part, witnesseth:

The party of the first part agrees to pay to the party of the second part the profits on 1,000,000 barrels of oil and the residue on another million barrels that may remain after adjusting and paying the other classes of labor injured by the shut-down movement, the cost price of said oil being 62 cents per barrel on the 1st day of November, 1887, and subject to interest, storage, and fire-loss charges from that date; the aforesaid profits to be distributed among the members of the Well-Drillers' Union who have been thrown out of employment. The said oil shall be held by the party of the first part, and sold by them when they think proper, but not faster than one-fourth every three months.

The party of the first part shall advance, upon said prospective profits, such sums as shall pay to each member of the Well-Drillers' Union \$1 per day, Sundays included, for each day said member is out of employment at drilling during the continuance of this agreement, payable on the 10th day of each month for the previous month.

The entire oil to be sold before the 1st day of December, 1888, and the residue of profits, after deducting the advances made as aforesaid, and advances for expenses and interest thereon shall be paid to the party of the second part, to be divided and paid by them to the members entitled thereto pro rata, in proportion to the time they have been out of employment at drilling, and also to compensate contractors for loss and interest on their drilling outfits on such basis as the party of the second part may consider fair and just.

The persons entitled to the aforesaid benefits shall only consist of members in good standing of the Well-Drillers' Union, and who have been legitimately engaged in the business of contracting, drilling, or tool-dressing during the year 1887 in the light oil field on oil wells; exceptions, however, may be made to this rule by the executive board of the Well-Drillers' Union.

All persons entitled to such benefits shall devote their time and attention to the stopping of the drill during the continuance of this agreement, and shall report weekly to a designated officer.

The party of the second part shall furnish to the party of the first part, on or before the fifth day of each month, pay-rolls, containing the names, residence, and occupation of their membership; also the last employer's name, residence, and date of such employment, which roll shall embrace all who are entitled to the aforesaid benefits. There shall also be presented an itemized account of actual expenses incurred in the stoppage of the drill.

There shall be a committee in each district, selected by the executive board of the local lodges, whose duty it shall be to keep a lookout for, and to endeavor to prevent the drilling of wells when ordered by the local lodges of either the Producers' Protective Association, or the Well-Drillers' Union. Said member may be changed to suit the occasion and shall receive as compensation, \$1 per day, in addition to his pay as a member, for each day so engaged, together with his actual and necessary expenses.

Any member of the Well-Drillers' Union, who shall assist the above-named committee in the shut-in movement, shall be entitled to actual expenses when so engaged.

No member of the Well-Drillers' Union shall engage in the drilling or cleaning out of any well in the Light Oil Fields without the consent of a designated officer of the Producers' Protective Association in the district to which he belongs.

Any member of the Well-Drillers' Union who shall obtain employment at drilling shall cease to draw pay for the time so employed.

This agreement, as to benefits and advances and the stoppage of the drill, shall continue in full force until the 8th day of September, 1888, but may be terminated at any time, upon the party of the first part giving ten days' notice to the party of the second part, and no obligations to pay or make advances shall exist after the delivery of said notice.

The first pay-rolls shall be made for the present month and compensation shall be made back to December 8, 1887; each member shall be paid from the date of his membership, and shall be paid January 10, 1888.

Previous to the expiration of this contract, it is designated that the parties of the first part and second parts shall meet and fix a scale of prices on just and equitable terms to both parties, which shall be carried out in good faith by the parties hereto.

It is also understood that the members of the Well-Drillers' Union shall have the preference in contracts and work whenever work is resumed.

This contract shall be submitted to each local assembly of the Producers' Protective Association, and to each district assembly of the Well-Drillers' Union, and when approved by two-thirds of said assemblies, such approval shall be given to the president of each assembly, and be binding on all.

Q. Mr. Webster, I call your attention to this provision in this contract:

There shall be a committee in each district, selected by the executive board of the local lodges, whose duty it shall be to keep a lookout for, and to endeavor to prevent the drilling of wells.

Has any action ever been taken under that clause of the contract?—

A. No, sir; there has been a man looking over the field to see what has been going on.

Q. There has been a man appointed then as a committee to keep a lookout?—A. Yes, sir.

Q. Has there been a man appointed by each lodge, or one for all the lodges?—A. I can not answer for anything outside of our own lodge. There has been a man appointed from my lodge for that purpose.

Q. Which is your lodge?—A. Bradford County and McKean County.

Q. Has there been any attempt to drill any wells in McKean County by any person or persons, so far as you have heard of it, without an order from one or the other of these associations?—A. I think there has.

Q. Since this contract was formed?—A. Yes, sir; that is, so far as I know.

Q. Has there been any well drilled or opened up or cleaned out in that county since the formation of this contract, except by the permission of one or the other of these associations?—A. I feel pretty positive that there has been.

Q. Have you so heard?—A. Yes, sir.

Q. That is the information you have?—A. Yes, sir.

Q. Has there been any attempt made to persuade or induce persons from attempting to drive a well or clean out a well there without such an order to stop?—A. Nothing more than getting them to join our union.

Q. That has been done, has it?—A. Yes, sir. They have been asked to join our union.

Q. And with the understanding that if they joined the union they would not continue work without the permission of one or the other of these associations?—A. Yes, sir.

Q. Have you heard, Mr. Webster, of the destruction of any well or of the apparatus used in drilling or cleaning out any well in McKean County since this agreement was formed?—A. You mean have I heard of the destruction of any property?

Q. Yes.—A. Yes, sir.

Q. Was that a case where the well was being driven or cleaned out?—A. No, sir; the rig was standing.

Q. Preparation was made to dig a well?—A. I don't know as the drillers were there.

Q. But the apparatus was there?—The rig was there. I understand the rig was there; I never saw it.

Q. Was it a case where no permission had been granted by these associations?—A. I don't know.

Q. But you understand there had been no permission granted?—A. Yes, sir.

Q. Was the rig destroyed?—A. As near as I can understand it the derrick was blowed up by some kind of compound.

Q. Some explosive was put under the dirt and it went skyward?—A. Yes, sir; as I understand.

Q. Has there been any other case of that kind anywhere within the field covered by this association to which you belong?—A. I have heard of another case—two of them.

Q. Where?—A. One near Oil City, and one near Emlington.

Q. Do you know a place called West Branch?—A. Yes, sir.

Q. Where is that?—A. It is a stream that runs through Bradford, and starts up above Bradford. It is west of Tona Creek.

Q. Have you heard of a man by the name of Leasure?—A. Yes, sir.

Q. Who had a leasehold right on the West Branch?—A. Yes, sir.

Q. Did you hear of the destruction of the derrick and apparatus where he was preparing to dig a well?—A. Yes, sir.

Q. I have a paper here, or a cutting from a paper, dated March 28. Is that about the time when the thing occurred, as you understand?—A. I can not say positively, but I think it was along about there.

Q. It has been about a week ago?—A. It has been more than a week ago; about two weeks.

Q. This paper puts the date as Monday night of last week.—A. I don't just exactly remember that it was a week ago last Monday night.

Q. Is that the occurrence of which you testified as having occurred in McKean County?—A. I understand that it occurred.

Q. That is the one about which you testify?—A. That is the one to which I have reference.

Q. I propose to read this so that the witness may state whether this statement of it is as he understood it :

[From the Daily Oil News, March 28, 1888.]

**MYSTERIOUS EXPLOSION.—GLYCERINE LETS GO AT NIGHT, REDUCING A RIG, BOILER, AND ENGINE TO DESTRUCTION.—THE AUTHOR OF THE DEED UNKNOWN.**

Bang! bang! bang! came a heavy report three times in quick succession Monday night at just six minutes to 11 o'clock from the direction of the West Branch. Some of the houses in the upper part of the Third ward were shaken as though a boiler had exploded in the adjoining lot. People ran to their doors to see what had happened and heard after the first explosion two more terrific ones.

It was learned yesterday morning that a rig belonging to Marion Leasure, and who else is not stated, had been completely demolished by what is supposed to have been glycerine, by some unknown parties. Mr. Leasure has been repeatedly requested to join the shut-down, but refused. He had just moved the rigging from a newly completed well to a place in the dense forest on Fuller's Brook, about 6 miles from this city, and had the rig up already to commence drilling. One charge was placed under the boiler, another under the engine-house, while the third was placed in the boiler, and the whole thing was blown into the smallest imaginable fragments. Everything was in the derrick preparatory to spudding, and all went up in the blast. The rig was over 3 miles from any residence and no one visited the scene until next morning. Mr. Leasure took the early train yesterday for Cleveland, not knowing the explosion had occurred. It was kept exceedingly quiet during the following day, and last evening scarcely any one knew what had been the cause of the explosion or the result. This makes the third rig blown up—recently one at Emlenton and one at Oil City, but this seems to have been the most complete job of the whole. F. E. Boden, of this city, is said to have an interest also in the well, and is also out of the shut-down movement, and he too is out of the city. It is unknown what the quantity was that caused each explosion, but it must have been an enormous charge to shake the windows 6 miles distant. James White, of this city, thinking it might be his boiler, took out his watch and found it to be just 10.54 when the first report was heard. In his language the whole rig was blown to —, boiler, engine, derrick, bull wheels, walking-beam, and all. Not even a good-sized piece of kindling wood was left.

[From the Bradford Era, March 28, 1888.]

**A WEST BRANCH EXPLOSION.—A TEMPORARY STOP PUT TO OPERATIONS UP THE WEST BRANCH.—A BOILER AND OIL-WELL RIG OWNED BY F. M. LEASURE TORN TO PIECES BY A SERIES OF EXPLOSIONS.—THE CASE SURROUNDED WITH AN AIR OF MYSTERY.**

About 11 o'clock Monday night three distinct explosions were heard by citizens in various parts of the town. Some thought a boiler had blown up, others attributed the shocks to thunder, while still others imagined the empty glycerine can was getting in its work. It was not until yesterday that the cause of the explosions became known. A boiler and derrick located on Fuller Brook, up the West Branch, had been blown to pieces.

F. M. Leasure holds, in conjunction with other parties, a leaseholder's right on certain lands in the Fuller Brook district. Some weeks ago he erected a rig in the vicinity of Freck's Mill, and let the contract of drilling the same to Messrs. Carmon & McKittrick. These gentlemen recently joined the Oil Well-Drillers' Union and suspended operations. Spudding has been started, but much work had not been done. The contract to drill, it is said, had been let to other parties. On Monday night some party or parties unknown visited the rig. About 11 o'clock the boiler and rig or portions of it took a trip skyward. As there were three explosions it is supposed that a number of shots were used. From the looks of things one shot was located under the boiler, a second under the jack-post, and a third under a corner of the derrick.

The first explosion was the loudest, and experts who heard the report at once declared that a boiler had gone up. Anyway the boiler and boiler-house was torn into fragments and scattered all over the adjoining country. The wreck of the boiler was complete in every detail. The jack-post was knocked out and the walking-beam tumbled from its position on the Samson post.

A corner of the derrick and a portion of the derrick floor were torn up and destroyed. Persons residing in the neighborhood of the explosion were very much startled. Windows were shattered and doors blown open. The supposition was that an unlucky shooter of glycerine had come to grief. When several of the frightened

inhabitants visited the scene of the explosion they discovered that the boiler and part of the derrick had been blown up.

Mr. F. M. Leasure left yesterday morning for Toledo, Ohio. A statement from an associate of that gentleman, and in reference to this matter, is to this effect: Mr. Leasure desired to drill a hole to the rock for the purpose of holding his lease, and that was his sole object in sinking this well. It was stated that he was acting in co-partnership with other parties in this city, but the latter deny that they held business relations with Mr. Leasure.

Oilmen when approached on the subject had various theories to advance, but the man or men who perpetrated the act are unknown, and the mystery surrounding the blow up will probably not soon be made public. As Mr. Leasure is out of town, his views on the case could not be obtained.

Q. Now, have you seen that statement before?—A. No.

Q. It appeared in the Daily Oil News. Is that a paper printed at Bradford?—A. Yes, sir; but I did not read it.

Q. After hearing that statement read of the facts in the case, does it agree with what was commonly reported as true in the community there?—A. No, sir; not altogether. I do not know of Mr. Leasure ever being invited to join the Well-Drillers' Union. I don't know of any such thing.

Q. You do not know of his being requested to join the Producers' Association, you mean?—A. I don't know anything about it.

Q. You do not know of him being asked to join your association?—A. No, sir. The parties reported this: That the boilers or engines were not blown up; it was the derrick.

Q. Two persons are named here, or a firm consisting of two persons, Messrs. Carmon & McKittrick. Do you know such persons?—A. Yes, sir.

Q. What is their business?—A. Contractors.

Q. For the digging of wells and cleaning out of wells?—A. Yes, sir.

Q. Can you give me their names?—A. I can give you Mr. Carmon's. We call him Cash Carmon. It is C. Carmon.

Q. Where does he reside?—A. In Bradford township.

Q. Not in the city of Bradford?—A. No, sir; not in the city. He resides in Bradford township.

Q. He lives in some village?—A. No, sir; he would get his mail in Bradford. His post-office is Bradford.

Q. It is asserted here that there were two other explosions, one at Oil City and one at Emlington. Are these the two you spoke of as occurring this winter?—A. Yes, sir.

Q. And they were also cases in which the machinery, or some part of it, was destroyed?—A. Yes, destroyed, I understood.

Q. You say that you are unable to state how much money has been paid by the Producers' Protective Association to the Well-Drillers' Union under this contract?—A. Yes, sir; I am, at present.

Q. Have you ever had any knowledge of it?—A. No, sir; not full knowledge of it.

Q. The money has not been paid to you as representing the Well-Drillers' Union?—A. No, sir. Do you mean money which I received?

Q. No. I mean before it was distributed among the members of the Well-Drillers' Union.—A. No, sir.

Q. This contract provides for a payment, or an advance, by the Producers' Protective Association to the Well-Drillers' Union of certain moneys?—A. That is it.

Q. My inquiry relates to that—whether you know what the aggregate has been?—A. I don't know; that is, I could not give you a statement now. I never figured it.

Q. Have you means of getting a statement?—A. I don't know whether I could or not.

Q. You see you are putting me in just this position, or rather you are putting the committee in just this position—you have asked the committee to excuse you from revealing the names of the officers of this association.—A. Yes, sir.

Q. Now, the fact as to how much has been paid under this contract I deem important, and I do not see that it will be feasible to excuse you from giving the names of the officers, unless you can show the figures, etc.—A. I presume they are in Mr. Goldsboro's books. You see there are different members that go on the producers pay-roll. It would be impossible for me to give a statement unless I got it from them.

Q. Has your organization a constitution?—A. Yes, sir.

Q. And by-laws?—A. We have a few by-laws. We have a constitution; yes, sir.

Q. Have you a copy of the constitution?—A. This is our constitution [handing the chairman a pamphlet].

Q. And this book you produce is the constitution and general laws regulating the entire Well-Drillers' Union?—A. Yes, sir.

Q. And its lodges?—A. Yes, sir.

Q. Has it been adopted by all your lodges?—A. It has. The constitution is as follows:

*Constitution and general laws of the Well-Drillers' Union.*

[Compiled by the general executive board, and adopted by the Butler Central District Lodge at regular meeting, November 29, 1887 —Published by the general executive board.]

PREAMBLE.

Believing it to be to the advantage of all those interested as drillers, tool-dressers, or contractors in and about the drilling of oil and gas wells to combine and thus provide a body through whom to speak and act; and hoping that by united action our rights can be honorably protected and defended and we can secure just compensation as the reward of our efforts, and that we may provide a means to contract with the Producers' Protective Association, we have organized ourselves into an order to be called The Well-Drillers' Union.

CONSTITUTION.

ARTICLE I.

SEC. 1. This order shall be known as the Well-Drillers' Union.

SEC. 2. The object of this union shall be the elevation of its members, the protection of their rights, and the procurement of fair and equitable remuneration for their labor and capital, and to this end to provide a head with power to negotiate, conciliate, and contract for the members of the union.

ARTICLE II.

SEC. 1. The members of this union shall consist of contractors, drillers, and tool dressers actually engaged in the business, who shall make application for membership on a blank form, to be prescribed by the executive board, and pay an initiation fee of \$1. If elected, they shall sign this constitution and take an obligation of secrecy and fidelity, as prescribed by the general executive board.

SEC. 2. When an application is presented, a ballot shall be taken upon the application; if not more than two black balls appear, their application shall lie over until the next regular meeting; if three black balls appear the applicant shall be rejected and an application from him shall not again be considered until after the expiration of two months. The member or members casting a black ball or balls (when less than three black balls) shall give his or their reasons, in writing, to the president, who shall read the same to the members, but shall not disclose the name of the member, and shall destroy the writing immediately after reading. The member or mem-

bers giving reasons for casting black balls shall not vote at the meeting which reconsiders original ballot. When any member casts a black ball and fails to give his reason to the president, as before provided for, it shall be the duty of the president to declare the applicant elected.

SEC. 3. The executive board of any lodge shall have power for the first month of its existence to elect and initiate new members.

### ARTICLE III.

The elective officers of this union shall be: A president, a first vice-president, a second vice-president, a recording secretary, a financial secretary, and a treasurer, who shall constitute an executive board of six, and shall be elected at the first meeting, and semi-annually thereafter at first regular meetings in July and January.

### ARTICLE IV.

SEC. 1. The president shall preside at all meetings and perform such other duties as he may from time to time be called upon by the union to do, sign all orders for money upon the treasurer, appoint all committees, and all officers not otherwise provided for.

SEC. 2. The first vice-president shall preside in the absence of the president, and perform such other duties as the president would perform, if present.

SEC. 3. The second vice-president shall perform duties of first vice-president, during his absence and absence of president.

SEC. 4. The recording secretary shall keep a record of all meetings, shall draw and sign all orders on treasurer, shall conduct the correspondence of the lodge, shall have charge of the property of the lodge not otherwise provided for.

SEC. 5. The financial secretary shall keep a correct account between the members and the lodge, collect all moneys due the lodge and pay same over to treasurer, taking his receipt for same.

SEC. 6. The treasurer shall hold all moneys belonging to the lodge, and pay therefrom all orders signed by the recording secretary and the president, and keep an account of all moneys received and paid out, and shall give bond, the amount and bond to be approved by the executive board.

### ARTICLE V.

SEC. 1. The executive board shall have a general supervision over the affairs of the union and perform such other duties as may be required of them by the union. They shall prepare and submit to the union a code of by-laws, which shall provide for and state time of regular meetings; how special meetings shall be called, and such rules and regulations as may be necessary for the government of this union not provided for in this constitution, and not inconsistent therewith; which by-laws, when adopted by two-thirds of the members present at a regular meeting, shall be equally binding as this constitution.

SEC. 2. The executive board of the union at Butler shall, until another is formed, as hereinafter provided, constitute the general executive board of the order, and shall be empowered to immediately proceed with the organization of unions in the following counties, viz: Washington, Allegheny, Clarion, Venango, Crawford, Warren, and McKean, of Pennsylvania, and Allegany County, N. Y., each of which in its own county, and in such territory as shall be by the general executive board attached to it, have jurisdiction.

SEC. 3. Each district as fast as organized shall elect one of its members of the executive board a member of the general executive board, who shall at once take his seat thereon, and as soon as three members have been added to the executive board of the Butler union, the board of nine shall not be increased, but as additional members are elected, commencing with the treasurer and in the inverse order of official precedence, said members of the Butler board shall be superseded until the board is full, when said general executive board shall be a distinct body from the Butler executive board.

SEC. 4. The general executive board shall call a general assembly, when a complete organization has been effected, and fix the ratio of representation to the same.

SEC. 5. The general executive board shall be the fiscal agent of the order and its executive arm, through which all dealings with the Producers Protective Association or with the public shall be transacted, and who shall have the charge, management, and control of all the business of the union; provided, however, that all agreements and contracts requiring the personal action of members for its operation shall be submitted for approval, and be approved, by two-thirds of the unions by a two-thirds vote.

## ARTICLE VI.

The appointive officers of this union shall be: An inspector, whose duties shall be to introduce candidates, examine all present at opening of each meeting, and report all present without the pass-word to the president, and perform such other duties as may be required by the union; a guard, whose duty shall be to guard the door, attend to all signals, to admit no one, except by direction of the president, and perform such other duties as may be required of him by the union.

## ARTICLE VII.

Members may be expelled, or suspended, for violation of the constitution or by-laws, or neglect or refusal to comply with the rules or regulations or for violation of secrets of this union.

## ARTICLE VIII.

The yearly dues shall be \$2, payable quarterly, in advance.

## ARTICLE IX.

This union shall elect delegates to the general assembly, when the same is called, and be subordinate to said general assembly, when properly constituted.

## ARTICLE X.

A benefit fund may be provided by the general executive board for the benefit of members out of employment. No member shall receive benefits who has not followed the business for one year previous.

## ARTICLE XI.

This constitution may be amended by a two-thirds vote of members present and voting at a regular meeting; *provided*, that notice of the proposed change shall have been given at the previous regular meeting, and shall have been submitted to the general executive board, and have been by them approved.

## GENERAL LAWS.

## ARTICLE I.

SEC. 1. It shall be the duty of each member of the union to assist a fellow member in obtaining employment.

SEC. 2. Each lodge shall keep a list of the names of its members who may be temporarily out of employment, and furnish the same, when called for, to the general executive board, or to the executive board of any local lodge who may call for men.

SEC. 3. Should any member undertake to instruct an unskilled workman in any branch of this craft, it shall be the duty of any member to report such member to the executive board of the district where the offense is committed, and they shall at once notify him that such proceedings can not be tolerated; and should he still persist in doing so, charges shall be preferred against him in the lodge where he belongs, and he shall be expelled from the order.

SEC. 4. Any member who may be convicted of a felony in the courts of the Commonwealth shall be expelled from the order, and can not again become a member thereof.

SEC. 5. It shall be the duty of all members of the order to render the officers and committees proper aid in the discharge of their duties to the order.

## ARTICLE II.

*Membership.*

SEC. 1. Membership shall date from time of initiation; admission by card or re-instatement and dues and other moneys shall be charged accordingly. No member shall be entitled to benefits unless he be in good standing.

SEC. 2. When a member or members of this order have violated the laws or constitution, charges may be preferred, in writing, signed by a member, stating the offense

clearly, when the officers shall investigate and take such further action as may be necessary in the case.

SEC. 3. A member making false charges against another shall be suspended for six months, and for a second offense he shall be expelled.

### ARTICLE III.

#### *Charges against officers.*

Charges against the officers of a local or central lodge must be signed by one member of said lodge, in good standing, and be submitted to the general executive board, who shall at once notify the accused of the nature of the charges, and cite him to appear before them and answer to the same; if found guilty he may be fined, suspended, or expelled.

### ARTICLE IV.

#### *Nomination and election of officers.*

SEC. 1. The regular election of lodge officers shall take place on the first regular meeting night in January and July, and shall be by ballot, separately. The president shall appoint three members not candidates, who shall act, one as clerk and two as tellers of election, who shall receive the votes and count them in presence of the lodge, and the clerk shall announce the result to the president, who shall declare the names of the successful candidates to the lodge. Candidates must be clear on the financial secretary's books up to and including night of election. The candidate receiving the highest number of votes shall be declared elected. Nominations shall be made one week prior to election.

SEC. 2. The officers-elect shall assume their respective duties at the next meeting night after election, when the retiring officers shall turn over to them all the books, papers, funds, etc., belonging to the union.

### ARTICLE V.

#### *Elective districts.*

SEC. 1. This order shall extend over and embrace the following-named counties, which shall constitute elective districts in the order named: First district—Butler, and that part of Allegheny County north of the Ohio River; second district—Crawford, part of Warren, and part of Venango County; third district—balance of Venango County, except Emlenton; fourth district—Clarion, part of Armstrong County, and Emlenton; fifth district—part of Warren, Forest, and Elk Counties; sixth district—Washington and Greene Counties; seventh district—Allegheny County not in first district, Pennsylvania; eighth district—McKean and Cattaraugus County; ninth district—Allegany, N. Y.

SEC. 2. Each elective district shall have one central lodge, which shall have jurisdiction over that district, and may establish local lodges therein as hereafter provided.

#### *Formation of local unions.*

SEC. 3. An application for charter for a local lodge must be signed by thirteen members of the profession, of good moral character; must be addressed to the president of the central district lodge; by him submitted to the lodge for approval; and then, if approved, forwarded to the general executive board at Butler, who shall issue charter and send organizer to establish the lodge. The regular charter fee shall be \$4, which, together with organizer's fee and expenses, shall be paid to the organizer. Each member shall sign the constitution and comply therewith.

### ARTICLE VI.

#### *Representation.*

SEC. 1. Each elective district shall be entitled to one member of the general executive board, as provided in section 3, Article V, of the constitution. Members of assembly shall be elected by the members of their respective district in lodge assembled, at such time as may be appointed by the general executive board, which election shall be fixed not later than the second week in January, and the corresponding date in July. The term of office of the first assembly shall be for six months. Election shall be by ballot,

**SEC. 2.** After election the delegates with proper credentials shall meet at the time and place designated by the general executive board, and shall transact such business as may be laid before them for the general good of the order.

*Compensation.*

**SEC. 3.** Proper provisions shall be made by each central lodge for the payment of transportation, and in addition each delegate shall be entitled to receive \$3 per day for each day's service while the assembly remains in session, and it is further provided that no session shall continue longer than five days.

*General assembly, organization of.*

**SEC. 4.** The delegates having met in the place appointed, the house shall be called to order by a member of the general executive board as speaker *pro tem.*, who shall appoint the three other members of said board, who must be present to act as a committee, who at once examine and report on the credentials of delegates present. A quorum of twelve shall constitute a legal house; that number being present and the credentials correct, they shall qualify at the speaker's desk; they shall then proceed to elect one of their number as chairman, who shall preside during the session, appoint a clerk, a doorkeeper, and such committees as may be needed.

*General assembly, function of.*

**SEC. 5.** The general assembly shall constitute the legislative body of the order; they may amend old laws and enact such new ones as may be needed from time to time. All such enactments must be approved by a two-third vote of the general executive board, and all measures of vital interest to the members of the order must be submitted to the lodges, as provided in section 5, Article V, of the constitution.

*Eligibility.*

**SEC. 6.** Candidates for assembly must be clear on the secretary's books, and must be fully qualified to perform the functions of the office to which they aspire, to the satisfaction of the lodge they represent.

**ARTICLE VII.**

*Reports of secretaries.*

The recording secretary of each lodge shall send a report every two weeks to the central district lodge of the number of strings of tools running belonging in his lodge and where working, the number of men working, the number idle, and how much work is being done by non-union men, and who for. And the recording secretary of the central district lodge shall forward such reports, along with his own, to the general executive board. Any lodge failing to report for two months shall be considered in bad standing, and may be deprived of special benefits for three months next ensuing.

**ARTICLE VIII.**

*Benefit fund.*

**SEC. 1.** In order to create a fund for the relief of sick or injured members, it shall be required that each member pay to his union 20 cents per month. Any member who is sick or out of work for one month shall be exempt from payment until he recovers or finds work.

*Who may receive relief.*

**SEC. 2.** The case of a member who may be sick, or who may have been injured, shall be reported to the nearest lodge, when the relief committee shall at once examine the case, and if found worthy they shall render such aid as may be required, reporting same to the lodge at next meeting night.

It is hereby provided that this law shall not apply until the first regular meeting night in January, 1888.

*Traveling cards.*

The general executive board shall prepare a traveling card, which shall be issued on order to all central and local lodges, and no lodge shall issue or receive any other card. Any member of the order going from one locality to another shall provide himself with a card; said card shall bear a certificate of membership. A member having such card may present the same for membership in any other lodge, and no lodge shall have power to reject such card. A member shall not be entitled to receive such card unless he is in good standing and clear on the financial secretary's books. The charge for a traveling card shall be 25 cents.

## ARTICLE IX.

SEC. 1. Any officer elected failing to appear for installation shall be fined not less than 50 cents. Vacancies *pro tempore* may be filled by appointment of the president. When an officer, by reason of distant employment, finds it impossible to attend his lodge duties at least once a month, he may tender his resignation, and if accepted by the lodge, they must, at the next meeting night, elect a member to fill the vacancy during the unexpired term.

SEC. 2. Term of office shall be for six months, except in case of lodges organized after the second week in January, 1888. All such shall elect to conform hereto.

## ARTICLE X.

*Local lodges.*

SEC. 1. Regular meetings shall be held by local lodges at least twice a month. Special meetings may be called by the general executive board. Twelve members shall constitute a quorum for special meeting; at such meetings no other business shall be considered.

## ARTICLE XI.

*Fines.*

SEC. 1. Officers of central and local lodges failing to attend regular meetings of the lodge may be fined 20 cents; if they can show good reason the fines may be remitted.

SEC. 2. Any member of a lodge failing to report in person, or by card, at the last regular meeting in December and June, shall be fined 25 cents; satisfactory reason for failure may excuse.

## ARTICLE XII.

*Lodge supplies.*

The general executive board, through the recording secretary at Butler, shall furnish, per order of the central and local lodges, all necessary books and blank forms.

## ARTICLE XIII.

*Funds.*

The funds of each lodge shall only be used for legitimate purposes, and it shall be the duty of the treasurer to deposit in bank, in his name, as treasurer of such lodge, all moneys over \$30. All checks drawn against such deposit must be signed by him and countersigned by the president.

## ARTICLE XIV.

*Recording secretary, compensation of.*

SEC. 1. The recording secretary shall receive \$25 per term for his services, to be paid quarterly.

SEC. 2. Any recording secretary neglecting to prepare and forward the monthly report of his lodge, or failing to perform his duties, shall be fined \$1.

SEC. 3. Central and local lodges shall have power to make such by-laws as they deem necessary for their government, not conflicting with the constitution and these general laws; and these laws shall not be altered or amended except by the general assembly, and approved as provided in Art. II of the constitution,

**RULES OF ORDER OF THE SUPREME LODGE AND LOCAL LODGES.**

**Rule 1.** The president having taken the chair, the officers and members shall take their respective seats, and at the sound of the gavel there shall be a general silence.

**Rule 2.** The president shall preserve order and pronounce the decisions of the lodge on all subjects. He shall decide questions of order without debate, subject to an appeal to the lodge by three members; on which appeal no member shall speak but once, when the question before the lodge shall be: "Shall the decision of the president stand as the judgment of the lodge?" which question shall be taken by the lodge.

**Rule 3.** During the reading of the minutes, communications, and other papers, or when a member is addressing the chair, silence shall be observed in the lodge-room.

**Rule 4.** Any member who shall misbehave himself in the meetings of the lodge, disturb the order or harmony thereof, either by abusive, disorderly, or profane language, or shall refuse obedience to the presiding officer, shall be admonished of his offense by the president, and if he offend again he shall be excluded from the room by the reporter for the session and afterwards dealt with as the by-laws prescribe.

**Rule 5.** No member shall be interrupted while speaking, except it shall be to call him to order or for explanation.

**Rule 6.** If a member, while speaking, be called to order, he shall, at the request of the presiding officer, take his seat until the question of order is determined, when, if permitted, he may proceed.

**Rule 7.** Each member, when speaking, shall be standing, respectfully address the president, confine himself to the question under debate, and avoid personalities or indecorous language.

**Rule 8.** If two or more members arise to speak at the same time, the president shall decide who is entitled to the floor.

**Rule 9.** No member shall speak more than once on the same question, and not longer than three minutes, until all who wish to speak have had an opportunity to do so, nor more than twice without permission from the president.

**Rule 10.** No motion shall be subject to debate until seconded and stated from the chair; it shall be reduced to writing at the request of any two members.

**Rule 11.** When a question is before the lodge no motion shall be in order, except to close, to amend, to take a recess, to lay on the table, or commit, to adjourn, to divide, to postpone indefinitely, which motions shall have precedence as stated.

**Rule 12.** On the call of three members debate shall close and a vote be taken on the subject under debate; the member making the motion shall have the right of the closing debate.

**Rule 13.** Any member may call for a division of the question, when the sense thereof will admit it. A motion to strike out and insert shall not be admissible, except at the option of the mover.

**Rule 14.** No motion or proposition upon a subject at variance with the matter under consideration shall be admitted under cover of amendment. Before putting the question the president shall ask, "Is the lodge ready for the question?" when, if no member arises to speak, he shall arise and put it. After the president has risen to put the question no member shall be allowed to speak upon it. While the president is putting the question or addressing the lodge no member shall interrupt.

**Rule 15.** All questions, unless otherwise provided for, shall be decided by the majority of votes cast.

**Rule 16.** Communications may be presented through a member or by the presiding officer, and must be entered in brief in the minutes. The member first named on a committee shall act as chairman until another is chosen by the committee.

**Rule 17.** A committee can not be discharged until all debts contracted by it have been paid. On call of committees, all the reports thereof, signed by a majority concurring therein, shall be read from the recording secretary's desk by a member of committee or by the secretary.

**Rule 18.** When a motion is postponed indefinitely it shall not be acted on during that or the next stated meeting. A motion to reconsider may be received, if made by a member who voted with the majority. A motion to lay on the table shall be put without debate.

**Rule 19.** A motion to adjourn is in order after the regular business of the lodge is concluded. Questions of order not herein provided for must be determined by Cushing's Manual.

**ORDER OF BUSINESS.**

1. Opening the lodge.
2. Calling the roll of officers and members.
3. Reading minutes of previous meeting.
4. Calling list of absentees at previous meeting.
5. Payment of dues, fines, etc.

6. Proposals of candidates.
7. Report of committee on candidates.
8. Balloting for candidates.
9. Initiation of candidates.
10. Call for communications.
11. Are any sick?—out of work?
12. Does a brother know of work?
13. Reports of standing committees.
14. Report of recording secretary.
15. Report of financial secretary.
16. Accounts payable.
17. Unfinished business.
18. New business.
19. Good of the order.
20. Report of the treasurer.
21. Adjournment.

By Mr. BUCHANAN :

Q. This book that you produce purports to be the constitution and by-laws of the association known as the Well-Drillers Union?—A. Yes, sir.

Q. And you have stated that the persons composing that were the persons engaged in the drilling of wells?—A. Yes, sir.

Q. Is membership in this union limited to those who are engaged in that work?—A. Yes, sir; supposed to be.

Q. And is the membership in this union limited to those who are engaged in working in that business, or does it also extend to those who have contracts for the drilling of wells?—A. It is limited to all men who are contractors, drillers, or tool-dressers, and more especially to those who worked in 1887—who done work in the year 1887, or one year previous to 1888.

Q. What I wish to ascertain is, whether the membership is limited to the men who actually do manual labor or not?—A. A contractor, if he owns tools and ropes, is entitled to go into the order if he has not worked on wells. If he employs men and hires them and takes contracts for drilling wells, he is entitled to go into the order.

Q. I will ask the question in another form. Is the membership in this union limited to employers; are the workmen employed by those employers eligible to membership in this order?—A. Yes, sir; those who are drillers or tool-dressers, who work on wells or clean them out.

Q. The contractors you speak of are men who take a contract for drilling a well?—A. Yes, sir.

Q. And in the execution of that contract, they employ workmen, do they not?—A. Yes, sir.

Q. Are those workmen eligible to membership in this order?—A. Yes, sir.

Q. And the contractor as well?—A. Yes, sir.

Q. So that employer and employé, both, when engaged in the business of drilling wells or dressing tools, are eligible to membership?—A. Yes, sir.

Q. And are actual members?—A. Yes, sir.

Q. From both classes?—A. Yes, sir.

Q. Since the organization of this order, so far as you have testified as to your knowledge of such organization, has the drilling of wells increased or decreased as to number?—A. Since the organization was started?

Q. Yes.—A. To the best of my belief it has increased.

Q. What necessity was there found for the organization of this union?—A. The necessity was that this oil, that I spoke of before, was set aside

for the laboring class, and we organized for that purpose. There was a class of men who were not able to keep themselves. The work in the oil countries has been very light for a couple of years. On account of the low price of oil there has not been much doing, and what has been doing was cheap, and many men have been shut off from time to time, and are very poor, and are unable to keep themselves. We organized in order to get this, and at the same time to stand in in good faith with the producers and get their work when it was offered.

Q. How did the organization of these men into the union facilitate their procuring their share of the oil that had been thus set aside?—A. We consulted with the producers.

Q. Having an organization, you had your officers who could attend to that matter collectively for the whole body?—A. Yes, sir.

Q. Did it in any other way facilitate the men in procuring their share of the oil thus set aside?—A. Not that I know.

Q. Suppose this organization had not been formed, how would a man, thrown out of work, as a driller or tool-dresser, secure that portion of the oil?—A. That I cannot tell; I do not know.

Q. Do you know whether this organization was formed at the suggestion of the Standard Oil Company for the purpose of making it more convenient for them to transfer to the workingmen their share of the oil?—A. No, sir; I do not know.

Q. You said something about standing in with the producers. Please explain more fully to the committee what you mean by that?—A. I meant that we would stand in good faith with them; we would help them through; we thought it was a good cause.

Q. What was the cause that you thought was good?—A. Producers had organized and shut down to decrease the surplus oil.

Q. You say that it had organized to shut down. Please explain how that shut-down was in fact operated?—A. I do not know; that relates to the producers.

Q. You saw what went on in that section; what went on after the shut-down had been ordered?—A. They stopped drilling; that is all I know about it.

Q. Did they stop the production of any wells in any way?—A. I understood so.

Q. They could not stop the flowing wells?—A. I do not know as to flowing wells. There are no flowing wells near our section of the country now.

Q. They are all pumping-wells?—A. There may be a few flowing wells; but as near as I can understand it, they shut the production off of these pumping-wells and let the others flow.

Q. And your observation was that about the time of this shut-down the pumping stopped in that section?—A. To a certain extent.

Q. Did you understand the purpose of that shut-down?—A. As near as I could understand it was to cut off the production and to use up the surplus oil.

Q. Had oil reached a low figure?—A. I should think it had, about 60 cents or somewhere about there.

Q. Per barrel?—A. Yes, sir.

Q. And the purpose of the shut-down, the reduction of the surplus, was, then, to increase the price of oil?—A. Not that I know of.

Q. Why did they wish to stop the accumulation of the surplus?—A. That is further than I can tell. I am not a producer.

Q. Did you understand that they shut down for the purpose of lowering the price of oil?—A. No, sir; I am not very much acquainted with

it; I could not explain it thoroughly, but I will give as near an explanation as I understand.

Q. Very well.—A. There was about in the neighborhood of 28,000,000 barrels of oil. It cost a good deal to carry it, a good deal for storage, and a good deal of money. It was gambled on in the market every day; it gave the controlling interest to “bears” and made “bears” a great power to sell oil. The “bear” interest became so great that it was hard to keep oil up. It fluctuated very much. It got down from 90 to 60 cents and stayed there awhile. They might work it up again but it would come back again. But as near as I could understand it, it was to get a greater price for oil; that is as near as I know; I am not a producer; that is as near as I understand it.

Mr. BUCHANAN. I am asking for your general information upon the subject. I understand that you do not understand the inside workings of the Producers' Union. [Laughter.]

By Mr. SMITH:

Q. Have you any other unions outside of the districts you have named?—A. No, sir.

Q. The districts you have named are all in Pennsylvania?—A. No, sir; one in New York.

Q. I understand that one of the objects of the union is to prevent others not belonging to the union from boring wells in those districts. Is that so?—A. To prevent others?

Q. Yes.—A. No, sir; not anything of the kind.

Mr. SMITH. I thought the chairman had read something to that effect.

The CHAIRMAN. I read what the contract contained, which is as follows:

There shall be a committee in each district, selected by the executive board of the local lodges, whose duty it shall be to keep a lookout for, and to endeavor to prevent, the drilling of wells.

By Mr. SMITH:

Q. Exactly. You are aware of that agreement?—A. Yes, sir.

Q. It says, “prevent the boring of wells.”—A. That is to prevent, as near as we can, by good talk to some man to get him to join our union.

Q. Suppose he will not join the union?—A. Then, sir, we would let him go and drill all he wants to. We have no way of stopping him only by good, reasonable talk. We have ignored anything else of the kind always.

Q. How did it happen to these parties that after driving and drilling wells and putting up their machinery they found their machinery, etc., blown into splinters?—A. We are not accountable for that; I do not know anything about it.

Q. And yet you say you are an oath-bound secret society?—A. Yes, sir.

Q. And you are not permitted to divulge the names of your officers?—A. No, sir.

By the CHAIRMAN:

Q. Do I understand you to say there has been an increase in the amount and number of wells dug and cleaned out in that country since this organization has been formed?—A. I think there has been since the time we have organized.

Q. And yet you have not had a day's work in that time?—A. No, sir; not around our country. They have in Butler County and Washington County. I am in McKean County.

Q. There has not been in your county?—A. No, sir; not in our county.

Q. Where has this increase that you speak of been?—A. In Butler and Washington Counties.

Q. When did the increase occur?—A. I think the last couple of months; the last month or two months.

Q. There has not been increase enough to bring back the production of oil to anything like the quantity that was produced a year ago, has there?—A. I have not the figures, but I do not believe it has, to the best of my ability.

Q. You understand that by this contract and by the terms of the constitution and by-laws here one object for the formation of those two associations was to restrict production, do you not?—A. Yes, sir.

Q. Then the increase in the boring of wells has not increased the production?—A. I do not know that it has; I have not the figures.

Q. Now, are there various kinds of labor employed about this drilling of wells?—A. There are rig builders.

Q. Do you not employ some cheap labor?—A. Not on drilling; no, sir.

Q. In any way connected with the drilling of wells?—A. No, sir.

Q. You have no labor of that kind employed at all?—A. No, sir; it takes four men to build a well.

Q. To some extent they are skilled mechanics?—A. Yes, sir.

Q. What was their rate of wages in the year 1887?—A. Three dollars and \$3.50; some got \$4 a day—some drillers.

Q. After the drilling was done and the wells were pumped, was there then employment for ordinary day labor—unskilled labor—in connection with the wells?—A. Pumpers.

Q. Those people were not admitted to your union?—A. No, sir.

Q. About what proportion of the men who had the material necessary to drill and clean out wells, that were occupied in that business prior to the 1st of December, 1887, has since that time become members of this association of yours?—A. I should judge there was about four-fifths of them; not more.

Q. You think that there are twenty men out of every hundred that were employed and were actually engaged in that business before the 1st of December, 1887, who are not in this association?—A. I think probably there are; for this reason, that Ohio was drilling.

Q. I am talking about your field.—A. Those men have come back.

Q. They have come back into your field, have they?—A. Yes, sir; from Ohio.

Q. Have they joined your association?—A. No, sir; we could not take them in and give this money that was set aside for the workmen, because they were not out of employment at the time of the shut-down.

Q. What were they doing?—A. Drilling.

Q. Where?—A. Butler County and Washington County.

Q. Then this increase of the drilling in Washington and Butler Counties is being done by men outside of your organization?—A. Mostly altogether.

Q. Is it being done by members of the Producers' Association?—A. That I do not know. I think they are outside men; I believe they are; of course I can not testify positively. I do not really know who are producers in the association and who are not.

Q. I see that the membership of this union is restricted to the persons engaged in business in the light oil-fields. That means petroleum that can be fit for illuminating purposes; is not that it?—A. Yes, sir.

Q. Is there any portion of this field that you have spoken of that

produces petroleum which is not fit for use?—A. I think there is a little piece.

Q. Where?—A. Right below Franklin. I think there is a little strip there that produces heavy oil; just how much I do not know.

Q. You have referred to the process of cleaning out a well. Please explain what that is.—A. After a well is drilled there is what is called "short sand." When the well is cleaned out and pumped the sand caves in. In pumping the well it shakes the sand and it caves in. Then they go to work with a tube and ropes to clean it out again. They have to put the tube in and clean out the short sand to keep the oil clean. After they clean the sand out of the well the oil keeps good.

Q. I would like to know what you understand by this clause in the agreement:

This agreement, as to benefits and advances and the stoppage of the drill, shall continue in full force until the 8th day of September, 1888.

Now, does that mean that after the 8th day of September, 1888, you shall be at liberty to drill?—A. Yes, sir; as I understand it.

Q. Without losing any part of the advantages which you are to have under this agreement?—A. Yes, sir.

Q. Now follows this clause:

But may be terminated at any time upon the party of the first part—

That means the Producers' Association—

giving ten days' notice to the party of the second part, and no obligations to pay or make advances shall exist after the delivery of said notice.

What do you understand that clause to mean?—A. As near as I understand it, when they can not raise the money on this oil they notify us, ten days in advance, and they quit paying; that is as it is understood by us.

Q. Do you understand that if they gave that notice that they also are relieved from the obligation to pay at the end of the term of the contract, September, 1888?—A. Yes, sir; under these circumstances, providing there is no more money out of this oil to pay. That is the way I understand it.

Q. So that as to that oil the chances of making any profit on it, over and above the 62 cents, are to be taken by your association?—A. Yes, sir.

Q. And not by the Producers' Association?—A. Not by the Producers' Association.

Q. Is there anything in that contract which will prevent them from giving you that notice at any time, whether there is a profit or not on the oil?—A. Not that I know of.

Q. You understand, then, that they are at liberty to give the notice at any time, even though the oil should be above 62 cents?—A. Yes, sir.

By Mr. WILSON:

Q. Mr. Webster, as I understand, this union of yours was formed on the 8th of December last?—A. Yes, sir.

Q. Prior to that time you had no organization of this character?—A. No, sir.

Q. At that time the drilling and the pumping were both suspended, were they not?—A. Yes, sir.

Q. There was a shut-down, was there not, at that time?—A. Yes, sir.

Q. By the Producers' Association?—A. Yes, sir.

Q. And you, having information that they had set apart a large quantity of oil to pay the workingmen during the time that they were

shut down, formed this union in order to secure the full benefit of that and a fair distribution of it?—A. Yes, sir.

Q. That, I understand, is your testimony?—A. Yes, sir.

Q. You left it to the Producers' Association to decide when they should start again?—A. Yes, sir.

Q. And your object, as you stated, was to stand in with them and both parties work together to curtail the production of oil, and thus increase the market price of it?—A. No, sir; I did not say "increase the market price;" you misunderstood me.

Q. I do not mean to say that you ever said that, but I am getting at my understanding of your contract with the Producers' Association to limit the production of oil, and thus to make a better market of it all around.—A. Yes, sir.

Q. Mr. Webster, before this organization of yours was formed, in case of a shut-down how were the rights or the interests of workingmen taken care of?—A. There was never anything paid. There never was a very lengthy shut-down before; three months, I think, was the longest that I can remember.

Q. They had been shut down for as much as three months before this time?—A. Yes, sir; I think so.

Q. And during that time the men were thrown entirely out of employment?—A. No, sir; not all out of employment; there was some work in the field.

Q. But the great body were?—A. Most of them.

Q. How were they supported during that time?—A. They supported themselves.

Q. Was there oil set apart for them?—A. No, sir.

Q. How did you get information that the Producers' Association proposed to set apart oil for the assistance of the men?—A. I saw it in the papers.

Q. Notice was given in the papers, was it?—A. Yes, sir.

Q. And you organized, then, in order to secure that in an orderly way?—A. Yes, sir.

Q. And also, as far as possible, to cover the field and prevent any one breaking in upon your association and undertaking this work?—A. That is, by good talk; talking to them to get them to join our association.

Q. I am not going into the question further than that at present. You have stated already the three classes of workingmen that are included in your union. How do the other working people that are engaged on these wells, when active drilling and pumping is going on, get any relief during this period of suspension?—A. I do not know anything about the producers; I understand that they are making some arrangements, but what I do not know.

Q. If I recollect aright, the agreement provides that the second million barrels of oil shall be primarily used for that purpose, and you are to get the residue of the profits on that after the other laboring people are taken care of?—A. Yes, sir.

Q. Is there any organization among them by which they receive their share of the profits?—A. Not that I know.

By Mr. BUCHANAN:

Q. What did you say was about the aggregate membership of your union?—A. I do not know positively, but I think it is between 2,200 and 2,400.

Q. What would be your ratable proportion of that million barrels?—

A. It would be pretty hard to say; I could not figure it; only what they get for it.

Q. I am not asking about the price; I am asking about the quantity. What would be your ratable proportion of the million barrels of oil not in money?—A. If you will allow me to explain, I don't get any of that oil. It is simply set aside, as I understand, at a price of 62 cents a barrel, and we get the profit above that.

Q. What would be your ratable proportion of the profits, above 62 cents, on that million barrels of oil—I mean your organization?—A. I can not figure it.

Q. Who else would share in it?—A. In the two millions?

Q. In the profits on that million barrels over 62 cents?—A. The other million—why the pumpers, as I understand—the rig builders.

Q. About how many pumpers are there?—A. That I do not know.

Q. Can you approximate how many?—A. No, sir; I can not give any idea. I do not know what pumpers the producers have discharged on account of the shut-down; I have never heard of any estimate.

Q. Can you give me any approximation of the proportion of the profits over 62 cents a barrel on that million barrels that would come to the 2,200 or 2,400 men comprising your order?—A. If there was a price set on it above 62 cents?

Q. I am not speaking of the price; I am speaking about the proportion. How much of it would come to your order?—A. I can not say, because I do not know the number of men outside of us.

Q. Then what means have you to guard against being cheated in this provision?—A. We have not any. We have done business with them—at least I have, as far as I am concerned; that is all I can answer for—for twenty years, since 1865, and I have never got cheated by one of them yet.

Q. You generally got your share in one way or another?—A. I never had a contract that I ever drew with them in my life. I never had a producer to try to beat me.

Q. Do you know whether there is any one in your order who is possessed of the information as to the proportion you ought to receive?—A. No, sir; I do not know.

Q. Do you know who receives this money in behalf of your order?—A. The treasurer.

Q. Are you willing to give his name?—A. I can not, sir.

Q. Why?—A. Because I am obligated not to.

Q. Obligated how?—A. Obligated in that order.

Q. What is the necessity of this order being oath-bound?—A. It is simply a secret organization of laborers. We intend to exist after this is over.

Q. Then it is formed for purposes other than you have named?—A. It is for the purposes of protection to labor, the same as any other labor organization.

Q. So far as the purposes you have named are concerned you know of no reasons why it should be oath-bound, do you? So far as it is organized for the purposes of receiving its quota of profit on oil there is no necessity for any oath?—A. I think I mentioned in the first part of my statement that they were organized for that, and for the purpose of getting better prices when this was over.

Q. When what was over?—A. When this shut-down was over; when business was resumed again and we got into drilling.

By the CHAIRMAN:

Q. I think you testified that you were a contractor?—A. Yes, sir.

Q. How many men did you employ?—A. According to the difference in the times. For the last three years I have not employed over three men at once.

Q. So that you had only one gang?—A. Yes, sir; and worked myself.

Q. Before that time how many did you have?—A. I have at certain times employed as many as twenty men; it would depend upon the amount of work I had to do.

Q. The amount of work has diminished there as the price of oil has diminished?—A. Yes, sir; it has been falling off for the last three or four years or more. A few years I think we had over 400 wells drilling in the oil field. For the last couple of years I do not think there has been over 140 at the outside at any one time.

Q. About how many are they drilling now?—A. I think it is in the neighborhood of—I can not say positively; I did not see the last monthly statement; I think it is in the neighborhood of 60 or 70 wells drilling altogether.

Q. And of those how many are being drilled by persons connected with your union?—A. I do not know.

Q. Do you know of any that are being drilled by persons connected with your union?—A. Not that I am sure of; not in our part of the country. We have men working on gas wells. There may be some in Butler County; I do not know; I do not think there is.

Q. This surplus oil that you talked about was oil belonging, as you understand it, to the Standard Oil Company in its tanks at different points?—A. In the United oil-tanks.

Q. That is, in the Standard Oil Trust organization?—A. I suppose so; I do not know. It is in certificates; certificate oil.

By Mr. WILSON:

Q. These wells that you say are being dug in the counties outside of your oil field by the men from Ohio are for other than the Producers' Protective Association?—A. I think they are; yes, sir.

Q. They are keeping their faith with you, you suppose?—A. I believe so.

Q. Let me ask you what you understand by this; it is one of the by-laws of your union:

SEC. 3. Should any member undertake to instruct an unskilled workman in any branch of this craft, it shall be the duty of any member to report such member to the executive board of the district where the offense is committed, and they shall at once notify him that such proceedings can not be tolerated; and should he still persist in doing so, charges shall be preferred against him in the lodge where he belongs, and he shall be expelled from the order.

A. That is the law there. We tried to amend that, and it may be after awhile. A good many did not want the unskilled labor in the union, according to the amount that has been lying idle for the last few years.

Q. Then you took a pointer from the Protective Association; you united with them to diminish the supply of oil to go upon the market, and you united among yourselves to diminish the supply of labor in your particular kind of work?—A. We did not diminish the supply of labor.

Q. I mean the labor employed in your particular line of work?—A. That was looked at in this way: It has been hard work for men to get work for the last two years in the oil country. Many good men have sat still and have gone out trying to get work, and the men have gotten so disgusted with it that they made that law to protect them for a while

until some of them dropped out. It was necessary. It was talked over several times among us and we thought of changing it; a good many thought that it was unnecessary to change it for a year or so.

Q. That is exactly in the line of your other agreement?—A. These are our own laws.

Q. Is it part of your agreement among yourselves?—A. Yes, sir.

Q. You first agreed with the producers to stop the production of oil in order to diminish the supply of oil in the market?—A. We have nothing to do with the production.

Q. You agree with the producers that you will stop production; that you will not hire out to anybody else to drill or pump?—A. We can pump, but not drill.

Q. You agree with the producers, as I say, to stop the production of oil; then you agree among yourselves to diminish the supply of labor in your kind of work?—A. Yes, sir.

By Mr. BUCHANAN:

Q. Would you to-day take an advantageous contract to drill a well for a firm or for any person that was not a member of the Producers' Association?—A. No, sir; not without a permit from the Producers' Association.

By the CHAIRMAN:

Q. Do I understand you that you did not intend by this agreement to increase the price of oil?—A. As far as we are concerned we did not intend anything hardly; we never thought of it, to tell the honest truth. [Laughter.]

Q. You expected to be paid this money, did you not?—A. Certainly.

Q. At the time this contract was made what was oil selling for per barrel?—A. At that time I think it was somewhere pretty close to 80 cents; I forget exactly what it was, but I think it was somewhere close to 80 cents.

Q. How was it when the Producers' Association made their contract?—A. I think it was between 60 and 70 cents; I forget.

Q. The only way you could get any money out of it was by having the oil sold at more than 62 cents per barrel?—A. Yes, sir.

Q. So that you did understand that an increase above 62 cents per barrel was necessary in order that you should get any money, did you not?—A. It looks so.

By Mr. BUCHANAN:

Q. Does the 62 cents per barrel include the barrel also; the barreling?—A. The Standard Oil Company issues certificates.

Q. I am not speaking of certificates. You spoke about 62 cents a barrel; do you mean 62 cents for so much oil, or 62 cents for so much oil including the barrel?—A. Just the oil.

By the CHAIRMAN:

Q. This oil was, as you understand it, in tanks and storage?—A. In both.

Q. You spoke of a barrel of oil; you mean 42 gallons?—A. Yes, sir; I think that is a barrel.

Q. Did you state which of these district organizations you are a member of?—A. Yes, sir; it is Bradford; it is McKean County, Pa., and Cattaraugus County, N. Y., eighth district.

At this point the committee went into executive session.

After ten minutes spent in executive session the doors were re-opened, and the committee resumed its investigation.

## TESTIMONY OF I. N. BENNETT.

I. N. BENNETT sworn and examined :

By the CHAIRMAN :

Q. Where do you reside ?—A. Bradford, Pa.

Q. Are you a member of this Well-Drillers' Association ?—A. I am.

Q. Connected with which district ?—A. The eighth.

Q. What is your business ?—A. Contractor and driller.

Q. For how long a time have you been in the business ?—A. Since 1864.

Q. How many men do you employ in your business ?—A. It is owing to what time it is. Within a year or so I have not employed more than four men at a time.

Q. That is, one gang ?—A. Yes, sir ; and worked myself, too.

Q. Prior to that time had you employed more ?—A. Oh, yes ; I was running five or six at a time.

Q. You produced this contract that was put in evidence to-day ?—A. Yes, sir ; I brought it here from the lodge where it belongs.

Q. That contract is an original, as I understand it ?—A. That is an original contract.

Q. It was not executed by the officers of either association ?—A. I do not think it is.

Q. It is not signed by them ?—A. No, sir.

Q. There is no copy that is signed or sealed that you know of ?—A. No, sir.

Q. It was adopted by your various lodges under your rules ?—A. Adopted by my lodge.

Q. Your understanding is that it was adopted by the requisite number of lodges to make it binding upon this union ?—A. Yes, sir ; I understand it that way. I thought you meant had all the lodges adopted it.

Q. It is the contract under which the arrangement between your union and the Producers' Association is being carried on ?—A. Yes, sir.

Q. Have you done any work since that contract was signed ?—A. No, sir ; I have not.

Q. Not at all ?—A. Not at all.

Q. Nor any of the men in your employment ?—A. Nor any of the men in my employment that I know of. Now, I could not answer that ; it is going too far. I do not know whether some of them are in the union or not.

Q. I mean the men who were working for you directly before that.—A. Directly before that, I could not say. They are scattered off and are in different sections of the country.

Q. They are gone so that you do not know where they are ?—A. Yes, sir.

Q. Have any of them remained in Bradford ?—A. There is one in aBrdford.

Q. And he is a member of your lodge ?—A. He is a member of our lodge.

Q. And has he done any work since that contract was adopted ?—A. He has.

Q. For whom ?—A. For William Barnstein.

Q. Is he a contractor ?—A. Yes, sir.

Q. Was that done by permission of the lodge ?—A. Yes, sir.

Q. How much work did he do ?—A. Drilled one well.

Q. Anything more that you know of?—A. No, sir.

Q. Have you had any opportunity to go to work in drilling?—A. No, sir.

Q. Nor cleaning out a well?—A. No, sir.

Q. No application has been made to you?—A. None whatever.

Q. By anybody inside or outside of the association?—A. Neither inside nor outside.

Q. Have you received any money from this fund created by this agreement?—A. Yes, sir.

Q. How much have you received?—A. Seventy-five dollars, I think.

Q. And up to what time was that a payment of what was due you?—A. The 10th of March, I believe.

Q. Was that in full up to the 10th of March?—A. Yes, sir.

Q. That is, you have been idle, then, seventy-five days?—A. Yes, sir; seventy-five days.

Q. Since that time you have received nothing?—A. Since the 10th of March.

Q. Was that the first payment made under the contract?—A. No; we got paid the 10th of January, the 10th of February, and the 10th of March, which made the \$75.

Q. You got \$25 in each month?—A. No, sir; I believe I got \$15 one month, \$29 the next, and \$31 the next—I think it was.

Q. So that you were paid irregularly?—A. It was according to the number of days in the month.

Q. When did you join?—A. The 17th of December, I think.

Q. Was that the time your lodge was formed?—A. Yes, sir.

Q. So that you were one of the original members of it?—A. Yes, sir.

Q. Do you know these gentlemen, Messrs. Carmon and McKittrick?—

A. I am not acquainted with them; I have heard of them.

Q. Are either of them members of your lodge?—A. Carmon is, I think; I could not say for certain.

Q. Do you know when Carmon was taken into the lodge?—A. I could not say.

Q. Within what month was it?—A. I would have to say in February; I do not know positively; I could not say within what month; I have not paid any attention to that.

Q. You have heard of this explosion on the West Branch, as it is called?—A. Yes, sir.

Q. Did you hear the explosion itself?—A. No, sir.

Q. There is a clause in the contract providing that "any member of the Well-Drillers' Union who shall assist the above-named committee in the shut-in movement shall be entitled to actual expenses when so engaged;" do you know of any case in which that provision of the contract has been applied in any way?—A. Only that we have a man in that business.

Q. A man appointed from among your membership to reason with people who insist on digging wells?—A. Yes, sir.

Q. His duties do not require the use of nitro-glycerine?—A. No, sir.

Q. He is appointed under the provision which authorizes or requires the appointment of a committee or a member to keep a lookout and endeavor to prevent the drilling of wells?—A. Yes, sir.

Q. With the exception of appointing that member, has any action been taken by your lodge, or by you individually, or by anybody else, to your knowledge, to prevent the drilling of wells?—A. No, sir.

Q. Did you ever know of a case of any man's derrick and apparatus

being blown up in the oil region before the formation of this association?—A. I could not say that I do.

Q. You understood before you went into this association that a certain amount of oil had been set apart, the profits on which above 62 cents were to be employed to pay the laborers who were thrown out of employment by the shut-in?—A. I understand there were 2,000,000 barrels of oil set apart for the labor.

Q. You understood that what was set apart of that million barrels was the difference between 62 cents a barrel and what it might be sold for?—A. I could not say positively about the 62-cent part after I went into the organization. The other I had heard of.

Q. Had you talked with anybody about that matter before you went into the organization?—A. About joining the association?

Q. Yes; or forming it?—A. No one, any more than among ourselves.

Q. Those of you who were engaged in the business talked it over among yourselves?—A. Yes, sir.

Q. And you understood that in some way the benefit of these 2,000,000 barrels of oil was to be obtained through the formation of this association, did you not?—A. Yes, sir.

Q. Did you also understand that the Producers' Association had made a contract by which they would reduce the amount of oil brought to the surface, the production of the oil?—A. I did not understand the producers had the contract with any one.

Q. Did you understand that they had an arrangement among themselves by which that was to be done?—A. Nothing more than I would hear spoken of on the streets.

Q. That was one of the subjects that was discussed in connection with these 2,000,000 barrels?—A. Yes, sir.

Q. You also comprehended that the only way they could do that was by stopping boring wells and stopping cleaning out, did you not?—A. Yes, sir.

Q. Now, this particular business of drilling wells, or cleaning out wells, requires some skill and experience, I take it?—A. Yes, sir; it does.

Q. How many men, as you understand, are now in this union?—A. Anywhere from 2,200 to 2,400; I could not tell exactly.

Q. What proportion does that bear to the whole number of persons skilled and able to perform that labor in the field covered by that agreement?—A. That ought to be 90 per cent.; it ought to have been the whole of them for the amount we have got in; but we have not got them all in. Some are in that probably ought not to be.

Q. You think the actual number of men that are skillful enough to do this work in the entire country there does not exceed 2,400 men?—A. Not just around there; but if you take them all through the country, of course there are more.

Q. I mean in the territory that your union operates in?—A. I think it ought, when we had no more than four hundred wells driven.

Q. Can you explain to me why it was, if you have not been doing any work since this contract was made, that you were paid only \$15 on the 10th of January?—A. Yes, sir; because we had not been formed before that; that is the only reason I can give you.

Q. Since that time you have been paid at the rate of a dollar a day?—A. We have been paid at the rate of a dollar a day from the time we organized our lodge.

Q. What rate of wages did you get before that? What was the rate of wages before that for that kind of labor?—A. The last work I was doing was cleaning out wells, running my own tools. Of course I would get more wages than a man working by the day. I was getting \$12 a day for the use of the tools and myself.

Q. What did you pay the men?—A. I did not have any men. I did the work myself and they furnished one man.

Q. You knew what other people were getting; you knew the rate of wages generally through the district there?—A. Yes, sir.

Q. What was it?—A. They were getting \$3.50 a day; tool-dressers were making \$2 a day; some drillers were getting more than that and some less; and some tool-dressers were getting more and some less.

Q. By the tool-dressers you mean the men whose business it is to repair those tools?—A. To sharpen them.

Q. You owned your own apparatus?—A. Yes, sir.

Q. Boiler and pump?—A. No; I did not have to have them; just the tools and ropes.

Q. The boiler and pump were furnished by the owner of the well?—A. Yes, sir.

Q. You understand that the profits on 1,000,000 barrels of oil between 62 cents and what it may be sold for by the 1st day of November, 1888, is to be distributed?—A. Yes, sir.

Q. And that distribution is to be in addition to the \$1 a day?—A. No, sir; a dollar a day is to be deducted out.

Q. You are to have your share of it less what has been paid at the rate of a dollar a day?—A. Yes, sir.

Q. And upon that expectation you are receiving a dollar a day and lying idle?—A. Yes, sir.

Q. Rather than work and get \$12 a day?—A. No, sir; my \$12 a day I could not get at that time.

Q. Why not?—A. Because there was no work to be done.

Q. That is, the producers were no longer boring or cleaning out?—A. As a general thing they were not.

Q. So you took that element into consideration in accepting this instead of \$12 a day, that you could not get the work?—A. That I could not get the \$12.

By Mr. WILSON:

Q. How do you suppose they got at this price of 62 cents a barrel as the basis of the agreement?—A. That I can not answer.

Q. Do you know what the market price of oil was at that time?—A. About the time that 62 cents was fixed?

Q. Yes.—A. I do not know about the time 62 cents was fixed. I could tell you near about what the price was at that time.

Q. What was the market price for oil, say, about the 1st of December?—A. It must have been between 70 and 80 cents.

Q. What was the market price for a month earlier than that; say, about the 1st of November?—A. I am only guessing at this. It must have been in the neighborhood of 70 cents; somewhere along there.

Q. And you do not understand, then, why, 62 cents was put into the contract as the basis of the agreement?—A. No, sir.

Mr. WEBSTER here made the following explanation:

I would like to have it understood that Mr. Leasure has drilled one well since they shut down, since we have been organized, just before this rig was blown up, and had finished the well just before this. I

did not know that he was going to start this well at all. The rig had been standing there for three or four months, and we did not know anything about it. He had just finished one.

By the CHAIRMAN:

Q. He drilled one and the rig was standing there?—A. Yes, sir; we did not know that he was going to start this other well at all.

By Mr. SMITH:

Q. He drilled one well. Was that in the neighborhood of where this derrick was?—A. It was within  $1\frac{1}{2}$  or  $2\frac{1}{2}$  miles. I never was up there.

By Mr. BUCHANAN:

Q. Do you know whether he had a permit for that well or not?—A. I do not think that he was connected with the producers at all.

Q. Do you know whether he had a permit for the drilling of that well?—A. I think not; I am positive that he had not; I feel positive that he had not. The producers can tell better than I could.

Q. One thing you are certain of, and that is that you are not certain. [Laughter.] You can not be positive about it, that he had a permit?—A. I could not tell what the producers had; I do not know; but it was the understanding, as near as I knew, that he had no permit; that was the understanding amongst us.

At this point the committee adjourned until to-morrow morning at 10.30 o'clock.

---

SATURDAY, April 7, 1888.

The committee met at 10.30 a. m.

Present: The chairman, Mr. Smith, Mr. McKinney, Mr. Wilson, Mr. Breckinridge, Mr. Grimes, Mr. Crouse, and Mr. Buchanan.

### TESTIMONY OF DAVID KIRK.

DAVID KIRK sworn and examined.

By the CHAIRMAN:

Q. Where do you reside?—A. Bradford, Pa.

Q. What is your business?—A. Oil producer.

Q. How long have you been engaged in that business?—A. Since 1860; about twenty-seven years.

Q. All times in that locality?—A. No, sir; not continuous in producing. I have been a refiner and transporter; a pipe-line manager; in business in various ways in that time.

Q. How long have you been engaged in business as a producer?—A. Fourteen years continuously; the last fourteen years.

Q. Do you know of the existence of an association called the Producers' Protective Association?—A. Yes, sir.

Q. Is that the exact title of it?—A. Producers' Protective Association; yes, sir.

Q. Is that an incorporated company?—A. No, sir.

Q. A voluntary association?—A. A voluntary association.

Q. When was it formed?—A. During 1887, last year; it commenced, I think, about June.

Q. June, 1887?—A. I think that was about the beginning of it.

Q. When did it get completely organized?—A. About in September or October.

Q. Has it a constitution?—A. It has.

Q. Have you a copy of it?—A. I have.

Q. Will you produce it, please?—A. Yes, sir [handing the chairman a copy].

(Copy hereto attached and marked D K, No. 1.)

Q. I see by the terms of this instrument that there is to be a general assembly of the Producers' Protective Association and also local assemblies. Has it been organized upon that plan?—A. Yes, sir.

Q. Are there local assemblies?—A. There are thirty-six local assemblies.

Q. Will you state where they are located?—A. At different points in twelve counties; two in New York and ten in Pennsylvania.

Q. Will you name the counties, please?—A. Alleghany and Cattaraugus Counties, N. Y.; McKean, Warren, Forest, Crawford, Venango, Clarion, Butler, Allegheny, Washington, and Armstrong Counties of Pennsylvania. That, I think, constitutes all of them.

Q. Are you a member of the general assembly?—A. Yes, sir.

Q. Are you one of the officers?—A. I am one of the executive board.

Q. That is, the executive board of nine provided for in this instrument?—A. Yes, sir.

Q. How many members has this Producers' Association now?—A. I am not sure on that point; somewhere between 1,800 and 2,000.

Q. Has the general assembly a treasurer?—A. The executive board has a treasurer.

Q. Is that the officer who is designated here as an officer of the general assembly?—A. I presume so.

Q. Under the head of officers in this constitution there is a provision that the officers shall consist of a president, vice-president, secretary and treasurer, and an executive board of nine?—A. Yes, sir.

Q. Is there some one filling the office of secretary and treasurer?—A. Yes, sir.

Q. Who is that?—A. I am not at liberty to name him. I do not know that there is any objection, but we take an obligation to that effect.

Q. You take an obligation to what? To the effect that you would not disclose under oath—what?—A. That we would not reveal any business transacted by the association or the names of its officers, except such as come before the public.

Q. Is there any other reason why you should not give the names of these officers?—A. That is all; I know of no other reason. It is just a question of my obligation as a man.

Q. Mr. Kirk, you were one of the promoters of the formation of this association?—A. Yes, sir.

Q. Before pressing that point we will go back a little. These counties that you have named in Pennsylvania and New York include within their boundaries what is known as the oil-producing regions of Pennsylvania and New York?—A. Yes, sir.

Q. Who are eligible to membership in this association or any of the local ones?—A. Producers of petroleum and those engaged in industries incidental thereto.

Q. What do you mean by producers of petroleum?—A. Well, a person who has oil-wells and produces petroleum.

Q. And what do you mean by "industries incidental thereto"?—A. Well, dealers in oil—well supplies and refiners and parties who are engaged in the petroleum business whose interests are supposed to be with the producers.

Q. Then your association permits persons to become members of it who are not engaged in actually getting the crude oil out of the earth ?—A. Yes, sir.

Q. In fact, Mr. Kirk, are there any refiners members of your association ?—A. Yes, sir.

Q. Individual refiners or companies ?—A. Well, there are, I think, individuals. By individual refiners I mean a man that is not in a corporation. There are partnerships and things of that class.

Q. Are any corporations represented in your association ?—A. No, sir; no refining corporation; crude-producing companies are.

Q. That is, companies who are owning and operating wells ?—A. Yes, sir.

Q. I see by this constitution that the general assembly was required to hold its first meeting on the first Tuesday in September, 1887 ?—A. Yes, sir.

Q. Did it held a meeting at that time ?—A. Yes, sir.

Q. Has the general assembly held any meeting since ?—A. No, sir.

Q. There is a provision under the sixth article of this constitution requiring a statement of daily average production of each member to be furnished to the local secretary on the 15th of each month, and the local secretary to transmit such statement to the secretary of the general assembly on the 20th of each month ?—A. Yes, sir.

Q. Has that plan been carried out ?—A. No, it has not been carried out lately.

Q. Have any such reports been made ?—A. I think there have been partial reports. It has been tried to put it into effect, but it has not been successful.

Q. Has your general assembly filled all the offices provided for by this constitution ?—A. Yes, sir; all the offices that it was authorized to fill.

Q. The officers named are a president, vice-president, secretary, and treasurer, and an executive board of nine ?—A. Yes, sir; of which those officers constitute part of the nine.

Q. Then there are six besides those officers ?—A. There is a vice-president—four outside of the officers.

Q. There are five outside of the officers if the secretary and treasurer are separate officers. I thought they were the same. Has there been kept by the secretary a report of the proceedings of the assembly ?—A. Yes, sir.

Q. Now, has this executive committee had meetings ?—A. Yes, sir.

Q. Do you recognize this document as a report or circular issued by the executive committee of the Producers' Association [handing witness a paper] ?—A. Yes, sir.

(Marked Exhibit D K, No. 2.)

Q. As originally organized, had this association any connection with the Standard Oil Company or the Standard Oil Trust ?—A. No, sir.

Q. Was any member, either of the trust or any of the companies of that name, admitted to the Producers' Association ?—A. No, sir; they were barred by the constitution and the laws.

Q. Have any been admitted since ?—A. No, sir. Its primary object was to organize against the Standard Oil Company—to protect itself against it.

Q. In what way, in your opinion, did the producers who formed this association need protection against the Standard Oil Company ?—A. Because the Standard Oil Company had secured virtually a monopoly of the transportation, refining, purchase, and sale of this article.

Q. How did you expect to overcome or alleviate that condition of things by forming this association?—A. We proposed to refine and market our own product at that time; that is, the men who got it up.

Q. Was that the plan that was started on in June last?—A. I would just like to read you the object of the association at that time. [Reading:]

To include in one organization all producers of petroleum, and those who are engaged in industries incidental thereto, and known to be friendly to the producers' interests, in order that they may, by united action and all honorable means, protect and defend their industry against the aggressions of monopolistic transporters, refiners, buyers, and sellers of their product, in order that the producers may reap the just reward of their capital and labor, and to this end encourage and assist as far as possible the refining and marketing of their product and sale direct to the consumer by the producer.

That is the object of the organization.

Q. Has there been any effort of which you know, or in which you took part, looking to the same end before this organization was formed?—A. We had almost unitedly asked of the legislature of Pennsylvania to pass a law throwing their lines of transportation open to the public and compelling them to deliver the goods at any point upon their lines where the owners desired, in order that the independent refiners could get the goods, and encourage the growth of independent refiners; and also to fix their charges at reasonable rates, which were deemed unreasonable and unjust for transportation.

Q. What do you mean by the transporting lines of the Standard Oil Trust?—A. There is a system of pipe lines connected with all oil wells, that are known as the National Transit System, and they transport the oil; gather the oil.

Q. And transport it where?—A. Originally to railroads within reach; but latterly nearly all of it goes by pipe lines, called "through lines" to New York, Philadelphia, Baltimore, Cleveland, and Pittsburgh; I believe that is all.

Q. Under the operation of those pipe lines could not oil be taken out except at the terminus of the line?—A. No, sir. They threw every obstacle in the way of reaching a railroad or getting where an independent man could get it.

Q. Then you had applied, as I understand it—the gentlemen who are now connected with this Producers' Association had asked the legislature to compel the Pipe Line Company to deliver the oil at other than the terminals of these pipe lines?—A. Yes, sir; they virtually had no terminals except at their own lines.

Q. And being defeated in that project?—A. (Interrupting.) We proposed then to market our own product.

Q. And being defeated in that project, you began this organization?—A. Yes, sir.

Q. You never have, as I understand the situation, refined any oil?—A. No, sir.

Q. After this organization was formed, was any negotiation entered into between it and the Standard Oil Trust?—A. Yes, sir; after a great many plans and schemes had been proposed it was deemed best to appoint a committee to wait on the Standard and see what they would do before we would go into a fight. We found that we would have trouble to get capital and means to construct those lines.

Q. Was such a committee appointed?—A. Yes, sir.

Q. Were you a member of it?—A. No, sir; I was not.

Q. Has it reported to the executive committee?—A. Yes, sir; reported to the assembly,

Q. Where was the negotiation conducted, at Bradford or New York, or where?—A. It was at Saratoga and Niagara Falls. I was not engaged in the negotiation originally; I was not one of that committee.

Q. Did you take part in the negotiation?—A. Yes; at a later date, in making a final contract, etc.; yes, sir.

Q. There was a contract entered into finally?—A. Yes, sir.

Q. When was that done? When did the negotiation reach a point?—A. I believe some time in September last.

Q. Was the contract reduced to writing?—A. Yes, sir.

Q. Have you it, or a copy of it?—A. No, sir.

Q. Do you know where that agreement is or where a copy of it can be obtained?—A. I think there is a copy of it in this room, probably.

Q. Not in your possession?—A. No, sir; I am not custodian of any papers. I might say that the Standard attributed all our troubles to existing stocks over supply; that we had a large stock on hand that was deteriorating in value—carried at vast expense that competed with us as producers, and until that was got out of the way we could not hope to get a fair price for our goods; and they convinced our committee, and finally the committee convinced our assembly, that that was the trouble, and the best course was to get rid of that trouble first and take up the refining and marketing of our goods afterwards, and a contract was entered into with the Standard. I can state about what that contract is.

Q. I was just going to ask you to state the substance of it, as originally made?—A. There was about 31,000,000 of oil on hand at that time.

Q. Thirty-one millions of what?—A. Barrels.

Q. Unrefined oil?—A. No; crude oil; 31,000,000 barrels. When they said that must be got rid of, we said, "What will you do if we stop our production with those stocks? It will enhance their value, and if we stop work we ought to get the benefit"; and we asked them to give all of that stock that they owned to us at the then market price. After a good deal of negotiation and trouble they finally said they only had 10,000,000 of this 31,000,000; that the 21,000,000 was owned by other parties, and that they would give us one-half of that, which, by this contract, they agreed to do; agreed to give us 5,000,000 at 62 cents, the price when the contract was made—the market price, to be held on our account, and to be sold during the year—we on our part to agree to reduce our production during the year 17,500 barrels a day. If we showed at the end of the year that we had reduced our production by 17,500 barrels a day, then we were to get the profits, whatever they might be, on that oil; that was, to sell it at our pleasure.

Q. The difference between 62 cents and whatever it sold for?—A. Yes, sir; less storage, fire losses, and insurance. We were to sell it at our pleasure, and as it was sold to give them an order for the oil. The oil was to be deposited in a trust company.

Q. By oil, you mean certificates?—A. Yes, sir; profits as received so deposited, and at the end of the year if we had shut in, on this proportion we were to have those profits. We had to do it for three months before this oil would be set aside and considered as for our benefit.

By Mr. CROUSE:

Q. Excuse me, Mr. Chairman, but I would like to ask a question just there. Were you to limit your production to 17,500, or by 17,500?—A. No; we were to cut off the production to that extent.

By the CHAIRMAN:

Q. To limit it by 17,500 barrels per day?—A. And whoever limited this production was to get his proportion pro rata for the number of

barrels shut in. Some shut in a half, some one-quarter, some one-third, and so on, as their circumstances would warrant, and the number of barrels per day that is shut in is divided pro rata among those who have done it, and they reap the profits in proportion.

Q. Now, you paid nothing to the Standard Oil Company and gave it no consideration for the transportation of these 5,000,000 barrels of oil other than the agreement to reduce the production to the amount you have named?—A. That is all; yes, sir.

Q. Now, was there a statement or agreement negotiated between you and the Standard Oil Trust in relation to the giving up by them of a further quantity of oil?—A. Yes, sir; of that 5,000,000 we immediately appropriated 1,000,000, or the profits thereon, for the benefit of labor that would be injured by the shut-down movement, and we thought we could wring another million out of the Standard for that purpose, and we went to work to do it and done it, and they gave us another million which made the 2,000,000 which is set aside.

Q. Now, when did you get from the Standard the agreement to set aside this 1,000,000 barrels of oil for the benefit of labor?—A. I think probably that was in October; somewhere along there.

Q. When was the shut-down to begin?—A. It was to begin whenever we got the requisite amount subscribed. We expected to do it by the 1st of October, but did not succeed until the 1st of November, when it was declared to be binding on all and went into effect.

Q. That is November, 1887?—A. Yes, sir.

Q. Since that time has there been a diminution of production in the region occupied by this Producers' Protective Association?—A. Yes, sir.

Q. Beginning with the first day of November?—A. The first day of November; yes, sir.

Q. And that still continues?—A. That still continues.

Q. Now, will you state how that was brought about; what methods were used to create or cause this diminution?—A. Well, we went up and down through the country begging.

Q. I do not mean that; I mean the practical mechanical method used. What did you do; stop pumping, or plug up your wells, or what?—A. We began to limit our production; shut down, some entirely, some partially.

Q. What do you mean by shut down?—A. In the case of a flowing well we just simply turn the cock.

Q. You turn the stop-cock?—A. Yes, sir.

Q. A portion of your wells are not flowing.—A. Well, we stopped pumping, and those parties just pumped enough to make their limit—pumped the wells partially. There was no shut down entirely.

Q. As I understand this business, prior to the shut-down you were in the habit of cleaning out, or doing something which you call shooting, I suppose?—A. Yes, sir; that was to increase the production.

Q. You say that was to increase the production?—A. Yes, sir.

Q. Was there anything of that sort done?—A. Yes, sir; there has been some of it done.

Q. As much as heretofore?—A. For instance, a great many parties were unable or unwilling to shut in and we got them to agree to sign another contract not to increase or to interfere with those who were sacrificing them, and agreed not to shoot any or to clean out.

Q. You say there has been some shooting?—A. Oh, yes; we did not get all the world in.

Q. Has there been any among members of your association?—A. No; there may have been some individual cases, but very few.

Q. I have not had time to read this constitution and by-laws through, but is there a restriction in them somewhere requiring members of the association not to shoot or clean out or increase the production of their wells except by permission of this executive committee or of the local assembly?—A. No, sir; not in the constitution. All that has been a matter of voluntary signing of contract.

Q. Then there is a contract?—A. We have, as I said, from 1,800 to 2,000 members; we got something less than 1,000 to sign a shut-in; the others were not compelled to shut in. We got some more, I do not know how many, to agree not to increase; the others have not been prevented from increasing, and so on. It was a matter of individual contract and agreement.

Q. So that there exist individual contracts between the members of this association, or signed by members of this association, relating to this matter?—A. Yes, sir; and signed by men who are not members of the association; many such.

Q. But agreeing with the members of the association?—A. Agreeing to such contracts as they might sign.

Q. Are those contracts in your possession?—A. For instance, there were what we regarded as standard allies. They were barred by our constitution, but they were willing to go into this, and while not members they signed those contracts.

Q. Are those contracts in your possession or under your control?—A. No, sir.

Q. Have you any copies of them?—A. I have not.

Q. About how many signers are there to these different kinds of contracts?—A. The shut-in contract, according to my recollection, is signed by nine hundred and eighty-two, I think, or nine hundred and ninety-two, pretty near a thousand; that is the shut-in contract; the others I do not know. There was another contract, an agreement not to drill new wells during this time. There are three contracts in all.

Q. How many signers were there to the third contract not to drill new wells?—A. That I do not know.

Q. Was that made with the members of the association—among members of the association?—A. Yes, sir; as well as outsiders.

Q. By and with the advice and consent of the general assembly or the executive committee?—A. Yes, sir.

Q. Was that part of the plan?—A. Yes, sir; those contracts all originated in the general assembly.

Q. Now you have said something of a surplus or an alleged surplus of 31,000,000 barrels; I do not know that you called it surplus, but stock on hand?—A. Yes, sir; stock on hand.

Q. That meant oil that had been pumped up and delivered in a crude state to some of these transportation companies?—A. Yes, sir.

Q. And was in store there in the tank or in the pipe lines?—A. Yes, sir.

Q. And for which certificates had been issued?—A. Yes, sir; for a large portion of it.

Q. The Standard Company, as I understand it, claim that they only owned 10,000,000 barrels of this?—A. At that time; yes, sir.

Q. Was the whole of it in their possession?—A. No, sir.

Q. Well, what proportion of it?—A. Well, probably 27,000,000 of 31,000,000; that is my recollection; perhaps 28,000,000. I could give the figures if I had a little time. I do not know whether I have

them here or not. (After examining a paper the witness continued.) In September I find there were 28,329,702 barrels in their possession.

Q. Out of the 31,000,000?—A. Yes, sir.

Q. And for which they had outstanding certificates?—A. Yes, sir; and probably there was another 1,500,000 in the hands of their ally, the Tide-water Company.

Q. This oil was represented by outstanding certificates, was it not?—A. A certain proportion of it; not all. At that time there was represented by outstanding certificates 20,959,000 barrels, about 21,000,000.

Q. The Standard and its ally, as you call it, had how much in September?—A. About 29,500,000.

Q. Of 31,000,000?—A. Yes, sir.

Q. And where was the rest?—A. In the hands of other pipe-line companies.

Q. Some of the smaller companies?—A. Yes, sir.

Q. Is there any other pipe line from this region to any of the principal markets that is not controlled by the Standard Trust?—A. No, sir; that is, there is the Tide-water to Philadelphia that I have understood signed a contract. They act in conformity and as partners of the Standard Oil Company, and prorate the production between them; I know that much.

Q. This small amount that was not included in the Standard Oil possessions was in the local lines, I suppose, and tanks of the smaller lines running through that country?—A. Yes. I will go further than that. There are two more lines owned by the Standard—the Southwest Pennsylvania and the Magdsburg. They are Standard companies which I did not think of. I would guess that within 500,000 of the 31,000,000 barrels was under the control of the Standard Oil Company; you might virtually say it was all under the control of the Standard Oil Company, that is, in possession of their tanks and systems. The other would be too trifling to talk about.

Q. Now, can you give me a statement to the latest date that you know of as to the amount of oil in stock at the present time and down to as late a date as you have?—A. I think about 26,000,000.

Q. At what date?—A. At the 1st of April.

Q. First of April of what year?—A. This present year.

Q. Did you go to work under this contract to reduce the production of oil?—A. Yes, sir.

Q. What has been the average reduction; daily reduction?—A. Well, I would say probably 25,000 barrels a day; 25,000 to 27,000 barrels a day; well, perhaps not from the 1st of November, but from the 1st of December I would say 25,000 barrels as an estimate.

Q. Has that reduction come from and as the result of these contracts?—A. Largely. There has been a natural shrinkage. Our shut-in has probably taken 19,000. The other is natural shrinkage, a part of it caused by the refusal to drill wells.

Q. That is, the wells produce less?—A. Yes, sir.

Q. And under your contract will continue to produce less unless cleaned out?—A. Yes; but many of them are being cleaned out. There are quite a number not in this arrangement. And notwithstanding the cleaning out and all that they decrease still. All wells decrease.

Q. I take it, without seeing these contracts, that they provided for a reduction of about so much; for each person who signed the contract stipulated how much he would reduce?—A. Yes. how much he would reduce a day.

Q. What was the aggregate of those contacts?—A. On the shut-in contract I think we reduced about 17,000 barrels.

Q. And in addition to that there was the provision of the contract that no wells should be dug and wells should not be cleaned out?—A. Yes, sir.

Q. And the natural tendency of the performance of that contract was to still further reduce the product?—A. Yes, sir.

Q. Now all the oil produced in this country is of a quality sufficient to make illuminating oil, is it not?—A. In this field you mean?

Q. Yes, sir.—A. We have a lubricating oil which is not suitable for illuminating purposes.

Q. Please explain the difference.—A. One is heavy and the other is light.

Q. Which is the heavy?—A. The illuminating oil is light. It has much less specific gravity. The heavy is the lubricating oil.

Q. And can not profitably be made into illuminating oil?—A. No, sir.

Q. The price in September, when you made this contract was 62 cents, was it not?—A. Yes, sir; on the day when the preliminary contract was made the market happened to be 62 cents. It had been down to 56 cents a short time before.

Q. State, please, from your experience, what it cost, averaging it, to bring a barrel of oil into the pipes?—A. Our estimate, made by the association after a careful examination, was \$1.15.

Q. When was that made?—A. This year. During the last two or three months.

Q. And in making it what did you include?—A. The cost of the wells and the cost of running them, and the shrinkage, etc.

Q. What do you mean by the cost of the wells? Do you mean the cost of putting them down?—A. Yes, sir; the drilling and the territory which has to be purchased or leased, and the equipment, engines and boilers, tubing, sucker-rods, and all the paraphernalia necessary to run a well. We estimate the cost at \$1.15 the past year. That was sold at an average of 66 cents, and we estimate that we lost over \$10,000,000. We were \$10,000,000 poorer at the end of the year than at the beginning. We were giving it away for nothing and approaching bankruptcy.

Q. Were you ever connected with any company or organization in this oil business before your connection with this Producers' Association?—A. Yes, sir, and I had been, as I stated, a refiner. I had a refining company, but was frozen out. I started a pipe-line company and had to sell that out to escape ruin.

Q. Did any company with which you were connected ever make any statement about the cost of the production of oil—any public statement that you recollect of?—A. I am president of a producing company, and we have made those statements annually—not this last year, but previously.

Q. Did you in any year within the last few years make a statement from any of your companies fixing a price at which oil could be produced at a profit at 40 cents?—A. No, sir, I did not.

Q. Do you know a company known as the Union Oil Company?—A. I do.

Q. Were you ever a member of that company?—A. No, sir.

Q. Do you know or did you ever hear of any of the dividends declared by that company?—A. By the Union Oil Company?

Q. Yes.—A. No, sir.

Q. You never heard anything about that?—A. No, sir; well, I do not

know, I believe I did. I believe 8 per cent. annually. I think I heard that.

Q. When?—A. I do not know when the company declared its last dividend.

Q. What is their business?—A. Producing oil.

Q. Did you ever hear of their declaring dividends as high as 50 per cent.?—A. No, sir; I never did.

Q. Did they declare a dividend last year?—A. I am not sure, but I think they did. I will talk about my own company in that connection.

The CHAIRMAN. Oh, just answer the question—that is all.

The WITNESS. Most of us have been declaring dividends out of our plant. Our plants are getting less, but we have to be supported; we have to live.

Q. Has there been a considerable change in the amount produced between last fall and this winter?—A. Yes, sir.

Q. I see a statement here that the average daily production in October, 1887, was sixty-five thousand and odd barrels; and in January, 1888, was thirty-seven thousand and odd barrels. Are those figures correct?—A. I think so; yes, sir.

Q. Now you have stated that the 2,000,000 barrels were set aside for labor?—A. Yes.

Q. What labor, what classes of labor?

The WITNESS. Will you please excuse me before leaving that question about the 40 cents?

The CHAIRMAN. Certainly, you may make any explanation you desire.

The WITNESS. From 1878 to 1884 we had wonderfully prolific territory. We could lay out and locate wells like rows of corn, and every well would be a success. This was how we accumulated these large stocks, reaching at one time nearly 40,000,000 barrels. For four years we have been unable to find any such territory. In the former time I speak of I do not think there was over a half per cent. of failures. That is the character of territory that we have now to produce out of, and the old stocks are now competing with us out of this kind of territory, and if dividends were declared formerly it was on that class of territory. I think my company earned 50 per cent. one year.

Q. At what price per barrel?—A. Well, allowing about \$1. Every year for four years we have been getting less oil and had to sell it at a less price. So if there was any estimate of 40 cents for cost it referred to a past time, and not the present.

Q. You reached the lowest price in 1887, did you not?—A. Yes, sir.

Q. The surplus stock four years ago was 27,000,000, was it not?—A. Yes, sir.

Q. And in 1887, 31,000,000?—A. Yes; it was the old stock competing with us on inferior territory.

Q. The use of kerosene oil, refined oil, throughout the world has not diminished any, has it?—A. No, sir; but we would be all driven out of the business at the price. We received on an average in 1887, 66 cents; we got 22,000,000 for what cost us 33,000,000.

Q. I want to know if you can give me any explanation why the decrease of production and increase of use should not have helped you on the price?—A. It should have; but those old stocks are carried on and affected the sales.

Q. Who carries those stocks?—A. Previous to this new territory being discovered we had had high prices—\$2 to \$5 a barrel; and the hope of the speculator was that that time would come again. But the

period of depression lasted too long, and they were all ruined, and the oil companies were about ruined, for the average barrel of oil will eat itself up in four years. If you pay the rates of storage and interest in four years you would have nothing, so that men have ceased to buy this oil or to carry it.

Q. These facts were known to you when you formed this association?—A. Yes; and we formed it to remedy them.

Q. As I understand, you formed it to get a better market for your oil?—A. We thought the oil companies were getting more than their share, and that the price the world was paying for the refined would still compensate us if we got our share.

Q. What difference between raw and refined oil will show a profit in the business?—A. That I could not answer on the spur of the moment.

Q. What has been the price of refined oil—the average price—for 1887?—A.  $7\frac{2}{5}$  cents for refined oil.

Q. That was the price per gallon?—A. Yes, sir.

Q. It is not given in barrels?—A. No, sir. That is in gallons.  $7\frac{2}{5}$  cents was the average price in New York, barrel included, package and everything for export being paid by the exporter. We delivered to him for  $7\frac{2}{5}$  cents.

Q. Was that the price throughout the United States?—A. No, sir; simply for export.

Q. What was the price for domestic use?—A. I guess you will find it 50 or 60 cents out in some parts of the country—Texas, for instance.

Q. In the foreign market have you any competition?—A. No, sir; at least Mr. Brewster, vice-president of the Standard Oil Company, told us we have not.

Q. Oil is produced in other countries, is it not?—A. He stated he could get us 4 cents a gallon more for the refined oil just as easy as what he was getting, and for every one-eighth advance on the refined he could get 4 cents a barrel more for the crude.

Q. Every eighth on what?—A. Every eighth of one cent a barrel. Add the 3 cents to the price it was and that would bring our oil to 64 cents; he could get that as easy as the 62 cents. He stated that the foreign importer looked over our stocks, and it was idle for them to advance the price as long as the stocks were as they are. That is the way he put it. Three-fifths of all our products in 1887 went to foreign countries.

Q. What other class of labor was there for you to take care of besides the people who are connected with this Well Diggers' Association?—A. There are pumpers and rig-builders, tank-builders, laborers, etc.

Q. These were people resident of the territory in which your association was located?—A. Yes, sir; it was arranged among the members of our association that each individual member would not discharge any one if he could help it. An effort was made not to discharge any one.

Q. Has any organization been formed by these laborers other than the Well Diggers' Association?—A. I have heard and seen in the papers of such an organization; but I do not know personally.

Q. So that the relief to labor not included in the Well Diggers' Association has been a personal matter to each laborer?—A. Yes, sir.

Q. And outside of the association the relief afforded to labor has been furnished to individuals?—A. Yes, sir.

Q. About how many men have been furnished any relief from the proceeds of the sales of this oil, not connected with the Well Diggers' Association?—A. The different assemblies have considered the wants

of the men from their immediate territory. All have sent in their names, and we have entered into a contract with the Well Diggers' Association, but have not had any opportunity of knowing the exact number.

Q. You must have formed some estimate of how many would be benefited before you made the contract? You must have had some idea of the number of people to be relieved?—A. No; we thought the laborer ought to get a share of the benefit. If they suffer, we suffer. They ought to get their share, and we arranged to give them one-third without regard to pay. It was intended not as a charity, but as a dividend. Steps were taken subsequently to ascertain who were entitled to it.

Q. And those steps were taken through the officers of your association?—A. Yes, sir.

Q. Who were the representatives of the Standard Oil Trust with whom you conducted your negotiations?—A. Mr. Brewster and Mr. Archibold.

Q. Are the members of your association sworn to secrecy?—A. I think you might regard it as an oath. I so regard it. It was what you might call an obligation.

By Mr. WILSON:

Q. Mr. Kirk, where are the oil fields of the country, generally?—A. They are in those counties I have spoken of; that is, the Pennsylvania field. It extends up into New York.

Q. I observe that in this statement of your executive committee there are two fields, one called the White Sand field and the other called the Bradford and Allegheny oil fields?—A. Yes, sir.

Q. Are there any other?—A. We have the Maxwell field, for instance, and some little in West Virginia. Well, they might be regarded as white sand too.

Q. You have been a representative producer of oil since 1866?—A. 1860.

Q. And have drilled a good many wells in that time?—A. Yes, sir.

Q. To whom have you sold your oils generally?—A. Well, for the last few years all our sales have been to the Standard Oil Company representatives.

Q. The Standard Oil Company was the purchaser of your oil, then, at the time you formed this association?—A. Oh, yes; this oil is put into certificates. It floats in the exchanges. There are nominal buyers that are not actual buyers. No actual goods pass in these exchanges. They are mere gambling dens, made up of betters on the markets. The great buyer of the actual goods is the Standard Oil Company.

Q. Just explain to me how you make your sales to the Standard Oil Company. When you pump your wells what do you do with the crude oil?—A. They come to my tank, take its depth, open the cock, and let it flow into their line until it is empty. All our tanks are gauged to a hundredth of a barrel. Then they give me a ticket showing how many barrels of oil I have in the line. I can take that to their office and get a check for the amount at the rate oil is quoted at on the exchanges at that instant.

Q. So at the time the producers entered into this association there was but one purchaser of oil in the market?—A. No, sir; there were a great many purchasers on those exchanges, as I have said.

Q. I am not speaking of exchanges but only of actual purchasers of oil.—A. Well, the Standard and its allies were the actual purchasers. They were the actual purchasers of at least four-fifths of it.

Q. And the object of your association, as expressed in the preamble, was to protect yourselves against this monopoly in the purchase, refining, and transportation of your product?—A. That was it.

Q. Of the one thousand eight hundred or two thousand members of your association, can you give me an idea as to how many are producers of the crude oil?—A. I think three-fourths, at least, of them are.

Q. How many are refiners?—A. Very few.

Q. How many persons are engaged in those industries incidental to petroleum?—A. That I really don't know. There are thirty-six assemblies, and they are judges of the qualifications of their own members.

Q. How many producers in this territory which you cover by your association are not members of the association?—A. That I can not tell.

Q. Any large number?—A. That has been a problem with us, and I do not think it can be answered.

Q. Do they continue to produce as they did heretofore, without any respect to the effort you are making to restrict production?—A. Some do; those who take advantage of our necessities.

Q. To whom do they sell their crude petroleum?—A. They sell just like the rest of us.

Q. It goes to the Standard Oil Company?—A. Yes, sir. It is the same for the just and the unjust.

Q. When this association was formed the market price for crude petroleum was 62 cents per barrel?—A. Yes, sir; the price had been down to 56 cents at one time, but when we formed the association it was 62 cents.

Q. When you conferred with the authorities of the Standard Oil Company or Trust, their opinion was that the low price of oil was due to the accumulated surplus on hand, of which they stated there were 31,000,000 barrels?—A. Yes, sir.

Q. But when you proposed to them to let you hold that oil to make any advance to be made on it, it had run down to 10,000,000?—A. They did not claim to own the stock.

Q. Perhaps I misunderstood you. I understood you to say that nearly all that thirty-one millions was owned by the Standard Oil Company?—A. No; I said it was in their tanks and pipe-line systems, held for whoever might be the owner.

Q. And the profits you were to have were to be made out of the advance in the price of the oil in the markets of the country?—A. Yes, sir.

Q. To be paid by the consumer?—A. Yes, sir.

Q. And I understand you set apart first one million, and after negotiation with the Standard Oil Company an additional million for the payment of your labor?—A. Yes, sir.

Q. That was set apart likewise at 62 cents a barrel?—A. Yes, sir.

Q. So the pay of the laborer was also to be made out of the rise in price that you expected to force?—A. Yes, sir.

Q. I understand that Mr. Brewster, in his conference with your association, said that so far as foreign competition was concerned, he would have no difficulty in running up the price of oil 3 cents a gallon in the foreign market?—A. Yes, sir.

Q. And that the reason he failed was because of the quotations in the home market?—A. Yes, sir, because of the surplus stock.

Q. In other words, the exporter or foreign producer seeing the prices quoted in the home market would resist the 3 cents advance?—A. Yes, sir.

Q. So the argument would be, if he could run it up here you could get the advance?—A. Yes, sir.

Q. Both here and abroad?—A. Yes, sir.

Q. Which have been the most profitable years in the oil business, Mr. Kirk, to the oil producers?—A. Well, the most profitable years I will say were during this Bradford field.

Q. From 1878 to 1884?—A. Yes, sir.

Q. Was the cost of production less than it has been since?—A. Yes, sir.

Q. And the price much higher?—A. Yes; if you include the cost of production, the certainty of getting it, and the permanency of the wells. Now, we can drill wells a great deal cheaper to-day than we could then, and they are cheapening all the time. If you give us the territory we will produce you oil less than we are selling it to-day.

Q. You have learned to cheapen the drilling of the wells very much in that time?—A. Yes, sir; we are willing to give consumers the benefit if God will give us the land.

Q. And the cost of producing a barrel of oil must depend entirely upon the individual well, I should suppose?—A. Yes, sir.

Q. The cost in a well that runs itself must be less than one that is pumped?—A. Yes, sir; and the soil has everything to do with it.

Q. So that it is a question with each individual producer?—A. Yes, sir.

Q. And varies not only with the individuals, but with their wells?—A. Yes, sir; that makes it so uncertain. Here is a man in the last week who got a 2,000-barrel well. He can make a fortune. With the average size of my wells, I would have to have 2,000 wells to do it. He will get more income from his one well than I can out of my 2,000. When we talk about the cost, we take the grand average of the country.

Q. When you say that the cost of producing a barrel of oil is \$1.15 or \$1.17, that means the average cost of the entire field?—A. Yes, sir.

Q. The flowing wells and the wells nearly exhausted?—A. Yes, sir. In that we include the Bradford field, that is still producing, and wonderfully cheap in expense. They only need to be pumped occasionally. It takes very little labor. The same authority estimates that the cost would be \$1.45. On the average of the last four years it would be \$1.45 a year. That is white sampoose on the territory where we have been getting it. In this Bradford and Alleghany field in New York the rock was formed very thick, and extended all over the country. Down in the white-sand districts there are little belts, streaks, pools, hard to find. If you drill a hole in a space not larger than this room, you will get a big well. The whole thing is uncertain, while the other was a dead sure thing. That makes a great difference.

Q. When you formed this association, as I understand, there was practically one producer only in whose hands you were?—A. We thought that they controlled it.

Q. And the producing of oil was getting to be a losing business?—A. Yes, sir; it was not getting to be, but it was already a losing business, and had been for years.

Q. Have you any reason to suppose it was a losing business to that producer, the Standard Company?—A. No, sir.

By Mr. SMITH:

Q. Do the producers own the land on which the wells are located?—

A. In some cases, and in some they do not. Many of them are leased on a royalty.

Q. Are some of those lands fit for cultivation?—A. Yes, sir.

Q. When a district has ceased to yield petroleum, is it abandoned as to the title?—A. No, sir.

Q. Does your union pay taxes on the land it occupies?—A. It does.

Q. Does your union pay taxes on the products of the wells?—A. No, sir; that is the individual's business.

Q. I understand by the articles of your association here, that you are the producers of oil?—A. Yes, sir.

Q. In that locality that you describe—those several counties and districts?—A. Yes, sir; the same as a union of farmers. Every farmer pays a tax of his own, and we do the same.

By Mr. BUCHANAN:

Q. The granger does not pay it?—A. No, sir.

By Mr. SMITH:

Q. Is the value or assessment made of your crop the same as any other?—A. The same as any other? I will correct that. We are generally in the hands of farmers or "buckwheats" [laughter], who charge ten times more on the proportion of the value. The moment oil is discovered, the local assessor whacks up the property. From those taxes we have had to build school-houses and roads, improvements far beyond our proportion.

Q. Now I want to ask you another question on this tax matter. Do you know whether the Standard Oil Company has to pay taxes on its pipe lines?—A. I do not.

Q. Are they obliged to pay taxes on the products which they purchase of you?—A. No; I think there is no tax on products.

Q. When it gets into their hands?—A. No, sir.

Q. Then you are the only individuals or association who are taxed?—A. No, sir; I presume they are taxed on the value of their refinery, or whatever they have got.

Q. But not on their product?—A. No, sir; we are not taxed on our product. We are taxed on our plant—the land and the wells. In one way we are. The assessors place the value in accordance with the production.

Q. So far as your testimony goes to show, this Standard Oil Company pays nothing in the shape of taxes to the public on that property?—

A. I really could not answer whether they pay taxes on their pipe lines or not.

Q. The pipe lines may be taxed, or may not be taxed?—A. I think not. I think personal property like that is exempted; that is my opinion.

Q. Are you sure that the State of Pennsylvania exempts personal property of that kind?—A. I could not answer that; there have been so many changes in the law.

Q. You stated in your testimony, in answer to the question put to you by the chairman of this committee, that you tried to make arrangements with the railroad companies of Pennsylvania to ship your products to the markets?—A. No, sir.

Q. You did not?—A. No, sir; I did not make any such statement as that. We tried to get the legislature to pass a law throwing the pipe-line system open to the public.

Q. Why did you do that?—A. I explained the object—to get competition in refining.

Q. Then the railroad companies refused you the privilege that they gave to others?—A. The pipe-line companies, I said.

Q. I understood you to say railroads.—A. No, sir; the pipe lines.

Q. Do you know who owns these pipe lines?—A. The National Transit is part of the Standard Oil Company's outfit, and the South-western Pipe Line and the Maxbergh Pipe Line are all parts of their trust, as I understand it.

Q. Did you have an idea that you could, by legislative enactment, get these gentlemen to permit your product to be pumped or driven through those pipes?—A. Yes, sir; we did.

Q. In the State of Pennsylvania?—A. Yes, sir; we were suckers enough to think that. [Great laughter.]

Q. You, then, were not versed well enough in law, as it is construed in modern days—that there were vested rights which the State of Pennsylvania could not interfere with?—A. We certainly thought that they had a right to regulate the monster they had created. That is what I thought—to limit its charges and compel the delivery of the goods.

By Mr. WILSON:

Q. Make it a common carrier?—A. Make it a common carrier, and limit its charges.

By Mr. SMITH:

Q. Have these pipe lines the right of eminent domain the same as railroads?—A. Yes, sir.

Q. And that gave you the idea that the legislature could compel them to transport your products?—A. Yes, sir; that was the idea, and it was a mistaken idea.

By Mr. BUCHANAN:

Q. In what shape did you make this application to the legislature of Pennsylvania, by petition or the introduction of a bill?—A. It was by the introduction of a bill.

Q. And did you appoint a committee to make a visit to Harrisburg to see to the furtherance of that legislation?—A. Yes, sir; producers went down by hundreds.

Q. How far did the bill get?—A. It passed the house by an overwhelming majority, but was defeated in the senate.

Q. What did the bill provide—that these pipe lines should be common carriers and receive all the oil that was offered?—A. That was the substance; and also the limiting of the charges.

Q. You are pretty well acquainted with the situation of the producers of oil in the oil-producing sections of the United States, are you not?—A. Yes, sir.

Q. Give me, in general terms, their situation as regards their means of getting oil to market; whether they are dependent upon the Standard Oil Company and what you call its lines of transportation to the market; and, if so, in what degree?—A. They are dependent upon the Standard Oil Company to this extent, that the pipe lines are owned by the Standard. Nearly all, I would say 95 per cent., of our oil is transported by the Standard Oil Company and its ally that works in a pooling arrangement with them.

Q. Is that because they succeed in obtaining the oil transported, or because there are not other transporters?—A. There are other transporters that have started and been driven out. They lower their rates wherever there is competition, but nowhere else.

Q. Has it been, within your observation, the policy of the Standard and its allies, as you call them, to drive out or freeze out, as you ex-

pressed it awhile ago, all competition in the transportation of oil?—A. Yes, sir; that is exactly it.

Q. They have settled the policy?—A. Yes, sir.

Q. How many lines of pipe run east from the oil regions of Pennsylvania and New York?—A. To New York we have two or three lines—I do not know how many. I see their capacity is estimated at 25,000 barrels a day. They are owned altogether by the Standard—the lines to New York.

Q. Through what territory do they pass? Are you familiar with that fact? I mean, in carrying the oil to market, through what territory do they pass?—A. Through New York and New Jersey.

Q. How many are there west of the oil-producing region?—A. There are pipe lines to Cleveland and Pittsburgh.

Q. Controlled by what?—A. By this Standard Oil Company; and to Baltimore and Philadelphia. Our through lines virtually are all Standard, reaching the centers of distribution.

Q. Taking now the tank lines of cars—is it a fact or not that the Standard has secured control of all these?—A. I think so; and that is our understanding, that they have controlled them to a large extent.

Q. Suppose that you desire to-day to begin the shipment of your oil to New York, Philadelphia, Baltimore, or Cleveland market by means of other than those owned by the Standard, or, as you call them, its allies, what course would you take to do it?—A. We would have to duplicate their system of pipes.

Q. There is no existing means, then, for doing that?—A. No, sir.

Q. In other words, as the transportation facilities now are, they are now all under the control of this one combination?—A. Yes, sir; we would have to find capital to make an equal plant to compete with it.

Q. Then what security have you at present against an advance of rates in transportation?—A. None whatever.

Q. You would be compelled to pay them?—A. Yes, sir.

Q. And what is your observation? Does an increase in the rates of transportation cut down the profits of the producer or increase the price to the consumer?—A. It must be one or the other.

Q. I am aware of that. I asked your observation as to where it finally lodges?—A. I declare I do not know. I think it lodges in me, who has been losing money for years. I have been “paying the piper.” [Laughter.]

Q. Your observation, then, is that the increase of transportation is at the expense of the producer?—A. Yes, sir.

By Mr. SMITH:

Q. What would be your benefit as a producer if these pipe lines were owned by the State?—A. It would be a great benefit.

Q. Would it also be a benefit to the people?—A. It would be a benefit to the consumer, of course. The producer would then have free competition and his price would be fixed according to the supply and demand. If we had not enough we would get more, and if we had too much we would get less if the avenues of transportation were open to everybody.

Q. Could you give this committee an idea of what these pipe lines cost?—A. The Standard Company, I believe, says they cost \$30,000,000; that is their capital stock. What the actual cost was I can not say. I could in time make an estimate. The understanding of the producers is that it never cost them a cent; that all their capital came from earnings—all of it—their whole system came from earnings.

Q. Whose earnings?—A. The earnings of those lines. The first line was bought on tick, and they paid for it before they had to buy more pipe.

Q. Do you know how many miles of pipe there are?—A. No; I can not say.

Q. Could you furnish this committee that?—A. At a later day I could furnish an estimate of the whole system.

Mr. SMITH. Mr. Chairman, what do you think of that?

The CHAIRMAN. I think that is a proper subject of inquiry.

Mr. BUCHANAN. We will have parties here who will have that information definitely.

By Mr. BUCHANAN:

Q. What is the average capacity of the pipe lines?—A. I think a 6-inch pipe will put 10,000 barrels in twenty-four hours; a 2-inch pipe will put 1,000 barrels. The capacity depends on the power. If you can put more power, you can put more through. If you increase your pumping force, you can send a great deal more oil through.

Q. I am asking as to your information about the average capacity of the working of the lines now constructed. I am speaking of the marketing lines.—A. The through lines; they are all marketing lines really. Their capacity is 10,000 barrels in twenty-four hours with 6-inch pipe.

Q. What proportion of the whole output of the Pennsylvania and New York field is sent to market by pipe, and what by tank-car?—A. I could not answer that without information.

By the CHAIRMAN:

Q. Have there been people working, such as rig-builders and carpenters, to a considerable extent in this oil business?—A. Yes, sir.

Q. They were not included in the Well-Drillers' Association?—A. No, sir.

Q. They have been provided for?—A. They were mentioned by me as rig-builders and tank-builders, etc., as being in the arrangement of which I spoke, their names being collected and arrangements being being made to pay them.

Q. When was that arrangement made?—A. It was resolved on at the time.

Q. Do you mean in November?—A. Yes, sir.

#### EXHIBIT D K, No. 1.

### CONSTITUTION OF THE GENERAL ASSEMBLY AND OF THE LOCAL ASSEMBLIES OF THE PRODUCERS' PROTECTIVE ASSOCIATION OF AMERICA.

#### PREAMBLE.

#### *Object of organization.*

To include in one organization all producers of petroleum, and those who are engaged in industries incidental thereto, and known to be friendly to the producers' interest, in order that they may, by united action and all honorable means, protect and defend their industry against the aggressions of monopolistic transporters, refiners, buyers, and sellers of their product, in order that the producers may reap the just reward of their capital and labor, and to this end encourage and assist as far as possible the refining and marketing of their product and sale direct to the consumer by the producer.

## CONSTITUTION OF THE GENERAL ASSEMBLY.

## ARTICLE I.

*Name and jurisdiction.*

SEC. 1. This body shall be known by the name of the general assembly of the Producers' Protective Association.

SEC. 2. This general assembly has full and final jurisdiction, and is the highest tribunal of the Producers' Protective Association. It alone possesses the power and authority to make, amend, or repeal the fundamental and general laws and regulations of the order; to finally decide all controversies arising in the order; to issue all charters to local assemblies, and to prescribe forms of traveling and transfer cards, and issue all supplies requiring uniformity. It can also tax the members of the order for its maintenance.

## ARTICLE II.

*Membership.*

SEC. 1. The members of this general assembly shall consist of delegates elected by the several local assemblies, and provided with proper credentials, signed by the president and secretary of the local assembly. Each local assembly having twenty-five members or less shall send one delegate; each local assembly having over twenty-five members shall send one additional delegate for each additional twenty-five members, or fraction thereof over twelve; said delegates to be elected at regular meeting of local assembly next previous to annual meeting of the general assembly and to hold their office for one year, or until their successors are elected: *Provided*, That whenever increased membership may entitle the local assembly to additional delegates, such delegates shall be elected and hold office until the next annual election of delegates.

New local assemblies, whenever constituted, shall elect delegates who shall serve until the next annual election of delegates.

SEC. 2. Each member of the general assembly shall be paid for his services \$3 per day for actual time spent in its services, and 3 cents per mile for traveling expenses to and from place of meeting, to be paid out of the funds of the general assembly.

## ARTICLE III.

*Meetings and duties.*

The general assembly shall hold its first meeting in Bradford, Pa., on the first Tuesday in September, 1887, and annually thereafter at such place as may from time to time be determined upon.

Special meetings may be called by the president at the request of the executive board or one-third of the local assemblies.

One-half of the whole number elected to the general assembly shall constitute a quorum.

It shall be the duty of the general assembly to consider and determine all plans, methods, and schemes for the betterment of the oil-producing business. Any plan, method, contract, or agreement, requiring the co-operation of the local assemblies or members thereof, must be approved by a vote of two-thirds of all the members elected to the general assembly, and when so approved shall be binding upon all.

## ARTICLE IV.

*Officers.*

The officers of this general assembly shall consist of president, vice-president, secretary, and treasurer, and an executive board of nine. The president, vice-president, secretary, and treasurer shall be a portion of the executive board. Five shall be a quorum.

All officers shall be elected and installed as soon as the constitution is adopted. They shall hold office until the next annual meeting, at which and subsequent annual meetings said officers shall be elected, and hold office for one year. All elections shall be by ballot, except in case when there is only one candidate.

All members of the executive board shall be actively engaged in the producing business. Not more than a minority of the executive board shall be elected from any one assembly,

## ARTICLE V.

*Duties of officers.*

**SEC. 1.** The president shall preside at all meetings of the general assembly; shall act as chairman of the executive board; shall enforce all laws when general assembly is not in session, having general superintendence of the order; make the pass-word, and furnish the same to every local assembly in good standing; sign all papers and documents that require the signature of the president to properly authenticate them; shall, upon request of the executive board, or upon request, in writing, of one-third of the local assemblies, direct a special session of the general assembly to be called, and the secretary shall notify each local assembly entitled to representation in this general assembly, at least ten days previous to time of meeting, stating the object of the call. He shall have power to appoint organizers.

At annual meeting of general assembly a written report shall be submitted by the president of all official acts during the term. He shall also perform such other duties as the laws, rules, and usages of the order require. In addition to expenses he shall receive for services such compensation as may be fixed at each annual session, the same to be paid in equal quarterly installments, and at the end of his term of office shall turn over all books and other property of the general assembly to his successor in office.

**SEC. 2.** The secretary shall keep a correct report of the proceedings of the general assembly and executive board, read all communications, reports, petitions, etc.; make to the general assembly, at its annual session, a complete statement of the condition of the order, compiled from the latest reports of the local assemblies; shall conduct the correspondence of the assembly; shall keep a record of the names, numbers, dates of institution, and location of all local assemblies; shall have charge of all books, papers, and private work belonging to the general assembly; shall prepare and furnish to the order all supplies authorized by the general assembly. At the end of his term of office shall turn over to his successor in office all property of this body and order; shall keep a true account between the general assembly and the local assemblies; shall present to the general assembly at each annual session a full and correct statement of the amount of money received and paid out during the year; shall prepare a book in which shall be placed the names and address, and the local assembly represented, of every representative to the general assembly, to be known as the roll book; shall collect from the secretary of each local assembly such statistics as shall be directed by the executive board; shall perform such other duties as the laws and usages of the order require. For such service the secretary shall receive, in equal quarterly payments, such compensation as may be fixed at each annual session.

**SEC. 3.** The vice-president shall assist the president during the sessions of the general assembly, as necessity requires, in the discharge of the duties of that office, and in case of death, resignation, or removal of the president, shall succeed to and perform all the duties of that officer for the balance of the term.

**SEC. 4.** The treasurer shall keep all moneys of the general assembly, and pay therefrom all orders signed by the president and secretary; shall keep an account of all moneys received and paid out; shall render to the general assembly annually a statement of all moneys received and paid, and, whenever required by the executive board, furnish a statement of the financial condition of the general assembly. Upon expiration of his term of office shall deliver to his successor in office all books, papers, and moneys in his keeping. Before entering upon the discharge of his duties, shall furnish to the executive board a bond for the faithful discharge of the duties of his office; the amount of bond and bond to be approved by the executive board.

**SEC. 5.** The executive board shall act as trustees of the general assembly, and have a general supervision and control over the order. In case of the neglect of duty or violation of law on the part of any officer the executive board shall have power to remove such officer, after a fair hearing, subject to appeal at the next general assembly. All vacancies occurring in this board shall be filled by this board. The executive board shall have power to appoint, upon the recommendation of the secretary, such additional assistance in the office of secretary as may from time to time be needed.

The board shall hold sessions at such places as it deems most convenient and economical, at the call of the chairman of the board, or at the request of three of its members, whenever the needs of the order may require, and all necessary expense for such meetings shall be paid out of the funds of the general assembly.

It shall be the duty of the executive board to devise ways and means for the benefit of the oil-producing business, and they are authorized to enter into any negotiations which they may consider will be for the benefit of the trade, but no contract or agreement entered into by them shall be considered as binding upon the members of this association until it is approved by the general assembly.

## ARTICLE VI.

*Revenue.*

SEC. 1. The revenue of the general assembly shall be derived from, for charters and supplies for local assemblies, \$10 each, and from all other supplies ordered or authorized by the general assembly, at prices fixed by the executive board. It is compulsory upon all local assemblies to procure any such supplies from the secretary of the general assembly.

SEC. 2. The general assembly shall have power to make assessments upon each local assembly for any further money required to carry on its operations. The basis of all assessments shall be the daily production of members.

SEC. 3. Each member of all local assemblies shall, on or before the 15th of each month, give to the local secretary a statement of his average daily production for the preceding month; the local secretary shall, before the 20th of the month, give to the secretary of the general assembly a statement of the production of the local assembly, and the names of its members, and all information relating to any change in the standing of its members.

SEC. 4. The secretary shall not furnish information or supplies to any local assembly that is not clear upon the books. Local assemblies thirty days in arrears are not in good standing.

SEC. 5. All supplies ordered from secretary must be paid for on delivery.

## ARTICLE VII.

*Organization.*

The executive board shall attend to all business relating to organization of local assemblies, and shall carry on such organization either through its own members or through an organizer appointed by the president.

## ARTICLE VIII.

SEC. 1. This constitution shall be printed and submitted to the local assemblies, who shall elect delegates under the provisions thereof and instruct their delegates thereon; and it shall require a two-thirds vote of all members of the general assembly to adopt the same, and when so adopted shall be binding on all.

SEC. 2. Amendments to this constitution may be proposed in any meeting of the general assembly. When an amendment is recommended by the general assembly it shall be printed and submitted to the local assemblies, who shall instruct their delegates thereon, and a two-thirds vote of the next session of the general assembly shall be necessary to adopt the same.

## CONSTITUTION OF LOCAL ASSEMBLIES.

## ARTICLE I.

This assembly shall be known as the "Producers' Protective Association" of ———.

## ARTICLE II.

The members of this association shall be actual producers of petroleum and those who are engaged in industries incidental thereto, and known to be friendly to the producers' interests, who shall sign this constitution, pay to the treasurer an initiation fee of \$5, and pledge their sacred honor to do all in their power to build up and maintain this organization and keep its secrets inviolate.

Any person wishing to join this association shall make application in writing, setting forth that he is a producer of petroleum, or otherwise entitled to membership as aforesaid, and giving location of his production, if any, or his business, and shall accompany said application with initiation fee of \$5; said application shall be offered at a regular meeting, and shall then be referred to a committee of three, who shall report at a regular meeting, and, upon the reception of said report, a ballot shall be taken upon the application. If not more than two black balls appear the application shall lie over until next regular meeting; if three black balls appear, the applicant shall be rejected and an application from him shall not again be considered until after expiration of two months.

The member or members casting black ball or balls (when less than three black balls) shall give his or their reasons, in writing, to the president, who shall read the same to the members, but shall not disclose the name of the member, and shall destroy the writing immediately after reading.

The member or members giving reasons for casting black balls shall not vote at meeting which reconsiders original ballot.

When any member casts a black ball and fails to give his reasons to the president, as before provided for, it shall be the duty of the president to declare applicant elected.

Corporations and partnerships may have the benefits of this association by making written application, binding themselves to pay all assessments levied; to be governed by the rules of the association; to designate in their application such person or persons as they shall choose to represent them; these persons to take all the personal obligations, pay all regular dues, and vote and act as individuals only, at all meetings of this association. The persons above designated shall be voted for as is provided for other proposed members. *Provided*, That at all times this assembly shall consist of at least three-fourths of persons actually engaged in the production of oil, and it is understood that any person receiving oil as royalty shall be, and is, considered an oil producer wherever the term oil producer is used in this constitution.

### ARTICLE III.

The elective officers of this assembly shall be a president, a first vice-president, a second vice-president, a recording secretary, a financial secretary, a treasurer, who shall constitute an executive board of six, and shall be elected at this meeting and semi-annually thereafter, at first regular meetings in July and January.

### ARTICLE IV.

The president shall preside at all meetings and perform such other duties as he may from time to time be called upon by this assembly to do, sign all orders for money upon treasurer, appoint all committees and all officers not otherwise provided for.

The first vice-president shall preside in the absence of the president, and perform such duties as the president would perform if present.

The second vice-president shall perform duties of first vice-president, during his absence and absence of the president.

The recording secretary shall keep a record of all meetings; shall draw and sign all orders on treasurer; shall conduct the correspondence of this assembly; shall have charge of the property of this assembly not otherwise provided for.

The financial secretary shall keep a correct account between the members and this assembly, collect all moneys due the assembly, and pay same over to treasurer, taking his receipt for the same.

The treasurer shall hold all moneys belonging to this assembly, and pay therefrom all orders signed by the recording secretary and the president, and keep an account of all moneys received and paid out, and shall give bond, the amount and bond to be approved by the executive board.

The executive board shall have a general supervision over the affairs of this assembly and perform such other duties as may be required of them by this assembly. They shall prepare and submit to this assembly a code of by-laws, which shall provide for and state time of regular meetings, how special meetings shall be called, and such rules and regulations as may be necessary for the government of this assembly not provided for in this constitution, and not inconsistent therewith; which by-laws, when adopted by two-thirds of the members present at a regular meeting, shall be equally binding as this constitution.

### ARTICLE V.

The appointive officers of this assembly shall be an inspector, whose duties shall be to introduce candidates, examine all present at opening of each meeting, and report all present without the password to the president, and perform such other duties as may be required by this assembly.

A guard, whose duty it shall be to guard the door, tend all signals, admit no one, except by direction of the vice-president, and perform such other duties as may be required of him by this assembly.

### ARTICLE VI.

Members may be expelled or suspended for violation of constitution or by-laws or neglect or refusal to comply with the rules or regulations, or for violation of the secrets of this association.

No person connected with "the Standard Oil Company" or any of its allies, as partners, stockholders or employes, and friendly thereto, shall be elected to membership, and members becoming such shall be liable to expulsion.

#### ARTICLE VII.

The yearly dues shall be \$2, payable quarterly in advance.

#### ARTICLE VIII.

All moneys required by this assembly, above the initiation fees and regular dues, shall be furnished by the members, corporations, copartnerships, and be assessed upon them in proportion to their daily production. Each member shall give to the financial secretary, on or before the 15th of each month, a statement of his average daily production for the preceding month and such other statistics as the association shall require: *Provided*, That no assessment under this shall be made, except at a meeting called for that purpose. Notice of which shall be given through the mail to all members of this assembly of the object of the meeting.

#### ARTICLE IX.

This assembly shall appoint delegates to the general assembly when the same is called and be subordinate to said general assembly.

#### ARTICLE X.

This constitution may be amended by giving notice of intended change at a regular meeting of this assembly; and if the proposed amendment is accepted by this assembly, by a two-thirds vote of the members present at next regular meeting, it shall be submitted to the executive board of the general assembly for their approval; and when approved by them, shall be submitted to all local assemblies for their adoption, and when adopted by two-thirds of all the local assemblies, it shall be an amendment to the constitution of all local assemblies.

---

#### EXHIBIT DK No. 2.

OFFICE OF THE EXECUTIVE COMMITTEE,  
Bradford, Pa., March 6, 1888.

*To the members of the P. P. A.:*

GENTLEMEN: After having passed successfully through over four months of the time we deemed prudent to shut in a portion of our production, and to curtail drilling, we are pleased to again congratulate all members of our association for their cordial support and unyielding fidelity to our common interests.

We have accomplished much, and have much more to accomplish. Our production is upon a basis entirely satisfactory, but prices are not yet remunerative. You, gentlemen, understand the situation, but the speculative trade do not know and are slow to believe that we, as producers, can not make a success of our business unless we receive very much higher prices. The above fact has caused very heavy selling by that trade, which selling has, thus far, obliged those who are forced to market their oil as produced to do so at prices still very unsatisfactory.

The world looks on in surprise at the success of our movement but can not understand it. We know that five years ago most of the producers of to-day had a magnificent production in Bradford, the most profitable of all fields, and our wells were generally paid for. From the proceeds of their production we have made an almost universal failure in endeavoring to produce oil without loss in other fields, until our Bradford wells are nearly run dry and we find ourselves forced to seek much higher prices or retire from the business with nothing but junk.

On November 19 last, we inclosed with our letter to you a carefully prepared statement showing as nearly as possible the cost of producing oil from the fields of the present supply. The cost as then shown was 1.17½ cents per barrel, exclusive of the cost of the lands drilled. The amount thus paid was very large, but exceedingly hard to estimate. Certainly we should obtain \$1.50 per barrel, for our product to make our business one of reasonable profit. Previous to producing oil in Bradford the business was unremunerative at less than \$2 per barrel. Twenty-five and one-half per cent. of all wells drilled in 1887 were dry, and at least 50 per cent. of the balance

were small. We here reprint that portion of our November circular which refers to the White Sand fields for the benefit of those who receive this and did not receive that one:

## WHITE SAND OIL FIELDS.

[This includes all Pennsylvania and New York fields except Bradford and Allegany.]

	Barrels.
Total gross production of premium oil, i. e., total produced from White Sand fields during the above period .....	13, 234, 535
Less average royalty to land owner, viz, one-eighth .....	1, 654, 317
Net oil to producer .....	11, 580, 218

## TOTAL GROSS INCOME TO PRODUCERS OF WHITE SAND OIL.

From 11,580,218 barrels premium oil, at 73½ cents .....	\$8, 540, 410
---	---------------

## OUTLAY BY PRODUCER.

Cost of producing the above oil and drilling wells to keep up the production; also shrinkage of valuation or inventory of producing properties:

Cost of drilling in past twelve months of 567 wells in Kane and middle district fields, and fitting up the same, at average cost of \$3,000* .....	\$1, 701, 000
Ditto in Washington County and lower district, 1,097 wells, at \$4,250* ....	4, 652, 250
Cost of pumping and raising the oil and of cleaning out wells, etc., at an average of \$25 per barrel of production .....	3, 308, 633
Interest at 6 per cent. on investment, based on an average valuation of \$400 per barrel for producing properties .....	970, 056

Total net cost of producing the premium, i. e., White Sand oils, including drilling the above 1,664 wells to assist in keeping up the production .....	10, 641, 939
--	--------------

If the production of the above fields had been maintained by the drilling of the above wells, and thus had prevented the shrinkage of value or inventory of these fields, the above figures would show a loss of but .....	2, 101, 529
--	-------------

A gross inventory of these White Sand fields show that their production average was 10,038 barrels per day less during October, 1887, than it was during October, 1886, which figured at \$300 per barrel is .....	3, 011, 400
--	-------------

This shows a net loss to the owners of the wells in these fields of .....	5, 112, 029
---	-------------

Total net loss in the past twelve months to the producers in producing oil, and endeavoring to sustain their production without including money paid for oil territory to be drilled was in Bradford and Allegany fields. ....	2, 401, 532
White Sand fields .....	5, 112, 929

Total .....	7, 514, 461
-------------	-------------

Or a loss of 28½ cents per barrel on the 8,508,789 barrels run to the credit of the Bradford and Allegany producers, and a loss of 44.1 cents per barrel (exclusive of the cost of the land) on the 11,500,218 barrels run to the credit of the producers of White Sand oil.

The very large amount of money paid for oil lands to drill should be added to the above losses in the White Sand oil-fields. As will be seen, the losses have been exceedingly large, exclusive of bonuses, which it is practically impossible to estimate. At 5 acres to each of the 1,664 wells completed, 8,320 acres have been drilled during the year. The bonus paid varies from a few dollars per acre to \$20,000 recently paid for a 5-acre lease at Saxonburg.

The production upon which the above figures are based is as follows:

	Barrels.
From Bradford and Allegany field:	
October, 1886 (average) .....	31, 471
October, 1887 (average) .....	23, 500

\* We have before us a statement of the cost of completing eight wells in the Kane field, and they cost an average of \$3,824 each, and a statement of cost of eleven wells in the Washington field, and their average was \$10,093 per well. In each case the figures are as low as work could be done, and no allowance is made for expenses of the owners.

From total White Sand fields:	
October, 1886 (average)	45, 530
October, 1887 (average)	*35, 300

In figuring the present valuation of production, suppose the fields to be owned by one company. This makes it quite plain that if for example the production of the Bradford and Allegany fields had shrunk about one-quarter in the past year, the value of the wells have shrunk correspondingly.

A very few men have made money, but this made the losses to be sustained by the others that much larger.

We now call your attention to the following tables exhibiting further facts confirmatory of the foregoing:

Table showing price, wells completed, production, exports and shipments from 1870 to 1886.

Year.	Price of crude.			Wells com- pleted.	Per cent. of wells dry.	From White Sand fields.	From Bradford and Alle- gany.	Total pro- duction.	Daily average.	Exports. Crude equiva- lent.	Shipments from region.
	Highest.	Lowest.	Average.

Shannopin	1888	1887	691, 000	600, 000	1 year 5 months.
Pontius	1885	1886	730, 000		1 year 10 months.

\* The decline from October, 1886, to October, 1887, in White Sand pools as shown in the text occurred, notwithstanding their aggregate new production, as shown by the monthly reports, was 52,012 barrels from 1,641 wells during that time.

The foregoing table shows—

That the total consumption of oil last year (1887) was 27,451,000 barrels.

That the total production for last year was 21,365,000 barrels.

That the total production from White Sand fields last year was 12,397,000 barrels.

That the total production from all White Sand pools in any one year never was equal to one-half of last year's consumption.

That excepting the years 1873, 1874, 1877, 1886, and 1887, the White Sand fields never produced in any year one-third the amount of last year's consumption.

That the average yearly production from White Sand fields for the last eighteen years has been less than 8,500,000 barrels.

That during only the two years of Bradford's greatest production could we have accumulated stocks had the demand for consumption been equal to that of last year.

That during the past nine years 31½ per cent. of the production has been from White Sand fields, while 68½ per cent. came from Bradford and Allegany.

That during the entire eighteen years covered by the tables, 25,400 wells were drilled in the White Sand fields, the entire production from which would be equivalent to only five and one-fourth years' consumption upon the basis of last year. To illustrate the unimportance of these "gusher" wells, we may here note that 5,000 wells drilled per year—based on these figures—would be required to supply our shipments.

That the aggregate amount of the first year's production of the several White Sand fields developed since 1881, viz, Cherry Grove, Cooper, Balltown, Wardwell, Thorn Creek, Cane, Tarkill, Cogley, Red Valley, Washington, Shannopin, and Pontius is but 11,075,000 barrels, or less than five months' supply for present consumption.

That the great Black Sand fields (Bradford and Allegany) from which the steady production has been derived, and which has produced the great bulk of the oil hitherto, are gradually, constantly, and surely declining, so that now their utmost capacity is much less than one-third the present consumption.

That the White Sand pools have ever been, and may be expected to always be, short lived and limited in production. Their wells often come in as gushers, but prove so ephemeral that any hopes of great results based upon the initial production is doomed to disappointment in the small aggregate which rewards the producer for the development of such a field.

The tables tell their own story, and it is a story of the past. Whence shall come the oil to supply the constantly increasing consumption of the future? No producer expects that a second Bradford will be found, and we have seen that the White Sand fields can not be relied upon. When we shall have reduced the stocks above ground to an amount which should be a healthy reserve, without being an undue weight upon the price of the commodity (as we certainly will be by the 1st of November next), we shall have made the situation such that, under the ordinary relations of demand and supply, will assure us a remunerative price. It needs no argument to show in the light shed upon the subject by the foregoing tables that no probable development of the coming summer can prevent such a reduction of stocks.

In this connection it is proper to notice an erroneous idea which we learn is entertained by some traders in oil, to the effect that we have now 20,000 barrels of oil shut in, which we can at any moment, and presumably will on November next, add to the present production. But producers know that the natural decline of production from existing wells will of itself absorb the amount shut in unless offset by new production. A striking illustration of this fact is found in the year 1886. The average production for January, 1886, was 59,470 barrels; for January, 1887, 64,500 barrels, an increase of but 5,030 barrels, although the aggregate of new production as shown by the monthly reports during the year intervening was 94,450 barrels, showing that during the same time the decline of production from wells, old and new, must have been 89,420 barrels. By way of further showing the extent of the natural decline, attention is called to the following statement comparing the last four months with the corresponding four months of the year previous:

Production (daily average) for—	Barrels.
October, 1886.....	77,009
February, 1887.....	63,724

Shrinkage from October to February.....	13,285
New production added from 843 wells finished during the above 4 months (November 1 to March 1) was .....	27,717

The above shrinkage shows that notwithstanding this very large new production, it failed to maintain the output by the above amount, viz, 13,285 barrels.

Production (daily average) for—	Barrels.
October, 1887.....	58,942
February, 1888.....	*40,000

Shrinkage from October to February .....	18,942
New production added from 418 wells finished during these 4 months .....	7,724

\* Estimated.

The above shrinkage of only 18,942 barrels (including amount shut in) as compared with 13,285 barrels the corresponding months the previous year shows that at the present time we have but comparatively little oil actually shut in.

It will be noticed in the first case that the shrinkage named was over and above the 27,717 barrels of new production, and that during the past four months we have had 20,000 barrels less of new production, yet have shrunk our output by only 5,657 barrels more than the year previous.

This shows that the natural decline from October to February, last year, was 41,002 barrels (i. e., 27,717 new production and 13,285 net shrinkage). The total decline of the past four months has been 26,666 barrels (i. e., 7,724 barrels new production, and 18,942 barrels net shrinkage and shut in).

Had the natural decline for the last four months been proportional to that of the corresponding four months of the preceding year, it would now be necessary to open up our wells to their full capacity and to take measures to sustain them. But as much of the decline comes from the new production, especially in the White Sand fields, the old declining more slowly, and as we have had so little new production since the shut down, the percentage of decline upon the aggregate production is necessarily less than before. Competent judges among the producers, however, believe that the amount now shut in which could be produced does not exceed 6,000 barrels per day, and that it will be necessary by November 1, next, making all due allowance for probable new developments, to open up our wells to their full capacity to maintain the present output.

Such, producers, are the glorious results which your organization so far has achieved. Stocks have been reduced as rapidly as the most sanguine hoped. The limit set to daily production has been faithfully maintained. You have demonstrated that you see your interests clearly, that you appreciate the proper methods to advance them, and your ability to lay aside all prejudice and unite in fraternal and determined effort to execute those methods. Those who hug the delusive hope that we will falter or lose our cohesion in this great effort for the common good, build on the grossest ignorance of the character, intelligence, and ability of the men engaged in the business of producing oil. We congratulate you, that no signs of weakening are within your ranks, and that your organization has already made it an assured fact, that in the future you will be in position to compel a remunerative price for the commodity which your energy, labor, and capital brings to the markets of the world.

THE EXECUTIVE COMMITTEE.

### TESTIMONY OF JAMES R. GOLDSBOROUGH.

JAMES R. GOLDSBOROUGH sworn and examined—

By the CHAIRMAN :

Q. Where do you reside ?—A. Bradford, Pa.

Q. What is your business ?—A. Producer.

Q. You have been present here this morning and heard the testimony of Mr. Kirk ?—A. Yes, sir.

Q. You are also a member of the Producers' Protective Association ?—A. Yes, sir.

Q. One of its officers ?—A. Yes, sir.

Q. I show you a circular and a copy of a resolution [handing same to witness]. Will you state if you recognize them as authentic documents ?—A. Yes, sir.

Q. You are there named as secretary ?—A. Yes, sir.

Q. Is that your office ?—A. Yes, sir. I will state to you, gentlemen, that of course under the constitution we are prohibited from naming the officers and the business transacted, but there has to be an official head of some kind, and I was designated as a member of the executive board to be that officer, and in consequence my name appears on these various instruments that were issued.

The circular and resolution referred to are as follows :

#### CIRCULAR.

I send you copy of rules and regulations which have been established upon the labor question by the executive and advisory boards, and approved by a convention

composed of representatives of our local assemblies. Your assembly will therefore conform thereto. The pay-roll will be sent you as soon as possible. In regard to what shall be paid to the persons proposed to be relieved it will depend upon the numbers and our resources, the latter upon the market. The more effective the stoppage of the drill is made the greater the sum will be to be distributed. The local boards, therefore, will please exercise great care in placing names upon the roll, and report the same as soon as possible, so that the grand aggregate can be ascertained. All your members and the recipients of the producers' bounty should be admonished as to their duty to aid in the stoppage of the drill.

I also transmit a resolution herewith passed by the convention, which the board hesitates to adopt until they know that no injustice will be done. They, however, would be glad to adopt it if satisfactory to those interested. I therefore ask all assemblies to consider and advise me of their action upon this resolution. If adopted it will greatly simplify the labor question, and add to our resources for those needing the same.

Yours truly,

J. R. GOLDSBOROUGH,  
*Secretary Producers' Protective Association.*

---

#### RESOLUTION.

[To be acted on by all local assemblies immediately.]

*Resolved*, That while we approve of the plan submitted by the executive and advisory boards for the distribution of the labor fund, yet in our judgment we think it best that all producers should take care of their own employes, and that the entire labor fund outside of what is required for the relief of those out of employment should be devoted to the Well Drillers' Union, provided they stop the drill, and we request that it be so ordered.

Unanimously adopted by the convention.

Q. Have you in your possession a copy of the original contract entered into between the Producers' Protective Association and the Standard Oil Trust?—A. I have, sir.

Q. Will you produce it?—A. I will [handing the same to the chairman]. With that paper, sir, goes this bundle of names—a thousand names.

Q. Those are the names of the persons who were to sign this contract?—A. Yes, sir; and the authority for placing their names on that contract is given in another instrument which I will produce when you are ready for it.

Q. Is this an original or a copy?—A. Yes, sir; that is the original.

Q. Now will you produce the authorization for the making of these?—A. I have brought down a sample of the shut-in contract; I did not bring them all; there are 56 of them. They are just hectograph copies. That is a contract that was issued by the Producers' Protective Association in which we solicited the subscription of the people of the oil country to this contract with the Standard Oil Company.

Contract referred to is as follows:

*Resolved*, That this general assembly approve and recommend to the members of the Producers' Protective Association who are producers of crude petroleum, and to the producers of crude petroleum generally, the execution of the annexed contract, and that each such producer limit his or their production by at least one-half, and as much more as can be done without serious injury to their wells, and that the obligation of secrecy be so far removed as to permit the communication of this recommendation by the executive board (who alone shall have the privilege of making such disclosure) to those to whom application is made for signatures, and that every such person to whom application is made be pledged upon his honor to observe secrecy upon this subject.

*Resolved*, That those who sign this contract shall report the total production of wells operated by them on leasehold or in fee, and shall include no oil received as royalty.

Whereas the Standard Oil Company of New York have set aside 5,000,000 barrels of merchantable petroleum, at 62 cents per barrel, for the benefit of such producers as shall collectively limit their daily production by an amount at least 17,500 barrels less than their average for the months of July and August, 1887, for the period of one year, which 5,000,000 barrels is to be subject to the order of, and sale by, an executive board of such producers after such limit has been attained for three months following October 1, 1887, or such other time as may be fixed, and if sold before the end of the year, the net profits over and above the set price, and storage and interest to the time of sale, deposited with some satisfactory trust company until the end of such year and at that time paid over to the executive board for distribution, as provided by an agreement among such producers.

Now, therefore, the undersigned persons, corporations and copartnerships, producers of crude petroleum, in consideration of such agreement and the benefits to be derived therefrom, do hereby mutually agree, each with all the other subscribers hereto, that each of us will limit his or their daily production of crude petroleum as averaged from the pipe-line statements for July and August, 1887, by the number of barrels daily set opposite the name of each below, for the period of such year; such limit to be based upon all oil produced from wells operated by each, including royalty on the same. That for the purpose of determining such fact each subscriber hereto will furnish such executive board with the pipe-line statement of all oil produced by him or them, and state thereon what is royalty production and amount of such royalty, or in default thereof hereby authorize the executive board to obtain the same, or to examine the pipe-line books for such months of July and August, and for each and every month of such year, and the pipe lines are hereby by each of us authorized to deliver, on demand, to such executive board such statements, or permit the examination of their books. At the end of the year the net profits arising from such 5,000,000 barrels, and which may have been turned over to such executive board, shall be divided among the subscribers hereto ratably, and in proportion to the whole amount so limited by each, as compared with the whole amount limited by all, to be determined upon the statements and by the method set forth.

*Provided, however,* if any subscriber hereto shall not have limited his or their production, as herein agreed, he or they shall forfeit all interest in such profits, and the same shall be divided without regard to him or them. Such profits shall be determined by deduction from the amount so turned over to the executive board, the expenses of procuring and executing the agreement with the Standard Oil Company and this agreement.

Any transfer, sale, or assignment of or incumbrance placed upon the oil production or property of any party hereto, shall be made subject to the terms of this agreement and share in its benefits. If any party hereto shall purchase property, the owner of which is not a party to this agreement, such property shall not be subject to this agreement or share in its benefits.

In case circumstances occur which, in the opinion of any party hereto, will work disaster to his or their interests, if this agreement is adhered to, he or they shall have the right to apply in writing to the executive board to be relieved therefrom, in respect to the particular matter working such disaster, stating particularly and circumstantially the facts and grounds therefor. Such executive board shall, upon such notice as they deem proper to parties interested, determine such application, and their determination shall be final and conclusive upon all parties hereto.

The executive board provided by this agreement shall consist of those members of the executive board of the Producers' Protective Association who shall join in this agreement. The profits on 1,000,000 barrels of crude petroleum, together with the profits on an equal amount to be obtained, if possible, from the Standard Oil Company, shall go into the hands of the executive board, who shall distribute such portion of such profits as the local assemblies may need to make a dividend with those connected with our industries for their co-operation in curtailing production, drilling, etc. Any portion of such profits which shall remain in the hands of such executive board after the just demands of the local assemblies are provided for shall be divided in the same manner as the profits on the remaining 4,000,000 barrels. This contract is not to be operative until the number of barrels daily are agreed to be limited, required to secure the profits on said 5,000,000 barrels, and when so agreed the executive board hereby provided are hereby authorized to sign the contract with the Standard Oil Company in our behalf and in behalf of each of us; also to fix a date when this agreement is to take effect, of which date timely notice shall be given.

Q. This is the form of contract signed by the producers themselves?  
—A. Yes, sir.

Q. And to which reference was made in the testimony of Mr. Kirk?  
—A. Yes, sir.

Q. As being the shut-in agreement?—A. That is what we call the

shut-in contract. It was distributed all over the country and signed by the producers.

Q. And signed to the extent of about a thousand names?—A. I think it may have been signed to a much larger extent than that, but the way we figured it, after I became custodian of all these things, was, that there was, say, for instance, in the month of October, between 60,000 and 65,000 barrels of production, and that the signatures to this contract aggregated in the neighborhood of 40,000 barrels a day—a little over 40,000 barrels a day; so that really an individual signature on that contract, for instance the Union Oil Company there, may mean many people but only one corporation. Many people may be members of an association, but only one signature would go on the contract.

Q. Now, I want your explanation about some words here. For instance, I see the Trust Oil Company limited 22.4 barrels run. Is that the amount they produce?—A. The total production was 22.4 barrels.

Q. And they were to cut off one-half of it?—A. Yes, sir.

Q. And these figures given here refer to the proportion of production which these various persons were to cut off; is that correct?—A. Yes, sir; I have a kind of duplicated record; I had to have this book separated on account of the magnitude of the business. I can tell you anybody whose name you want to know, either individual or corporation, with the amount they have shut in. Those things are all under my charge.

Q. How much was the shut-in?—A. Eighteen thousand four hundred and eighty-six barrels.

Q. That went into effect on the first day of last November?—A. Yes, sir.

Q. Since that time has any addition been made to the amount?—A. Yes, sir; we are constantly receiving signatures, any time that anybody feels they want to sign. In fact there was a contract out there when I left for signatures.

Q. How much is the aggregate now?—A. When this last name was put to it, it would be slightly over 18,500 barrels.

Q. How much do you say it was on the first of November?—A. Eighteen thousand four hundred and eighty-six barrels.

Q. Then the additional signatures have not brought it up much?—A. Oh, it is a limited quantity.

Q. Mr. Kirk referred to another contract—a contract not to bore. Have you that contract with you?—A. Yes, sir; here is the copy of one of the originals [handing it to the chairman].

Q. Is this the paper?—A. Yes, sir.

The contract is as follows:

Whereas an agreement is being signed by the operators and producers of crude petroleum to limit their production of crude petroleum for one year from October 1, 1887; and

Whereas it is desirable for the improvement of the petroleum industry that all drilling should cease for the same period, as far as possible:

Now, therefore, each of the subscribers hereto, in consideration of such agreement and of the agreement by all other parties hereto, in like manner, as each such subscriber severally agrees, that he or they will not drill any more wells for oil or build any rig therefor for one year from September 3, 1887, except he or they be relieved from this agreement, in special cases of hardship, by consent in writing of the executive board of the Producers' Protective Association; or failing in obtaining such consent, after proper application, any subscriber to have the right to ask a board of arbitrators of three persons to be selected, one by the subscriber so applying and one by said executive board, and they to select a third person, whose decision shall be in writing and shall be conclusive upon all parties.

Q. There is still another contract?—A. Yes, sir; not to increase. These were taken out indiscriminately just as I put my hand in and

pulled them out. They are kept in that way. One contract means all. They are hectographed and all in my handwriting.

Q. Now, upon this shut-in contract are there the names of any persons who are not members of your association?—A. Yes, sir; that is not obligatory. Membership in the association is not obligatory upon the signers to the contract. That is distinct and separate.

Q. Are there any producers' names there? Are the names of any producers on the shut-in contract who are in any way connected with or controlled by the Standard Oil Trust?—A. Yes; I presume there are some names of members of companies that are perhaps members of the Standard Oil Company; presumed to be at least; and who are also stockholders in those companies. That is the way I understand it. Not that they control them at all, but they own stock in those companies.

Q. Has any person who is connected with the Standard Oil or Trust signed this agreement to shut in the production at a well of which he is in control?—A. No, sir; I have no such information as that.

Q. Now, I hold here the agreement about the drilling. Are there any persons, signers of this agreement, who are members of the Standard Oil Trust or interested therein?—A. You are asking me a pretty big question.

Q. I mean to your knowledge?—A. Not to my knowledge. I want to explain to you and to the committee that the drilling contract we esteem as an essential part of this movement, but the carrying out of that contract was left rather to the integrity of the people and had not been systematized as the shut-in contract had, because of the fact that upon the production in the months of December and January was predicated the fact whether or not we would obtain this 6,000,000 barrels of oil.

Q. Now, there is a third contract here not to increase?—A. Yes, sir.

Q. Now, upon that contract have any persons signed who are in the interest of the Standard Oil Company, or controlled by it?—A. No, sir; I think not.

Q. You have a contract also for an extra million over and above the amount stipulated in the first contract with the Standard Oil Company?—A. Yes, sir.

Q. Is that the contract [showing witness the same]?—A. Yes, sir. The contracts last referred to are as follows:

BRADFORD, October 1, 1887.

Memorandum of agreement between the undersigned producers of petroleum, as follows:

Whereas the producers of petroleum, for the purpose of reducing the excessive stocks of petroleum now on hand, and to place their industry upon a permanently better basis, have signed a contract not to drill any well for oil within one year from September 8, 1887, and have also entered into a contract to reduce their production a stipulated amount for a month for one year; and

Whereas the undersigned, owing to the presence of salt water in their wells, and the use of gas-pumps, or for other special reasons, being unable to sign said contract to reduce our production, yet heartily desiring to co-operate in said general movement for the common benefit, hereby covenant and agree that we will not increase our production during any one month for the year said contract to reduce production is to operate.

---

Memorandum of agreement entered into this 1st day of November, A. D. 1887, between the Standard Oil Company of New York and T. W. Phillips, H. L. Taylor, David Kirk, Henry Fisher, Peter T. Kennedy, N. F. Clark, John L. McKinney, Rufus Scott, and J. R. Goldsborough, the executive committee named in the agreement hereinafter first referred to, as follows:

Whereas by an agreement, bearing even date herewith, providing for the reduction of the production of petroleum of the producers named therein, to the extent of at least

17,500 barrels per day, for one year from the date thereof, as compared with the daily average production of said producers for the months of July and August, 1887, the said Standard Oil Company of New York has set apart 5,000,000 barrels of merchantable crude petroleum, to be sold upon the order of the executive committee of the producers named in said agreement, the profits thereof to be deposited with the United States Trust Company in New York City, in trust, to be paid over and distributed as therein provided; and whereas an agreement between the said producers, based upon the said last-recited agreement, provides for the setting apart of the profits of 1,000,000 of the said 5,000,000 barrels to go into the hands of the said executive committee, who are to distribute said profits upon the said 1,000,000 barrels of crude petroleum, whenever certain local assemblies may direct such distribution, to those connected with the petroleum industry, for their co-operation in curtailing production, drilling, etc.: Now this agreement witnesseth:

That the Standard Oil Company of New York, for the purpose of aiding the class of persons last referred to, hereby sets apart an additional 1,000,000 barrels of merchantable crude petroleum, at 62 cents per barrel, subject to storage charges, general average assessments, and interest upon the same, as also interest upon the price of said petroleum, to be sold by and upon the order of the said executive committee, or a majority of them, and the profits to be paid to the said executive committee, as sold, to be distributed to those connected with the petroleum industry for their co-operation in curtailing production, drilling, etc., the said profits to be applied pro rata to all contributing parties to the said movement to limit production, whether members of the Producers' Protective Association or not. The first one-quarter of the said 1,000,000 barrels may be sold at the end of three months from the date hereof, if the reduction of the production of the said producers to the amount of 17,500 barrels, as provided in said agreement, shall have been attained as therein provided, and thereafter the remaining three-fourths, in equal parts, may be sold at the end of each three months, or as soon thereafter as said executive committee shall determine, provided all the conditions of the first-recited agreement have been fully performed by said producers up to the date of each of said sales.

[SEAL.]

STANDARD OIL COMPANY OF NEW YORK,  
By WM. ROCKEFELLER,

*President.*

GEORGE H. VILAS,  
*Secretary.*

Q. You have had charge or had knowledge of the financial operations of this Producers' Association in its connection with the laborers, have you not?—A. Yes, sir; all the finances of the concern have passed through my hands.

Q. Will you state the amount of money which has been paid by the Producers' Protective Association on account of the support of labor affected by this shut-in?—A. I will state the amount affected and paid to the Well-Drillers' Union by this association. The other has been thus far paid through the local assemblies, as provided for in the contract.

Q. I mean the aggregate that you have paid out, no matter to whom you paid it?—A. You see, it is this way: We have paid in the neighborhood of about \$85,000 to the Well-Drillers' Union. Now, each one of these local assemblies has a treasury, and because of the fact that until the 24th day of February, at 11 o'clock at night, we had not earned this million barrels of oil, the disbursements have not been made through my hands; but the assistance rendered had been by these local assemblies to those absolutely in want. Many of them had not worked for a great while, but we took care of them out of charity. Of that amount I would be ignorant. I have pay-rolls which I will now submit to you. They contain names of people all over the country who have lost their positions and are not earning as much as will keep their families.

Q. Those are of the Well-Drillers' Association?—A. No, sir. These are the ones designated, and which have been overlooked by me, from the various assemblies, and checked off with the amount we will allow these men while being idle.

Q. You have paid out about \$87,000 ?—A. About \$85,000 to the Well-Drillers' Union.

Q. And in addition to that there have been payments by local assemblies of which you have no account ?—A. Of which I have no knowledge; yes, sir.

Q. From what source did the Producers' Protective Association get the fund to pay \$85,000 ?—A. At the time the first pay-roll was due, the 1st of January, it was advanced by members of the association. So was it also on the 10th of February; a part of it in the month of March. But in the month of March there were 250,000 barrels of oil sold which netted us a revenue of about \$77,000. I think that is the amount.

Q. That amount was received from the trustees ?—A. That amount of money was received from the sale of 25,000 barrels of oil.

Q. As I understand the testimony of Mr. Kirk, the certificates for this 6,000,000 of barrels of oil, or the proceeds thereof, were to be deposited with a trust company in New York.—A. Mr. Kirk made this statement—that the five millions were, but under the second agreement with the Standard Oil Company for the million barrels we had the privilege of selling it quarterly and the proceeds to be disbursed among the labor element.

Q. The proceeds were then to come from the Standard Oil Company direct ?—A. No, sir; it is set aside in the safe of the Safe Deposit Company as the other 5,000,000 are.

Q. That is what I want to get at, who the person was that made the sale, settled the amount, and got the money ?—A. That was the broker in the market. When we sold we simply sent them an order to send to this broker so much, and he would send us a statement of it.

Q. To whom did you send that order ?—A. We gave them a memorandum that that order had been passed by the executive board.

Q. Gave who ?—A. The Standard Oil Company; so that they would know we had the right to take that out. The action of the executive board would be the authority.

Q. You sent that to the Standard Trust Company ?—A. Yes, sir; by a man we designated.

Q. And on that the man you designated got the certificate for 250,000 barrels of oil and sold it ?—A. Yes, sir.

Q. Paying to the Standard Oil Company 62 cents and whatever charges there were, and the balance over went to your company ?—A. Yes, sir.

Q. So there was no intervention of the trust company in that transaction at all ?—A. Oh, no; they were simply the custodians of these certificates; that is all.

Q. Has there been any subsequent transaction of that kind ?—A. No, sir.

Q. That is the only sale that has been made out of this million barrels ?—A. Yes, sir.

Q. You stated your business was that of oil producer ?—A. Yes, sir.

Q. That is, you are the owner of wells ?—A. Yes, sir.

Q. And of course you keep track of the market there ?—A. No, sir; I gave that up years ago. A man who is a statistician in the oil market generally goes bursted; you can bet on that. If he minds his own business and sells his oil when he gets it, he will come out better than figuring on what he will get in futures. Setting up at night and figuring on figures that never come around is played out with me.

Q. Have you ever made any payments except to the Well-Drillers' Association ?—A. What do you mean by payments ?

Q. Payments out to any laborer.—A. No, sir; I have not. As I told you, the pay-rolls are all called for, sent out, and are under the supervision of the committee of each local assembly. They send out word to all the people in their vicinity that these pay-rolls are in their hands. Those who are in distress by this movement come there and present themselves, and when they are properly looked after these pay-rolls are returned to me. Now, out of the 36, up to the time I left, I think but 19 of them had received anything.

Q. Was that the first pay-roll you received?—A. Yes, sir; there was no possibility, as I said before, of our making a disbursement until we had established the fact beyond controversy that we had earned the 6,000,000 barrels.

Q. Then you have not made any disbursements to the laborers as yet?—A. No, sir.

Q. These are the pay-rolls [exhibiting them to witness]?—A. Yes, sir; up to my departure from Bradford.

Q. Can you tell me how much?—A. No, sir; we have had clerks figuring at them, and you can see that there are a great many changes made in them. We sent for the local man and talked these things over and reasoned with him a little.

Q. I have in my hand the pay-roll of Bolivar (New York) Assembly—23 persons—under the head of “cause of discharge, shut-down.”—A. That is not a literal truth. Any man who was a roustabout, for instance—that is, a fellow who is only a periodical worker on wells and works only when the opportunity presents itself, by virtue of the discontinuance of working in certain localities, his jobs are less frequent than formerly; and so he says he is injured to such an extent by the cause of the shut-down—the cause of discharge and shut-down. He is not discharged at all.

Q. I simply state what the paper shows.—A. Yes, sir; that is right.

Q. Under the column, “number of families dependent upon the applicant, 83 persons; total amount of payment ordered, 501.50, Clarendon Assembly,” state the name of each assembly and the amounts allowed upon the pay-rolls produced and offered in evidence, and the number of persons in each pay-roll to whom allowances are made, and the cause of their discharge or being out of work.—A. I can not furnish them without taking time to go over them, but I will do so hereafter and will send a sworn statement to your committee.

Q. Have you detailed statements of the amount produced, the amount of oil tabulated—statements alphabetically arranged?—A. I have books, as I have said, but I can not get the books in there. This is the size of the book [exhibiting it to the chairman]; they are now all bound. That thing run to page 39. I found that the business had increased to such an extent that I took half of the book and sent it away and had it rebound. This is the book of entry; we used it as a kind of a blotter.

Q. Does this book which you now produce contain the names of all the persons who have united in this shut-in contract?—A. Up to the time that the new books came in use.

Q. Up to December, 1887, it says there.—A. I think this was not done really until the 20th of January. We had been using this book up to the 20th of January.

Q. You may state how the figures contained in this book showing the total production, the amount to be shut in, and the amount to be produced, are to be arrived at.—A. Under the contract between the producers themselves their production for the months of July and August as taken as a basis of what their production should be for the year of

the shut-in. Now you take the pipe-line runs for the months of July and August, and the difference between the stock on hand on the first day of July and the 1st of September, and we have a decrease of stocks; if you would subtract that from the runs and divide by sixty-two days it would give you a daily production. If an increase of stock, it would be added to the runs, and divided by sixty-two would give you a daily production.

Q. That is, you have a report which gives you what you call the daily runs?—A. Yes, sir; I have not a daily report. Now take, for instance, some of these small accounts—E. A. Adams, for instance—and I will show you how we work it up, if you would like to see. I merely mention his name because it is the first one on these stocks. His number is 10.

Q. I see here Ames & Co.—A. They are No. 2. They do not render any stock statements like this. They make out their own statements.

Q. Give me another one that you have?—A. Here is the same thing—C. H. Ames & Co. Now on the first day of December they said that they had 650.02 on the ground in their tanks; on the first day of January, 455.81 on the same property, and that, therefore, they had a decrease of 194.21. They had run in the tide-water pipe lines during that month of December 542.53, from which must be subtracted 194.21, leaving a net production of 348.32 for the month—a daily production of 11.24 barrels.

Q. That is, you keep a sort of a balance sheet?—A. I know what every man produces during that month which passes under my personal supervision. Take, for instance, that statement you have in your hands. If that man overproduces, he gets a notice; if he has underproduced he does not get a notice. If he exceeds his limit, he gets a notice to curtail his production during the coming months.

Q. Then monthly you get from all the subscribers of this shut-in contract a statement?—A. I do, sir.

Q. That statement you correct by information obtained from the pipeline company of the amount which they have run for that particular period?—A. Yes, sir; they only give me their stocks on their leases, and I go to them and take a statement of what has been run. Then I make up what their production is per day to conform to my books.

Q. You require them by notice, then, in case they have produced more than stipulated in this agreement, to reduce the production the following month, so as to make up the average?—A. Yes, sir.

Q. Have there been any cases in which men have overproduced?—A. Yes, sir; a large number. For instance, many people unintentionally would overproduce one one-hundredth of a barrel a day. It made no difference, but when the clerk ran down the column if the man had only one one-hundredth of a barrel overproduced he would get a notice.

Q. As the result of that, what has been the curtailment of the production from the wells, averaging it?—A. I want to make one thing explicit to you gentlemen. Out of a gross production of about 41,000 barrels there were to be curtailed about 18,500; that is as between ourselves. In the month of November there were 18,143 barrels. The average for the months of December and January was 19,985.62 barrels. For the month of February the curtailment was 18,386.12 barrels.

Q. And for the month of March?—A. It has not been computed yet. Generally I do not get through with that before the 20th or 25th of the month.

Q. Compare November, December, January, and February with last year, or did you compare them with those months in order to ascertain

the curtailment?—A. Oh, no, sir; we started with the basis of July and August.

Q. July and August, 1887, and the curtailment was to be based on that production?—A. Yes, sir.

Q. As compared with the four calendar months of the year 1886-'87, November, December, January, and February, what was the difference of production in the months of November, December, January, and February last past?—A. The daily average for the months of November, December, January, and February?

Q. Yes. I want to contrast the production of the four months since this agreement has been in operation with the four months of the preceding year.—A. I did not have anything to do with the four months of the preceding year.

Q. Have you any data that would enable you to do it?—A. No, sir.

Q. Of course the statistical papers out there print all that?—A. You could perhaps get it; but when I went in it was entirely a new thing and I paid more particular attention to getting that part of it than to know the past. We hoped the past was dead.

Q. You are a member also, I suppose, of a local assembly?—A. Yes, sir.

Q. Has your local assembly made any payments to laborers?—A. Yes, sir.

Q. Other than the oil-well drillers?—A. They don't make any payment to the well-drillers' union.

Q. The payments that you have made, or that your assembly has made, have been to individuals?—A. Yes, sir.

Q. State what the character of the occupation of the individuals thus relieved was, in relation to the shut-in.—A. Pumpers and roustabout men who had families sick and impoverished. That was a source of relief to them and we did not withhold it. It was in our community and we thought we could well afford to allow them that.

Q. For what did you pay them?—A. For charity's sake.

Q. Did you give them any occupation?—A. We had not it to give; we gave them money instead.

Q. Did you give it to them upon any condition that they should remain idle and not go to work for other people?—A. Not at all.

Q. Did you give them any work in going around to satisfy others to remain idle?—A. Well, no. Now I am speaking with relation to the local assembly. I have very little to do with that, being principally engrossed with the carrying out of the general contract, and of the details of the local assembly I would know but very little indeed about it—very little.

Q. Where did the local assembly of which you are a member get the funds from which it made these payments to laborers?—A. From the initiation of its members, and dues, and such as that.

Q. Any other source; any outside source?—A. No, sir; I think not; I am sure not.

Q. Can you state what the average annual demand of the market was for crude oil; how much it used up during the year 1887?—A. No, sir; I never amused myself with looking that up. I had other fish to fry. I was too busy earning a living.

Q. Have there been any sales of any part of the 5,000,000 barrels of oil?—A. You say "5,000,000" No; there has not been.

Q. That is, under the first contract?—A. No, sir; there has not been.

Q. As you understand, by the terms of that contract there are to be

no sales of that?—A. We can sell it whenever we please, but we can not distribute the profit. That is, I say, we can sell it when we please. We can now sell it whenever we please.

Q. You know of this agreement made between the producers' association on the one part and the executive board of the well-drillers' union on the other?—A. Yes, sir.

Q. I call your attention to this clause:

This agreement as to benefits and advances and the stoppage of the drill shall continue in full force until the 8th day of September, 1888.

A. Yes, sir.

Q. Will you explain, please, what you understand to be intended to be covered by that provision?—A. If you take that drilling contract there, you will find that that is the contract in which the 8th day of September is named as one year from September 8. That was the date of the ratification by the general assembly of that contract. We did not antedate nor did we dare to put it forward; so that nobody could claim they had rigs built and that sort of thing.

Q. So that that date, the termination of the year, was fixed with reference to the date of the contract not to drill which your association had made?—A. Yes, sir.

Q. But that date does not agree with the date at which your contract with the Standard Oil Company expires, as you understand the shut-in contract?—A. No; the contract with the Standard Oil Company has no reference to drilling.

Q. Now, you also reserved a right to terminate this contract on the part of your association by giving a ten-days' notice.—A. Yes, sir.

Q. "And no obligations to pay or make advances shall exist after the delivery of said notice." Will you state what was intended to be provided for by that clause?—A. I was not present at the preparation of that contract; and as to the design of the originators of the contract I would scarcely know. The contract was delivered to me, after having been confirmed at a meeting not held in Bradford, and by me promulgated, or issued and prepared and sent out as it is there. It is simply a copy of what was handed me. What the original intention of the designers was, I do not know. I was not there at that meeting.

Q. Were you one of the original organizers of this producers' association?—A. I did not come into it until the latter part of August; it was the last week in August, I guess.

Q. Can you state the largest amount that has been shut in in one day under this shut-in contract?—A. No, sir; we take an average on the month.

Q. What was the price of oil on the 1st of November, 1887?—A. That would be simply a matter of guess-work. I have not it in my mind; I think in the neighborhood of 70 cents; somewhere about there; I don't remember exactly. The reason I am not so familiar with the market is that I have never bought a barrel or sold a barrel. I have attended to my legitimate duties, as I understood them, and have tried to fix these things up and systematize them. That was my branch of it and I have endeavored to do it.

Q. I understand that by the agreement the division of the ultimate profits that may result from the sale of these 5,000,000 barrels of oil, or the 4,000,000 out of the 5,000,000, is to be divided pro rata among the producers who have shut in to the same extent as they have shut in.—A. No; the amount or limit agreed upon.

Q. The limit agreed upon?—A. Yes, sir.

By Mr. SMITH :

Q. Can you now sell your product to any person you wish—the product of your wells?—A. That depends somewhat upon the quantity that you have of that. For instance, if I have a sufficient amount in the pipe lines to go there, and take it out in certificates, I can go there and sell the certificates to whom I wish.

Q. I mean right at your wells?—A. No; I am not located so that I can.

Q. Any one of your union?—A. There are people who have wells close to refiners who have limited amounts. Take them as a whole—no.

Q. It is to your advantage to dispose of this product of yours to the Standard Oil Trust, is it not?—A. Or somebody else who will pay equally as much.

Q. Somebody can not pay equally as much on account of not having facilities to transport; is not that so?—A. Yes, sir; except these little fellows I am talking about; they can pay a little bit more.

Q. How is it that they can pay a little bit more—the small manufacturers?—A. If I own a refinery and it was over here, and if you owned an oil well over there about three or four hundred feet away, you can run that oil to my factory without pipe, and I, as a refiner, would be willing to give you a little more than the limited price, because I would be saving something more.

Q. When it comes to the refined product in the market, the small refiner would have a large competitor in the Standard Oil Trust?—A. Yes, sir.

Q. And he would be handicapped there?—A. Mr. Smith, these questions that you are asking me are rather hypothetical questions. I am swearing to what I know, and I am willing to stand to all I do know; but when it comes down to a question of abstract and all that sort of thing, that is something else. I do not want to deny any question you ask. I will do the best I can. I will give you any evidence that is within my knowledge.

#### TESTIMONY OF MR. KIRK—Continued.

Mr. KIRK again resumed the stand.

By the CHAIRMAN :

Q. Has there arisen any difference between you and the officers of the Standard Oil Trust with regard to this agreement since the formation, to your knowledge?—A. Not officially. We understand that we are to have the assistance and advance in the price, and we do not seem to have gotten it. That is about all I know.

Q. Then there is a difference arising out of supposed?—A. (Interrupting.) I can not speak of anything more.

Q. Have there been any conferences upon that subject between the trustees and yourself?—A. Yes, sir.

Q. Which one of the trustees of the Standard Oil Trust have you met on that subject?—A. I had a conversation with Mr. Brewster.

Q. What is Mr. Brewster's connection with it?—A. I think he is vice-president; I do not know whether of the big thing or the little thing, but some of the things. He is vice-president of something—that is what is on his door.

Q. In New York?—A. I do not know whether it is the Standard of New York or Cleveland, or the Standard National, or what. He is the

main representative of the Standard that we met in making this contract.

Q. Had that conversation anything to do with any other matter than the question of price?—A. That was all.

Q. And did you, as the representative of your association, call to see Mr. Brewster?—A. I went as an individual; I was not appointed to go there.

Q. Did you with the knowledge of the other members of the executive committee?—A. No; I did not.

Q. They did not know of it?—A. No, sir.

Q. It was not in pursuance of any action on their part?—A. No, sir.

Q. How recently was this?—A. During the present week.

Q. That was after the drop in oil which occurred last week?—A. Yes, sir; it was Tuesday. We put refined up to 70½ cents, and maintained it at that, and on that basis we understood that we were to get 96 cents if it had gone down to about 78 cents.

Q. And you went there to protest?—A. Yes, sir.

Q. Did Mr. Brewster afford you any explanation as to how that should be changed?—A. No, sir.

Q. What explanation did he give of the situation of the change in the market?—A. He said there was no change in the markets of the world; that they could get the price for refined, but they did not propose to hold up the price of crude; if we could not do that they could not help it.

By Mr. BUCHANAN:

Q. In other words, he evinced his ability to hold up the price of refined and his inability to hold up the price of crude?—A. Yes, sir.

Q. Had refined to sell and crude to buy?—A. Yes, sir.

By the CHAIRMAN:

Q. Did what he say refer to his inability or his unwillingness to do it?—A. Both.

Q. He did not propose to do it?—A. I will say personally that I regard their giving this million as a bluff; that they had no thought that we could organize, a rabble like we were, and carry it into effect, and that they fear we are going to get power to equal them.

By Mr. BUCHANAN:

Q. Did you say that, or is that your belief?—A. I told Mr. Brewster that; that I regarded that to be so.

Q. What reply did he make?—A. He said I might believe what I pleased; he didn't care.

### TESTIMONY OF MR. GOLDSBOROUGH—Continued.

Mr. GOLDSBOROUGH again resumed the stand.

By the CHAIRMAN:

Q. (Exhibiting to witness sheet number 38). This is the form upon which you keep the list of the producers who are signers of the shut-in contract?—A. Yes, sir.

Q. And the way in which the statement is made up monthly of the production?—A. Yes, sir.

Q. And it is from the statement as thus made which enables you to know whether they have produced more or less than they are permitted to?—A. Yes, sir.

The sheet referred to is as follows :

*Production.*

Name.	Residence.	Post-office address.	Member of assembly. (Number.)	Signature on contract. (Number.)	Total production for July and August, 1887. (Daily.)	Amount to be shut in. (Daily.)	Amount which can produce. *Memorandum of agreement between the Standard Oil Company and producers.*

Memorandum of agreement, made this 1st day of November, 1887, between the Standard Oil Company of New York and the following named persons, partnerships, and corporations, producers of crude petroleum, Thomas W. Phillips and others, whose names will be found in the schedule hereto attached and made part of this agreement, as follows :

Whereas there has accumulated, in past years, an excessive stock of crude petroleum, which is deteriorating in quality, and a portion of which each year becomes sediment, valueless for any purpose, and the carrying of which excessive stock requires the expenditure of vast sums annually; and whereas in consequence of the existence of said stock the price of crude petroleum has for the past year been largely below the cost at which the same was produced; now, in order, as far as possible, to preserve the said stock from further waste and to conserve the public interest and our own, this agreement witnesseth:

That the Standard Oil Company of New York will set apart, at 62 cents per barrel, and hold for the use of the above-named producers and those who shall hereafter become parties to this agreement, as hereinafter provided, 5,000,000 barrels of merchantable crude petroleum, of 42 gallons each, to be sold and disposed of in the manner hereinafter provided. The said 5,000,000 barrels of petroleum to be subject, until sold by the said producers, to the usual assessments, storage charges, and interest upon the same, as also interest on the price of said petroleum, at 62 cents per barrel; said assessments, charges, and interest to be added to the price aforesaid.

In consideration of which the above-named producers agree to limit their production of petroleum that for the year next ensuing from this date, they or any number of them shall, for said year, collectively produce at least 17,500 barrels of crude petroleum less per day than they or any number of them collectively produced per day for the months of July and August, 1887, and that they will use every reasonable endeavor to control their production so that the same shall be in the aggregate 30,000 barrels less per day than it was during the said period of July and August, 1887.

If at the end of three months from the date hereof the said reduction of 17,500 barrels per day shall be attained, to be measured by taking the average production of the above-named producers for the month of December and January next and comparing the same with their average production for the months of July and August, 1887, a statement of the same being hereto attached and made part of this agreement, then the said 5,000,000 barrels of petroleum shall be delivered as fast as the same shall be sold by, upon the order, and for the account of, said producers through their executive committee appointed by agreement between themselves, and hereinafter named, to be paid for with interest and storage as delivered; that the profits aforesaid upon said 5,000,000 barrels of petroleum as sold, in accordance with the provisions of this agreement, shall, by said Standard Oil Company and said producers executive committee, be deposited with the United States Trust Company, in New York City, until the expiration of one year from the date hereof, in trust, in accordance with and subject to the provisions of this agreement, and in case the above-named producers or any

number of them shall not have lessened their production 17,500 barrels per day for said year as aforesaid, then all of said profits upon said 5,000,000 barrels of petroleum shall belong and be paid to the Standard Oil Company of New York, and in case the said above-named producers or any number of them collectively shall have lessened their production 17,500 barrels per day for the said year as aforesaid, then the entire profits aforesaid upon the 5,000,000 barrels of petroleum shall be paid to said producers executive committee, to be by it distributed in accordance with agreements between themselves to such of said producers as have fulfilled the terms of this agreement, and all agreements between themselves relating to such distributions.

The said producers are guaranteed by said Standard Oil Company of New York against loss within said year upon said 5,000,000 barrels of petroleum. The lessening of 17,500 barrels per day above provided shall embrace and include any reduction or lessening of production by producers who shall sign contracts not to use means to increase their production by drilling or otherwise.

Producers may become parties to this agreement within the year the contract is to operate by signing the agreement between producers authorizing the executive committee to sign this contract on their behalf, and having their names added hereto as parties by said executive committee.

The following-named persons constitute the executive committee above referred to, to wit:

(Names omitted by consent of the chairman.)

Mr. KIRK. I would like to say one word more, with your permission, and that is that in regard to our testimony we were legally advised that we were under no obligation to expose private business here, and to stand upon our rights. But all of our board present, and such as were called for consultation, resolved that we had nothing to be ashamed of, but everything that we were proud of, and therefore we regard this as voluntarily coming here to give this testimony. I want that understood. The only objection we have made to furnishing anything is a mere technical one on the matter of our obligation, and if we had time to have got our general assembly together, and the proper authorities, there is no doubt we would have been relieved even of that. We are willing to lay everything we have done before the world as a public necessity for ourselves and our country, to get just compensation for an article that we are entitled to; that we were never meant to be slaves to work for nothing. In that arrangement we provided, which I think is unexampled, that all the labor should be taken care of; that no man should suffer in the ranks of labor from our stoppage to produce.

By Mr. SMITH:

Q. Then, Mr. Kirk, you were compelled to combine against this large combination of the handlers of the product?—A. That, and circumstances; that, and our failure to get the territory to produce in competition with those stocks. They attributed it alone to our stocks, and we saw there was reason in it when it was called to our attention. They had to be sold before we could get a price, and with the present territory we could not produce them at the price. Give us territory and we will give it to you cheaper and cheaper.

Q. Is the oil to such a figure now, or as low a figure now as it ever was?—A. Yes, sir; the average of last year was the lowest in the history of the business.

Q. And that arose from this great surplus on hand?—A. Yes, sir; that is the cause. We thought even with that surplus, with just rates of compensation, we could live.

By the CHAIRMAN:

Q. Will you tell us what you find in the present rates of transportation to complain of?—A. We are charged 20 cents for pipage from the wells. It is a mere local gathering.

By Mr. SMITH:

Q. Twenty cents for what?—A. A barrel.

Q. How many miles?—A. Sometimes half a mile, sometimes 10. It is just the uniform rate of gathering from the wells to the central station of either the through pipe line or a railroad, as the case may be.

Q. You could almost send it by mail as cheap [laughter]?—A. Yes, sir. Previous to the securing of the lines by the Standard there was a multiplicity of lines—a number of lines. The nominal rate was 30 cents for that service, but by competition the actual rate was down to 5 or 10 cents. They consolidated and placed it at 20 cents, and it has remained at 20 cents, I think, since the year 1876.

Q. That is about one-third of the price, is it not?—A. Yes, sir; one-third. The whole process of transportation has been cheapened. Pipe that cost 45 cents a foot has in that time been got for 10 cents. The quality of the pipe was improved so that there is not the leakage or the wastage. There are all those improvements and inventions that have cheapened it. We pay the same now as we did fifteen years ago. We have reduced the cost of our wells at least 100 per cent. They have reduced nothing.

By Mr. BUCHANAN:

Q. You don't mean 100 per cent.?—A. I mean 50 per cent.

Q. You could get your wells for nothing if you did that?—A. That is right.

Q. You mean you reduced that one-half?—A. Yes, sir; there is no reduction where there is no competition.

Q. Have you sufficient information and data to give this committee an idea of what would be a fair return upon the capital invested in a series of gathering lines, as you may call them?—A. I think during the Billingsley bill—I have forgotten the data, but I can get it—they placed the nominal cost of their lines at \$30,000,000. We estimated that they got a gross income of \$20,000,000 from that; that certainly not more than \$5,000,000 was running expenses, and therefore they were making 50 per cent. on the transportation of this oil. They got \$20,000,000 in gross for the year 1876 for transportation, and we got \$18,000,000 for furnishing the lands, the wells, the risks, the chances everywhere. With more pipe—three times more than the proportion they had to transport, which cost ten times, I suppose, the proportion—we only got \$18,000,000, our gross earning of the whole country, and they got \$20,000,000 of the production of oil alone.

Q. Is it your opinion that 10 cents on the barrel would pay a fair return upon the capital necessary to construct and operate those gathering lines?—A. Yes, sir.

Q. Would the increased efficiency of the pipes, and the decrease in the cost of the material of which they are composed, probably be less than that?—A. We think 5 cents would be sufficient compensation.

By Mr. SMITH:

Q. For what distance?—A. For this 20-cent charge we think 5 cents would be a fair compensation.

By Mr. BUCHANAN:

Q. To afford a fair return on the capital invested?—A. Yes, sir.

Q. You are paying 20 cents?—A. Yes, sir. [Turning to Mr. Goldsborough.] Do you recollect the price that was fixed, Mr. Goldsborough?

Mr. GOLDSBOROUGH. First it was 12½ cents, and they finally fixed it at \$1.15.

By Mr. SMITH:

Q. What is the price to transport a barrel from this oil district to New York—to the sea-board?—A. There is no open tariff that I know of.

By Mr. BUCHANAN:

Q. The owners of the line buy the oil and transport it?—A. Yes, sir.

By Mr. SMITH:

Q. You do not know what it could be transported for at that distance?—A. No, sir; I think they maintain a difference in the prices between the ports of 50 and 60 cents; that is, they get 50 or 60 cents for taking it to New York; that is my recollection.

Q. Do you think that this oil could be forced through the pipes to New York for 5 cents a barrel?—A. That is all a guess. I think the running expenses would not be much more than that.

Q. I mean where this 6-inch pipe, as you say, is a main pipe. Could the oil be transported to the seaboard or to New York for 5 cents a barrel?—A. Of course there would be interest on the investment, etc., and profit. I am merely speaking of the running expenses of pumping. I think it could.

Q. What is the freight per barrel on cars to New York?—A. That I do not recollect. Whatever it is, it is comparatively nominal. The Standard does not need to give a barrel to any railroad. It has capacity to take it out.

Q. What it can not take by pipe it can take by the tank lines?—A. It can take all by pipe.

Q. A great deal of oil comes out West to our city—I know, at least, all of it, so to speak, except in the summer season, when the navigation is open on the lakes—in these tank cars. Now, is that refined oil?—A. What city do you mean?

Q. Milwaukee.—A. Yes, sir; that is refined oil. The oil, I presume, that reaches you is pumped by pipe lines to Cleveland, or possibly Pittsburgh. It is there refined and loaded in bulk cars and sent to Milwaukee.

Q. The cars are branded "Union Tank Company;" "Tank Line Company?"—A. Yes, sir. There is another matter I desire to call to the attention of the committee. I think one thing you should do is to apply the principles of the interstate commerce law to pipe lines, the transportation of oil by pipes, making them common carriers and subject to regulation.

Q. I understand your testimony to state that they claim to lay their pipes under eminent domain?—A. Yes, sir; the same as a railroad.

Q. They are interstate?—A. Yes, sir; and in a year they are going to become more so.

By the CHAIRMAN:

Q. Do you know what the cost of transportation of crude oil from New York to the sea-board was before there was any pipe line?—A. The rates were \$1.90 cents a barrel, and I think reduced to 80 cents before there was any pipe line.

Q. What was the price of crude oil when the freight was \$1.90 out in the oil country?—A. Here is the price from 1861; I do not know exactly what year. I should say it was \$1.90. The open rate I recollect was \$1.90 in 1877.

Q. What was the price of crude oil per barrel in 1877?—A. Two

dollars thirty-eight and three-fourth cents; but the very next year, in 1878, it was down to \$1.16.

By Mr. BUCHANAN:

Q. Do you know the weight of a barrel of oil?—A. Three hundred pounds was fixed at one time by some people, and 360 by another—the railroad rate.

By Mr. MCKINNEY:

Q. How many gallons are there in a barrel?—A. Forty-two gallons in a barrel.

Q. Eight pounds to the gallon?—A. I think 8 pounds.

### TESTIMONY OF E. F. HOWES.

E. F. HOWES sworn and examined.

By the CHAIRMAN:

Q. Where do you reside?—A. Olean, N. Y.

Q. What is your business?—A. Merchant.

Q. Are you treasurer of the Oil Well Supply Company, Limited?—A. Yes, sir.

Q. Where does that company carry on its business?—A. New York, Pennsylvania, and Ohio.

Q. Does the company or yourself in any way belong to any of these associations?—A. No, sir.

Q. What is the nature of the business?—A. Manufacture and sell oil-well supplies.

Q. That means pipe?—A. We don't manufacture pipe.

Q. You sell pipe?—A. Yes, sir.

Q. What else is covered by that?—A. Almost all material that goes to make an oil well or drill. We manufacture drilling tools, drills, sucker-rods, and fittings for steam, gas, water, and oil.

Mr. BUCHANAN. You furnish the *whole* except the *hole*? [Laughter.]

The WITNESS. Yes, sir; and the tools to make the hole with.

By the CHAIRMAN:

Q. How long have you been in that business?—A. Since 1872.

Q. You are familiar with the whole tract covered by this oil-producing region of New York and Pennsylvania?—A. Yes, sir.

Q. Do you do business through it?—A. We do business all through the oil regions of New York and Pennsylvania.

Q. In the transaction of the business of the company do you travel through that country?—A. Yes, sir; sometimes.

Q. Have you been through it recently?—A. Not for a month or two.

Q. Have you been there this year?—A. Yes, sir; not all over it, but over different parts of it.

Q. What has been the condition of your business in supplying materials for boring wells during the last four months?—A. Our business has been very light, indeed.

Q. And has it been noticeably light since the formation of these associations?—A. Yes, sir.

Q. I have an estimate of a diminution of business to the extent of five or six thousand dollars a month as compared with former years; is that correct?—A. It is a great deal more than that.

Q. What do you think the diminution has been per month for the past four months?—A. I do not think we have sold one-third of the amount of goods that we did previous to that.

Q. How is the condition of general business throughout that section?—A. Very light.

Q. Has it been noticeably so since the formation of this association?—A. Yes, sir.

Q. As compared with former years, what would you say it averaged?—A. I can not say as to that.

Q. Has the general business suffered as much as your business?—A. I do not think it has.

Q. Not quite?—A. No, sir.

Q. What has the population of that section of the country done? What has been its business connected with this oil?—A. Producing oil almost altogether.

Q. Very little farming business?—A. Not very much. There has been some lumbering.

Q. But the laboring population have found their source of employment in connection with this business?—A. Yes, sir; largely.

By Mr. SMITH:

Q. Is the nature of the country such that it is not fit for cultivation for farming?—A. A large portion of the country where oil is produced is very hilly, rocky, and mountainous, and in some places it is covered with forests. In other parts there is some land that could be cultivated. In Allegany County, N. Y., there is a great deal of that under cultivation; and in Butler and Clarion Counties.

Q. Are those all heavy oil-producing counties?—A. They are all oil-producing counties. The largest production of oil has been in McKean County.

Q. In the State of Pennsylvania?—A. Yes, sir.

Mr. GOLDSBOROUGH. I wish to illustrate somewhat about this labor business by my own case. I am not mentioning it here boastingly, or anything of that sort, but only to show you the sentiment which prevails in the community where I come from. It is this: I am a small producer, an insignificant man in the country, I might say. I have four men taking care of this little property I have. In furtherance of the contracts which we had issued and agreed upon I retain these four men, paying them exactly the same wages they had before, and requiring them only to do that which is requisite to get the proportion of oil that I agree to limit my production to. I have not been on the lease to superintend it as much as formerly, but previous to the time of the agitation of the "shut in" I was there almost every day, personally. My case alone is a very little one to a large majority of the producers of the country.

By Mr. SMITH:

Q. Mr. Goldsborough, let me ask you right here. You spoke about a lease. What is that lease? How much is that lease? How many acres?—A. This lease was property formerly belonging to the Bingham estate, the heirs of whom are English people—I believe it is traced back hundreds of years—and they give these leases at graded royalty; an eighth royalty, or something like that.

Q. On what?—A. On the production. For instance, if I have a well that produced eight barrels, they would get one-eighth, which is one

barrel, and I would get seven. I incur all the expenses and the land is theirs. I have a term lease for that property.

Mr. HOWES. I think Mr. Goldsborough is right about that. They discharged men and cut down the wages.

By Mr. SMITH :

Q. Mr. Howes, you testified that business is very dull ?—A. Yes, sir; I know we have transferred a great many of our employes around to Ohio and down to Pittsburgh. We have not discharged but one man, and he because we closed up store entirely.

(At this point the committee adjourned subject to the call of the chairman.)

*Synopsis of labor pay-rolls of Producers' Protective Association.*

Location of assembly.	Amount allowed on each pay-roll.	Number to whom allowances are made.	Number out of work on account of shut-down.	Number unemployed, no reason given.	Number out of work on account of property changing hands.

STATE OF PENNSYLVANIA,  
McKean County, ss :

Before me, a notary public, in and for said county, personally came James R. Goldsborough, who, being duly sworn, says that the above is true and correct to the best of his knowledge and belief.

JAMES R. GOLDSBOROUGH.

Witness my hand and official seal, this 28th day of May, A. D. 1888.  
[SEAL.] G. H. MOON,  
Notary Public.

STATE OF PENNSYLVANIA,  
County of McKean, ss :

I, J. M. McElroy, prothonotary of the court of common pleas in and for said county, which is a court of record having an official seal, do certify that George H. Moon is a notary public in and for said county,

duly commissioned and sworn and authorized by law to administer oaths and take the acknowledgment of deeds and instruments for record, and his term of office commenced on the 17th day of May, A. D. 1887, and will expire on the 17th day of May, A. D. 1891; and further, that I am well acquainted with his handwriting and verily believe that the signature to the annexed instrument purporting to be his is genuine.

In testimony whereof I have hereunto set my hand and affixed the seal of said court at Smethport this 28th day of May, A. D. 1888.

[SEAL.]

J. M. McELROY,  
*Prothonotary.*

FRIDAY, April 13, 1888.

### TESTIMONY OF I. E. DEAN.

I. E. DEAN sworn and examined.

By the CHAIRMAN:

Q. Where do you reside?—A. Toledo, Ohio.

Q. What is your business?—A. Producing oil.

Q. How long have you been engaged in that business?—A. Twenty-four years.

Q. By producing oil you mean that you are the owner of wells that are in operation?—A. Yes, sir.

Q. Where are they located?—A. In Alleghany County, Pa., McKean County, Pa., Warren County, Pa., Allen County, Ohio, Auglaize County, Ohio, Hancock County, Ohio, Sandusky County, Ohio, and Wood County, Ohio.

Q. Then a portion of your wells is located in the Ohio field, as well as a portion of them in the Pennsylvania field?—A. Yes, sir.

Q. Are you a member of the Producers' Protective Association?—A. Yes, sir.

Q. When did you become a member of that?—A. In September last, I think.

Q. At the time you became a member of it was there any agreement between the Standard Oil Company and the Producers' Association?—A. No, sir.

Q. Have you ever signed or made yourself a party to any of the agreements made by the Producers' Protective Association with the Standard Oil Company, or with its own members, or with the laborers, for the shutting in and reduction of the production of oil?—A. No, sir.

Q. Will you state, please, what the object of the Producers' Protective Association was, as you understood it, when you joined it?—A. The object of the Producers' Protective Association, as I understood it when I joined it, was for the purpose of solidifying public sentiment, so far as the producers and those interested in their welfare was concerned, in any movement that might be made to secure legislation or otherwise benefit the oil industry.

Q. Did that association contemplate at that time a contest with the Standard Oil people or trust, or was it expected that they would combine interests?—A. The Producers' Protective Association was an outgrowth of the strife in Pennsylvania to secure the passage of what was known as the Billingsley bill, and at the time I joined the Producers' Association it was supposed—at least that was my supposition and information—that it was proposed to organize the producers wherever

there were parties interested in the production of oil, so that in case any legislation should be introduced, either in Pennsylvania, New York, Ohio, or other States, or the Congress of the United States, in the interest of the producers, to at once, and without unnecessary expense, throw the whole combined interests of the oil business and those interested in it and in favor of it, with no idea of combination at that time, as I understood it.

Q. That is, combination with the Standard Oil Company?—A. Yes, sir; the combination with the Standard Oil Company was an after consideration.

Q. Now, what was the Billingsley bill of which you spoke?—A. It was a bill introduced in Pennsylvania for the purpose of reducing the pipeage, the storage, and the charges on oil, and also to compel the transportation company to deliver oil from their lines wherever the buyer of such oil should dictate; that is, if they had the facilities, of course. It may be necessary to say that it has been the practice of the transportation company to deliver oil where they saw fit, and you might build a refinery alongside of their loading station, and they would not deliver oil to you from the field where you wanted to get your oil.

Q. The pipe line companies then, as I understand it, decline to deliver oil at all except at the terminals of their lines?—A. They refuse to deliver the oil at the terminals, where you might build a refinery, for instance.

Q. These transportation lines or pipe lines were under the control of the Standard Oil Trust?—A. Yes, sir.

Q. You are not a refiner, are you?—A. No, sir.

Q. You have not shut in any of the product of your wells?—A. No, sir.

Q. You may state what that product amounts to in the different fields—that is, separating the Pennsylvania field from the Ohio field?—A. The gross production or my production?

Q. Your production?—A. Individually I have a production in the Allegheny field of twenty-two wells, probably producing about 22 barrels, about a barrel apiece. Then I am interested in a company; that is, in the Allegheny, McLean, and Warren fields, I think, seven hundred and eighty wells. I can not say exactly.

Q. Per diem?—A. Yes, sir. I can not say exactly what the production of those wells is. The same company owns in the neighborhood of forty wells in the Ohio field, and I have now three wells outside of the company in the Ohio field, that if I was running the production would be in the neighborhood of 200 or 250 barrels a day.

Q. Is there a difference between the oil from the Ohio field and the oil from the Pennsylvania field?—A. Yes, sir.

Q. In what does that difference consist?—A. The Ohio oil is strongly impregnated with sulphureted hydrogen, that gives the oil a smell which is objectionable to some people. The Pennsylvania oil has a sweeter odor.

Q. Is this sulphureted hydrogen in the Ohio oil a difficult matter to eliminate in the process of distillation?—A. It has been so considered. For twenty years they have experimented on it, and within the last three or four years they have been unable to get rid of it; but now they are able to deodorize it perfectly, so that the smell is taken out entirely.

Q. Is there any difference in the weight of the oil produced in Ohio from that produced in Pennsylvania?—A. Yes, sir; there is a difference in the weight of any oil.

Q. I mean the average?—A. Yes, sir; the Ohio oil is of heavier gravity than the Pennsylvania oil. The Pennsylvania oil runs from 25 gravity at Franklin, 40 to 44 gravity at McKean field, and 47 to 54 in the lower field; while the Ohio oil runs from 36 to 42 gravity.

Q. Is the Ohio oil what they seem to call a light oil; that is, an oil the distilled product from which can be used for illuminating purposes?—A. Yes, sir; that is what you would call a refined oil; not lubricating oil.

Q. The oil which you have mentioned as being found in the Pennsylvania field, I take it as a lubricating oil?—A. Yes, sir.

Q. About what is the heaviest crude oil that can be used by the process now known for the production of illuminating oil?—A. They can get a certain amount of illuminating oil out of any oil.

Q. I mean profitably?—A. I would not consider that oil that would show a gravity below thirty-five or twenty-five profitable illuminating oil. It would be owing to other ingredients in it that had to be eliminated.

Q. Where do you market the oil from your wells in Pennsylvania?—A. With the Standard.

Q. That is, you deliver to the pipe lines and take certificates for it?—A. I deliver it to the pipe lines and sell credit balances.

Q. What do you mean by that?—A. If you understood their system of doing business you would know that the oil that the producer produces from his well is run into the pipe line from day to day and is credited to the account of the owner of the well or the owners of the wells, and that stands and shows in the report as credit balances until certificates are issued for the same. In the meantime the producer generally sells his credit balances instead of taking certificates. Very few producers take out certificates for their production. Certificates are generally issued by the Standard Oil Company, they buying most of the credit balances.

Q. So what the producer sells actually is a credit which stands in his favor upon the pipe-line company's books?—A. Yes, sir. No certificate is issued until you have a credit for 1,000 barrels. They are not issued in less than thousand-barrel lots. The producers scarcely wait for a thousand barrels before they sell it.

Q. And selling it below a thousand barrels, do they have more than one customer, practically?—A. No, sir.

Q. In the Ohio field how is your oil marketed?—A. There it is all sold to the Standard Oil Company. They issue no certificates there.

Q. How is it gathered up at the wells?—A. In the same manner.

Q. There is a small pipe line which gathers it and takes it to the Standard?—A. The local lines put the oil into the lines at these points and we get credit for it at the Standard office.

Q. A credit entitling you to so much cash?—A. No; to so many barrels of oil, and that oil you have the privilege of selling to them at 15 cents a barrel.

Q. What is the price in Ohio?—A. Fifteen cents.

Q. What is the price in Pennsylvania?—A. Seventy-seven and something, I think it was yesterday. The certificates issued by the Standard Oil Company have become matter of speculation. They are used as collaterals in the banks, and bankers and brokers as well are interested in keeping up the price; whereas there are no speculative certificates issued in Ohio. The Standard Oil Company is the only purchaser, and there is no speculation. They fix the price to suit themselves.

Q. What is the production of the Ohio fields?—A. Between 18,000

and 20,000 barrels. If they would run all the oil it would be between 30,000 and 32,000.

Q. Is that 18,000 or 20,000 a day?—A. Yes, sir.

Q. And that all goes to the Standard Oil Company at a price fixed by them?—A. Yes, sir.

Q. What do you mean by the statement "If they would run all the oil the Ohio field would produce 32,000 barrels a day"?—A. I mean that they have refused to take care of only such a portion of the oil, and hence wells have been shut back in. Wells which if opened up would run 1,000 or 2,000 and something, or even more, would be shut in four days out of the week. When they would open an 800-barrel tank, for instance, they would open it long enough to fill it, which would take four or five hours, and then the well would be shut in again.

Q. Have you made any investigation recently to know the cost of refining the Ohio oil?—A. Yes, sir.

Q. Do you know, too, what the cost of refining the Pennsylvania oil is?—A. Not personally. I know what it is stated to be.

Q. You know what it is reputed to be?—A. Yes, sir.

Q. What is the difference in the cost of refining Pennsylvania oil and Ohio oil?—A. It costs one-third more to refine the Ohio oil than to refine the Pennsylvania oil, or about 13 cents more a barrel.

Q. I understood you to give the price of Ohio oil and Pennsylvania oil as so much per barrel?—A. Yes, sir; per barrel of 42 gallons.

Q. Do you know what use is made of the product of the Ohio field—what they do with it?—A. A good deal of it is in storage tanks built there, and the Standard are running a refinery at Lima.

Q. Using Ohio oil?—A. Yes, sir; they have a refinery there of about 3,000 barrels a day capacity, and they are mixing—that is a matter of hearsay, too, yet it comes as straight as anything can come—they are shipping from the Lima refinery to the Springfield refinery, at least a portion of it, and a portion of it is sold directly from the Lima refinery; but in both cases mixed with Pennsylvania oil.

Q. For what purpose is that done?—A. The Standard are behind other refineries so far in treating the Ohio oil. They are making a very good illuminating oil from it, but they mix the Pennsylvania oil with it to cover up a defect in the oil.

Q. What is that defect?—A. It is something in the oil that will color a chimney a rainbow color after being burned five or six hours; and if you have ever burned oil in your house you will notice that if your lamp is burned six or eight hours without changing the chimney, the chimney would be of a rainbow cast. The Ohio oil does this to a much larger extent than the Pennsylvania oil. But now, through a process known as the Detroit process, they are making of the Ohio oil a refined oil which is simply perfect. I have burned it for ten hours without its leaving the slightest discoloration.

Q. And the object of the Standard Company in mixing the refined product from the Pennsylvania field is to get an oil that will not produce this discoloration of the chimney?—A. That will not produce it to such an extent.

Q. With the ordinary use of the lamp?—A. Yes, sir; there may be a further object than that. They buy one oil for 15 cents and the other for 78 cents. Adding 20 cents for pipage would bring it to 98 cents, and 30 cents additional for freight would make it cost them \$1.28 at Cleveland. The one oil would cost them \$1.28 delivered in Cleveland while the Lima oil only costs them 15 cents, or, adding 20 cents for pipage, 35 cents at the refinery in Lima.

Q. Is it all sold at the same price?—A. The Lima oil?

Q. Yes.—A. Yes, sir.

Q. I mean the refined product.—A. Yes, sir.

Q. They sell the refined oil from the Lima product at the same price as that from the crude oil from the Pennsylvania field?—A. Yes, sir; they are making at Lima a special oil that is selling in the West, which some call the fuel oil. It is not given the same treatment as illuminating oil, and they are selling it for a less price.

Q. That oil is not refined to the same extent?—A. No, sir; it is not given the same treatment.

Q. It is used for kerosene stoves, oil stoves, and such things, I suppose?—A. Yes, sir.

Q. Your operations as an oil-well owner have not enabled you to speak from personal experience with regard to the question as to whether there are not preferences given to the Standard Company in the matter of transportation over the railroads?—A. No, sir; not recently. Four years ago I was interested in a company that built a pipe line and some tankage.

Q. Where?—A. At Warren, Pa., and we were talking some of building a pipe line and perhaps a refinery in Allegany County, N. Y., and in looking up the question of transportation we had occasion to come in contact with railroad men, but not to such an extent that we could tell what their rates were or anything of that kind.

Q. Supposing you wanted to ship your oil by rail from any of your wells to any point, do you know at what rate you could get it done?—

A. Since the interstate commerce bill passed they claim to give everybody the same rates. The rate from Cygnet, Findlay, and other places, to Detroit, Mich., for instance, is 20 cents.

Q. Is that in bulk?—A. In bulk; and you furnish your own cars. I forget the rates to different points, but I have got all of them. We are making arrangements to ship our own oil now.

Q. To ship it to a refinery?—A. Yes; and for fuel purposes. We expect to use a good deal of it for fuel.

Q. Can crude oil be used for fuel?—A. Oh, yes; it is being used very largely. In the remanufacture of steel it is found that the crude oil is the most desirable fuel; for instance, in the manufacture of car-springs and everything of that description, springs of any kind.

Q. From what source do you get your tank cars?—A. We buy them of the car-makers.

Q. You have to build them?—A. Yes, sir.

Q. The railroads do not furnish them?—A. No, sir; I have been since the 12th of December trying to get a siding put in by the Pennsylvania road. I have got a contract signed at last.

Q. So that you can load your cars?—A. Yes; I have had the cars since the 5th of January, had the pipe for the pipe-line, had the tank up for loading, and all the facilities for loading at the well, but the company were a little slow in making up their minds that they would put in a siding. I finally got a contract signed by them, however.

Q. Where is that located?—A. At Gibsonburgh, Ohio.

Q. You have not with you any table of statistics, have you?—A. Of production do you mean?

Q. Yes?—A. I think I have. If I had known just what statistics you wanted I would have been very glad to have furnished you with all the figures in regard to the oil fields. Here is Mr. Dodd's argument in which he furnishes the production—shipments of oil—an amount refined from 1861 to 1887. Here is a pamphlet issued in 1884

that shows the size, location, number of barrels, and tankage connected with the National Transit Lines. It shows also the acceptances outstanding and their conditions.

Up to 1872 the Standard Oil Company had no tankage to speak of, and had no cars. The Standard Refining Company had a few cars, of course, to ship their oil to Cleveland in. The iron tankage of the country had been built by individuals entirely and by the local pipe lines organized from time to time in the producing regions, and even after 1872 until 1884 a large proportion, if not a majority, of all the tankage built in the oil country was built by individuals. One company had over 300 miles of tankage. I, individually, had about 70 miles built. I had a couple of gentlemen associated with me.

Previous to 1879, after the McKane field was discovered, they practiced upon the oil country what they call their immediate shipment. That was this, that they would not transport the oil from your well until you had sold it, and you had to sell it to them. Immediate shipment oil was worth 30 cents less than the market price of oil, that is, than of certificate oil. If you built your own tank and put it on their line they would fill your tank the same as if you had sold the oil but would not give you storage for it nor empty your tank.

This caused such an intense feeling in the oil country that what was known as a phantom party was formed, and 1,000 men, with sheets and pillow-cases around them, marched from Tarport to Bradford in the evening, without saying a word, and the supposition was that it scared the Standard Oil Company and their employés. At any rate, it resulted in a meeting being called at Olean, by which we got a tankage contract. They agreed that if an individual built tankage they would run oil into that tankage until it was full. If he sold his oil, they would give him the benefit of the storage. This led a great many of the producers, who were able, to go on and build tankage. This lasted until 1884, when they annulled that tankage contract, and since that time they have not paid us, nor given us the benefit of storage even, though we owned the tankage.

There were 5,158,471.42 barrels of tankage connected with the National Transit Line and owned by outsiders—outside the National Transit Company. In connection with that, I will say that this tankage cost the producer who built it 30 cents a barrel, while at the same time the Standard Company were building their tanks under contracts at from 23 to 25 cents a barrel. When they annulled their tankage contract with the producer, that tankage was at once reduced to junk, worth about 3½ cents a barrel, and it looks to me like a confiscation of the difference between the value of that tankage for storage purposes and the 3½ cents per barrel which they paid for the portion that was held by outsiders. I had built seventy-two tanks, and I sold my one-third interest to my partners, who were bankers, and thought they could not have any better investment than carrying their own oil, but it was not six months afterwards before the Standard Oil Company's edict was issued making that tankage useless to my partners, although they had oil in the line.

Q. So that under the arrangement as it exists now these private tanks can not be used?—A. No, sir; not for the benefit of the owners.

Q. There has been a claim that the system of carrying oil in bulk in these tank cars was an invention or instrumentality used by the Standard Oil Company for the purpose of reducing the price of oil to the consumer. Will you state, please, what you know of the history of that method of transportation?—A. There have been improvements made in the transportation of oil by car from year to year, the same as in drilling and

every other department of the oil business, and the Empire Transportation Company, which was the first transporter over the Pennsylvania Railroad, owned a great many hundred iron tank cars, before the Standard Oil Company in its present form was known; and before the Standard Refining Company the Empire Company and other individuals owned quite a great many tank cars.

The cars we are using at present will hold, some of them, 154 barrels of oil. Until the Ohio fields were discovered the largest tank cars in use only held 120 barrels, and usually not over 80 to 100, and the practice of the railroads was to charge so much a car, regardless of how much they held. As soon as the producers of Ohio began to build larger cars they made a change. The Standard Oil Company was getting the worst of it, and they set up a howl at once that injustice was worked upon them, and the system of the charges was changed from so much a car to so much per hundred-weight. The cars were weighed when filled and when empty, so as to give the Standard a fair show with other people, which of course was right.

I think that Mr. Dodd's claim that they made the improvements in transportation is seriously out of place from another fact. Pipe-line transportation is unquestionably the scientific way of transporting oil where the quantity is sufficient to guaranty it. That was seen a number of years ago by men interested in oil, and Mr. Henry Harley, who was at one time connected with transportation over the Erie road, after the death of Fisk, and he was unable to secure as favorable rates as before, organized a company among the producers in connection with the Pennsylvania Railroad Company, with which he was connected, to build pipe lines to the sea-board by way of Philadelphia. They had organized their company, and sent men to secure the right of way and secured a portion of the right of way. The Standard Oil Company made arrangements with parties to head off that line, and did head it off. They even went so far in heading it off as to attack the credit of Mr. Harley and his line, and did finally bankrupt it. It was not until 1880, four years afterwards, that there was a line finally built to the sea-board. Mr. Dodd's claim that they made the improvements in transportation is, I think, entirely out of place.

Q. What is the relative cost of conveying a barrel of oil from the oil field to the seaboard or to Cincinnati, or any other central point, by pipe line or by car?—A. You mean what are the charges?

Q. Yes; from any point where both methods can be used?—A. There is no pipe line to Cincinnati.

Q. But to the seaboard there are several, I think?—A. The charges are the same.

Q. Whether by pipe line or by car?—A. Yes, sir.

Q. For a barrel of oil?—A. Yes, sir.

Q. Mr. Dodd says that the charge when they went in was \$1.50 a barrel?—A. That is true, but the Standard Oil Company was getting 80 cents rebate whether they shipped the oil or you did. He only tells part of the story, and the men who owned oil along the Ohio River were only going deeper and deeper into bankruptcy, and they did not know what hurt them until it was brought out later on that it was a question of rebate, allowing the company to make profit which it was impossible for the owners to do.

By Mr. SMITH:

Q. You stated that pipe lines were first started by Mr. Henry Harley?—A. I stated that the first seaboard line was, Harley, in fact, was the man who built the first pipe line.

**Q.** In building these lines was Mr. Harley and the men associated with him obliged to condemn the right of way?—**A.** They bought the right of way.

**Q.** They bought the right of way?—**A.** Yes, sir.

**Q.** Testimony was given to this committee that the pipe lines, as they now exist, have the right of eminent domain?—**Yes, sir.**

**Q.** When was that procured?—**A.** By what was known as the free pipe-line bill of Pennsylvania. I forget the date of it. I think it was about 1878 or 1879. I am not certain.

**Q.** What do they charge you as a producer per barrel for sending the oil from your tank to their main line?—**A.** Twenty cents a barrel, regardless of whether it is transported ten rods or ten miles; and then when you come to sell it, you get 15 cents for your share.

**Q.** In Ohio?—**A.** Yes, sir.

**Q.** How is it in Pennsylvania?—**A.** You have there the privilege of selling to them or any one else. There you get the market price, whatever it is, on the floor of the exchange at the time. The Standard Oil Company pay the market price, which is now about 78 cents, I think.

**Q.** You spoke about some certificates that you received in Pennsylvania for your oil—your product?—**A.** Well, what do you want to know about it?

**Q.** When you dispose of your oil to the Standard Oil Company you get a certificate of the amount of oil; is that correct?—**A.** No; you are given a credit on their books, which is known as the credit balance. If you do not care to sell the oil you can take out the certificate when you have deposited 1,000 barrels. It is just the same as depositing money in a bank and getting a certificate of deposit for it.

**Q.** Are these oil certificates negotiable?—**A.** Yes, sir; they are used to borrow money on.

**Q.** Are they ever used as currency?—**A.** They are used as collateral.

**Q.** As collateral only?—**A.** Very largely.

**Q.** Do the merchants ever take them?—**A.** A good many merchants have taken too many of them; that is, taken chances on them. Most of them have been bankrupted through it.

**Q.** Can you state about what percentage the earnings of the Standard Oil Company are on these lines?—**A.** No, sir; I can not state that, from the fact that they claim that they can not state it themselves. Dodd says that it is 13 per cent.

**Q.** What was their stock worth in 1884?—**A.** Seventy-five per cent.

**Q.** What is it worth now?—**A.** I do not know. It is as high as 223. It has been watered about \$20,000,000 in the mean time, and during these four years, while their stock has increased in value so largely, the business out of which they derived all of their profits has been undergoing a process of depreciation and bankruptcy, and the oil-well property to-day will not sell for one-third, certainly not one-half, of what it would in 1884.

**Q.** Oil property?—**A.** No, sir; the land will not sell for one-third, certainly not one-half, what it would. Well, their stock has increased from 75 cents—about \$60,000,000—to 220 cents which would be about \$180,000,000, and the value of their stock does not represent the dividends they paid or the salaries; while the producers have been working without salary mostly and without much grub in the house.

By Mr. BUCHANAN:

**Q.** You spoke of belonging to the Producers' Protective Association. Now, the officers of that association have been before this committee,

and have produced papers showing the method of operation and books showing the amount of production that each member of the association was limited to; and the statement was further made by the secretary that when any member exceeded that amount he was notified of such excess and warned that it must not be repeated. I understand you to say that you have not shut in because of your connection with the association. Do I understand you correctly?—A. Yes, sir.

The CHAIRMAN. Perhaps I can explain that to you, Mr. Buchanan. The statement of the officers was that the amount of production was regulated by the contracts which were signed, and it was not necessarily required of the members of the association that they should sign the contracts, nor were all the signers required to be members of the association.

The WITNESS. No; all the members need not necessarily sign that contract.

Q. That, then, explains why you have not been connected with the shut-in?—A. I have always been opposed to the shut-in.

Q. You were simply a member of the association, but not in the inner sanctum?—A. I never made a contract with the Standard Oil Company or any other company for cornering the market of a commodity or for artificially regulating the price. I do not believe in it. I am opposed to strikes, in other words, in any form, shape, or manner, whether by men working by the day or by the Standard Oil Company.

Q. How is the oil that you produce in Pennsylvania shipped?—A. Principally now by pipe lines.

Q. Owned by whom?—A. By the Standard Oil Company.

Q. Have you any other means of transportation?—A. No; except by the Tide Water Line, which has a running arrangement with the Standard. The Standard owns the majority of the stock.

Q. In short, are the transportation facilities in the field in which you operate entirely under the control of the Standard Oil Company and its allies?—A. Yes, sir.

Q. Are you compelled to pay the rates for transportation which they demand or go without transportation?—A. Or not ship; yes, sir.

Q. What remedy have you to suggest in the way of legislation for that state of things, if any?—A. If I were to recommend, I should favor simply the passage of a bill by Congress putting the transportation and storage companies into the position of bonded warehouses, similar to the whisky bonded warehouses, thereby making it a Government department, and the Government certifying to each certificate and delivering every barrel of oil.

Q. Have you thought of the advisability of bringing the pipe lines under the operation of the interstate commerce act?—A. No, sir; I have not given it any attention. I am willing to do business in competition with the Standard Oil Company, or any other company or individual, and I can do business cheaper because I am in the field, and, if I do say it myself, I am practical in the business, know nothing else, and if I have the same chance and same opportunity I can compete with any of them. But when there is a possibility for the Standard Oil Company to produce paper oil, or to produce more oil with the printing press in a few hours than the producers can with years of labor, I can not, of course, compete with them.

Q. What do you mean by paper oil?—A. I mean that there have been occurrences where the transportation company has issued certificates for more oil than there was in the pipe lines, and by that means have broken the oil market.

Q. You mean they issued certificates for which no oil was in existence?—A. Or at least in their custody.

Q. I mean in their custody.—A. But if it can be fixed so that there will be no possibility of an occurrence of that kind, I am willing to do business in competition with the Standard or any other combination. If you go back to the market in 1884 at the time of the Grant and Ward failure, you will discover that the whisky market did not break more than a few points, but oil went from 102 to nothing—nominally 50, but practically nothing. How do you account for that?

Q. I have long ago ceased trying to account for operations in Wall street. To return to the subject, what difficulties, if any, exist in the way of the producers of oil in the Pennsylvania oil-producing region combining to construct their own pipe line to the seaboard?—A. I guess that could be better answered by an illustration.

Q. Answer it in your own way. I am merely seeking for information.—A. If you had a sponge filled with blood and put that sponge under a pressure of about 10,000 pounds to the square inch, and kept that up for a considerable time, that sponge would be a poor place to look for blood; and the Pennsylvania producers are now poor men to look to for money to build a pipe line requiring an expenditure of many million of dollars.

Q. The only reason, then, would be the want of capital?—A. Yes, sir.

Q. Is there any other difficulty, in case that one could be surmounted?—A. No, sir; I do not know that there is, unless there would be the question of harmony. They made so many efforts to harmonize the different interests, which have all been merely flashes in the pan, that they have become somewhat discouraged.

Q. Has it been the policy of the Standard Oil Company to restrict or head off enterprises of that character?—A. Yes, sir.

Q. What has been their method?—A. They generally give the promoters of a scheme of that kind notice that if they go into it they will not make a dollar. Then if they know who the financial backers are they generally convince them that that is a fact; and that generally winds up the scheme.

Q. What means of transportation have you to market from the Ohio field?—A. No means now except by the Standard. There are three different concerns there—Sherman & Collins at Cygnet, the Syndicate Fuel Company at Findley, and the Eagle Refining Company at Lima, Ohio—that are marketing their own oil. I may say four, for Shumer, Teagle & Co. are doing so.

Q. What is there to prevent your shipping your oil from the Ohio field to market? You say you are compelled to sell to the Standard.—A. There is nothing to prevent now, as fast as we can get cars, with the same exception of want of funds that prevents Pennsylvania producers from building pipe lines, etc. We are now making arrangements in the Ohio fields, or at least hope to do so, by which we will build three large refineries outside of the Standard, to be built by the producers in connection with certain capitalists.

Q. Are there railroads from the Ohio fields to market?—A. Plenty of them.

Q. And you have cars. What is there to prevent you shipping your oil over those railroads?—A. Nothing, after you get the cars.

Q. After you ship it do you find the market controlled or not by the Standard Oil Company?—A. There you come into the same competition that you find everywhere. Of course they are out selling their oil, and most manufacturers prefer making contracts with the Standard,

knowing their responsibility and the large stock they carry, to making one with an individual or an outside company, not knowing whether they will be able to fill the contract a year hence. The Syndicate Fuel Company, of Findlay, have contracted for 2,400 barrels a day; Sherman, Collins & Co., 1,500 barrels a day, and Apple, of the Eagle Company, 1,000 barrels. Those are the three concerns I mentioned that started out with comparatively small capital, but are working their way to the front.

Q. I was seeking to ascertain the reason for the state of things which led you to say that you are compelled to sell your Ohio oil to the Standard Oil Company, and ask of you now if there is any other reason than those you have named?—A. You understand the situation; you go out and get—

Q. Excuse me; I am asking you for information and would like to have your answers concise and to the point.—A. I will try to do so. You ask me for further reasons, as I understand. You may have a 20-acre lease at Cincinnati, another 20-acre at Gibsonburgh, 100-acre lease at Cygnet, 50-acre lease at Waterville, another 50-acre lease at North Baltimore. Those different leases you may have are scattered over 150 miles of territory, no two of them within 10 miles of each other. Now, you can not build a loading rack in every place where you have a 20-acre lease; it would require too much capital; hence you have to depend upon such transportation as you find where your lease is, which compels you to run the oil by the Standard, because their lines run everywhere. They make it their business. Those companies I spoke of that have marketed their own oil have taken up large blocks of land, and thus have been enabled to build a switch and make arrangements for marketing their own oil; but the producers go wherever there is development. For instance, we have 2,000 acres at Gibsonburgh, and we propose to market our own oil from there. We ordered our own cars and rack and switch on the 12th of December, but we have not got the switch yet, although a contract has at last been signed. Now, those are serious delays. The producer can not wait so long. His notes come due and have to be paid.

Q. I was asking more particularly as to the difficulties, if any, put in your way by the transportation lines, with a view of ascertaining the desirability of applying some remedy by way of legislation. Can you give any additional difficulty laid in your way by the transportation companies, leaving aside those which arise from the want of capital on the part of the producer and things of that character?—A. Supposing, for instance, at Cygnet, I put in a loading rack and shipped my own oil, I would find at once that the transportation line would leave the rest of my oil in other parts of the field, and would not run it.

Q. Would refuse to receive it?—A. Yes, sir.

Q. Would the railroads refuse to transport your cars?—A. No, sir.

Q. Can the pipe lines refuse to take oil?—A. Yes, sir.

Q. Then, if the pipe lines were called common carriers, and subject to the law as such, would not that afford some relief?—A. Well, yes, I think it would afford some relief, but I do not think it would afford relief so far as the price is concerned. It might afford relief so far as getting oil into the pipe lines is concerned.

By Mr. WILSON:

Q. Are these pipe-line companies organized by a special act of the legislature, or under the general law?—A. The National Transit Company was organized by a special act of the legislature of Pennsylvania. They have a remarkable charter; I am sorry I have not a copy of it with me.

Q. Is there a general law either in Pennsylvania or Ohio under which such companies can organize?—A. Yes, sir.

Q. So there is no difficulty in the way of procuring legislation in either State, and organizing a company and constructing a pipe line?—A. Not at all.

Q. The general law gives them the right of condemnation of property?—A. Yes, sir.

Q. The only difficulty, then, is that this monster concern can, by its intimidation, or actual discrimination, crush out any small link because of its having so extensive a system itself?—A. Yes, sir.

Q. All the gambling done in oil by speculation is on these certificates of the Standard Oil Company?—A. Yes, sir; they are the only certificates known to speculation. The Tide-Water Company has certificates out, but they are not known to brokers for speculative purposes at all?

Q. That is an ally of the Standard?—A. Yes, sir.

By Mr. BRECKINRIDE:

Q. I would be glad, Mr. Dean, if you would describe what a pipe line is and how it is operated.—A. The pipe line is the means by which the oil is gathered in at the wells and transported from place to place. They usually use a 2-inch pipe from the wells. For instance, you drill a well. You tube your well, and it flows or pumps into a tank varying from two hundred and fifty to six or eight or twelve hundred barrels, according to the capacity of the well. That tank is gauged so as to ascertain the number of barrels it holds and the number of barrels each quarter-inch holds from bottom to top. The pipe-line company then connects a 2-inch pipe to your tank, and when a tank is full and ready to run they gauge it and find the number of barrels of oil in the tank, and then they run it out into their line or storage capacity through these tubes, and when they have completed running it out they regauge the tank and find out how many barrels of oil remain, and deduct the number run out from the number remaining, which shows the number of barrels run out, and that, less the royalty to be paid the owner of the land, is credited to you on their books. These pipe lines extend from the wells to their general field tanks. They build large iron tanks holding from 20,000 to 30,000 barrels in different parts of the field, in which they store oil temporarily. From these they have a pipe line 6 inches in diameter extending to the different cities. There are two to New York, one to Baltimore, one to Pittsburgh, one to Cleveland, and one to Buffalo. Through these larger lines they pump this product with immense pumps to New York, Philadelphia, Baltimore, etc.

Q. Where are these pumps located?—A. The first one is at their gathering station in the field, and they are located, generally, every 30 or 40 miles along the line. Sometimes there are 60 miles between the starting point and the next point. They run with about 1,000 pounds pressure to the square inch and they put the pumping stations in such positions as to work to the best advantage. There is no question but the company has systematized everything thoroughly. They have made great improvements; but when Mr. Dodd says they have made all the improvements he is giving too much credit to them.

Q. Are these pipes under ground?—A. The main oil pipes are but not the field pipes. They are compelled to bury them in the Ohio field from the fact that our Ohio territory is in the midst of a rich agricultural country, and hence in making our leases we are compelled to agree to bury all pipes.

Q. How deep are pipes generally buried?—A. So that the plow will miss them, and so that they will not interfere with drainage; 12 to 18 inches.

Q. Will coal oil freeze?—A. Crude oil?

Q. Yes.—A. There is a difference between oils as to their cold test. Some oils will stand more than others. But that is not an indication of poor oil. For instance, the fourth-sand oil, which is the best oil for refining purposes, will not stand a great amount of cold.

Q. What is the effect of cold on oil?—A. It chills it makes it stiff.

Q. You have spoken of the difficulties; what is your idea of the remedies? What do you think ought to be done, or can be done, to prevent the pressure we hear of by these combinations?—A. Every man, almost, has a different hobby and a different theory.

Q. Well, we are gathering them all up; let us have yours.—A. I have a different theory from almost any man in the oil country. I believe, and I do not want you to think I am a free-trader, in the utmost freedom of trade and commerce.

Q. You are speaking of coal oil?—A. I am speaking of coal oil. I believe if there was a positive assurance that there was no danger of overissuing certificates, or overdrawing the accounts, or issuing oil that they have not bought and paid for, or any other advantages of that kind which was gained by their being members of the Standard Oil Company, that an outside refiner can do business and successfully compete with them. Now, to show what I mean. Here is a statement showing the location of their tankage. Here you will see that every barrel of tankage they have at Philadelphia, New York, and other points, in connection with their large refinery interests there, in case of a fire the producer pays for it—the crude oil—and their tankage is kept short. Now you see all those tanks [indicating them] are at Pittsburgh refineries. Here is Saddle River, N. J., and the Great Pennsylvania, Milton, Pa., Sandy Hook, N. J., and Bayonne, N. J. All that tankage capacity around those refineries may be filled with oil, and in case of a fire goes into the general average and is paid by an assessment plan; while if you or I own a refinery alongside of them at Bayonne and put in sixty or a hundred or two hundred thousand barrels of tankage at our own expense, and had bought the oil of them to fill it with, when it is delivered to you the certificate is canceled and the oil becomes your property, and if it burns up you are the loser. It can not go into general average.

Q. But if oil is consumed while it is in their custody it goes into general average and no certificate is impaired in value by that?—A. No, sir; each certificate is assessed according to the percentage of losses in kinds.

Q. The oil is one element?—A. Yes, sir.

Q. Now as to your remedies. You spoke of preventing the overissue of certificates?—A. Yes, sir.

Q. That is all you mean to cover?—A. Yes, sir; that and the overdrawings of account. For instance, say it was practicable for you and I to control the capital to buy every certificate in existence to-day and put men in the field and buy the whole oil; that is, oil direct from the producer—every barrel of oil that is produced (they have 70,000 or 75,000 barrels of refining capacity to-day)—and I do not believe there is a man acquainted with the business that believes that one single refinery of theirs would shut down for want of oil. They are merely an oil bank. They do not agree to deliver and do not attempt to deliver the same identical oil that you deliver to them. But they agree to deliver a like amount on demand, the same as a bank, and if you go to them and say,

"Here, you are refining my oil," they will say, "I will deliver your oil whenever you want it;" and if you wanted to corner them you might buy all the certificates in existence and buy all the oil, and you would have to have 30,000,000 or 40,000,000 barrels of tankage to run your own oil into before you know whether they were short of oil or not.

Q. Have you any other remedy that you think would be fair?—A. No, sir. I do not believe in legislation fixing prices, neither for transportation nor for the product itself. I believe in an even chance, and the devil take the hindmost in the race.

Mr. BUCHANAN. Is not that what you are complaining of, that the devil is getting the hindmost?

The WITNESS. The devil is getting the hindmost; no doubt about that; but it is not an even chance.

Mr. MCKINNEY. Nor an even start.

The WITNESS. No, sir; nor an even show.

By Mr. BRECKINRIDGE:

Q. The Standard Oil Company controls all the pipe lines, does it not?—A. Yes, sir.

By Mr. MCKINNEY:

Q. I understand you to state that this combination known as the Standard Oil Trust has had a tendency to reduce or to impoverish the individual oil producers?—A. Yes, sir.

Q. There are a great many men employed in this business, are there not?—A. Yes, sir; directly and indirectly connected with the oil business and dependent upon it, probably in the neighborhood of 80,000 or 100,000 people.

Q. What effect has this combination had upon the wages of these 80,000 or 100,000 men, if any?—A. You mean since 1884, or since the combination made last November?

Q. Either. I am asking questions for general information. What effect has it had in the past and what effect is it having now? Explain to suit yourself.—A. Before the organization of the Standard Oil Company probably one-half of the men engaged in the oil business were refining or hunting a market for refined products, and the other half were drilling and operating wells. Hence our production was not as large as it has been since the Standard squeezed out and bought out and took the refining and transportation business entirely to themselves, and turned all those other men that were connected with the business prior to that into the producing business—made them all producers. That is the only thing they have been allowed to do. They went on in a wild way hunting new oil, and when they found it they would develop it rapidly until in one year we averaged nearly 100,000 barrels of oil a day. The last two years, up to last November, we have had over 7,000,000 barrels reduction on the stock. During that two years we have had the lowest price for crude oil that we have ever had in the business during that length of time.

Q. Are the wages of the help reduced?—A. Yes, sir; I met a man the other day in Lima that worked for me twenty-four years ago. I paid him \$6 a day then and expenses. He had only worked on one well, so he was not much of an expert. He has been continuously at the business since then and is working now for \$40 a month. That is true of every department of the oil business so far as the wages of workmen are concerned. Drillers' wages now are about \$3 a day; twenty-four years ago they would demand \$6 a day and expenses. Now they have to pay their own expenses and lay still a great while.

Q. What effect has it had on the general business of the country outside of the oil business?—A. I can say this, before 1872 I could within my own acquaintance name twenty men, I presume, that could draw their checks almost any time for \$100,000. I could name fifty men who draw their checks for \$50,000. I could name two hundred men that could draw their checks for \$10,000. To-day there is only one man in the oil business, after fifteen years' experience with those fellows—and most of the very men I spoke of before are still in it—that could draw his check for \$50,000, or even \$25,000. Their wealth has gradually been depleted, until they have, like all the rest of us, used their credit most of the time, until they find it is a case of economy and struggle to get a living out of the industry.

Q. Then you make this assertion, do you: That this combination has destroyed the wealth of many men in that community?—A. Yes, sir.

Q. And that it has reduced the wages of those employed materially?—A. Yes, sir.

Q. Has that been more so since this last combination than previously?—A. Since last November. When this combination was made the market was down to 62½ cents, and the object of this combination, so far as the producers' end of it is concerned, was to put prices up, and they were in the hopes of putting the prices up to \$1.50. The object of that combination was to limit the production and by that means enhance the price, which would be a benefit to the oil country. They put the price up to 98 cents. It was for a second \$1, but it did not stay there long enough so that any one could hit it very hard, and got back to 75, and along there. Since this has been advanced the oil country has been encouraged and business is very lively. They have not got any benefits only in their minds.

Q. Do you believe that if any legislation could be passed by which this combination could be broken, and that all men in the business would have an equal chance, that it would be a benefit not only to the business of those communities but also to the laborer?—A. Yes; yet at the same time I believe in combined capital; I believe in combined effort, but I do not believe in monopoly.

Q. That is what I mean?—A. That is, I do not believe in any combination being made for the purpose of reducing production and by that means enhancing value. I do not believe a combination should be made for the purpose of monopolizing any industry and arbitrarily fixing prices. I believe in combined capital instead of combined credit. If I had my way I would not allow a railroad to issue a dollar of indebtedness except its stock. I would make them sell their stock out for cash, and until that they could not build their roads. They might need more money, but we would have less suffering.

By Mr. BUCHANAN:

Q. Do you know of any way by which an additional amount of money would flow into the oil regions, except as the result either of an increase in the price of the selling of oil or a decrease in the price of charges in oil from the producer to the consumer?—A. No, sir.

By Mr. BRECKINRIDGE:

Q. Would not this influence it; that whatever might be the price of oil, would it not be important that the charges for transportation should be uniform, free from any discrimination between shippers?—A. Yes; that we have now.

Q. You have that now?—A. Yes, sir; so far as these pipe lines are concerned. Their price is 20 cents in the field.

Q. And no drawbacks to favorites?—A. No, sir; there is no discrimination in that rate.

Q. That was, however, the principal reason of trouble heretofore?—A. No, sir; there has never been any charge of anything of the kind in the oil country. There was with the railroads, but not with the pipe lines. You could not ship—or I could not ship a barrel of oil over the railroad without we paid their regular advertised rate. While the railroad made a reduction, the Standard got a rebate on every barrel of oil that I shipped.

Q. That broke you up?—A. Yes, sir; after we ran through the sheriff's hands we learned some things.

Q. The rates now by the pipe lines are absolutely uniform?—A. Yes, sir.

By Mr. BUCHANAN:

Q. Do you know of the existence of the rebates on the roads now?—A. No, sir; I do not.

Q. The interstate commerce act or something else has stopped that?—A. I think the interstate commerce act has had a good effect, especially on the oil business.

By Mr. BRECKINRIDGE:

Q. Have the charges by the pipe line been uniform all the time?—A. Yes, sir; there has never been a charge even of discrimination so far as the local pipe line is concerned.

Q. They did not discriminate in favor of one locality as against another locality?—A. No, sir; not so far as locality is concerned. The way they do that is this: If they find inferior oil in one place they make that the certificate oil, and pay a premium for a better oil. There is a difference in the grades of oil. For instance, McKean and Allegheny oil is not considered as fine for marketable purposes as the Pebble Rock oil. For instance, they pay 8 cents premium on the Pebble Rock oil; but the McKean and Allegheny fields is certificate oil.

By Mr. SMITH:

Q. Do you think those charges per barrel are exorbitant?—A. Yes, sir; no question about it; 7 cents a barrel is better business for piping oil than \$1 is for the producing of it.

The CHAIRMAN. There being no other questions to be put to the witness, he is discharged; and as there is no other business now before the committee this morning, it is adjourned.

---

WASHINGTON, D. C., April 23, 1888.

The committee met at 11 o'clock a. m. Present: The chairman, Mr. Smith; Mr. McKinney, Mr. Buchanan, Mr. Grimes, Mr. Crouse, and Mr. Bunnell.

The CHAIRMAN. Mr. Scott, you stated that you desired to say something to the committee when it was in session. It is now in session, and you may proceed.

Mr. JOHN SCOTT. Mr. Chairman, the subpoenas with the clause requiring the production of a very large number of books, documents, and papers were served upon some gentlemen who are officers of the Pennsylvania Railroad Company on Wednesday or Thursday of last week, requiring the presence of all of them here to-day at 12 o'clock. I

think there were ten of them, embracing the second vice-president, who is in charge of our transportation business, the general traffic manager, secretary, treasurer, and some five or six others. I was apprised on Saturday evening that Mr. Thompson, the second vice president, had information that, owing to the statement which he had made as to illness in his family, he would not be required to be here at the time; but I had no understanding that that exemption from obeying the subpoena extended to the other officers of the company, and that they might not seem to be in disregard of their subpoena, having to come to Washington on business before the Interstate Commerce Commission, I come before you to make a brief statement as to the position in which the service of that subpoena would place our officers if it is to be literally obeyed. I may say here that I disavow, representing that company, any desire to obstruct any legitimate investigation which may give to Congress or its committees any information that may be necessary to enable them to legislate upon any question of public interest. We are not obstructionists in that direction. We want to give such information as will lead up to proper legislation, and we shall obey when it is enacted. But this subpoena is to me somewhat wonderful in its extent.

The CHAIRMAN. Have you it with you?

Mr. SCOTT. I have a copy that was served on some of the officers. They are not named as officers in the subpoena, but the clause *duces tecum*, as it is technically determined, is in it. Of course they were subpoenaed for the purpose of bringing books here as officers of the Pennsylvania Railroad Company. I shall have occasion to refer to one or two clauses, and with your indulgence will speak with reference to them.

The CHAIRMAN. I made that inquiry because the form of the *duces tecum* clause is not known to any member of the committee.

Mr. SCOTT. I am glad to hear that.

The CHAIRMAN. I wish you to understand that in advance of anything you might say about it, because it will be necessary, in order that your remarks may be appreciated or understood by the committee, that they should know just what is in that clause.

Mr. SCOTT. I say I am glad to hear that statement, but I hardly supposed it was possible that this committee could, without a full understanding of the extent of this, be made the instrument for preparing in a Congressional committee material for private lawsuits.

The CHAIRMAN. Do not understand me as criticising it at all.

Mr. SCOTT. Then I infer from your present statement that the members of the committee are ignorant of what is in this clause of *duces tecum*.

The CHAIRMAN. I desire to make plain to you just what the fact is. There is no secret about it. These subpoenas have not been prepared by the committee in session, nor are the contents of them understood by or known in any manner to the majority of the members of the committee. My remark was addressed for the purpose of informing you of that fact, that you might not proceed with your discussion of it without informing the members of the committee what it was exactly that the subpoena contained.

Mr. SCOTT. As a preface, then, coming down to what that subpoena does contain, I may say that after this subpoena was sent I read with considerable interest the debate which resulted in the resolution under which you are now sitting, and I saw that whatever might be the general scope of that resolution some of the members who participated in the debate were solicitous that two subjects should not escape investi-

gation; one was the Standard Oil Company, the other was the anthracite combination. Seeing my friend Mr. Gowen here, I naturally supposed he was here subpoenaed as a witness for the anthracite combination. I did not know how soon they were going to take that up, he having been the president and receiver of the Reading Railroad Company while that combination existed, I believe. However that may be, I do not know whether you intend to direct your investigation specifically to the anthracite combination or the Standard Oil Company first, or to any of the general subjects that are embraced in them.

I come now to the subpoena, because it is specific in its purpose which is set out. It wants the documents, contracts, etc., made between the Pennsylvania Railroad Company and the South Improvement Company, dated January 18, 1872. That is specific enough, if there is such an agreement.

Then follows quite a number of contracts between the Pennsylvania Railroad Company and the producers of petroleum, represented by Benjamin B. Campbell and others, for the transportation of petroleum made in the year 1879 or 1880.

Then all contracts between the Pennsylvania Railroad Company and the Empire Transportation Company, especially the following (then follows the list "A, B, C," and so on, as follows):

A. The contract under which the Empire Line commenced business in the lines of the Pennsylvania Railroad Company.

B. The contract under which the property of the Empire Transportation Company was acquired by the Pennsylvania Railroad Company.

C. The contract or contracts under which the Empire Transportation Company transported oil on the lines of the Pennsylvania Railroad Company, and the contract or contracts under which the said Empire Transportation Company relinquished the transportation of oil on the lines of the Pennsylvania Railroad Company.

Then, and very generally—

IV. All contracts or agreements made between the Pennsylvania Railroad Company, or any department or officer or agent thereof, and any person, persons, firm, partnership association, trust, or corporation for the transportation of petroleum or the products of petroleum over the lines of the Pennsylvania Railroad Company, or any portion thereof—

So that you will see this is not intended to be confined to interstate investigation, but it would require every contract with reference to transportation of petroleum between all points in Pennsylvania—

or over any lines of railroad leased or operated by the Pennsylvania Railroad Company from the year 1870 to the year 1888, both inclusive.

A period of eighteen years.

V. All books, vouchers, receipts, bills, statements, or accounts relating to or showing any and all rebates, allowances, drawbacks, car service, or other payment whatever made, allowed, or credited by the Pennsylvania Railroad Company, or any department, officer, or agent thereof, for, on account of, or in respect of any and every shipment of crude or refined petroleum, or any of the products thereof, over the Pennsylvania Railroad, or any part thereof, or over any line or lines leased or operated by the Pennsylvania Railroad from the year 1870 to the present date inclusive.

VI. All books, statements, manifests, and accounts of the Pennsylvania Railroad Company, or any department thereof, showing any shipments of crude or refined oil over the lines operated by the said company, or any part thereof, during the years 1881, 1882, 1883, 1884, 1885, 1886, and 1887, showing in case of each shipment the name or names of the consignor and consignee, the point of origin and destination, the character of cargo, the actual weight or quantity of cargo, and the actual weight or quantity upon which freight was charged, the gross amount and rate of freight charge, the amount and rate of drawback, rebate, allowance, car service allowed or paid, the net amount of freight charge received less the drawbacks, allowances, rebates, or car service, and the distance in miles over which each shipment was transported.

VII. All letters and telegrams received by the Pennsylvania Railroad Company, or any department or officer thereof, with copies of all replies thereto, relating to claims for drawbacks, allowances, rebates, or car service upon or on account of all or any shipments of crude or refined petroleum, or any of its products thereof, from the years 1881 to 1888, both inclusive.

I would not have read the whole of this had it not been your request, Mr. Chairman, that I should do so for the information of the committee. Two things are apparent upon the face of it.

First. It is not a broad, general inquiry as to what the profit of the railroad company has been with reference to the shipment of petroleum and the rates charged; but it is a specific inquiry asking for the shipments, the dates, the names of the consignors and consignees, and the rates charged, and all that. That is the reason why I say, gentlemen, that as a lawyer when I read this it struck me that it was prepared by some gentleman who was endeavoring, through your committee, to prepare his private lawsuit for trial in court; and the reason I thought so is, that we have in Pennsylvania a statute dating back, my recollection is, to 1883, which gives to all shippers a remedy for rebates, payment of rebates, or for discriminations made against them, and those who consider themselves aggrieved under that statute have to-day pending against a railroad company lawsuits, and they are now in process of preparation for trial. This testimony, if it exists and they can get it through this channel, would be entirely appropriate in a private lawsuit. What advantage it will be for a committee of Congress to know whether a thousand barrels of oil went from Bradford to Pittsburgh to John Jones or Peter Smith, I am at a loss to see. The general practice certainly is all you want to inquire for, and why your committee should be asked to require the officers of the company to go over their accounts from 1870 to 1888—eighteen years—bring here all the manifests, all the correspondence, all the accounts, and all these books, I think, gentlemen, you will say to yourselves that it is somewhat mysterious to you, if you have not heretofore been informed of the contents of this subpoena *duces tecum* served upon ten officers of the Pennsylvania Railroad Company.

But in addition to that, gentlemen, I have this to say: The very evils that are complained of here, so far as they affect the interstate commerce, were the evils which were under discussion in your House and in the Senate for many years, and have resulted in the passage of a law to remedy these evils.

We are now being called from time to time before the Interstate Commerce Commission, a tribunal erected by Congress for the very purpose of remedying these evils. I am here to-day, and intend to go to-morrow before the Commission to answer a complaint made at Baltimore with reference to this very transportation of oil, and it does strike me, gentlemen, that however it may be your spirit to determine, Congress having acted upon the information obtained through long investigation and inquiry, having erected a tribunal for the very purpose of correcting these evils before which persons injured may go, and before which they are going daily—now is it the province of your committee that you shall go back to the year 1870 and require an investigation and search over this old straw which has been gone over by legislative committees in Pennsylvania and in Congress, for the purpose of enabling anybody to prepare a private lawsuit?

Mr. BUCHANAN. Let me ask you whether these suits you speak of are suits arising or based upon the causes of action which have been arising since the date of the taking effect of the interstate commerce law?

Mr. SCOTT. The suits to which I refer and which I have specially in mind relate back beyond the passage of the interstate commerce law, some of them, and embrace, according to my recollection, also charges made since the interstate commerce act. They are now in the State court; those suits are pending in the State courts of Pennsylvania.

The CHAIRMAN. Pending under some statute, not of the United States, but of your State?

Mr. SCOTT. Of my State.

The CHAIRMAN. These actions are pending under that statute?

Mr. SCOTT. Yes, sir. The other complaints that have been made before the Interstate Commerce Commission, of course I need not say to this committee, are with reference to interstate commerce, and not with reference to shipments.

Now, as I have already stated, our ten officers were subpoenaed all to be here to-day at 12 o'clock. I supposed anybody who prepared that subpoena, if he had given thought for a moment, would have come to the conclusion that it was hardly necessary that the same clause of *duces tecum* should be served on ten officers, the duties of whom are so distinct as those of the treasurer or the general traffic manager of the company; and I hardly supposed your committee expected the attendance of them all here this morning, even had there been any arrangement as to one of them. But I present to you this broad, general, question. I take it that there is no expectation that you will act here upon anything but interstate commerce. I do not know of any clause of the constitution that has conferred any other jurisdiction. Congress, as I have said, has already acted and conferred upon a tribunal jurisdiction over all questions of that character. It does strike me that it ought not to be asked of a corporation whose business is as extensive as that of the Pennsylvania Railroad Company that it shall detail its officers for the work of at least a week to look up documents, correspondence, telegrams, and accounts and bring them down here—as one of the officers said to me—in half a train, for it would take that pretty nearly to convey here all that enormous business of the Pennsylvania Railroad Company from 1870 to 1888, at least so much of it as has been left from the pulp mills, for we have not room enough in the building at Fourth street or anywhere else to keep these documents beyond a certain period of time.

Now, what your committee may determine to do, whether you will still insist that some of these witnesses may come and when they shall come, of course it is not for me to suggest. It will be for you to determine, in the light of the information which you now have, to what extent it is proposed to bring the officers here. If it is proposed to follow the other branch of the contention, and to insist on bringing our papers here from 1870 to 1888, from my experience of investigations I wish the committee all the joy they will have on hand.

But I come now to present it to you in that light, and we shall await in the future your determination as to whether you propose to bring these witnesses here for oral examination, or for the production of documents, and shall then be governed by our sense of duty to the public and to ourselves in the position in which we shall then find ourselves.

The CHAIRMAN. Now, as you are here as the representative of the Pennsylvania Railroad Company, I desire to know from you whether the understanding which I had with Mr. Scott, of Pennsylvania, Representative in Congress, will be acquiesced in and lived up to. Mr. Scott came here Saturday afternoon to say to me that the officers of the Pennsylvania Railroad Company were subpoenaed to appear here at 12 o'clock

to-day, and to bring with them a large amount of documentary proof. He wanted to know whether that date would be insisted upon. I told him that it would not be, upon the understanding that they would come without the service of a subpoena at some date to be fixed by me hereafter or by the committee, and of which they should be notified by telegram; of course, reserving to them at all times any legal rights they had under this subpoena, but not requiring us to serve a second subpoena upon them.

Mr. SCOTT. Is that the full inquiry you wish to make?

The CHAIRMAN. Yes, sir.

Mr. SCOTT. I do not wish to be misunderstood upon the question at all. I shall be as frank in my answer as you have been in your inquiry.

You refer, I presume, to Mr. William L. Scott. The family has become quite numerous. It is well to keep on the record about whom you are talking.

William L. Scott, as I understand, was telegraphed to or written to by Mr. Frank Thompson, the second vice-president, because of the illness of his son. His son is very ill, and is hardly expected to live a day or two, and it was impossible for him to leave him. All I know is contained in a dispatch which was sent by Mr. Scott to Mr. Thompson, and which was sent to me on Saturday evening, saying that his attendance was dispensed with. That came to me from Mr. Thompson. It was the language of the dispatch simply:

Chairman out of town. I have an understanding, however, that you need not appear Monday, and when you are wanted you will have time to respond.

The CHAIRMAN. I do not want any misunderstanding about it.

Mr. SCOTT. I am going on to state it. That was sent to me, and the impression made upon my mind when that note came to me was that I should come to Washington anyhow, notwithstanding his excuse. I did so for the reason that I understood the excuse extended only to him and not to anybody else. Had I understood it extended to everybody I should not have hurried here to-day, but would have come to-morrow before the Interstate Commerce Commission.

I will say here now that we will not require the duplicate service of the same subpoena, if that is what you refer to, on those gentlemen. That subpoena, whatever postponement you see proper to make as to their appearance, shall be considered as having been left with them, the notice not requiring the renewal of those copies upon them. Of course, the production of the papers or their giving testimony here must, of course, be reserved for instruction when they shall appear before you. I do not wish to put the committee to the trouble of re-serving their subpoena, if they insist upon the presence of these witnesses now.

The CHAIRMAN. For my part I do not ask for anything that will predetermine what your response to this subpoena will be. But I want it to be understood that they shall be treated as if they were here to-day, and assenting to the adjournment. Then, if there is to be any questions as to whether they are to be here to-day, we will call them and have their absence noted.

Mr. SCOTT. I am here for them, to say that it is impossible for them to be here to-day. We will not require the service of your subpoena again. So far as the efficacy of the service of that subpoena goes, it may be considered as made for such time as you may postpone the hearing to.

Mr. GOWAN. Mr. Chairman and gentlemen, some three weeks ago I was written to by the chairman of this committee to know whether I

would act as counsel for this committee in conducting an investigation under the authority of the resolution upon the subject of trusts, combinations, and confederations.

Mr. SCOTT. Excuse me, but I did not hear the first of your remarks.

Mr. GOWAN. Some three weeks ago I was written to, as a lawyer, by the chairman of this committee to know whether I could be employed by the committee as its counsel to investigate under their resolution the question of trusts and combinations, and particularly with reference to the Standard Oil Trust. I replied that if the committee would agree to make an investigation into whether, and to what extent, unjust railway discrimination in freight charges has enabled the Standard Oil Company to obtain and maintain its monopoly, I would cheerfully lend them my assistance, provided the term of my service was limited to two or three weeks, in which I could devote my time to it, having other engagements.

The chairman wrote a reply, stating that he had read my letter before the committee, and that they had unanimously agreed upon such an examination. I then had an interview with the chairman, and wrote him fully the facts which I proposed, as their counsel, to bring out, and asked him if he had any objections to it or desired to make any suggestions. He replied that he had not, and in obedience to my request he sent me the subpoenas which I had filled up in my office and served, acting solely and entirely for this committee, and without regard to any other interest, except the professional one which I was engaged in, to wit, my duty to this committee.

I proposed, as counsel for this committee, to prove this state of facts : That a discrimination by railroads—and among them the Pennsylvania Railroad—which amounted to millions of dollars a year, had enabled the Standard Oil Company to maintain its practical monopoly of the oil trade. In order to show that, it was necessary to prove, by anybody who had knowledge of the subject the fact that these drawbacks, rebates, and allowances were made. To do that, eight or ten officers of the Pennsylvania Railroad Company were subpoenaed ; among them the general traffic manager, who would know all about the contracts they had for carrying oil ; the treasurer, who would know what money had been paid out in drawbacks ; the secretary, who would have charge of the papers of the company, and therefore know where the contracts were ; and the head and assistant head of the three departments to which, if any money were paid on such drawbacks, the vouchers would have been presented.

Now, so far from this subpoena *duces tecum* having the extent which my friend Mr. Scott claims it has, the only things that are asked to be produced, apart from the five or six specific things which could be found in five minutes in any office of a company so well regulated as the Pennsylvania Railroad, are specific contracts, made at such and such a rate, that can be found in a moment.

The other things that are asked to be produced from 1870 to 1888 inclusive are what ? Nothing except two classes. First, any contracts they made to carry oil that are in existence. Their contract-book will show them that in ten minutes, certainly. Next, any rebates, bills, or receipts for rebates or allowances made from 1870 to 1888. Every rebate or allowance entry in their ledger, if it is turned to, will in twenty or twenty-five minutes surely enable an expert clerk to lay his hand on all such papers, if there are any. The books, manifests, and accounts about the shipping of crude oil that are asked to be produced, are only for the last seven years, from 1881 to 1888, inclusive.

Now, it is utterly impossible to conduct this investigation without having the power of this committee to secure the production of these papers, provided the gentlemen connected with this company will not relieve us of the necessity of producing the papers by themselves, as witnesses, testifying to their knowledge of the facts. Without this, unless this goes on, the examination is a farce. In my judgment, there is no more doubt than that I stand here that by the production of these papers we will be able to show that this Standard Oil Company, that now controls from 85 to 90 per cent. of the business interests, was enabled to grow to that proportion and break up every single opponent or rival they had, simply because at the time they entered into business, some twelve or fifteen years ago, and as late as nine years ago, they received on every barrel of oil they shipped—to use no worse phrase—an illegal drawback, and that, in addition to that, they were paid the same drawback on every barrel that everybody else shipped. If this is not a fit subject for Congressional investigation I do not know what is; and if these gentlemen are to suppose that the process of the subpoena is not to be obeyed, then there is no use of going on with it.

Now, in answer to what Mr. Scott alleges, that this may not be interstate traffic and therefore Congress has no power over it, I will call the committee's attention to the fact that you are not engaged in an investigation of interstate commerce. You are engaged in an investigation as to rebates producing monopolies, and the particular monopoly is the Standard Oil Company, which is what?—engaged in business all over the United States. Now, if the Standard Oil Company, handling 20,000,000 barrels of oil a year or more, all of which except a trifle comes out of the State of Pennsylvania—I say, if the Standard Oil Company, engaged in this business, which extends all over the United States and to foreign countries, makes an arrangement with a company in a particular State in which the oil originates, that at the well they are to have 50 cents or \$1 a barrel on this 20,000,000 barrels, the result of it is that that profit which they illegally made enables them to conduct their interstate commerce all over this country to the injury of everybody else and grow rich, while everybody else is becoming poorer. Is it any answer to you gentlemen who are engaged in investigating how a monopoly grew into existence to say that that rebate given by the Pennsylvania Railroad Company was only given to the Pennsylvania State? How easily could all interstate commerce be evaded if a party sending goods from New Orleans to New York in competition with twenty others were enabled to get such a rebate in the State of Louisiana as would practically reduce their rate of transportation outside of that State to nothing and destroy everybody else? Is not that a fit subject for investigation?

Now, I must also reply to a remark—I do not know whether it was a professional or otherwise remark—of my learned friend, Mr. Scott, that I am endeavoring here—I suppose he alluded to me, because I am the only one who had anything to do with the preparation of—

Mr. SCOTT. Permit me right here. The relation between you and me has entirely changed since I came into this room. I did not suppose you were a component part of this committee. It seems you are retained as counsel of the committee to prosecute the Standard Oil investigation only, and not the anthracite part of it. You will pardon me for supposing that with your prominence as the counsel for the Reading Railroad Company, and as the receiver, and as the gentleman who made contracts, if I am correctly informed, with the Empire Line for the transportation of oil, this was the last position in which I expected to find

you. Finding you here as counsel I shall extend to you the courtesies of counsel, so long as you see proper to maintain that position, which is, of course, a question for you, and I feel quite sorry that I did not know that my argument was to be addressed to a gentlemen who is to be the counsel of the committee in advising them what weight shall be given to my arguments.

The CHAIRMAN. The relation now being understood, you can go on.

Mr. GOWEN. I only desire to say that the only claim I have in any way against the Pennsylvania Railroad Company is a little matter that I have been corresponding with my friend Mr. Scott about, and which I hope he will settle, which has not any relation to this.

Mr. SCOTT. Very pleasantly.

Mr. GOWEN. I have no interest whatever against the Pennsylvania Railroad. I will take any good case that anybody will bring me against them. I do not mean to say I will stop that. I have been asked within the last few days to know whether I would accept a retainer to sue the Pennsylvania Railroad. I said certainly, but I have not received it yet. Why should I, even if I did occupy that position, or if anybody in this community or elsewhere was interested in a suit against the Pennsylvania Railroad Company, prevent the committee from having these facts brought out? If the Pennsylvania Railroad Company has done no wrong, the production of this testimony will do them no injury. If the Pennsylvania Railroad Company, in violation of its duty as a common carrier, has given a rebate of 50 cents, or 75 cents, or 25 cents, or 45 cents a barrel to one shipper of the Standard Oil Company, while they have not given it to another, will you gentlemen refuse to have that proof before you because the man who is injured can therefore bring a suit against the Pennsylvania Railroad and recover the money back? Why should he not? That is one of the very evils you are supposed to cure.

Having said this much, I have nothing more to say, except that this subpoena both as to the person and the *duces tecum* clause should be obeyed. Of course, if I can aid Mr. Scott or the Pennsylvania Railroad Company by getting through two or three of these persons the information asked for, it will not be necessary to bring them all. But we subpoenaed them all, so that there might be no doubt of catching at least some of them whose knowledge of this subject would enable us to ascertain the facts, and so that we might have everybody who was supposed to have possession of the papers.

Mr. SCOTT. Of course the committee does not wish that I should remain while they consult their counsel.

Mr. BUCHANAN. I would like to ask you a question or two for information. The sixth requirement here is a requirement to produce "all books, statements, manifests, and accounts of the Pennsylvania Railroad Company, or any department thereof, showing any shipments of crude or refined oil over the lines operated by the said company, or any part thereof, during the years 1881, 1882, 1883, 1884, 1885, 1886, and 1887, showing in case of each shipment the name or names of the consignor and consignee, the point of origin and destination," etc. Let me ask you from your general knowledge of the method and conduct in the business of that company as to whether that would require the production of each manifest from each party at each time, and whether the amount of oil would be larger or smaller, and if so, from your knowledge approximate the number of manifests it would require.

Mr. SCOTT. I have not sufficient knowledge of the details of the business to enable me to give any approximate idea. I can only say that one

of the gentlemen named, who is in charge of the freight receipts, in speaking on this subject, stated to me that to obey this subpoena literally would require the work of several clerks for a month or two, and I used his language when I said it would take that number of cars to bring that down here after it was looked up.

Mr. BUCHANAN. That looks to me as if it would require the production of each manifest or way-bill, whatever it may be called, which would consist of an immense number of papers.

Mr. SCOTT. Seven years, "showing in case of each shipment the name or names of the consignor and consignee."

The CHAIRMAN. Mr. Scott, before you leave us, can you indicate at all when it will be convenient for any of the officers of your company to come here; because, while we desire to go on with this investigation, we do not desire to be inconveniencing any gentleman unnecessarily.

Mr. SCOTT. I do not know that I could at this time say when it will be convenient for those officers to come. If your committee conclude to follow this investigation and to compel the attendance of these witnesses, if they are given some days' notice I will say that they will endeavor to conform their convenience to their duty with respect to that subpoena. Some of our officers have frequently to be away.

The CHAIRMAN. The question is put to you because we have the officers of other corporations here under subpoena, and they had definite and specific reasons why they could not conveniently come on certain days. They gave me that information, and it was arranged that they need not come here when there was a special reason for their being excused, and I desire to know whether there is anything of that sort that you know of now.

Mr. SCOTT. I take it that we will be informed as to whether the subpoena, which is now considered served, is to be insisted upon literally; or, if there be any modification of it, that we will be informed to what extent, and when I have that information I will take it up to our officers and endeavor to instruct them as to their duty, and instruct them to come when it will be convenient for them to do so.

Mr. GOWEN. I think the witnesses were obliged to be here to-day, and I am perfectly willing—if I am to conduct this investigation, and if the witnesses are to be here on Wednesday or Thursday—as to the multiplicity of things asked for in the sixth paragraph, to relieve them from a great deal of its voluminousness, provided the other things are brought.

Mr. SCOTT. Am I correct in understanding that the investigation is to be conducted by the counsel of the committee?

The CHAIRMAN. Yes, sir; it is to be conducted by the counsel of the committee, and I suggest to you that, after the committee have had a conference with their counsel, it may be desirable that the counsel for the committee and the counsel for the Pennsylvania road should confer, if agreeable to you.

Mr. GOWEN. There are a great many things we will only require in case we can not get the information in other ways, and if these gentlemen of the Pennsylvania Railroad will tell us it may relieve them.

Mr. BUCHANAN. I was about to suggest that it may not be possible for the gentlemen of the committee to determine as to what they would evidently require prior to an examination of these witnesses. It may be that an examination of these witnesses may result in the dispensing with these things.

The CHAIRMAN. It seems to me, and I desire to say in all kindness to counsel here, that if the counsel for the committee and the counsel for the Pennsylvania Railroad Company sit down with an earnest desire

to reach an agreement that the difficulties which we apprehend here, and which were expressed to us by the counsel for the Pennsylvania Railroad Company, will largely disappear. Now, I am speaking only for myself, and as to the result of what I understand to be the determination of this committee. I desire to indicate that what this committee understands to be its duty is not to inquire whether the Pennsylvania Railroad Company has complied with the interstate commerce law, but it is to ascertain whether the Standard Oil Company or the Standard Oil Trust by reason of any arrangement with the Pennsylvania Railroad Company acquired advantages which have resulted in the creation of that enormous concern to the detriment and injury of anybody else, and whether the interstate commerce law needs amendment or correction, or whether it needs extension in any way, or whether any new law is called for by reason of the facts which may thus be developed.

We are not prosecuting anybody. We simply wish to ascertain the facts. We are simply desiring to know how this thing came about and how it exists to-day, and what its growth was, and what its method of growth was, and when we have gotten that this committee is to take that back to the House for the purpose of such legislation as the House may deem to be proper.

Mr. SCOTT. Pardon me for suggesting that I do not think it quite the thing to suggest a conference between the counsel for the Pennsylvania Company and the counsel for the committee. These gentlemen who are subpoenaed as witnesses happen to be officers of the Pennsylvania Railroad Company, discharging their duties as such. I do not suppose the committee is yet quite ready to say that the Pennsylvania Railroad Company is a sinner above all men, and that Mr. Gowan, being without sin, shall cast the first stone at it. Before he examines the Standard Oil Company or anybody else he charges them to be a trust.

The CHAIRMAN. Permit me to say that this committee is not casting stones at anybody, nor is its counsel. If you object to my designating you as counsel for the Pennsylvania Railroad I will withdraw that and say counsel for these witnesses to whom I extended an excuse this morning, at the request of gentlemen who came here on their behalf.

Mr. SCOTT. What I wish to avoid is to having the Pennsylvania Railroad Company designated as the party who is sinning against the law, and who is to be first investigated. Their officers are subpoenaed as witnesses, as I understand it, for the purpose of fastening the sin upon the Standard Oil Company, and what I objected to was to putting the Pennsylvania Company in the position of the great sinner.

The CHAIRMAN. If you are not counsel for the Pennsylvania Railroad Company I do not know why you should trouble yourself about the question whether they are sinners or not, as far as this committee is concerned.

Mr. SCOTT. I am not troubling myself as to whether they are sinners or not, and, moreover, the tone of the remark about my coming here before this committee to explain that these men could not come here rather satisfies me that I ought not to leave this question to you, to be decided by you and by your counsel.

The CHAIRMAN. I have no power to decide in any way. I do not want you to misapprehend the fact that this committee is sitting here, not with the idea of prosecuting anybody, but in search of information.

Mr. SCOTT. The resolution under which you are acting directed no investigation against the Pennsylvania Company, nor was it named in that discussion. It did direct an investigation against the anthracite combination and the Standard Oil Company. If our officers can be

witnesses without exposing our private business publicly, giving it to litigants against it, they shall be witnesses; but we will endeavor to protect the interests which are confided to us, no matter who may be directing the investigation against the Standard Oil Company.

Mr. BUCHANAN. It is evident that the course of the investigation by this committee, so far as it has proceeded, is not exactly understood. We are investigating these trusts, these combinations, by whatever name they may be called. We have at present under consideration the case of the Standard Oil Trust or combination or whatever it may be called, and this is not the commencement of that investigation. We have had other witnesses before us who have detailed transactions which their organizations had with the Standard Oil, and in that way we are endeavoring to ascertain the truth as to the operations, not of these other corporations, but of the Standard Oil combinations, to ascertain to what extent it has been enabled by these operations to have an advantage over other competitors outside of and beyond fair business competition. That, it seems to me, is all this committee desires.

The CHAIRMAN. That is all, as far as I understand it. From whatever source they may get it, it is immaterial to them, so that they ascertain the method of operations of this company in order to be able to apply any remedy by legislation which is within the specific power of Congress to apply. It seems to me that if that were understood it would then be understood that we are prosecuting no one, and especially so as to these witnesses.

Mr. GOWEN. Permit me to state in relation to these officers that probably fifteen or twenty railroads have been subpoenaed to attend this committee. The Pennsylvania Railroad is only one out of fifteen or twenty. The reason it is given this prominence is because the counsel for the Pennsylvania Railroad is here to say that the gentlemen of his company can not attend. Every railroad company that has given an illegal rebate to the Standard Oil Company has been called to prove it.

Mr. SCOTT. This is the first appearance of the railroad company.

Mr. GOWEN. There are forty witnesses who are officers of railroad companies who are subpoenaed next week. I will have to get through with this examination this week and next week. We have subpoenaed twenty-six witnesses for this week and forty next week.

Mr. BUCHANAN. I would say further in connection with the suggestion of Mr. Scott that I am advised there are suits pending in the State of Pennsylvania under State law, testimony in support of which might be developed here; that as a member of this committee I desire that the committee should avoid even the appearance of using its public purposes for private ends, and it may be that a conference between the parties interested would be such as to avoid promulgating any facts that might be developed in a private suit, and at the same time attain the ends of the committee.

The CHAIRMAN. It seems to me that the only trouble on this point is this, that no testimony ought to be taken or admitted here which relates solely or mainly to any private lawsuit or controversy between this road or any other road and any individual; but that we should not refuse to take the testimony which is material to the subject that we are investigating, to wit, the method of operation of the Standard Oil Trust, because it may incidentally affect some other private matter. That seems to me to be the rule. (To Mr. Gowen). Are there any witnesses present?

Mr. GOWEN. The witnesses whom I subpoenaed have asked to be ex-

cused by the chairman, either on account of illness or for some other reason. It is very important, I think, to hurry this thing through and get done with it promptly and systematically, letting the examination commence in order and chronologically, so that any witness testifying out of his time may be understood. If you take the witness who happens to be in the room to-day he may testify to something that amounts to nothing, whereas witnesses who are to be examined before him ought to be produced. There are twenty-six or twenty-seven witnesses that I propose to examine here this week, including those of the Pennsylvania Railroad. There is one witness here, Mr. Malcolm Lloyd, whom I would not prefer to examine just now.

Mr. MALCOLM LLOYD. I do not see why my evidence to-day will not be just as plain as any other day. It will be taken down, and it is very important that I should get home to-night. My wife is not well, and I feel that if the committee can extend that courtesy to me I would like it very much. I can not see just particularly why it should not occur.

Mr. GOWEN. It is for you gentlemen to say. It will not take long to examine Mr. Lloyd.

Mr. SMITH. You have taken upon yourself the work of conducting the examination of this committee. We do not wish to go to work and interfere with your examination. You have already blocked out your proceeding.

Mr. GOWEN. Yes, sir; according to the course I have blocked out to the chairman, and I would rather prefer to examine other witnesses who come afterwards; otherwise, this sporadic examination of these witnesses who come will make an undigested and complicated mass of material which could not be understood.

Mr. CROUSE. Whatever importance this witness's testimony may have it can be inserted in the record at its proper place.

Mr. GOWEN. Yes, sir; we will take it *nunc pro tunc* and insert it in the record at its proper place, if that will be any relief to Mr. Lloyd.

Mr. SMITH. If that is satisfactory to you we will go on.

Mr. GOWEN. I would like, when the report is made up, to have this testimony come in at the proper place.

### TESTIMONY OF MALCOLM LLOYD.

MALCOLM LLOYD, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Philadelphia.

Q. What is your age?—A. Forty-nine years.

Q. In what business are you engaged?—A. Until recently I have been engaged in the refining of petroleum, and am now connected with the Atlantic Refining Company.

Q. How long were you engaged in the refining of petroleum as an independent refiner on your own account?—A. Since 1864.

Q. Where was your refinery located?—A. The first refinery was located at Twentieth and Washington avenue.

Q. Philadelphia?—A. Yes, sir.

Q. Did you change from there?—A. When the business changed we moved to Gibson's Point on the Schuylkill River. Two or three years after that the refinery was burned down and we moved on the river, where the oil could be exported.

Q. How long have you been engaged on the river at Gibson's Point as a refiner?—A. We went there in 1866 or 1867; I have forgotten just what year.

Q. Is that refinery still in existence?—A. It is still in existence.

Q. Are you conducting it?—A. I am not.

Q. Who owns it now?—A. The Atlantic Refining Company.

Q. Is that one of the companies which is affiliated with the Standard Oil Company?—A. I understand it is.

Q. You sold it to them, did you not?—A. Yes, in December last.

Q. Not last year?—A. Yes, sir; I made an arrangement with them by which they have charge of the works, and the works have been incorporated with theirs.

Q. Are you connected with the Atlantic Refinery in any way?—A. Yes, sir; treasurer of it.

Q. Have you charge of the business of refining oil?—A. No, sir; not particularly. It has only been since January that I have been there, and I have been sick for about six weeks, so that I am not very well acquainted with the details.

Q. Who is the president of the Atlantic Refining Company?—A. William G. Warden.

Q. Who is the secretary?—A. Mr. Bushnell.

Q. John Bushnell?—A. C. E. Bushnell.

Q. How did you get your oil when you were an independent refiner?—A. By the Pennsylvania Railroad Company for twenty years, or since 1864 and then also by the Reading road after the Tide-water Line had been established. I mean by that a number of cars—not many cars, but a few cars.

Q. What was the capacity of that refinery during the last few years?—A. A thousand barrels of crude oil a day.

Q. To what extent did you run it?—A. Fully.

Q. To a thousand barrels?—A. That is to say as fully as most refiners run their refineries.

Q. Can you give us the rates you paid on oil during the last three or four years up to the time you sold the Atlantic Refinery?—A. I think it has been 40 cents a barrel.

Q. Where did you ship your refined oil?—A. To any part of the world.

Q. Shipping it from Philadelphia?—A. Shipping it from Philadelphia.

Q. Did you receive at any time any rebates from the Pennsylvania Railroad Company up to the time you sold out to the Atlantic Refinery?—A. Yes, sir; in several instances.

Q. On crude oil?—A. Yes, sir.

Q. What did they amount to?—A. I could not begin to tell you. It has gone over a long series of years. I received drawbacks several times during that period.

Q. How frequently were those drawbacks paid, monthly or weekly?—A. Monthly.

Q. Did you make out a bill against the company for the drawback, or did they send you a voucher from their officers showing what it was?—A. We generally made a bill out.

Q. Where are copies of those bills?—A. I do not know, sir. My papers, after I discontinued my individual business—most of these things were destroyed.

Q. Are they all destroyed?—A. I judge so.

Q. Are your books destroyed?—A. No, sir.

Q. When you received a drawback it was in cash, was it not?—A. Generally.

Q. To what account did you credit that in your books?—A. That I am not able to say now. Of course they (the books) are now there. I did not keep the books.

Q. You could tell from looking at your books what rate of drawbacks you received?—A. Yes, sir.

Q. Will you do that for us and make out a statement?—A. I will do so if it is deemed proper that I should.

Q. By whom?—A. By the committee.

Q. Did you receive any drawbacks on refined oil shipped by railroad from your refinery?—A. I never shipped any.

Q. You never shipped any by railroad?—A. Not refined oil. My business was that of a refiner of crude petroleum.

Q. Was your entire market for refined oil abroad?—A. Yes, sir; until recently we had a trade since we went into it, for the last three or four years. We did not court that trade; we did not try for it before that time.

Q. But you did ship inland refined oil by railroad, did you not?—A. Yes, sir.

Q. Did you receive any rebate on refined oil when you were an individual refiner, working on your own account?—A. No, sir; because I did not ship refined oil from the West.

Q. I don't mean from the West, but from your refinery. You shipped refined oil from your refinery to your customers?—A. No, sir; we never received any. Allow me to explain that. I said in the last three or four years we had courted the home trade; before that time we did not. We did not think it was worth following.

Q. What I want to know—and you have answered it, and if your answer is correct you need not answer again—is, on that refined oil which you shipped to the home trade when you were in business yourself, did you not receive any rebates or drawbacks?—A. I do not think we ever shipped a car of refined oil out of the State of Pennsylvania. Yes, we have sent some to New York, but only a very few, and on those we received no drawback whatever.

Q. Did you receive any drawback on any refined oil that you shipped?—A. No, sir.

Q. In the State of Pennsylvania or elsewhere?—A. No, sir.

Q. Did you receive any drawback on account of refined oil, even if the drawback was paid in another manner?—A. No, sir.

Q. Now then, leaving your own business, and coming to the business of the Atlantic Refinery, of which you are the treasurer—when you sold out your business to the Standard Oil Company did you retain any interest in it?—A. No, sir.

Q. None whatever?—A. No, sir.

Q. Was it guarantied to you that you should have a salary?—A. I believe that I should be relieved from answering those personal questions. I am perfectly willing to give the committee any general information they want; but is it fair to ask me about a salary which I may or may not be receiving? Now is it right, or is it fair?

Mr. GOWEN. The question is, gentlemen, and the point I make is that this is one of the ways the Standard Oil Company has made a monopoly, or have conducted a monopoly, so that the individual refiner can make little or no money. They go to a refiner and buy him out and pay him a small salary. That is the very subject of your investigation.

The WITNESS Allow me to say that whatever was done as between myself and the Atlantic Refining Company was simply my desire generally that it should be done. They never said one single word to me. I went there, made my own arrangements, was treated generously, and deemed it wiser to conduct my business in that way than in an individual way; but no force of any description was used.

Q. Was any persuasion?—A. Nor persuasion.

Q. Was it not agreed that you should have a large salary to continue for a certain time as one of the conditions of this sale?—A. No, sir.

Q. Are you not now receiving such salary from the Atlantic Refinery?—A. I beg now to be excused; I have answered your question.

The CHAIRMAN. If there is any question about it, we will have to go into executive session, I suppose.

Mr. GOWEN. Yes, sir.

The CHAIRMAN. Is it desirable to do it now?

Mr. GOWEN. No, sir; we will waive it for the present.

By Mr. GOWEN:

Q. Now, Mr. Lloyd, where does the crude oil that is refined by the Atlantic Refinery now come from—from what districts?—A. I of course know very little about that, Mr. Gowen, except what I hear.

Q. You are an officer of the company?—A. True; but when you ask me whether I know positively where that oil comes from, can I answer unless I have actually seen the oil started? Do you mean that I shall go into that kind of detail?

Q. I will ask you by what line of railroad does it come to you.—A. Some by the Pennsylvania Railroad.

Q. Any by any other road?—A. I don't know. The Pennsylvania Railroad is the only road, except the Reading, that brings oil into Philadelphia, and I have frequently tried to get oil from the Reading but was not really able to succeed.

Q. The question is, where does the oil come from?—A. I suppose it comes from what you know to be the Bradford region.

Q. By what railroad does the oil that the Atlantic Refinery gets come over?—A. Some of it comes over the Pennsylvania road.

Q. Does any of it now come over any other line than the Pennsylvania?—A. Not that I know of. I say I do not know that there is any other line that can reach it.

Q. Why did you say that some of it came; does not all of it come over the Pennsylvania?—A. Some of it is transported by pipe.

Q. Does any of it come through pipe?—A. Yes, sir.

Q. Whose pipe is it?—A. The National Transit Company.

Q. That is affiliated with the Standard Company?—A. I think so.

Q. It is one of the companies that is in the Standard Trust?—A. I don't know anything about the Standard Trust.

Q. Don't you know as a business man that the National Transit Company is affiliated with the Standard Trust?—A. Yes; I think it is.

Q. Who is the president of the Transit Company?—A. I think Mr. Clement A. Griscom.

Q. Do you know what is now paid by the Atlantic Refinery for crude petroleum transported to them by the National Transit Company?—A. When the oil comes from the upper regions, the Bradford regions, 40 cents is paid; and when the oil comes from the lower regions, 50 cents is paid.

By the CHAIRMAN:

Q. That is, per barrel?—A. Yes, sir

By Mr. GOWEN:

Q. Does that payment of 40 and 50 cents, respectively, include the pipage on the local line?—A. No, sir.

Q. What is the pipage on the local line?—A. Twenty cents.

Q. In both cases?—A. Yes, sir.

Q. Therefore the National Transit Company, running this pipe alone, receives from the well to the refinery in Philadelphia, including main lines and local lines, 60 cents a barrel from that which comes from the Bradford field, and 70 cents from that which comes from the lower field?—A. Yes, sir.

Q. What rate does the Atlantic Refinery pay to the Pennsylvania Railroad Company on oil from the Bradford field?—A. Forty cents.

Q. What rate on oil from the lower field?—A. Fifty cents; and allow me to continue that that also, the 20 cents pipage, is to put the oil on the car.

Q. That is to say, in addition to the freight that you pay to the railroad of 40 cents and 50 cents, respectively, you also in that case have to pay 20 cents local pipage as well?—A. Yes, sir.

Q. Therefore, the rate of the railroad is exactly and identically the same as the rate on the pipe line?—A. Yes, sir.

Q. Now state whether or not the Atlantic Refinery, to your knowledge, has received any rebates or reduction on crude oil since the time it purchased your refinery?—A. No, sir.

Q. Do you mean to say it has not?—A. It has not.

Q. Now state whether or not, since the Atlantic Refinery purchased your refinery, it has received any rebate on refined oil?—A. No, sir.

Q. Are you sure of that?—A. None that I know of. If there was I think I would know of it.

Q. Therefore the rate on the railroad for your oil is identical with that on the pipe line for your oil?—A. Yes, sir.

Q. Where is the refined oil of the Atlantic Refinery now sent to?—A. All over the world.

Q. Is it mostly sent abroad?—A. Yes, sir.

Q. What proportion goes abroad and what proportion elsewhere?—A. I think three-fourths.

Q. Is that which goes abroad shipped from Philadelphia, or do you send any of it to Communipaw, N. J.?—A. All shipped from Philadelphia.

Q. Has the Atlantic Refinery since it got into the Standard Oil Company ever shipped any refined oil from its refinery in Philadelphia from any other port than Philadelphia for the purpose of being shipped abroad?—A. Not that I know.

(At this point, 1.15, p. m., the committee took a recess for fifteen minutes.)

The recess having expired, the committee resumed its session.

The CHAIRMAN. Mr. Lloyd, the committee have had under consideration the questions and answers put to you about the rate of drawbacks you received, and have reached the conclusion that you should furnish the statement as called for.

The WITNESS. Well, sir, I will do my best to furnish it. I stated a little while ago that most of my papers were destroyed.

The CHAIRMAN. I will hand you a copy of the record as it stands.

(The stenographer copied that part of the record indicated by the chairman and the same was given to the witness.)

By the CHAIRMAN:

Q. You are the treasurer of the Atlantic Refining Company?—A. Yes, sir.

Q. To which you sold your property?—A. Yes, sir.

Q. When did you become such treasurer?—A. About the first of January.

Q. 1888?—A. Yes, sir.

Q. Are you, as such treasurer, paid a salary?—A. Yes, sir.

The CHAIRMAN. Gentlemen, I will ask you to retire once more, and the committee will hold an executive session for a moment.

Mr. LLOYD. I did a petroleum refining business alongside of the Standard Oil Company for twenty years. I made money in my business and attended to my business. I believe in the accumulation of capital to do business, and I believe that sentiment is growing over the country. We are going to do business on a larger scale, and for that reason and that reason alone, I sought to become a portion of them, and throw in my small capital with their larger ones; but it was entirely my own volition and desire.

By Mr. GOWEN.

Q. Then I will ask you one question. Are you interested with them? Did you accept in payment of your property any interest in theirs?—A. Yes, sir; of course.

Q. What did you accept?—A. We accepted the Standard Oil Trust.

Q. Certificates?—A. Yes, sir.

Q. Have you any objection to telling us how many you got?—A. Yes, sir; I have objection; the same objection that I have stated heretofore, that it was entirely upon my own volition and wish.

Q. In selling out to them you became a member of their fraternity by accepting their certificates in their Standard Trust as the compensation of the property you turned over to them?—A. Yes, sir.

By Mr. SMITH:

Q. And you find it to pay just as well or better than when you were doing business before?—A. I have not been there long enough to find that out.

Q. How long have you been there?—A. Since January.

By Mr. GOWEN:

Q. You evidently expected to better your condition financially by joining them?—A. Yes, sir.

Q. You expect now to receive as dividends upon their trust certificates a larger profit than you received as an individual in competition with them?—A. I do not know.

Q. If you did not do that, why did you sell to them?—A. Because, as I stated, I believe a change has come over our country in the way of doing business. Whether it is a good change or not I do not know.

Q. Were you willing to jeopardize your property and become a minority holder in a larger corporation without a well-founded belief on your part that it would result to your pecuniary advantage?—A. I believed, as a matter of course, it was wise for me to do.

Q. Did you not believe it was a profitable thing for you to do?—A. Yes, sir.

By Mr. BUCHANAN:

Q. You speak of receiving trust certificates. Please explain what they are.—A. They are the evidence of ownership. I placed my prop-

erty in with the Atlantic Refining Company and received this evidence of ownership, and became one of the stock company, or one of the stockholders.

Q. Of the Atlantic Refining Company?—A. The Atlantic Refining Company is, of course, connected with the Standard Oil Company.

Q. But what did you get—Atlantic Refining Company corporation certificates, or Standard Oil Trust certificates?—A. Standard Oil Trust certificates.

By the CHAIRMAN:

Q. Standard Oil Trust certificates?—A. Standard Oil Trust certificates.

By Mr. BUCHANAN:

Q. Do you remember how they read?—A. No, sir; I do not.

Q. Have you one with you?—A. I have not.

Q. Do you remember by whom issued?—A. I think by Mr. Rockefeller, the president of the Standard Oil Trust.

Q. Are you speaking now of certificates in the Standard Oil Trust or the Standard Trust?—A. The Standard Oil Trust.

Q. Did you receive certificates to the amount or in excess of the appraised value of your property which you turned over?—A. Just exactly the appraised value. We appraised it carefully.

(At this point the committee went into executive session for ten minutes, after which the doors were re-opened, when the chairman announced that the committee had adjourned until to-morrow morning at 11.30 o'clock )

WASHINGTON, D. C., *April 24, 1888.*

The committee met at 11.30 a. m. Present: The chairman, Mr. Smith, Mr. McKinney, Mr. Grimes, Mr. Bunnell, Mr. Bynum, Mr. Crouse, and Mr. Wilson.

Mr. JOSEPH J. POTTS having been subpoenaed to appear before the committee, and having not yet arrived, the committee took a recess until 2 o'clock p. m.

AFTER RECESS.

Mr. SMITH (to the CHAIRMAN). Has there been any answer received from this witness Potts?

The CHAIRMAN. Yes, sir.

Mr. SMITH. What is the reason he is not here, or is he here?

The CHAIRMAN. He is not here. He telegraphed to me that he did not receive my dispatch in time to come over, and asks to be excused until Friday. In a telegram I am about sending him now, I have directed him to be here to-morrow morning.

Mr. SMITH. I hope you will be a little more stringent with these witnesses. I do not like the idea of fooling away our time here. I believe in bringing these men here, and if they won't come, sending a sergeant-at-arms after them.

Mr. GOWEN. I have now to lay before the committee the original subpoenas of all these witnesses, with affidavits. All the subpoenas will be here in a few days. Some of them went to New Orleans, Louisville, and Nashville.

**TESTIMONY OF THOMAS W. PHILLIPS.**

Having first duly affirmed, Mr. PHILLIPS testified as follows :

By Mr. GOWEN :

Q. Where do you reside, Mr. Phillips ?—A. In New Castle, Pennsylvania.

Q. You are interested in the production of petroleum, are you not ?—A. Yes, sir.

Q. Largely ?—A. Yes, sir ; largely.

Q. How long have you been engaged in the business ?—A. Since 1861. I began drilling for oil in that year. In 1862 I became more actively engaged in it.

Q. What is the amount of your production, in thousand barrels, per day ?—A. When I signed this contract to shut in I was producing 6,600 barrels per day. I produced 173,000 barrels the month prior to that time.

Q. You occupy the position of president of what is called the Producers' Association, do you not ?—A. Well, I presume that that has become an open secret at the present time. Such is the case. While I might not be at liberty to state the other officers, I think I would be at liberty to state that.

Q. I have understood that you desire of your own motion to make some statement to the committee with reference to the matters connected with the oil regions, and the present method of doing business there. If so, you will please, in your own way and in your own manner, just state what information you desire to give to the committee.—A. I would not desire to do it. It was not a desire on my part in the first place ; but learning that there might be some testimony given here, and more especially some by parties out of the State, that would not be favorable to the contract which the Producers have made with the Standard, it was thought well by myself and others that we should make a more full statement than had been heretofore made in regard to that particular part of the business—the contract.

Q. I understand that the chairman is willing that you should make your statement, and say whatever you desire to say on that subject, and if you will please go on the stenographer will take it down.—A. I will state that I have a paper here, prepared and signed by a number of persons largely interested in this industry, and all parties to the contract with the Standard. It is not lengthy, and I would be pleased to make my affidavit to it or make it a part of my testimony. May I be permitted to read it ?

The CHAIRMAN. Allow me to look at it and see what there is in it, please.

(The witness handed the paper to the chairman.)

The CHAIRMAN (after examining the paper). I do not see any objection to your reading that, if you desire to, as your statement in reply to Mr. Gowen's suggestion that you can make a statement to the committee.

The witness then read the following paper :

BUTLER, PA., April 18, 1888.

DEAR SIR: The undersigned members of the executive committee of the Producers' Protective Association, having been informed that in the course of your investigations

you have deemed it proper to inquire into the nature and purposes of our association, beg leave to submit a brief statement with the annexed statistical circulars for your information.

The production of petroleum is the principal industry in a considerable territory in the States of Pennsylvania and New York, employing the labor and talents of many thousands of people.

This section of country had become impoverished, and the people so engaged on the verge of bankruptcy, because of the long-continued depression of the price of crude petroleum below the cost of its production, and below a price warranted by the legitimate relations of supply and demand.

Upon investigation the producers believed this unhappy condition of their business was due to two causes; one the existence of 31,000,000 barrels of crude petroleum stored in tanks in advance of consumption, and the other the continual selling short by speculators who were not interested in the business of production of petroleum, nor, indeed, in any legitimate business connected with petroleum in any way, but who persisted in selling short, gambling on the hope of differences in their favor, without having any oil to deliver nor expecting to have any to deliver.

The second cause above named was not in our power to remove. It is aggravated by the usage in the various oil exchanges, which by a system of so-called clearances enables a day's transaction involving millions of barrels to be made with the use of so much actual oil only as will settle balances on the brokers' sheets, and by the further usage in such exchanges which allows to the short seller the current charges for carrying, which the holder of petroleum must pay.

This second cause can be corrected only by legislation. Such gambling in differences, we were advised, is illegal, but that the only penalty for its commission is in the refusal of a court to enforce any contract of that character. As a remedy this is wholly ineffectual. Further legislation is needed to prevent it and adequately punish the offender. If, under the power to regulate commerce, Congress can and will enact a law to meet this evil, it will confer a great blessing on those engaged in this now languishing industry.

The first cause was, the producers conceived, within their own control. They created the Producers' Protective Association, embracing a large majority of the producers, and agreed with each other to restrict production for a year, intending thereby to reduce the stock above ground to an amount consistent with a healthy condition of business, and a remunerative price to them for the capital and labor employed in production, and also by thereby compelling the use of existing stocks to prevent the unnecessary waste of value caused by their continuing deterioration.

These stocks of oil depreciate in value with age. Evaporation eliminates the more valuable constituents to a large extent, and the practical result of delayed use is less oil with more worthless residuum, and of course involving a large decrease in value, which is so much loss to the wealth of the nation. The reduction of stocks which we aim to accomplish affects the second above-named cause of our distress, in this, that it removes the basis of one of the strongest arguments upon which a sentiment in favor of short selling was grounded, for production and consumption were on a healthy basis. It was the existence of these large visible stocks alone that lent a color of justification for the extremely low prices which have prevailed in recent years.

We beg you to observe that the producers' action is one which, while it advances the interests of those engaged in this industry, appeals to the sympathy of the entire nation, for the petroleum producer looks to the world for his market, two-thirds of the oil being exported and consumed in foreign lands.

Our efforts tend to increase the national wealth by bringing into the country from abroad more money for the commodity we produce.

Nor is the advance in the cost of refined oil on the smaller proportion consumed in this country sufficient to be worthy of consideration as an argument against our efforts, for each 4 cents a barrel of advance on crude petroleum is equivalent to an advance of but one-eighth of a cent a gallon in refined.

The imperative necessity for a higher price than has recently prevailed is plainly shown in the annexed circulars, showing the actual cost of production to be far above the price received.

While we believe the facts above set forth amply vindicate the producers' movement to restrict production, there is one feature peculiar to the production of petroleum which makes combination indispensable. Owing to the fluid nature of this commodity, the oil in one tract of land may be extracted by wells upon an adjoining property. One owner, therefore, can not stop producing while his neighbor continues without having his oil extracted by his neighbor's wells. The remedy open to individual operators in other branches of business, to quit when prices are low, can not be applied in this business without suffering meanwhile the loss of property. Justice and necessity therefore in this case require producers to join for the restriction of production to accomplish the end which in other branches of business is accomplished by

individual action. We respectfully pray, therefore, if within the province of Congress, such remedial legislation as will aid the purpose for which we labor.

T. W. PHILLIPS.  
H. L. TAYLOR.  
JOHN L. MCKINNEY.  
RUFUS SCOTT.  
N. F. CLARK.  
DAVID KIRK.

Hon. HENRY BACON,  
*Chairman of the Committee on Manufactures, House of Representatives.*

[For circulars referred to see page —.]

By the CHAIRMAN:

Q. Is there anything you desire to add to what is contained in that statement?—A. Well, now, I would just state that this last part has not been fully understood—"owing to the fluid nature of this commodity the oil in one tract of land may be extracted by wells on adjoining property." The production of petroleum is very different from any other industry, because every man who is your neighbor there is your financial enemy as well, no matter how you may regard him. It is his business to get all he can out of his well and your business to get all you can out of yours. And without combination, when we overproduce, one farm might be entirely drawn, and in fact when oil is low there are farms which become almost worthless by those adjoining producing much more oil than those on the other side. For instance, a farm which would produce 10 or 15 barrel wells would be good paying property at \$2 and \$2.50 a barrel, but would not pay at 60 or 70 cents a barrel; while a farm adjoining producing 200 barrel wells, pump and flow, would pay. In consequence, the farm in a year or two would be rendered entirely worthless by these small wells. Consequently there has been considerable property actually destroyed by oil being produced below the actual cost per barrel, which we found by actual statistics to be from \$1.15 to \$1.20 last year.

There is another effect. They were beginning to abandon small wells throughout the whole country. When we commenced these negotiations oil was selling in the fifties, and oil could not be produced at that. Bradford was one field where they were pumping a barrel to a barrel and a half to a well. Where these wells were at all isolated they did not pay to pump or even flow, because the quantity was so small. Now, a very large per cent. of such territory would have been abandoned. And there was every prospect for oil going lower. The papers published throughout the oil country were stating that Lima oil could be refined and that it was as good as our tank-oil. This was not the fact, but people believed it, and they were not disposed to hold the oil because they feared the Lima field and other things; and they had begun to sell, and we do not know where the price of oil would have gone if we had not started this movement, and in doing so we have saved perhaps millions of dollars' worth of property. There were many large producers who could have gone into the business of wrecking prices and taking in farms at low prices; but we chose rather to restrict production and bring prices up so that people could retain their property. We are certain that there would have been much bankruptcy in that region had this movement not been made. I will state further in justice to them, that this was not a movement on the part of the Standard Oil people. It was a movement conceived by the producers themselves. They approached the Standard people in regard to this matter, and after long negotiation, which you have here in testimony, the contract, which you also have, was formulated and signed.

Mr. GOWEN. This is not one of my witnesses, but as he is here I wish to ask him one or two questions.

By Mr. GOWEN:

Q. You stated, Mr. Phillips, that the average cost of producing oil was \$1.15 to \$1.20 per barrel, from actual statistics; how do you ascertain that?—A. In this way: We have regular statistics of all the wells that are drilled in the Pennsylvania oil fields prepared once a month. We know the cost of drilling wells in each field. We take the dry wells along with the good ones, as a matter of course, and the failures as well as the successes. Then we know the cost of pumping, torpedoing, cleaning out, and raising this oil, and by this means we ascertain accurately the cost. But there is another factor which is more difficult; that is the increased value of the oil lands over other lands. Our figures did not take that in. We did not take in the bonuses paid for rentals to hold them until such time as we could drill, and I have always maintained that our figures have been below the cost rather than over it.

Q. What I am getting at is this. What amount of interest on the capital invested in sinking a well do you charge annually for each barrel of oil? For instance, suppose it cost \$4,000 to sink a well and that well produces 20 barrels a day. How much of that \$4,000 do you include in this sum that makes up the average cost of \$1.15 per barrel?—A. We ascertain it in this way: We take the cost of drilling the well and putting it in pumping order and then we calculate the interest at 6 per cent. for a year, and then the cost of raising, torpedoing—

Q. Don't go beyond interest, please. You only add the interest?—A. Yes, sir.

Q. And divide that yearly interest by the total number of barrels produced, and that gives you the sum that represents the interest on the investment for each barrel?—A. Yes, sir.

Q. Do you mean to say that you add nothing to represent the capital that becomes eliminated when the wells are abandoned?—A. I do not think our statistics take that into account. The calculation was simply for the year.

Q. Suppose a man spends \$10,000 in drilling a well and his well runs out in one year, do you only add 6 per cent. on the \$10,000?—A. No, sir.

Q. Would you add the whole capital?—A. If it was all lost in a year, of course.

Q. Suppose it is lost in ten years; have you not assumed some yearly proportion of the capital, which you might call depreciation, to be added to the cost of the production of oil yearly?—A. While I looked over the statistics carefully, it has been some time since they were made, and I do not know; but Senator Lee and Senator Hall have both looked over them lately, and I would like to ask them.

The CHAIRMAN. Let us have your view; they are not witnesses. If you can not tell us what the items are which you include in your computation, say so.

The WITNESS. I do not remember.

By Mr. WILSON:

Q. What is the average life of an oil well?—A. Probably six to eight years.

Q. Then, in making your calculation of the cost of producing oil, ought not you to charge up one-sixth or one-eighth of the capital each year?—A. It would seem so.

Q. I want to know whether the total capital lost in unproductive wells—wells which have never amounted to anything—whether that is also included by you in making up the cost of the production of oil?—A. Yes, sir; it is.

Q. And interest upon it?—A. Yes, sir.

Q. Would it not follow that if you took two isolated cases—on the one side of the line a man spends \$10,000 and gets nothing, and on the other a man spends \$10,000 and gets a great deal—that the average cost would not be anything like the cost of the man who gets a great deal out of his \$10,000, but you would include in that man's average cost a share of the capital, a share of the depreciation of the capital spent in the other man's unproductive well?—A. Yes, sir.

By Mr. GOWEN:

Q. That is what I was getting at. I see, according to the statistics which I will show you directly, that the price of oil at the wells for the last eight years has run from 88 to 94, 85, 78, once \$1.05, 83, 71, and once 66 cents. Am I to infer from what you have heretofore testified that those prices have not paid the producers?—A. For what number of years?

Q. For the last seven or eight years.—A. No, sir. Well, I will state this: The Bradford field in McKean County was a very prolific one. It was almost universally good. You had an idea what you were going to get whenever you located a well. That territory is now almost exhausted. There was a time when a considerable amount of money was made in that field. Oil could be produced at \$1 a barrel in that field from the fact that one engine and boiler would drill a dozen or twenty wells. It was prolific and certain, and cost very little. Instead of having two men to a well, one man would attend to twenty-five or thirty wells, see that they ran and were properly cared for. That time is past. We have no such fields in existence now. We have what are called white-sand fields and they are very uncertain. They exhaust more rapidly; but a large well struck in one of these basins, as we term them there, would weaken that whole basin just as far as it extended, on the principle that if you take a pailful of water out of a pond you reduce the amount of water in the pond just that much. So just as far as that large well extends and is not cut off by hard rock, it is affected by the first well deepened, and when we get down a number of wells they all begin to weaken very rapidly. We have ascertained that oil can not be produced, even when we got these large flowing wells, the average barrel of oil can not be produced at \$1 a barrel.

Q. You mean the producer must have at least \$1 a barrel in order to pay him?—A. It would not pay him, nor will it pay in any part of the oil fields to-day. There was a time when this McKean County field was discovered—and I will state here that that county alone has produced 150,000,000 barrels or something over that, about one-half of all the oil produced in the Pennsylvania fields.

Q. One hundred and fifty million barrels?—A. Yes, sir; if I am correctly informed. Wells are not averaging now more than from one to one and a half barrels to the well; but we have these accumulated stocks to contend with, and now the cost of producing is actually much more than \$1 per barrel.

By Mr. WILSON:

Q. When a well is exhausted is that the end of that well; or will it recover after a rest?—A. Not very often. They sometimes will accumulate a little, but generally when a well is abandoned, it is never resuscitated again. There is just a given amount of oil in this rock, and

when that is exhausted it is done. Of course there is a sleeping process. A well which occupies a lower position will run much longer than one which occupies a higher position, geologically speaking.

Witness dismissed.

The CHAIRMAN. Mr. Flagg, subpoenas have been served upon Clement A. Griscom and Daniel O'Day, who should have been here yesterday. Are those gentlemen included in the understanding I had with you?

Mr. FLAGG. Yes, sir.

Mr. TODD. Griscom spoke to me about it and I said that as he was subpoenaed as one of our men, he was included in that arrangement.

The CHAIRMAN. All I desire to do is to account for his absence. That is all.

Mr. GOWEN. I think it would be well to offer in evidence these statistics on the petroleum industry which I have taken from a book issued by the Standard Oil people. As it comes from the enemy's camp, I presume it will not be objected to.

The statistics are as follows :

Statistics on the petroleum industry.

Year.	Crude oil ; barrels of forty-two gallons.				Refined oil. Average price per gallon in barrels, for export at New York.	Total value of petroleum and its products, exported from the United States.—Fiscal year ending June 30.

\*Estimated.

Statistics on crude oil production, shipments, and stocks are taken from the Derrick Hand Book published 1884 ; later statistics on crude oil taken from the published reports of the National Transit Company.

Prices of crude and refined are averages of the published daily market prices.

Value of exports taken from the published reports of the Statistical Bureau of the Treasury Department, Washington, D. C.

The CHAIRMAN. That is all that can be done by the committee to-day. Other witnesses will be here to-morrow.

The committee then adjourned until 11.30 a. m., on Wednesday, April 25, 1888.

WASHINGTON, D. C., April 25, 1888.

The committee met at 12 m.

Present: The chairman, Mr. McKinney, Mr. Grimes, Mr. Bunnell, Mr. Crouse, and Mr. Smith.

### TESTIMONY OF B. B. CAMPBELL.

The witness, having been duly sworn by the chairman, testified as follows:

By Mr. GOWEN:

Q. Where do you reside?—A. In Westmoreland County.

Q. Pennsylvania?—A. Yes, sir.

Q. What is your business?—A. Refining oil.

Q. You were at one time connected with the production of oil, were you not?—A. Yes, sir; and I am yet to a small extent.

Q. How long have you been connected with the production of oil?—A. Since 1859.

Q. Can you remember the time at which the so-called South Improvement Company was about to be put into existence?—A. I could not tell you the date.

Q. You remember the circumstance?—A. I remember the circumstance very well.

Q. Going back to about the year 1870, do you remember who at that time controlled the oil trade; or did any particular interest control it at that time?—A. There were a number of refiners at that time, as far as my recollection holds.

Q. A number of independent refiners?—A. In Cleveland, Pittsburgh, New York, and Philadelphia, principally.

Q. How many independent refiners at that time were about Pittsburgh, do you suppose—in western Pennsylvania?—A. A very large number; I could not tell exactly.

Q. As many as fifty?—A. I should think so.

Q. How many were in the neighborhood of Philadelphia at that time, do you remember?—A. I do not remember.

Q. Five or six, were there not?—A. I think there were that many, but I am not certain.

Q. How many were there in New York?—A. More than that.

Q. How large at that time, in that early history of the trade, was the interest of those who now represent the Standard Oil Company or Standard Oil Trust? What extent of interest had they in refining?—A. I could not give you that.

Q. Had they much at that time?—A. Not much larger interest, I judge, than some of their competitors.

Q. Did that Standard oil interest at that time form any large extent of the production of oil?—A. Not to my knowledge.

Q. What extent of the refining capacity of the country is now controlled by the Standard Oil Trust and its affiliated interests, do you suppose?—A. That is pretty hard to answer. I am not very familiar with the refining interest on the creek at present. There are more there than I have knowledge of, but I suppose there are 15 per cent.

Q. Of independent refiners?—A. Yes, sir.

Q. Outside of the Standard?—A. Yes, sir; entirely outside of the Standard; and then there is the Tide-water Refining Company.

Q. Do you think there is in existence 15 per cent. of independent refiners outside of the Standard?—A. Outside of the Standard and the Tide-water; but I am not a very good statistician.

Q. Do you remember the condition of things in the country, in the oil region, at the time it first became known that what is called the South Improvement Company was about to be started?—A. That was shortly before I was much in the oil country—before I had any interest in the Pennsylvania oil region. I was operating before that in West Virginia. It was about 1870 or 1871 that I began to operate in Pennsylvania, and before that time I did not keep myself posted.

Q. This South Improvement Company contract was made in 1872; did you ever see that contract?—A. I saw what professed to be copies of it published in the papers at the time.

Q. You were familiar with it?—A. Yes, sir.

Q. Will you glance your eye over this printed book [handing to witness book entitled "History of the Rise and Fall of the South Improvement Company"], on page 97, and say whether in your judgment that is a copy of the contract between the Pennsylvania Railroad Company and the South Improvement Company?—A. I believe that to be what we generally considered the contract; but I never saw the contract.

Q. You never saw the original?—A. No, sir.

Q. Where did you first hear of the existence of this contract between the Pennsylvania Railroad Company and the South Improvement Company. Can you remember where you first heard of its existence?—A. No, sir; I can not—through the papers, I suppose.

Q. It became public property, did it not?—A. Yes, sir.

Q. State whether or not there was a great feeling of indignation throughout the country against it on the part of producers of oil.—A. There was.

Q. State from your recollection of the contract, and what you heard at the time, whether there was any agreement on the part of the Pennsylvania Railroad which was afterwards acquiesced in by other companies to give the South Improvement Company the practical monopoly of the oil trade.—A. I believed it to be impossible for any refinery to be run in opposition to that company, receiving the rebates named in the contract.

Q. State whether or not those rebates they were to get were not to amount to as much as \$1 a barrel or higher.—A. That is my understanding.

Q. Would it have been possible for any individual refiner whatever to have continued in business if a system of transportation of that kind had gone into effect?—A. I do not think so.

Q. State whether you know as a matter of fact that the railroad companies receded from that contract and agreed to give it up.—A. Yes, sir; it was so understood.

Q. Did they not also at that time in writing, and as a result of this feeling of indignation against them, pledge themselves to carry oil for everybody at the same rate?—A. I believe so.

Q. Have you any recollection or knowledge of the existence or character of the written pledge then made by the railroad companies to treat everybody alike on the subject of the transportation of oil?—A. I could not describe it. It was my understanding that there was such a pledge, but I took no part in that controversy, and therefore there are a great many more competent witnesses than I am who took part in the fight.

Q. I might refresh your recollection, Mr. Campbell, as to these circumstances by handing you a book called "An Appeal to the Executive of Pennsylvania," an address to Governor John F. Hartranft, which, I think, was issued by you and Mr. Patterson as a committee representing the producers [the book referred to was handed to the witness].—

A. Yes, sir; I am aware of this paper. It was prepared and presented to Governor Hartranft in compliance with his request. The first appeal was a verbal one, made by a committee of the Producers' Union, of which I was then president.

Q. At the time this paper was prepared, and when you signed it, the facts connected with the history of the oil trade referred to in the paper were then fresh in your recollection, were they not?—A. Yes, sir; and I believed them true.

Q. I now call your attention to page 19 of this pamphlet, and show you what purports to be an agreement with the railroads in the petroleum trade, executed 25th of March, 1872, signed by the various officers of the railroad companies and by several gentlemen representing the oil trade, whose names you will remember, and ask you whether that, to the best of your recollection, was a copy of that paper?—A. We certainly believed it to be so when we furnished it. This paper was prepared by our counsel at the request of Governor Hartranft after a verbal interview with him, and made the basis of action by the attorney-general before the supreme court.

Q. Now, leaving the time at which this trouble and apparent settlement of the difficulty arising from the contract with the South Improvement Company took place and coming down to the year 1879, will you state what was the condition of the oil trade as affecting the individual producers and refiners on the one part and the Standard Oil Company on the other between the years 1872 and 1879? In other words, who in that time secured the control of the oil trade?—A. We believed it to be the parties who to-day are practically the Standard Oil Company.

Q. Were they not the parties who were also the South Improvement Company at that date?—A. Many of them were included in that. There were some other parties. I do not believe the parties were exactly the same.

Q. But were not the people who now constitute the Standard Oil Company the same people who, with others, were associated in the ownership of the South Improvement Company?—A. Yes, sir.

Q. What became of the individual refiners of oil who were in competition with the Standard from the year 1872 or 1879, or most of them?—

A. Most of them failed. Many of them ran in connection with the Empire Line; no, that was subsequently; almost all the independent refiners, I think, failed.

Q. Did the Standard refiners fail?—A. No, sir.

Q. They were very successful, were they not?—A. They were believed to be so.

Q. Have you any reason to suppose from your knowledge of the trade that those independent refiners had any less business capacity or knowledge of their trade than those who managed the Standard?—A. I think they were fully their equals.

Q. Is it not your experience in business that an individual man attending to his own private interests can get better results at a given manufacturing establishment than a corporation can?—A. I believe it to be so; because he gives it his personal attention, which is certainly better than employed help.

Q. State whether or not up to and in 1875 you occupied the position

of chairman of the Producers' Union, or whatever it was called.—A. I did, sir.

Q. Is that the proper name?—A. That is the proper name.

Q. Now state, in your own terms, what efforts were made by you and the gentlemen associated with you to discover the causes which led to the bankruptcy and failure of all the individual refiners on the one part and the prosperity and control of the trade on the part of the Standard Oil Company and its affiliated industries.—A. We believed that they had advantages in rates of freight, in control of cars, and facilities for doing business.

Q. State what proceedings, legally or otherwise, were undertaken by you, or by the community, or by your Producers' Union in order to ferret out and get at the facts of the case.—A. With the committee appointed by the Union we called on Governor Hartranft, governor of Pennsylvania at the time. We laid the case before him, and asserted that we believed the railroad companies of Pennsylvania were affording facilities to one party that others could not receive, and thereby preventing competition. He requested us to go home and prepare, in the form of a memorial, the facts we had already stated, the result of which was that paper which was prepared by our counsel. He then directed his attorney general to commence proceedings before the supreme court of Pennsylvania against the Pennsylvania Railroad and the western connections of the New York and Erie and the New York Central—I forget the names of the roads, but they were western connections—asking for an injunction to prevent them giving advantages to one shipper over another either in rates of freight or distribution of cars. Under that, application was made to the supreme court and entertained and a master appointed.

Q. Do you remember the name of the master?—A. J. B. Sweitzer, Before him a very large amount of testimony was taken which was printed and a copy of which you have.

Q. I hand you now these two papers, marked "Commonwealth of Pennsylvania against the Pennsylvania Railroad, J. B. Sweitzer, master examiner," in two books, ask you to look at them, and state whether they represent the testimony which was taken in these cases at that time.

(The books referred to were handed to the witness.)

A. Yes, sir.

Q. Were you present when most of this testimony was taken?—A. A good deal of it.

Q. You were yourself examined as a witness?—A. I was.

Q. Will you state whether the testimony you gave on that occasion was true and correct?—A. I believed it to be true and correct, and I have no reason to change my opinion now.

Q. And your knowledge of the subject was better at that time in consequence of the danger of forgetting since?—A. I was in the middle of the fight then.

Q. Did you discover in any manner, through that testimony, what the extent of the rebate or allowances was that were given by the Pennsylvania Railroad Company to the Standard Company on oil?—A. We discovered—of course there is no use repeating, as that book shows it all—we produced statements of actual business, and they are much more correct than my memory, showing that on shipments from Pittsburgh to Philadelphia the Standard received a rebate of more than half the freight, no matter who was the shipper.

Q. When you speak of the Standard in your testimony you include in

the designation of Standard all the corporations or interests who were affiliated with them and doing business with them?—A. Yes, sir.

Q. Do you remember whether it appeared at that time that there was a concern called the American Transfer Company?—A. There was; yes, sir.

Q. That got a rebate of  $22\frac{1}{2}$  cents on all the oil, no matter who shipped it?—A. That, I think, appears in the testimony; yes, sir.

Q. You heard the testimony of Mr. Cassatt, did you not, who was examined as a witness at that time under oath?—A. I did.

Q. State who he was?—A. He was the second or third vice-president of the Pennsylvania Railroad at that time; he was in active charge of the oil transportation of the company.

Q. If you can recollect having heard him admit what these rates of drawback were will you tell us as nearly as you can what they were, first on crude and then on refined oil?—A. I prefer to refer to the testimony, because I have not for years thought of those things.

Q. I will call your attention to page 90 of that book, and ask you to look at that part marked in blue.—A. I remember that testimony.

Q. What is it; what rebate was given to the American Transfer Company?—A. Twenty-two and one-half cents per barrel.

Q. No matter whether shipped by them or by others?—A. It made no difference.

Q. State whether the American Transfer Company was one of the companies affiliated with the Standard.—A. We believed it to be.

Q. That drawback of  $22\frac{1}{2}$  cents was practically paid to them not only on their own shipments but on the shipments of everybody else?—A. So it was understood, and I think it so appeared in the testimony.

Q. Now look at page 91 and see what drawback was allowed them on refined oil as compared with other shippers.—A. Mr. Cassatt states there was an allowance of  $22\frac{1}{2}$  cents to the American Transfer Company, 10 per cent. to the Standard Oil Company, according to a letter referred to, and an additional allowance of 15 cents, making 51 cents reduction, making a net rate of  $88\frac{1}{2}$  cents.

Q. On crude?—A. No; on refined.

Q. That was a net rate of  $88\frac{1}{2}$  cents to the Standard. What was the rate to other people?—A. One dollar and forty cents.

Q. Now, if you will turn to page 95, where Mr. Cassatt has testified, commencing at the bottom of page 94, you can just tell us what the general rates were to the public on crude oil and what the rate was to the Standard Oil Company outside of the  $22\frac{1}{2}$  cents rebate which was additional.—A. Mr. Cassatt states there was an additional rebate of—

Q. State the rate to the public first.—A. One dollar and fifteen cents.

Q. And \$1.40, is it not?—A. Yes, sir; those were the rates given; I really am not familiar with them from memory.

Q. Just see if one is not the rate from the Bradford region and the other from the lower region.—A. Yes, sir.

Q. As compared with that \$1.15 and \$1.40 rate, which the public from the two regions respectively had to pay, what rate did the Standard Oil Company pay, according to Mr. Cassatt's testimony?—A. Mr. Cassatt states that 80 cents net was the rate to the Standard, and to all others \$1.90, less  $44\frac{1}{2}$  cents.

Q. That is on refined, is it not?—A. Yes, sir;  $26\frac{1}{2}$  cents off from the \$1.15 rate.

Q. That is crude?—A. Yes, sir.

Q. The Standard got  $26\frac{1}{2}$  off the \$1.15 rate, and how much did they get off the \$1.40 rate?—A. Twenty-nine cents off the \$1.40 rate.

Q. That was on crude?—A. It is so stated.

Q. And that was in addition to the 22½ cents which was paid to the American Transfer Company, was it not?—A. So I understand.

Q. Now, then, give us the answer on refined oil.—A. The statement was that the freight was 80 cents net to the Standard Oil Company.

Q. And how much to the public?—A. One dollar and forty-four and one-half cents.

Q. That, therefore, would have made on refined oil a rate of 80 cents to the Standard as against \$1.44½ to the public?—A. Yes, sir.

Q. That is a rebate of 64½ cents a barrel, is it not?—A. Yes, sir.

Q. Just look at those figures and see what, including the 22½ cents drawback that went to the American Transfer Company, was the net rate to the Standard Oil Company on crude petroleum from the upper regions?—A. On the \$1.15 rate the net rate would be 66 cents.

Q. That is, the Standard from the upper region paid 66 cents while the public paid \$1.15.—A. Yes, sir.

Q. Now, from the lower region—the \$1.40 rate—what was the net rate?—A. Eighty-eight and one-half cents.

Q. That is what the Standard paid.—A. Yes, sir; as against \$1.40.

Q. The difference, then, between 66 cents and \$1.15 is 49 cents, is it not?—A. Yes, sir.

Q. And as between 88½ cents and \$1.40 is 51½ cents?—A. Yes, sir.

Q. In the one case the rebate was 49 cents and in the other 51½ cents, was it not?—A. According to those figures of Mr. Cassatt; yes, sir.

Q. And on refined oils the difference was between 80 cents and \$1.44½, which makes a rebate of 64½ cents?—A. Yes, sir.

Q. And that does not take into consideration anything they got out of the 22½ cents that was paid to them on other people's oil, does it?—A. I should judge not, sir.

Q. Now, then, if other people shipped at the time exactly the same amount as the Standard Oil Company shipped, that company would then have gotten 22½ cents additional on every barrel shipped?—A. That was my understanding. I believe that was the effect of the testimony.

Q. If other people shipped only half as much as the Standard, then the 22½ cents drawback or payment which they received on oil shipped by other people would have amounted to 11½ cents on their shipments?—A. Yes, sir.

Q. And those respective amounts must be added to these other amounts in order to see what was the actual drawback?—A. I believe so.

Q. I will hand you some statistics offered before the committee yesterday, to refresh your recollection. Can you from them give us a rough estimate of about what the total production of oil was, say, from 1872 to 1880?—A. I could not, from my own knowledge.

Q. Look at these tables.—A. (Having examined tables.) These have been very carefully prepared by parties who have made it their business, and I have no question of their correctness.

Q. I would like to get on the minutes now about the exact amount. State whether the production of oil from 1872 to 1880, inclusive, was not nearly 120,000,000 barrels.—A. About 120,000,000; a little over that, I judge.

Q. Now, if these rebates on crude oil, 51–49 cents, which would average about half a dollar per barrel, had applied to all that oil it would have amounted to \$60,000,000, would it not, in that time?—A. It did not apply to all that oil.

Q. But I say if it had.—A. Yes, sir.

Q. Did not the 22½ cents apply to all the oil that was shipped during the time it was in operation?—A. I can not speak further than the Eastern shipment. The home trade, the consumption in the region, and the Western shipments would probably have to be deducted from that.

Q. Would you kindly tell us how much you suppose, out of the 120,000,000, went to the home trade and to Western shipments?—A. I am hardly competent to answer the question.

Q. Do you think as much as a third?—A. No, sir.

Q. Was it a quarter?—A. That is probably it; but I do not feel competent to answer that question. There are many people more competent to answer that than I am.

Q. You know as a general thing that nearly two-thirds of the oil refined is exported?—A. I believe so.

Q. And there is also considerable consumption in the eastern part of America of refined oil?—A. Certainly.

Q. When you and your associates discovered the existence of these rebates and allowances which have been made to the Standard Oil Company, had you then, as business men, any longer any doubt what was the cause of the bankruptcy of the individual refiners?—A. No, sir.

Q. Is it possible, or would it have been possible, for any refiner or producer to withstand competition of that kind?—A. Not unless it would be some small refiner who did a local business.

Q. Who would not have to come into competition with them?—A. Yes, sir.

Q. Was there any reason that you know of why eight or ten gentlemen should be selected by a common carrier and made the recipients of bounty to the extent of \$50,000,000 or \$60,000,000, while another and a more numerous class were thrown into bankruptcy and ruin?—A. I have never been a railroad man. Doubtless the argument used was that these parties tendered to the railroad a larger amount of business.

Q. Could they have gotten that large amount of business without the rebate?—A. I think not.

Q. If you had been given a rebate of even 20 cents a barrel over every competitor could you not have secured the entire traffic?—A. They would have had a very comfortable business.

Q. But do you not think that a rebate of 20 cents could have turned the trade to you?—A. If a party chose to sell at what would have been the actual cost to his competitor he would still have a very good business at that rebate.

Q. But what amount of rebate do you think would have been sufficient to turn the oil trade from one party to another?—A. That is a question that is almost impossible to answer, because it depends upon whether the party receiving the rebate is willing to gauge his profits merely by his rebate. He might want more, and therefore parties paying that might still live. But if the war was carried down to the bottom one could live at the 20 cents rebate when all others would die.

Q. Even 20 cents rebate, then, would turn the scale if in favor of the party who got it?—A. I think so.

Q. Now, then, if there had been a desire on the part of the Pennsylvania Railroad to break all you gentlemen and create a race of millionaires so as to lay the foundation for a future order of nobility in this country, do you not think they could have done it cheaper than at 49 and 50 cents a barrel?—A. Mr. Cassatt, as I understood his testimony, put it on the ground that they paid the rebate because they had to. A party would come and say, if you do this, well and good; if not, others

will do the business. I am not a railroad man and that is a problem to which I have not given much attention.

Q. Is it not the duty of a common carrier to treat everybody alike?—

A. I have thought so and believed so.

Q. You believed so at one time?—A. Yes, sir.

Q. Has your faith in that principle been shaken?—A. Not the slightest.

Q. Very well; I only mention the Pennsylvania Railroad because that is the only one about which there has been any testimony in this case. I will make it broader and apply it to all the other companies, assuming in advance of proof that such condition of things existed also with them. Do you not think that the railroads could have turned the whole business over to them by making a less rebate than they actually did make?—A. I am not a railroad man and therefore that is not a question I could answer. I doubt not they got all they could. I think it was a case of force.

Q. Can you see any reason, then, why they made other people pay more? If they could not get more than this rate of 80 or 88 cents from the Standard, why did they make other people pay more?—A. I never knew a railroad that paid rebates for the love of it. I think they got all they could.

Q. Do you not think it would have been a good thing for you and the rest of the gentlemen whom you have referred to as having been broken up if you could also have participated in these favors?—A. Unquestionably.

Q. You would not have refused to take it?—A. Not if it was made an equal rate.

Q. Do not you think that the fact that the rates were unequal and that you had the heavy end of them to bear was what caused the bankruptcy amongst these individual refiners?—A. I have no question that it was the unequal rates. Parties receiving rebates like those could sell and make profits at prices it was impossible for refiners paying the open rates to meet without bankruptcy.

Q. Have you any doubt whatever that it was the rebate and allowance which enabled the Standard Oil Company to obtain the control of the oil trade which they now possess?—A. I have always considered it so.

Q. Have you ever known any other reason that enabled it to do it?—A. They have been industrious and have attended to their business, and are good merchants and are good manufacturers; but there are others whom I think are quite as good as they are.

Q. Were not the others just as good?—A. Many of them.

Q. Many of them better?—A. I would not say that.

Q. State whether or not you do not know also that pending and during these times the Standard was saddled with an enormous or very large cost, resulting from the purchase of competitors and subsidizing of other gentlemen who had been connected with the refining industries.—A. I have no knowledge of those facts other than common rumor.

Q. Were you born in this country?—A. Yes, sir.

Q. You are an American citizen?—A. I was born in Allegheny County.

Q. Did it ever strike you as somewhat remarkable that a common carrier, whose obligation was to treat everybody alike, should have the right himself to determine which particular gentleman should get a favored rate?—A. I do not quite understand your question.

Q. Did it ever strike you as being rather remarkable that the common carrier—namely, the railroad company—whose obligation it was to treat

everybody alike, should have the right, at its own will, to make one class of people rich and to make another class poor?—A. I think they have no such right.

Q. Did not you somewhat at that time lose a little faith in the protecting care of your own country, that did not take care of you and prevent such a state of things existing?—A. Unfortunately there is enough law in the State of Pennsylvania to prevent, if you could have the law enforced.

Q. That is what I am coming to. In addition to your application to the governor, who was the chief magistrate, and who responded to your request—in addition to that, what effort did you gentlemen take to secure immunity from such a condition of affairs as this?—A. We pursued these investigations until the facts alleged in the bill were proved as against the Pennsylvania Railroad Company. We failed utterly as to any of the other railroad companies named in the bills.

Q. Why?—A. Every officer we put on the stand stated he was not aware of those facts. The officer who was aware and had charge of the books was outside the jurisdiction of the State. We failed utterly as against every railroad company except the Pennsylvania Railroad Company. Our attorneys acted merely as assistants to the attorney-general, and he refused to allow proceedings to be taken against the Pennsylvania road unless we could prove our case against the others. He was not willing that company should be enjoined and the rest go free.

Q. All the proceedings resulted in, then, was the proof of the fact, without the remedy which should have followed that state of things?—A. The cases were never presented to the supreme court.

Q. But it appeared in the case of the Pennsylvania Railroad Company that their officer, Mr. Cassatt, had the courage and manliness to tell the truth. He never equivocated?—A. His testimony is very clear and very correct, and, in addition to that, we had the statement of the accounting officers.

Q. Did he not in that connection give as a reason for the discrimination in favor of the Standard that other railroad companies were doing it?—A. So I understood. He pleaded that there was a necessity on their part to do the same as the other companies were doing.

Q. And did not he justify the act of his company on the ground that other companies would take the business at that or a lower rate if he did not?—A. That was it.

Q. Now, then, if Mr. Cassatt's testimony and the declaration of the Pennsylvania Railroad Company were accepted as proof of the existence of this state of things, can you tell why the attorney-general did not accept as equally true his statement that the other companies were also engaged in it?—A. I do not think that if Mr. Cassatt had been put on the stand he could have produced legal evidence of that. He unquestionably knew of the existence of those things. We tried our best, but could not prove by what was considered competent evidence the other cases. Their books and officers who knew were outside of the jurisdiction of the State.

Q. The traffic in oil has grown to be over 25,000,000 of barrels a year, has it not; the production I mean? It has been considerably beyond that at some times; once 35,000,000. Just look at this book, please, and inform the committee what the highest production has been.

(The book referred to was handed to the witness.)

The WITNESS. The maximum production was in 1882 35,789,190 from the Pennsylvania and New York fields.

Q. Now, for the present production of oil in the United States, prac-

tically how many buyers are there; I mean how many buyers who have sufficient business to affect the price?

Mr. CROUSE. Crude or refined?

Mr. GOWAN. Crude.

The WITNESS. The buyers of certificates of crude oil can not be numbered.

Q. You mean those dealing in it on the exchanges?—A. Yes, sir. The actual buyers of the oil are the Standard Company and its refineries, and the exporters of crude.

Q. The exporters of crude are those who buy crude oil for the purpose of sending it abroad as crude to be refined there?—A. Yes, sir.

Q. But of the amount that is purchased in this country for refinery purposes is it not in your judgment safe to say that 80 or 85 per cent. of it is bought for or on account of the Standard Oil Company and its affiliated corporations and interests?—A. I should judge those figures to be correct.

Q. Do you not think it would be better for producers—the people who own the oil—if they could have fifty people competing for its purchase than to have to sell 80 per cent. to one purchaser?—A. I have always so contended.

Q. And have seen no reason to change your mind?—A. No, sir.

Q. Now, Mr. Campbell, will you go back in memory to what was the advent of the Empire Line as a transporter of oil on the Pennsylvania Railroad. You remember that circumstance, do you not?—A. I can not give the date of the advent of that company.

Q. But you can remember the fact?—A. They were in existence on the creek when I first began to do business in the oil country.

Q. Oil Creek?—A. Yes, sir.

Q. State whether or not for a year, or probably more, almost all the oil transported over the Pennsylvania Railroad was transported by the Empire Line. Do you know of that fact?—A. I believe it to be so.

Q. At that time did you ever hear, or was it ever charged, that when the Empire Line was transporting oil there were any rebates or drawbacks given to anybody?—A. The evidence of rebates extends through some of those years you refer to.

Q. Do they?—A. Yes, sir.

Q. Do you remember—I do not mean the exact date—but do you remember the fact that the Empire Line ceased to be transporters of oil on the Pennsylvania Railroad?—A. I wish to correct my former answer. I think I was mistaken about that. I did not understand you. While the Empire Line did this business I knew of no rebates.

Q. I thought so. Did not the producers gladly assent to send them the traffic over their Line?—A. As far as I was concerned I gave them all my business.

Q. And all the others too?—Yes, sir; they had a very large business.

Q. State whether or not the Empire Line was not the line of transportation that moved this traffic over the Pennsylvania Railroad.—A. It was, sir.

Q. And during the time it was so engaged you knew of no drawbacks?—A. The business was perfectly satisfactory.

Q. Did not the Standard Oil Company unite with the Pennsylvania Railroad in buying out the Empire Line and purchasing the right of it as the transporters?—A. I believe so.

Q. Did not the Standard Oil Company purchase the refineries of the Empire Line, and did they not advance some money to enable the Penn-

sylvania Railroad to purchase the rolling-stock of the Empire Line?—A. I so believed at the time. As to the refineries I can not speak so definitely. The Empire Line supplied a great many refineries which they did not own. For instance, they supplied all the parties who were then known as the outside refiners of New York.

Q. They were supplied by the Empire Line?—A. Yes, sir.

Q. The Empire Line supplied their own refineries as well as supplying the refineries of individual refiners?—Yes, sir.

Q. And so far as you knew or heard there was no complaint on the part of any one except the Standard Oil Company that the Empire line was treating people unfairly?—A. At that time I was only familiar with the producing part of the business. As a producer doing business with the Empire line I never had reason to complain. When they first came to the lower region where I was I grumbled at the new system of red tape; but I soon found that red tape meant accuracy and honesty and I quit grumbling at it.

Q. And when the Standard Oil Company got rid of the Empire Line as a transporter of oil, and shipped it over the Pennsylvania Railroad direct without the intervention of the Empire line, you did not have the same show as you had before, did you?—A. I believe that the trouble of the refiners commenced then, and therefore we lost a number of independent buyers. In that way the market for crude was interfered with. At that time my own business was a producer of crude oil.

Q. Do you know whether or not one of the reasons given by the Standard Oil Company for their opposition to the Empire line as a transporter was that that line was also engaged in the refining of oil, and therefore was a competitor?—A. It was so then currently and publicly alleged. Of course, I could not bring back the accusation to any one person.

Q. In other words they thought it was not fair or honorable for a rival of theirs in the refinery business to be engaged in the business of transporting oil as well; and they did not want to rely upon such an interest as the transporter of their own supply. Was not that the reason they publicly gave?—A. That was it in substance.

Q. Since the Standard Oil Company secured the control of this large amount of oil that you speak of, state whether or not they continued to ship it until to-day as they did before over the lines of the railroad, or whether they constructed pipe lines to carry it to tide-water on their own account.—A. To-day and since the completion of their pipe lines the great bulk of the oil used by the Standard Oil Company in its refineries is transported through their own pipe lines, and their interest is that of transporter instead of consumer.

Q. Therefore the Standard Oil Company, which controls, we will say, about 80 per cent. of the refining industry of this country, is by means of pipe lines a large transporter of oil as well; is it not?—A. Very large.

Q. To what extent in proportion to the whole amount do you suppose the pipe lines carry?—A. It would be impossible for me to tell. The pipe-line officers could.

Q. Is it two-thirds or three-fourths, do you suppose, of the crude oil going eastward?—A. It is a very large proportion, but I do not want to give estimates when the committee can get it from others to a barrel.

Q. The Standard Oil Company, by reason of getting rid of the Empire line as a competitor, which they justified on the ground that it was improper for a refiner to be a transporter, is to-day to a consider-

ably greater extent in the same position which they complained of the Empire Line for being in?—A. They transport to a great measure the oil they refine themselves, and, of course occupy the same plane.

Q. When a producer in the oil field gives his oil to the Standard pipe line, we will say, what does he receive as evidence of that?—A. He receives a credit balance on the books of the pipe-line company.

Q. And when that amounts to a certain number of barrels?—A. When it amounts to a thousand barrels he can, if he wishes, get a certificate. He can, however, at any time sell the credit balance to the pipe-line company at the price of the day.

Q. And when the amount of his oil that has gone into the pipe-line of the Standard Oil Company reaches a thousand barrels he is entitled to what may be called a negotiable certificate?—A. Yes, sir.

Q. These certificates are evidences of ownership in the oil which pass by delivery to the purchaser?—A. Yes, sir.

Q. The man who buys a thousand-barrel certificate of oil if he wants to use it in the East can only receive the oil through the pipe line of the Standard Oil Company if he has taken their certificate; is not that so?—A. You mean if he wishes to receive the oil for shipment?

Q. Yes.—A. The course would be, then he would deposit the certificate, pay the pipeage on it and it would then be passed to the credit of the shipping account and they would deliver that oil at any of the known loading racks they had in the oil regions.

Q. He can only get it out by means of their machinery and appliances?—A. Not necessarily; if you place cars at the rack you can get it out yourself.

Q. But when he delivers a thousand barrels of oil to their local lines he has to take it out wherever there is a delivery place on their lines. He must depend on them. Therefore that man occupies the same position to them, if he is a refiner, as the Standard Oil Company in its capacity as a refiner occupied to the Empire Line when they were transporters?—A. That is if you call the pipe line the Standard Oil Company.

Q. Of course.—A. Of course, it is a separate corporation, but where the ultimate ownership is I do not know.

Q. Is not the National Transit Company affiliated to the Standard Oil Company?—A. It is so believed; that is, that the Standard Oil Company is the largest stock-holder in it.

Q. To you gentlemen, dealing with those people in that region, are not their relations well known and understood; is not the National Transit Company known and understood as one of the companies affiliated with the Standard?—A. It is so believed to be. The Standard is supposed to be the largest owner of it.

Q. Who signs the certificates which you get for each thousand barrels of oil?—A. I will have to refer to Mr. Kirk, to have to answer to that.

Mr. GOWEN. Never, mind; we will prove that later.

Q. Have you any connection with the Standard Oil Company in any manner?—A. No, sir.

By Mr. SMITH:

Q. What distance is the oil carried at a charge of \$1.40 per barrel?—A. That was the old price. It is not the present rate of price.

Q. What was the distance at that time?—A. I believe it was from Pittsburgh to Philadelphia.

Q. How many miles is that?—A. Three hundred and fifty-three miles.

By Mr. GOWEN:

Q. Three hundred and fifty-five miles, isn't it?—A. Three hundred and fifty-three.

By Mr. SMITH:

Q. Do you think that that was a very high charge for carrying a barrel of oil that distance?—A. I think so now.

Q. What would be a fair charge?—A. The present rate is 45 cents.

Q. Do you think it could be carried for less?—A. I say the present rate is 45 cents. It has been carried as low as 30 cents.

Q. You say it has been carried as low as 30 cents?—A. Yes, sir.

By Mr. GOWEN:

Q. How many barrels of crude oil are counted to a ton?—A. There are 315 pounds to the barrel.

Q. Practically about 7 barrels to a ton?—A. Yes, sir.

By Mr. SMITH:

Q. What was the name of the State's attorney at that time that you spoke of in your testimony who was to prosecute the Pennsylvania and other railroads?—A. Mr. Lear was the attorney-general; but this testimony was taken entirely by the counsel employed by the Producers' Association. Do you wish to know their names?

Q. No; I do not care for that.—A. Well, Attorney-General Lear—who has died lately—I think he was for Governor Hartranft, and during the latter part of the proceedings Mr. Palmer was the attorney-general for Governor Hoyt.

By Mr. GOWEN:

Q. There was a change of administration just about this time?—A. Yes, sir.

By Mr. SMITH:

Q. The railroad officials were called in and their testimony taken?—A. Yes, sir.

Q. Didn't they try to shift the load from one official to another, claiming that they were not posted on this matter?—A. The testimony will show very clearly. We produced statements of account rendered from one railroad to another, which showed the monthly business, which are contained in those books. It showed the gross statement of business and the amount of rebates paid on it.

Q. Weren't the railroad officials very short-minded and short-memoried at that time?—A. As far as the Pennsylvania Railroad was concerned, I have no doubt the entire truth was told as shown in the testimony—every circumstance.

By Mr. GOWEN:

Q. You had in your possession at that time and secured by a subpoena the documentary evidence that would show exactly at what rates this oil was carried, had you not?—A. Yes, sir. Of course our attorneys acted merely as assistants of the attorney-general, and were governed by him. At the outset they required us to prove a prima facie case without calling on the officials of the railroad to do it. After a great deal of trouble we succeeded in doing that. We produced a witness with the actual statement of the month's business, which you will find in that book. From that time the matter was easy.

By Mr. SMITH :

Q. Was the right of way that is now occupied by the pipe lines procured by purchase from private property, or by condemnation under the right of eminent domain ?—A. Generally by purchase, I think, sir.

Q. Can they use the right of eminent domain ?—A. Under our new pipe bill it was claimed they had the right of eminent domain.

Q. When was that pipe bill or act enforced or passed ?—A. Within two or three years, I think. Of course, it is a matter of record. It is in daily use both for gas and oil.

Q. That act was intended not only for oil, but also for gas ?—A. Yes, sir. The original lines, I think—both the Tide-water and the Standard lines—the rights of way were purchased.

Q. Could you state whether the Standard Oil Trust is also engaged in gas-piping ?—A. Not to my knowledge, sir. Many of the members of the company are engaged in it, but not the Standard Oil Company, to my knowledge.

Mr. Gowen at this point read to the committee extracts from the former testimony of Mr. Campbell and of Mr. Cassatt, as follows :

B. B. CAMPBELL was sworn in the case of *The Commonwealth v. Pennsylvania Railroad Company*.

Direct examination by Mr. ACHESON :

Q. Where do you reside ?—A. Westmoreland County, 19 miles from Pittsburgh.

Q. Are you engaged in the oil-producing business ?—A. I am.

Q. How long have you been connected with that business ?—A. I commenced boring for oil in 1860 in West Virginia, and continued up until the breaking out of the rebellion. Our men were driven away and our wells destroyed.

Q. You have continued in it since ?—A. As soon as the war was over I returned to West Virginia and commenced producing there; in 1871 I commenced operations at Parker, and since that time have been uninterruptedly in the business of producing oil.

Q. State whether you have had large experience in the matter of producing oil and its transportation to market.—A. I am to-day the unfortunate owner of interests in nearly a hundred pumping wells; I have shipped all my own production, and at least I have produced over half a million barrels of oil, which were shipped over the Pennsylvania road through its agent, the Empire line, with which I did my exclusive business as long as they continued in the business.

Q. Since the Pennsylvania Railroad purchased the Empire Transportation Line and undertook the business of transporting oil by what is known as the Green line, state whether your oil has gone by that route to any extent.—A. I have been compelled since the purchase of the Empire line by the United Pipe Lines to do my business with the United Pipe Lines, the only corporation in the lower country doing an extensive pipe business. What they do with the oil, I can't tell; it is no longer in my control, and I no longer direct the shipments over the Pennsylvania road, the Allegheny Valley, or any other sources.

Mr. HAMPTON requests Mr. Acheson to state the purpose of the evidence.

Mr. ACHESON. I propose to examine the witness, Mr. Campbell, in respect to the illegal combination charged in the bill of *The Commonwealth v. The Pennsylvania Railroad Company*, and to show acts done by the Pennsylvania Railroad Company or parties in the combination in furtherance thereof.

(Defendant's counsel objects to any evidence except such as relates directly to such participation, if any, as the Pennsylvania Railroad Company may have had in that combination, and objects to any evidence as to acts, conduct, or declaration of other parties named in the other bills filed in this case.)

Q. Explain to the master why it is not in your control in respect to transportation ?

(Objected to, except in so far as the Pennsylvania Railroad Company is directly concerned in the subject-matter, and as incompetent and irrelevant.)

A. The United Pipe Lines, which are to-day the only pipe lines connected with my wells, from their main line connect at each tank that the producer places at his well; when the tank is full the gauger of the United Pipe Lines measures the oil in the tank, gives a ticket to the pumper at the well stating the depth of the oil at which the run is commenced to the tank and the depth of the oil in the tank after the run is completed; in the office of the United Pipe Lines there are gauges for every tank with which they have connections; there the run is calculated, and the number of barrels placed to the credit of the particular well from which the run is made. As far as my

own business is concerned (I will not speak of the other producers), I do not ship the oil; when I wish to sell I either give an order on the pipe line for the amount I wish to sell or I draw a certificate for such amount of oil as I want in even thousand barrels; certificates not being issued except in thousand barrel amounts. These certificates are transferable from hand to hand and are considered negotiable. When I part with them I part with my interest in the oil; if bought by a speculator, he merely carries the oil, paying the storage or tankage; if bought by a shipper he pays the pipage on the oil and directs the shipment by rail to such points as he may desire. My control over the oil ceases as soon as they run it from my individual tank into the lines of the United Pipe Lines; my oil is then mixed with the general oil of the district and all identity of it is lost.

Q. Is your case, sir, an exceptional one, or is it an illustration of how the business is done?—A. To my belief it is the universal practice of nearly all the producers, ninety-nine out of a hundred. Some few exceptional cases were interested in refineries of their own, and were shippers of their own, but the bulk of the producers deal as I have detailed it.

Q. State what connection the United Pipe Lines has with the Pennsylvania Railroad and other railways?—A. It would be very difficult for me to state all; I could state a great number of them.

Q. I wish you to state how the connection is made, and in that connection, too, you can state the lines?—A. The United Pipe Line takes the oil from the district of Butler and Clarion, in which I am particularly engaged and know most about, by pipe direct to Pittsburgh, avoiding all use of railroad communication; they bought the Conduit Line, a 3-inch line; the American Transfer, which I believe is identical, have a 4-inch line to Pittsburgh; they prorate the Pittsburgh trade, giving two-thirds of the crude required in Pittsburgh for the pipe line, and one-third to the Allegheny Valley Railroad Company; they afterwards tore up the Conduit Line and moved it, I believe, to Bradford; I have been informed and believe—

(Objected to as incompetent and mere hearsay.)

Mr. HAMPTON. We want your personal knowledge.

The WITNESS (continuing). They deliver oil to the Valley road at Brady's Bend, Sara Furnace, Monterey, Ocean Siding, Parker, Mouth of the Clarion, Foxburgh, Scrubgrass, and there my knowledge ends. They deliver oil direct by a 3-inch pipe to Oil City; that line I have seen thousands of times and know where it lays; the capacity of that line would be 5,000 barrels a day easy. The capacity of the Pittsburgh line has been forced up to 7,000 by increasing the pumping stations. They put a pumping station exactly opposite to where I live, shortened the haul, and increased the capacity of the line. They pump oil to Harrisonville and Raymelton, I think a 3-inch line; that is about all I could speak of my own knowledge of their business.

Q. Do you know anything personally about the connections made by the United Pipe Lines with any railway?—A. I have just stated that they connect at Raymelton and Harrisonville with roads in the New York Central and New York and Erie interest.

Q. Have you knowledge, sir, of what is commercially known as the Green Line, operated by the Pennsylvania Railroad Company?—A. I have; it is a line of cars, built, owned, and run by the Empire Transportation Company. Mr. Brundred is their agent, representing them.

Q. Down to what period of time was that line operated by the Empire Transportation Company?—A. Some time in October, I believe, 1877. Since that time, I have been informed by Mr. Brundred, the agent, that the line was run directly by the Pennsylvania Railroad Company.

Q. Do you know personally anything in respect to the transportation of oil by the Green Line since it has been operated by the Pennsylvania Railroad Company, and, if you do, state what you know, if anything, in regard to a lack of car supply?—A. The first thing I think that I ever heard of any difficulty in the supply of cars for carrying oil was in the year 1878, on the first Thursday in June, I think.

Q. Let me now ask you whether during the time that line was operated by the Empire Transportation Company you had heard or known of any difficulty in the supply of cars?—A. I had not. I never heard of the scarcity of motive power or cars used as an element in the depression of the market until this occasion in the early part of June, 1878; I had not been at Parker for a few days previous to that, for some reasons which I now can not remember. I think Thursday I left home and went to Oil City and transacted some business there with the United Pipe Lines relative to our tankage; I came back to Parker in the evening about 5 o'clock. I wish to state here that a few day previous to this time the United Pipe Lines had issued an order that they would not run any oil from any wells unless it was sold before it was run, alleging that their tanks were full.

(The foregoing answer objected to as incompetent and irrelevant to bind the Pennsylvania Railroad Company.)

The WITNESS (continuing). I came to Parker about 5 o'clock in the evening, and

found the citizens in a state of terrible excitement; the pipe lines would not run oil unless it was sold; the only shippers we had in Parker of any amount, viz, the agents of the Standard Oil Company, would not buy oil, stating that they could not get cars; hundreds of wells were stopped to their great injury; thousands more, whose owners were afraid to stop them for fear of damage by salt water, were pumping the oil on the ground. I used all the influence I had to prevent an outbreak and destruction of railroad and pipe lines; I at once went over to the Allegheny Valley Railroad office and telegraphed to Mr. John Scott, president of the Allegheny Valley Railroad Company, that owing to the refusal of the United Pipe Lines—

(Defendant's counsel object to the witness proving the contents of the dispatch that he sent to John Scott, president of the Allegheny Valley Railroad Company, on the ground that the witness can not prove the contents of a written communication, the production of the original or a copy of it being the best evidence; and further, as incompetent and irrelevant, as binding the Pennsylvania Railroad Company in this case.)

Q. State whether the dispatch you have spoken of was sent over the private line of the Allegheny Valley Railroad Company?—A. It was.

Q. Did you write it or simply dictate it to the operator?—A. My belief is I dictated it—thinking, now, I am not certain. I can produce on a future occasion a copy of the dispatch; but I know that I know its contents by heart.

Q. Did you receive a reply to that telegram?—A. I did; it was there next morning before I got out of bed.

Q. State what your telegram was?

(Objected to for the reason heretofore given, there being no evidence that the witness has attempted to obtain from the operator of the Allegheny Valley Railroad Company the message he had dictated or a copy of it.)

A. "The refusal of the United to run oil unless sold upon immediate shipment, and of the railroad to furnish cars, has created such a degree of excitement here that the more conservative part of the citizens will not be able to control the peace, and I fear that the scenes of last July will be repeated on an aggravated scale." That message I left in the office about 7 o'clock in the evening; I got up the next morning before 7 and received an answer.

Q. What was the answer?

Mr. HAMPTON. Was the answer in writing?

The WITNESS. I think it was.—

Mr. ACHESON. Was it an answer by telegraph?

The WITNESS. Yes, sir; through their own lines.

(Objected to, the dispatch having been directed to and received by the witness, who is incompetent to prove the contents of it, the dispatch itself being the best evidence in the case; and as incompetent and irrelevant as affecting the Pennsylvania Railroad.)

A. "What do you advise should be done? John Scott." I answered. "Will meet you to-morrow morning," which would be Saturday. Early—

(Objected to for the reasons heretofore given.)

The WITNESS (continuing). On Saturday morning I came in on an early train and met at the depot Mr. Shinn, then, I believe, vice-president of the Allegheny Valley Railroad Company, David A. Stewart, one of the directors of the road, and Thomas M. King, assistant superintendent.

(Mr. Hampton asks Mr. Acheson what he proposes to prove at this point.)

Mr. ACHESON. I propose to prove what took place by the witness and the parties he has named on that occasion, and what subsequently was done by the Pennsylvania Railroad Company in pursuance of what occurred at this interview and in consequence thereof.

(Objected to as incompetent and irrelevant, first, because the Allegheny Valley Railroad Company is not a defendant named in the bill filed in this case, and any communications that may have passed between the witness and the officers of that company are not binding upon the Pennsylvania Railroad Company. Those officers have no authority to bind the Pennsylvania Railroad Company by any declarations they could make.)

(Defendant's counsel does not object to any declaration made by any officer of the Pennsylvania Railroad Company at that time to the witness.)

The WITNESS. We walked down town to some office, I don't recall exactly where, where we could have a private talk. I spoke very plainly to Mr. Shinn, telling him that the idea of a scarcity of cars on daily shipments of less than 30,000 barrels a day was such an absurd, barefaced pretence that he could not expect men of ordinary intelligence to accept any excuses for the absence of cars, as the preceding fall, when business required, the railroad could carry day after day from 50,000 to 60,000 barrels of oil. Mr. Shinn stated clearly that he knew that I knew that the Allegheny Valley Railroad Company did not control the oil business over its line, but were governed entirely and exclusively by orders received from the Pennsylvania Railroad Company. I then requested him to be the vehicle of communicating to the Pennsylvania Railroad officials my

views of the subject, telling him that I was convinced that unless immediate relief was furnished and cars afforded there would be an outbreak in the oil regions. After further conversation we parted. My interview with them was not as officials of the Allegheny Valley Railroad Company, but as representatives of the oil traffic carried on and controlled by the Pennsylvania road. On the next Monday I returned to Parker. After passing Redbank, where the Low Grade road, the connecting link between the Valley road and the Philadelphia and Erie road, connects the Valley road, between that point and Parker the express train was delayed for over half an hour in passing through hundreds of empty oil cars. The shipments on Monday, to the best of my recollection, were over 50,000 barrels, and they equaled that amount the balance of that week, while the week before they had not exceeded if equaled 30,000 barrels.

By the MASTER:

Q. Weekly or daily?—A. Daily. The shipments as I give them are taken from the official tables prepared by the president and secretary of the Oil City Exchange, from daily reports furnished them by the United Pipe Lines, and they constitute our only data used in the oil country for determining the daily shipments.

(Objected to as incompetent and irrelevant, and merely hearsay as to the number of cars shipped, the defendants not being bound by any reports made by people other than their own officers.)

Q. These empty cars you speak of suddenly appearing were of what line?—A. Green Line cars.

Q. Can you fix the date of this occurrence?—A. It was on the Monday succeeding Thursday, which I think was the 4th of June.

Q. Then, according to your recollection, it would be Monday, the 8th of June, 1878?—A. Yes, sir.

Adjourned to 10 a. m., February 1, at the same place.

PHILADELPHIA, *Saturday, February 1, 1879.*

Before J. B. Sweitzer, esq., master and examiner.

Parties met pursuant to adjournment of Friday, January 31, 1879.

Same parties present, and examination of witnesses continued.

Mr. B. B. CAMPBELL, recalled.

Direct examination by Mr. ACHESON:

Q. State what was the market price of crude oil before your communication with the railway officials, and the furnishing of cars in June, as you have testified to, and what was the market price immediately after those cars made their appearance?—A. During the months of April and May the crude market was what we call strong, the price not varying very far on a fixed average, in the neighborhood of \$1.35. At times it would be forced above that by the tactics of the "bull" party, and depressed below that by the "bears," but the apparent fixed value was between \$1.30 and \$1.40. Shortly after the 1st of June, shortly after the refusal of the United Lines to run oil unless it was sold before shipment, shortly after the failure of the railroad companies to furnish needed facilities, the price of oil dropped, and commenced a course of almost uninterrupted decline until the depressed price of 80 cents a barrel was reached, I think, in October. I won't be positive about that. That was about the lowest price reached; but from the 1st day of June until the lowest point was reached the course of the market was downward, heavy, and depressed. In the following month, or rather the commencement of July, the shipments reached a magnitude unequalled in the history of the oil trade, and in the face of the increased shipments the price declined.

Q. You say, in the face of these heavy shipments the price declined?—A. Yes, sir.

Q. As one long in the trade and acquainted with its workings, state to the master what, in your judgment, was the reason for this decline in the face of these increased shipments.

(Objected to as incompetent and irrelevant, as merely the opinion of the witness.)

A. In my opinion the market was controlled by practically one buyer. Practically, to-day, there is but one buyer of crude oil for use.

Q. Name that party.—The Standard Oil Company and its connections. The gentlemen who testified here are known as outside refiners of New York and use a considerable amount of oil, but as compared with the controlling buyer, the Standard Oil Company, in the market they are but as drops in the bucket. We take our commodity to one buyer; we take the price he chooses to give us without redress, with no right of appeal.

Q. Now, sir, explain how it is the Standard Oil Company has this monopoly.

(Objected to as being incompetent and irrelevant, there being no averment in the bill that this evidence tends to support.)

A. Simply from the fact that the only power and control, in my belief, that the Standard Oil Company has over the market is based on the receipt by them of the exorbitant and gross rebates on the freight rates. As business men, as refiners, I do not consider that they have any advantage over any independent refiner, possessed of ordinary capital or ordinary ability. On the contrary, they are loaded down by the payment of hundreds of thousands of dollars a month to men whom they have turned out of the business, and who to-day are acting as their paid, apparently useless, agents. As refiners, unless protected by exclusive rebates, I consider that the Standard Oil Company appears in the market under very great disadvantages. But on looking at the evidence filed in this case—

(Objected to.)

The WITNESS. I will state that where they are getting a rebate of four-fifths of the rate charged, it is utterly impossible for any one to attempt to compete with them. I believe a rebate of 10 cents a barrel on the open rates would be a fortune to any refiner, and a rebate of \$1.10 a barrel on refined, shipped from Titusville to the seaboard, would be eleven times as much advantage as 10 cents.

Q. On crude?—A. No, sir; on refined.

Q. What, sir, do you know from your own observation as to the Standard Oil Company acquiring possession of rival refineries in the oil-producing regions of Pennsylvania and elsewhere?

(Objected to as incompetent and irrelevant, the defendant, the Pennsylvania Railroad Company, not being charged in the bill with directly or indirectly aiding or abetting the Standard Oil Company in procuring the control of or buying out refineries; that the matter sought to be inquired of is not pertinent to the issue or any question we are trying.)

A. About the year 1870 to 1871, when I first began to give my attention to the production of oil in earnest, there were about Pittsburgh a vast number of refineries, I think over fifty, bringing the crude oil from the regions of Pennsylvania, refining it in Pittsburgh, and from Pittsburgh shipping the principal amount over the Pennsylvania Railroad to Philadelphia, which was then the great natural shipping point to foreign countries of the Pennsylvania product of petroleum. I think in 1872, I won't be certain about the date, a combination was formed, known in the oil country by the name of the South Improvement Company.

(Objected to as incompetent and irrelevant, and as attempting on the part of the witness to place upon the record facts and transactions which transpired years ago, with which it is not alleged the Pennsylvania Railroad Company had anything to do, nor is there any averment in the bill that there was ever such a corporation as the South Improvement Company; and objected, further, as placing upon the record a mass of hearsay evidence, which can not in any way affect the defendant.)

The WITNESS. The signers to that document on the part of the refining interests comprised the leaders and controllers of to-day, the Standard Oil Company, the purpose and object of this South Improvement Company being avowed on the face of the document, which these parties, together with the president or leading officers of the Pennsylvania Railroad and New York Central Railroad and New York and Erie Railroad, also signed, declared in plain terms.

(Objected to as incompetent and irrelevant, the witness having shown that the paper is either in print or writing, and being the best evidence of its own contents the witness can not state what it contains.)

The WITNESS. That the railroads would give the parties, the refiners, a rebate of at least \$1 a barrel, and as much more as was necessary to give them the monopoly of the petroleum business. This document was produced, made known to me and to the other producers, in the committee-room of a committee appointed by one of the houses of the legislature, I can not say which—I think it was a committee of the house. When this fact became known throughout the region an excitement was created which has never been equaled. A statement was made to the officers of the railroad by a committee appointed by the then producers' association.

(Objected to unless the witness was present at the conference and will undertake to state an interview held between himself and the officer, naming him.)

The WITNESS (continuing). I was not present, but for five years I did business on the faith and governed by the terms agreed on in that conference. The officers of the railroad were told that they had placed themselves within the scope of a criminal indictment for conspiracy.

(Objected to unless the witness was present and heard the interview, and names the officer of the Pennsylvania Railroad with whom it was held.)

The WITNESS (continuing). The South Improvement Company's scheme was abandoned, and the railroad companies made a contract with us for the transportation of petroleum. By "us" I mean the producers, in which they guaranteed that the rates

on crude and refined petroleum should be the fixed, given, and definite amounts stated in the contract without discrimination; that that contract should only be repealed or altered on a given fixed notice, I think of ninety days. In common with all other producers I was a party to that contract.

By Mr. HAMPTON:

Q. Was it in writing?—A. I never saw it; I believe so, but I never saw it in writing. (Objected to as incompetent and irrelevant, not only as to the foregoing statement which the witness has made, but as to anything he may state as to the contents of that which is in writing; it being the best evidence of its contents, must be produced.)

The WITNESS (continuing). To the letter of agreement of the Pennsylvania road with the producers the road strictly adhered, and the enforcement of the letter of the contract was the ruin of their customers. No rebates were given over the Pennsylvania road, and yet refiner after refiner in Pittsburgh, buying his crude oil in open market, manufacturing it at his works, shipping it over the Pennsylvania road to the nearest sea-board town to the oil regions, met with a continued succession of losses, and either was forced to bankruptcy or the sale of his works, and a buyer for his works was always there.

(The whole of the foregoing statement objected to as incompetent and irrelevant, and as not pertinent to any question raised by the bill filed in this case against the Pennsylvania Railroad, relating merely to past transactions and not the subject of controversy at present.)

By Mr. ACHESON:

Q. Inform us who that buyer was.—A. The party known as the Standard Oil Company. They are the original Standard Oil Company corporation of Cleveland; the Standard Oil Company, I believe, a corporation of Pennsylvania, Warden, Frew & Co., Warden & Oxuard, or others, who are known to be directors, leaders, and controllers of the Standard Oil Company combination. When the Standard Oil Company had absorbed these numerous refining interests, had got the control of the refinery interests of Pittsburgh, it then appeared as the dictator of railroad rates. During the early spring of 1877, as the heaviest customer of the Empire line—the oil branch of the Pennsylvania road—and for some reason or other enjoying the confidence of its president, I was asked to use my influence, business, and position to throw trade over the line of the Pennsylvania road as against the Standard combination. Being to me both a pleasure and a duty, I entered into that service with all the zeal and all the power that I have. I made a contract with the Empire line wherein I bound myself to give all my business to this line. Its president came to Pittsburgh on a subsequent occasion to my house, and there met Mr. Hatch, chief agent of the Empire line in the oil country, Mr. E. G. Patterson, of Titusville, and myself.

(The foregoing evidence objected to as incompetent and irrelevant, it not having any connection with any act or declaration of the Pennsylvania Railroad by any of its officers, and the interview proposed now to be shown between the parties just named and the witness, and any declarations made therein, are irrelevant, because no officer of the Pennsylvania Railroad Company was then present, and at the time the interview took place the Empire Transportation Company was separate and distinct wholly from the Pennsylvania Railroad Company, and whatever acts or declarations its officers may have made or done are not binding upon the Pennsylvania Railroad Company.)

The WITNESS (continuing). After considerable desultory conversation Mr. Potts, as representing the transporting interest, drew up a formal contract to be signed by the producers on the one part, the Empire Pipe Line on the second part, the Empire Transportation Company on the third part, and to be indorsed and guaranteed by the Pennsylvania Railroad Company, the Allegheny Valley Railroad Company, the Philadelphia and Erie Railroad Company, and the Pennsylvania Company of the West, wherein, under the condition on our part—

(Objected to, the witness having shown that the contract proposed to be made was in writing. Defendant's counsel objects to any evidence as to its contents, and requires the witness to produce the contract itself, or if not a contract a proposal for a contract in writing, and that the witness is incompetent to state that which is in writing.)

The WITNESS (continuing). That we should run our oil through the pipes of the Empire Pipe Company, and one further condition, that in case any of the parties to this agreement desired to sell their property, that the Empire Transportation Company should have the right to buy their property at the same price as any public bona-fide bid that we received. They, on their part, agreed to transport that oil to the sea-board at as low rates of compensation as they did for any other party, or at as low rates as any competitive line would take like oil produced in the same place, deliverable at the sea-board; and further, in case we wished to send our oil to a local refinery, as to Pittsburgh, they would carry the oil to the refinery and allow it to be refined,

would ship it on the usual basis at as low rates as if that oil had been carried to any other refinery by any other route, and would also take the products, less the naphtha and the tar, as they were carried for other parties from like points. They would take our crude oil from the wells to a refinery in Pittsburgh and would deliver it in any Western city with which the Pennsylvania Company had direct connections as cheaply as if the oil had been sent to Cleveland, and from Cleveland sent west. When Mr. Potts read this contract, which he drew up without one word or suggestion from Mr. Patterson or myself, we accepted it in a moment. I made one suggestion. Mr. Potts wished to do a purely transporting business; owing to the competition existing between the Standard Oil Company and the united lines on the one side, backed by the New York Central and New York and Erie road, and the Union and Empire Pipe Lines of the Pennsylvania road, it was necessary for these pipe lines to get business, to buy the oil from their customers. During this fierce competition the freight rates were sunk by the competition. Mr. Potts agreed that for six months after the date of signing the contract the Empire line would continue as they had done for the last year, and buy the oil from the producer, if he preferred to sell it to them rather than ship it, the first six months being ample time for every producer to ally himself directly with some refiner. It was made the duty of Mr. Patterson and myself to get signatures of producers to this agreement, and a sufficient amount to warrant the Pennsylvania road entering into a permanent arrangement. The contract was, I think, for three years. Unfortunately the riots occurred in Pittsburgh a short time after our last interview with Mr. Potts, who throughout this entire arrangement represented himself as the agent of the Pennsylvania road, as well as president of the Empire Pipe Company.

(All the foregoing evidence is objected to as incompetent and irrelevant, and not in any way affecting the Pennsylvania Railroad Company, it not being shown that, directly or indirectly, it participated by any authorized agent or officer having authority to bind it, and as matter purely of private negotiations between the producers on the one part and the Empire Transportation Company on the other, which was a separate and distinct corporation from the defendant.)

By Mr. ACHESON:

Q. How soon after that last interview with Mr. Potts did the Pittsburgh riot occur?—A. Probably ten or fifteen days.

Q. Now, proceed with your narrative.—A. I was notified by Mr. Potts that owing to the changed circumstances of the Pennsylvania road—

Mr. HAMPTON (interrupting):

Q. Is that notification in writing?—A. I can not tell you; very probably it is a telegram. I got word somehow to come to Philadelphia. I can't tell you how. Mr. Patterson and myself met here a day or two before the sale—the resolution of the board of directors of the Pennsylvania road authorizing a sale of their refineries to the Standard Oil Company. Mr. Patterson and myself in this house prepared a letter to them.

Q. To whom?—A. It was addressed to the board of directors of the Pennsylvania Railroad, Thomas A. Scott, president, of which I will produce a copy, and know it to be correct.

(Witness produces copy of the letter.)

By Mr. HAMPTON:

Q. Was that letter delivered personally to any officer of the Pennsylvania Railroad Company?—A. No, sir.

Q. It was never delivered to the Pennsylvania Railroad Company?—A. Not by either of the writers. It was registered and I have the register-letter receipt here, addressed to Thomas A. Scott, and receipt for the letter by Thomas A. Scott, per a deputy.

By Mr. ACHESON:

Q. Did you receive a reply?—A. No, sir.

(Receipt marked as Exhibit No. 22, Commonwealth v. Pennsylvania Railroad Company, Philadelphia, February 1, 1879, J. B. Sweitzer, master, of which the following is in substance a copy: "Returned registered letter, receipt No. 7876, Philadelphia, September 11, 1877, mailed at Titusville, Pa., by E. G. Patterson, a letter addressed to T. A. Scott, Philadelphia. Received the above-described letter, Philadelphia, September 12, 1877, Thomas A. Scott, per James Vizard.")

(Plaintiff's counsel offer in evidence the receipt, Exhibit No. 22.)

(Plaintiff's counsel offer in evidence the copy of the letter mentioned in the receipt to Thomas A. Scott, president of the Pennsylvania Railroad Company.)

(Objected to as incompetent and irrelevant, as containing a statement of facts of a general character that has no relation whatever to the subject-matter of controversy in this case, and as containing merely the views, arguments, and opinions of B. B.

Campbell, of Pittsburgh, and E. G. Patterson, of Titusville. That such declarations and statements can not be made evidence in this way. That the facts therein, if competent evidence, are susceptible of proof, but can not be shown in a letter of the general character of the one presented. That it in nowise could bind the Pennsylvania Railroad Company, either to assent to or to decline to assent to any of the terms of the proposition therein stated, and because the said letter bears the date Philadelphia, September 11, 1877, long prior to the filing of the bill in this case, in October, 1878, and as having no relation whatever to the controversy that arose in the early part of 1878, and which led to the filing of the bill by the Producers' Union in this case; and further, that there being no reply to the letter upon the part of the Pennsylvania Railroad Company, it can in no way be bound by any assertions of fact therein contained any more than a letter by one individual to another containing views and arguments which he proposes to advance, can be said to bind the person who receives the letter, and as incompetent and irrelevant.)

The witness then read the letter as follows:

*"To the President and Directors of the Pennsylvania Railroad Company :*

"GENTLEMEN: About July 1, last, the undersigned were of a delegation from the oil region of our State, asking of your road an assurance that its course during the preceding two months, in giving to all producers and shippers of petroleum equal facilities and impartial rates, might be formally made its permanent policy.

"In an interview with your president at that time that assurance was given, coupled with the requisition that such support should be given it by the producers and shippers as would repay it for the exertion it must make in defending that policy and guarantying that such support should be continuous and permanent.

"The people of the oil region were only too glad to enter into such an agreement, and steps were immediately taken of a practical nature to carry it out.

"It was understood that it could not be immediately done.

"After the formal abandonment by the trunk lines of the South Improvement Company in 1872, your road for some months faithfully adhered, as we believe, to the pledge then given by all the trunk lines, that no discrimination should thenceforth be permitted. We believe, also, that it stood alone among the roads in adhering to it, for gradually the persons constituting the South Improvement Company were placed by the roads in as favorable a position as to rates and facilities as had been stipulated in the original contract with that company. At this time the line of your road in western Pennsylvania, including that under your influence and control, was dotted with refineries capable of producing a large proportion of the refined oil needed by the world. The policy of the Standard Oil Company, the successor in everything but name of the South Improvement Company, has resulted in the dismantling and abandonment of every one of those refineries as soon as they fell into their possession which could not be reached by some other and a rival road to yours; and now there are in the oil region proper but few refineries, and those universally owned by the Standard Oil Company, those in Pittsburgh being owned or controlled by that combination, or by the Conduit or Empire lines.

"The use and export of crude oil is but a small proportion of the consumption, and time and money were required to re-establish this great product upon its former basis, and these people were glad to furnish all immediate means to accomplish this end, as are also capitalists at other points not strictly within the oil region, yet upon your lines.

"We are met in the midst of this preparation by assertion of agents of the combination, and as accepted news by the press, that such a combination is entered into or under consideration by your road and the Empire Transportation Company, the Erie, Central, Lake Shore, and Baltimore roads of the one part, and the Standard Oil Company of the other, as would preclude your road from carrying out the policy announced by your president at the interview heretofore referred to.

"We believe there is danger that such a result may be reached, and we, in behalf of those whom we represent, in making our efforts to prevent its accomplishment, or if accomplished to defeat it, as a first step address this communication to you, desiring to present its aspect as affecting your road from our standpoint.

"So far as we and the general public are affected, you will not question that the present scheme is but the repetition of the South Improvement scheme, never abandoned by its authors, and seeking the sole and absolute control of all the petroleum produced, purchased, refined, and shipped within the States of Pennsylvania, New York, Ohio, or West Virginia.

"The overproductions of 1873, 1874, 1875, and the consequent almost entire destruction of petroleum values, gave the Standard Oil Company, with its organization and capital, almost the desired monopoly.

"The equalization of consumption and production in 1876-'77 brought that combination to the same point that they were in in 1872, utterly unable by reason of geographical position, if for no other, to monopolize this product without the co-opera-

tion of all the transportation, and then only under a contract similar to that of the South Improvement Company, and including all of its dangerous and extraordinary features; none other can serve them; and so they stand to-day, and we believe that your road can enter into no compromise, treaty, or arrangement which will serve the ends of the monopoly, under any less stringent stipulations and devoid of the liabilities thereof.

"Under such an arrangement it is probable that the Central and Erie have transported its oil during nearly all of this year. It is now an open secret in the producing region that no charges follow the shipments over at least one of these roads, and crude oil is delivered in New York in shipping order at prices which barely repay the cost of packages and contents, with little or no remainder for transportation charges. This aid to the scheme of combination is possibly given in view of the high tariff and consequent large revenue promised to be derived hereafter, when the scheme has been made a success, and all opposition in trade and transportation extinguished.

"Suppose your opposition to be withdrawn and you join the alliance, where does your profit come in? We are entitled to impartiality. As we are advised, the law, common and statute, provides for it; it pronounces those participating in such a scheme conspirators against the public weal, and there is no court upon your line but what will enforce, by mandamus and injunction, the impartiality that we ask. The combination will promise you an immediate increase of revenue. If we are well-advised, will you realize upon that promise? Can you make a contract with them that if we do not succeed in destroying it will be their interest to keep? You will not have a refinery left; and they are now completing pipe lines from Pittsburgh to Oil City and can deliver the oil received by all their pipe lines independent of your road and its branches. In case of a contract with them executed, but afterwards broken, from what source will you derive your oil traffic, and what court will enforce the broken contract in your favor? We urge that you can not enter into any arrangement with the monopoly that can be permanently useful to it and to you, and doubt if it can be made temporarily so.

"Suppose that you decline to enter into such a treaty or any such scheme, but announce and adhere to the opposite policy? There is no law, not even that of necessity, to compel you to serve the ends of the Standard Oil Company.

"If Messrs. Vanderbilt and Jewett believe that their aid alone is insufficient to the establishment of the monopoly, for how long will they carry its oil as at present, for nothing, when they could have full rates by uniting the railroad interest and leaving the Standard Oil Company to do its business in common with all others?

"If the Pennsylvania Railroad, having the geographical position in its favor, will announce and adhere to the policy of impartial and competitive rates, in three or six months it can have all the facilities and extent of business which the Standard Oil Company can give the competitive roads, and by men who have all to gain by so doing.

"We ask consideration of our views and of our assurances of good results from their favorable consideration.

"If you choose to place the matter in the light of an experiment, its trial can cost you nothing but the failure to realize upon the immediate fulfillment of the promises of the common enemy, and that realization we believe will not be permitted.

"Very respectfully,

"B. B. CAMPBELL, of Pittsburgh,  
"E. G. PATTERSON, of Titusville,

"PHILADELPHIA, September 11, 1877."

Q. Did you ever receive from the Pennsylvania Railroad Company a reply to that communication?—A. Never.

Q. Did you have any further communication, either with the road or with Mr. Potts, who you say professed to represent the road, prior to the time when the Pennsylvania Railroad Company bought out the Empire Transportation Company, or not?

(Defendant's counsel objected to any interview that took place between the witness and Mr. Potts, because the latter is not an officer of the Pennsylvania Railroad Company, and not competent in any respect to bind it, but he does not object to any evidence that may be given by the witness as to an interview between any officer of the Pennsylvania Railroad Company competent to bind that company, there being first proof as to who that officer was at the time.)

The WITNESS (continuing). Knowing that within a few days after the date of that letter the Empire Transportation Company pipe line was sold to the United Pipe Company, that their Eastern refineries were sold, that their tank-cars on the line were branded with a mortgage held on those cars by the Standard Oil Company, which mortgage being to-day held for the Car Trust Company of Philadelphia, we took no other steps, it being too late and the mischief done.

(The whole of the foregoing answer objected to as incompetent and irrelevant and as not affecting the defendant in any respect.)

By Mr. ACHESON:

Q. When, Mr. Campbell, did the Pennsylvania Railroad Company commence operating the Green Line directly?—A. I understood, from conversation with Mr. Branded, their agent, that it was immediately after the transfer. He still continued to be their representative, as he had been before.

Q. He had been the representative at Oil City?—A. For the Empire Transportation Company or the Green Line; he still holds the same position.

Q. He continued afterwards to represent the Pennsylvania Railroad Company?—A. Yes, sir.

Q. Did you see, sir, a circular letter at that time issued by the Pennsylvania Railroad Company, signed Thomas A. Scott, president, with reference to transportation?—A. My recollection don't hold good. If it was published in the papers, of course I saw it; but I don't remember.

Q. You spoke at an earlier stage of your examination of there being at one time as many as fifty oil refineries in the city of Pittsburgh?—A. Yes, sir.

Q. At the present time, sir, how many refineries are there, if any, outside of the Standard combination?

(Objected to as incompetent and irrelevant.)

The WITNESS (continuing). There is one small refinery owned by a gentleman of the name of Reighard. I needed a couple of barrels of oil for my own use about three weeks ago. I wanted to buy two barrels of oil. I didn't want to buy from the Standard combination. I hunted industriously for a refinery where I could buy, and I found Mr. Reighard at a small refinery, with a capacity of about 200 barrels a week. I bought two barrels of very fine oil.

Q. What has become of the fifty independent refineries that you say were there at the period of time referred to?

(Objected to as incompetent and irrelevant, there being no averment in the bill so far as the defendant, the Pennsylvania Railroad Company, is concerned, as to the number of refineries that existed in Pittsburgh in 1871-'72-'73, as stated by the witness, as compared with the number existing there now, or is there any averment in the bill which charges that the Pennsylvania Railroad Company was in anywise instrumental in the destruction of those refineries or in their ceasing to operate, and as incompetent and irrelevant.)

The WITNESS (continuing). The great majority of them, when bought by the Standard Oil Company, were dismantled, and the stuff, or "junk" as it was called, hauled to other refineries, and there made use of. When you leave Pittsburgh, going out on the Valley road, the first refinery you see running is that of McKee's. Mr. McKee owns his own refinery to-day, but he is to-day working for the Standard Oil Company.

(The foregoing question and answer objected to as incompetent and irrelevant.)

The WITNESS (continuing). There are some small refineries near the mouth of Ewalt street, Bly & Elkins's old refinery, which are owned directly by the Standard Oil Company, all oil being marked Standard Company. Next, the refinery of Holdship & Irwin, owned by them, but worked under a contract with the Standard Oil Company. At the end of the Sharpsburgh bridge, the Citizens' Own, the next large refinery, worked under a contract with the Standard Oil Company. The next large refinery is that of the well-known Brilliant works, owned by Lockhart, Frew & Co.; run by the Standard Oil Company. The next two works immediately above the Brilliant are the old Vesta and Cosmos, two large works, whose cost was probably \$200,000, which were purchased at sheriff's sale by the Standard Oil Company for \$50,000, and are to-day run very vigorously and very largely by the Standard Oil Company. On the line of the Valley road the next refinery that I know of is the Germania Refinery, a refinery built and owned by James A. Hutchinson, of Pittsburgh, who had a contract with the Empire Transportation Company for the manufacture of oil, and ran his refinery to its utmost capacity as long as the contract with that line existed. The works are standing idle, leased by the Standard Oil Company. At the West Pennsylvania Junction are the works erected originally by Mr. Rieter, his right name I have forgotten now; bought and owned by the Standard Oil Company. Immediately above that, a distance of about a mile and a half from West Pennsylvania Junction, is the town of Aladdin, where very large works were built originally for the distillation of coal oil, and converted afterwards into a refinery for petroleum. These works have been dismantled, the majority of the stuff being shipped to the Standard Oil Company's lubricating works at Franklin.

Q. Dismantled by what company?—A. By the Standard Oil Company. I am not so familiar with the works on the other side of the river, on the West Pennsylvania road, but I know that all the oil made by them is made either for or by the Standard Oil Company. Immediately opposite to my house, 19 miles from Pittsburgh, are the works of the Central Oil Company, probably the largest oil refinery in Pennsylvania, owned and controlled by the Standard Oil Company.

(Objected to as incompetent and irrelevant, the evidence disclosing nothing more than the sales of oil refineries voluntarily made, even according to the statement of

the witness, to the Standard Oil Company, and as not showing, or attempting to show that those sales were made to the detriment of their owners, by any illegal combination in which the Pennsylvania Railroad Company participated, and as merely an attempt on the part of the Commonwealth to load the record with extraneous facts and circumstances that have no bearing whatever upon the point at issue.)

Q. From your own knowledge and observation, state who is to-day practically the only refiner of oil in western Pennsylvania.

(Objected to as incompetent and irrelevant; first, because it tends merely to elicit the opinion of the witness and not any facts; and secondly, not tending to prove any averment set out in the bill filed against the defendants in this case.)

The WITNESS (continuing). The Standard Oil Company combination.

Q. What, sir, in your judgment as an oil man and as a business man, has been the effect of this combination upon the oil interests of western Pennsylvania?

(Objected to as incompetent and irrelevant, for the reasons heretofore stated.)

The WITNESS (continuing). Most disastrous; we are compelled to sell our commodity to a single buyer, accepting not the value of that commodity, but what the buyer is willing to pay us. Of course, I wish to qualify that by "practically so." Other parties have been buying smaller lots, as has been testified to here, but practically the oil has been sold as I have stated.

Q. What has been the effect of this Standard combination upon the refining interests of the State of Pennsylvania?

(Objected to as incompetent and irrelevant, for the reasons heretofore stated.)

The WITNESS (continuing). Absolutely ruinous to all not in combination, or not adopted or fostered by it. Bankruptcy to all attempting to lead an independent existence.

Q. I think that you said the city of Philadelphia, in your judgment, was the natural port for the exporting of refined petroleum?

(Defendant's counsel objects to any answer witness may make on that subject, as tending merely to elicit the opinion of the witness upon a matter wholly irrelevant to any question or averment contained in this bill.)

The WITNESS (continuing). When the trade in the early stages was free and unfettered my belief is that Philadelphia exported 75 per cent. of all oil sent abroad. Being at the end of the shortest, best-managed, best railroad leading out of the oil regions, it was the natural place where all the oil, either shipped in crude form or manufactured in the oil regions or manufactured here, should be exported; any diversion to New York, either by refining in Cleveland or by shipping to New York and refining there, being, in my opinion, a violation of the natural laws—geographical laws—of trade.

Q. Now, sir, state what, according to your observation and knowledge, has been the effect of this Standard combination upon the business interests of the city of Philadelphia in respect to the petroleum trade.

(Objected to as incompetent and irrelevant, and as tending merely to elicit the opinion of the witness upon a general subject, upon the movement of oil and as to the question of export, and as not pertinent to any matter set forth in the bill filed in this case against the defendant.)

The WITNESS. Accepting as correct, as we are compelled to do in our business, the figures furnished us by the statistics in the petroleum trade, and especially by Mr. Stowell, a witness in this case, during last year New York exported, I believe, 42 per cent. of the entire production, Philadelphia 9 per cent.

The cross-examination of the witness postponed until a future day.

Adjourned to meet at the same place, Thursday, February 6, 1879, at 10 a. m.

B. B. CAMPBELL was recalled in the case of *The Commonwealth v. The Pennsylvania Railroad Company*, and cross-examined by Mr. Hampton as follows:

The WITNESS. Before the cross-examination begins I desire to correct my testimony. In my examination-in-chief I stated that I thought the dispatch I sent from Parker to Mr. Scott I had dictated. I have since found the original, which is written by myself, and I desire to put the dispatch itself in evidence. This is the original dispatch I wrote.

The MASTER. Do you want to put it in as an exhibit or put it on the record?

The WITNESS. This is a correction. I repeated the dispatch before from memory. This is the original itself. I thought I had dictated it. Dispatch read, as follows:

JOHN SCOTT,

*President of A. V. R. R.:*

The excitement against the Standard for refusing to buy oil to-day while tanks are running over is intense, and will, unless relief is given and the immediate shipment

plan abandoned, lead, I fear, to excess which the more prudent part of the people can not prevent, and the scenes of last July in Pittsburgh repeated.

B. B. CAMPBELL.

Cross-examination by Mr. HAMPTON:

Q. Mr. Campbell, are you the president of the Producers' Union?—A. I am, sir.

Q. Where has that organization its headquarters?—A. Titusville.

Q. How long has it been in existence?—A. The first meeting of the council, was, I think, in November, 1877—the latter part of November.

Q. For what purpose was it organized?—A. It was organized for the purpose of being a protective organization for the producers; for the purpose of collecting statistics about their business for their own information; for protecting themselves against all conspiracies formed to injure the producers in their business.

Q. What particular injuries were supposed to exist that the Producers' Union was organized to prevent happening to the producers?—A. In my opinion?

Q. Well, give us the facts.—A. So far as I can speak, it has been that of the over-weening control of the oil business by the Standard Oil Company.

Q. That, you say, was the purpose of the organization at the time you started in the fall of 1877?—A. Yes, sir; I could only speak so far as it has been developed by its acts.

Q. What is the present number of the council that meets at Titusville?—A. It varies from 160 to 170 down; the average attendance is from 75 to 160, I suppose.

Q. Are there branches of the council throughout the oil regions?—A. Yes, sir; local unions.

Q. Called local unions?—A. Yes, sir.

Q. At what points?—A. It is difficult to repeat them. I will do it as far as I can. There is one at Pittsburgh that I think has fallen into disuse; one at Butler, Kittanning, Millerstown, Karns City, Modoc, Petrolia, Parker, Foxburgh, Emlenton, Saint Petersburg, Turkey City—the town that was burned—Edinburgh, Franklin, Oil City, Pleasantville, Titusville,

Q. Are these organizations that you have named independent of each other, or do they work in harmony?—A. I have not gone through the list yet; I was trying to think of one I can not remember; Bradford, Tidioute, Redbank, Olean, Allegheny, and there may be probably one or two others that I can not mind.

(Commonwealth's counsel objects to this line of examination as not cross-examination and as immaterial.)

Q. Do these organizations that you have named act in concert or independent of each other, or have they a common head?—A. They send delegates to the general council which meets monthly at Titusville.

Q. What is the entire membership, as nearly as you can tell, of the organization?—A. It is impossible for me to tell.

Q. As near as you can tell.—A. It would be a mere guess—from 2,500 to 4,000.

Q. Are they secret societies?—A. The council is not.

Q. I ask you if the societies themselves that you have named are secret societies?—A. I believe they are; I know as to the one I belong to.

Q. You can state whether the membership is composed entirely of producers?—A. Almost entirely so. There are a few parties, I believe, who are not producers, though connected by interest with production, but almost entirely producers.

Q. Are there any refiners in it?—A. Not to my knowledge, sir.

Q. It is, then, an organization composed entirely, with, may be, a few exceptions, of producers?—A. Yes, sir.

Q. You can state whether amongst other objects of the association one is not to regulate and control the price of crude petroleum in the oil regions so far as may be?—

A. From the time of the first meeting of the council to the last I have never seen an attempt to affect, directly or indirectly, the current price of oil—a successful attempt so far as any resolution or action being passed.

Q. Have there not been discussions upon the subject, and plans proposed for the advancing of the price of crude petroleum in the oil regions?—A. No doubt there have been, sir, alliances proposed to have that effect.

Q. Can you state with any degree of accuracy the number of producers of oil in the oil regions of Pennsylvania to-day?—A. I can not; the number has increased so in the northern regions that I know nothing about that; I could not give anything more than a mere guess.

Q. Are there 20,000 directly or indirectly engaged in the production of oil?—A. Oh, yes; unquestionably, directly or indirectly.

Q. Either owning wells, or directly superintending them, or interested in the ownership of them?—A. Oh, no, sir; when I speak of 20,000 I would speak of heads of families and men working; there are not 20,000 who are unfortunate well owners.

Q. About how many producers are there in the oil regions of Pennsylvania to-day, taking the Bradford district and the lower district?—A. That I can not give you any reliable data on.

Q. Are there 10,000?—A. That I could not tell you.

Q. Are there as many outside of your organization as inside it?—A. I have no means of judging. I am almost entirely ignorant of the northern country, which to-day is the greatest producing field.

Q. The Bradford region is the great producing region to-day?—A. Yes, sir.

Q. With that you are not familiar?—A. No, sir.

Q. Have you an oil exchange in the oil country at any point or points?—A. Several of them.

Q. At what points?—A. Parker, Oil City, Titusville, Bradford, Petrolia, may be others I am not familiar with.

Q. Are persons who are members of the association members of these different oil exchanges?—A. Many of the producers are, but as a rule active members of an exchange are not producers, and therefore not in the association. They are brokers.

Q. You can state whether or not the price of oil in the oil region is not regulated by these different oil exchanges?—A. I do not think it is, except temporary fluctuations.

Q. Is there not a very large amount of oil bought and sold at these exchanges?—A. There is.

Q. Is not nearly the entire product of the oil regions disposed of in that way through these brokers or oil exchanges?—A. The product is not disposed of in that way. The product is generally sold to buyers of the Standard Oil Company. It is accumulated stock that is sold on the exchange. The product is nearly all sold to buyers of the Standard Oil Company. There are buyers in every region, and they buy from the producers directly.

Q. Can you state the number of buyers of oil in the oil regions to-day?—A. Buyers for consumption, do you mean, or buyers for shipment?

Q. Buyers generally of crude petroleum.—A. I can not say who all represent the Standard Oil Company, but except them the only buyers for shipment are Warren Gray, who buys a little oil for Mr. Rousseaux, I think, and Mr. Nicholson, who buys for the association of outside refiners of New York. The other buyers, I believe, are all in the Standard interest.

Q. Who buys for the refiners at Philadelphia other than those owned by the Standard?—A. They probably would buy round lots at the exchange. They have no regular buyers in the field.

Q. There is a very large amount of oil produced and sold and sent to Philadelphia, is there not, for the refineries there?—A. I do not know the extent of the trade; there is some. The tables show it not to be so large, comparatively.

Q. Is Mr. Ohlen a buyer in the oil regions?—A. Not from producers, I think.

Q. He is a buyer?—A. He is; he buys on exchange.

Q. He has bought very largely within the last year or two, has he not?—A. Yes, sir; his shipments were to quite a large amount.

Q. Is he not one of the largest buyers in the oil region?—A. Oh, no, sir; the Standard combination purchase a great deal more than he does.

Q. Next to them, does he not buy the largest?—A. Yes, sir; I suppose he does.

Q. Whom does he represent?—A. He represents what is known as the outside refiners in New York. I can not name them all.

Q. Name them as near as you can.—A. Mr. Bush, Mr. Gregor, and Lombard & Ayres. I believe that is all I know. My acquaintance with them is very slight.

Q. Does he buy for what you term the outside refiners in New York?—A. I so understand; that is mere hearsay.

Q. Does he buy directly from the producers?—A. I think not.

Q. Or middlemen?—A. He buys, I think, from middlemen.

Q. Does he buy at the exchanges?—A. That I can not tell you.

Q. How often do the oil exchanges meet?—A. Daily.

Q. Meet daily?—A. Sundays and holidays excepted.

Q. And they bear about the same relation to the oil business that the gold room did to gold when it was above par in New York, do they not?—A. So far as I know of that institution, they do.

Q. Are not these exchanges open now, and have they not been open ever since they were organized for the producers to go in and sell their oil?—A. They deal in no oil except 1,000-barrel lots.

Q. If he has thousand-barrel lots, is not the exchange open to him?—A. Certainly; but that don't take the oil away from our market, though.

Q. I understand you, then, that whenever a man can command oil in thousand-barrel lots the exchanges are open to producers to go in and sell?—A. He can employ a broker or sell through a broker; if he is a member he could sell for himself.

Q. Has not the price of oil greatly fluctuated in the oil regions since the opening of these exchanges on account of the bulling and bearing of the market?—A. I consider the exchange a regulator of the market.

Q. I did not ask you that.—A. You asked me if the fluctuation was on account of that. I do not think it was on account of that.

Q. I ask you whether or not the price of oil has not greatly fluctuated within the last few years, since these exchanges were established, owing to the mode of doing business in them?—A. No, sir; I do not consider that the cause.

Q. I ask you whether oil has not been bought and sold in these exchanges at prices greatly fluctuating from week to week and month to month?—A. They certainly do greatly fluctuate.

Q. Very much depressed one day or a week or so, and afterwards rising again?—A. Not very great changes in a week or two.

Q. It does change, does it not?—A. There is a change; yes, sir.

Q. Have not these changes a good deal to do with fixing and determining the price of crude petroleum in the oil regions as affecting the price at which oil is sold?—A. My belief is—

Q. I did not ask you your belief; I asked you for the fact.—A. I will answer it and give an explanation.

Q. I would prefer that you would just answer the question.—A. Ask the question again, will you, and I will give you an answer.

Q. (Question read by stenographer.) A. In my opinion the effect of the exchanges is to hold the price of oil from extreme elevation or extreme depression.

Q. Well, sir; state whether, within a period of a few months during any year since they have been organized and in operation, there have not been very great depressions and elevations in the price of crude petroleum.—A. There have been variations, owing either to parties buying large quantities of oil, or suddenly throwing large quantities on the market; in nearly all cases I believe that to be the work of the Standard Oil Company, the heaviest operator on the exchange.

Q. Now, I ask you the question again whether the quotation of the price at the oil exchange does not fix, as a general rule, the price of crude petroleum throughout the oil regions for the time being?—A. It does for that day.

Q. So that if the price of oil is depressed to-day from what it was a week ago, the whole oil region suffers with that depression?—A. They take the price.

Q. So that if a corresponding increase in the price of oil occurs from the same cause, it elevates or increases the price of crude throughout the oil regions?—A. Yes, sir.

Q. And that has its effect, has it not, upon the New York market in the quotation of crude and refined there?—A. I do not think the fluctuations of crude have their due force on the refined market. When crude is advancing you would naturally expect to see the refined go up, as it would if it was in the hands of the local market, but then you often see refined decreased, and *vice versa*. As far as the market is concerned, I think it is entirely fixed and arranged either on the exchange or off the exchange by the Standard Oil Company.

Q. That is your belief?—A. Yes, sir.

Q. You have no facts to support it?—A. I have the experience of a life-time.

Q. You have no facts you are stating an opinion from?—A. The facts every man has in his own business and that govern his proceedings.

Q. I am asking you whether it is your naked opinion unsupported by facts?—A. It is supported by facts. I have every day knowledge of it, and that the newspapers every day point out.

Q. Will you state what have been the daily transactions in crude, from day to day, one day with another, one month with another, as to their magnitude?—A. They are very large.

Q. Will you state what they are, what they would aggregate?—A. Of course, I can not tell that; I have known them to go as high as four and five hundred thousand barrels a day, that is the tossing about of certificates for oil in the hands of speculators, and not the oil itself; so far as the dealings in oil are concerned, they are confined to the shipment of oil from the oil regions, and not to these transactions of tossing about certificates by speculators, which I doubt very much are many times represented by oil; dealings of the exchange are not dealings of oil.

Q. You say that they have gone as high as four or five hundred thousand barrels of oil in a single day?—A. I believe so—sales of certificates on exchange.

Q. Those were certificates issued by whom?—A. Latter days by the United Pipe Lines.

Q. They were considered bona fide certificates, as I understood from your testimony in chief, and who ever held them has the title to the oil?—A. Has a title, but not to any specific oil.

Q. To so many barrels of oil?—A. Yes, sir.

Q. And if I held a certificate of the Union Pipe Lines for 50,000 barrels of oil, and should go on exchange with it, I would be considered as holding a title for 50,000 barrels of oil that the United Pipe Lines had?—A. Yes, sir.

Q. And I would be considered as a fair and square dealer if my oil was taken by

you on a bid; you would consider that I was in a condition, on the payment of the money by you, to transfer the oil?—A. Yes, sir; in position to transfer the oil, but the custody of the oil is never transferred until a shipment is made; it is a mere speculation with the representatives of oil.

Q. But that speculation which involves transactions of five or six hundred thousand dollars daily is based upon certificates issued by responsible parties?—A. Certificates issued by the United Pipe Lines.

Q. By responsible parties?—A. I know nothing about the responsibilities.

Q. Did you ever know of their not being responsible?—A. I know that every certificate of theirs that is transferred from hand to hand is transferred without recourse by every dealer in the oil regions.

Q. Do you say that they are not considered as importing absolute verity and honesty, and that money is paid on them?—A. They are dealt with as the best representative we have.

Q. Take any one day's operations of 500,000 or 600,000 barrels, what would be the average fluctuation in the price by the gallon or barrel?—A. I have known on the present basis as high as 5 cents a barrel variation in a day; it is not common, though.

Q. Take any one month in the year 1878, what would be the total of the operations of those oil exchanges in the selling of crude petroleum by the barrel?—A. The sale of crude petroleum by the barrel would be very small. The sale of certificates of the United Pipe Lines would be very large.

Q. State about how large it would be, the sale of certificates which impart a title; how many barrels in any one month with business in its average or ordinary stage?—A. I should suppose they would average 100,000 barrels a day, at least that; I am no judge of that, though.

Q. One hundred thousand barrels a day, every day in the month, Sundays taken out?—A. Yes, sir.

Q. Do I understand you that these operations in the oil exchanges are bona fide transactions, or gambling operations?—A. The great bulk of them are gambling operations, with no intention of buying or selling oil; it is to make money on the difference.

Q. So that the price of oil in the oil regions, in your judgment, is controlled by the gambling operations in these oil exchanges?—A. No, sir; it is not.

Q. Didn't I understand a moment ago that the price of oil throughout the oil regions for any given day, one day with another, was fixed by the sale of oil on the exchange?—A. Exactly, for the day, but not for the year; the price is fixed either by the accumulation of oil or the shipments of oil; these certificates of oil that are tossed from hand to hand, when they get heavy are thrown back on the market again.

Q. I ask you whether you did not state a few moments ago that the price of oil throughout the entire oil region was regulated by the quotations of the oil exchange?—A. I did, sir, for the day; meaning for the present time.

Q. Then I ask you whether or not, if that statement be true, the price of oil in the oil region is not dependent upon these great gambling operations at the rate of 100,000 barrels a day in any given month?—A. No, sir; I think they keep the price from going to extremes—either too high in times of demand or too low in times of depression.

Q. Then, if I understand you, if these are gambling operations, as you seem to think, they are a benefit to the oil regions?—A. I have not considered them an injury.

Q. Although you say you believe them to be gambling operations, and actual oil is not transferred, and although the price of oil is fixed in that way, still it is a benefit to the producers?—A. I did not say a benefit; I said not an injury, and I will give my reasons for it. In a time like this, when the shipments are very small, about 20,000 a day, and the production itself double that, if there was not speculation going on, it would be impossible to find a market; the shipper says he does not want it, and the producer is forced to sell that day; and he would be compelled to offer his oil lower and lower until a very low price would be reached. The speculator, however, he comes in and holds it until the buying time arrives; he steps in and buys this oil, carrying this stock. It is the stock that is the trouble.

Q. I understand the illustration you give in your answer is when there is not much demand for oil?—A. Yes, sir.

Q. Suppose there is a brisk demand for oil, how then?—A. Then, I believe, it prevents it going as high as it would by people selling the oil they do not possess, selling short.

Q. So that in getting at the real price of oil you have got to consider this gambling operation as an element very intimately connected with it?—A. For the mere price, but not so far as shipping and dealing in oil is concerned.

Q. Do not producers, many of them, go into the oil exchange with certificates and gamble in that way?—A. If they sell their certificates, that would not be gambling; it is a sale of the actual production.

Q. I understood you to say that these operations were mere speculations?—A. Not all of them: I said a great majority of them.

Q. Did you not say that they are in the main gambling operations?—A. A great many sell the oil that they have, which I consider legitimate; a great many sell oil that they have not, which I consider gambling.

Q. So there are some sales that are fair, and some that are gambling?—A. I do not call any gambling; one is a bona fide operation, and the other is what is called stock jobbing or gambling operation.

Q. Then I will inquire again, do not large producers and a great many of them go into these oil exchanges and gamble on these oil certificates?—A. I know some of them do, and they meet with one universal fate, that of loss.

Q. I did not ask you whether they lose or not; all I want is the fact whether they do not go in and go into these operations?—A. As a class I do not think they deal heavily.

Q. Do you now know of some members of your own organization going into these exchanges?—A. Most certainly they do; it is not prohibited by anything.

Q. When did you become acquainted with the oil regions of Pennsylvania first?—A. Either in 1870 or 1871, I can not state which.

Q. The Bradford district was not developed then—but very little?—A. Not at all, I think.

Q. Your knowledge was then confined to what is called the lower district, the Oil Creek and river district?—A. I never operated in Oil Creek. I commenced at Parker. My operations were properly confined to Butler, Armstrong, and Clarion Counties.

Q. Can you state about what time it was that the supply of oil exceeded the demand for it; or, in other words, when the overproduction of oil commenced in the oil regions of Pennsylvania?—A. I think from the very first; there have been periods of overproduction and then of scarcity, which affected the price. Some time in 1862 or 1863 I bought oil on the creek, although I never was there, as low as 35 cents a barrel.

Q. What is that price compared with it to-day?—A. Well, it was a better price because there were but few and very large wells.

Q. What is the price of oil to-day?—A. Ninety-seven and a half cents.

Q. I wish you would state whether the overproduction did not commence in about 1873?—A. That is the one I know the most about.

Q. You can state from 1873, on down until this time this overproduction has not gradually increased, having consequently decreased and depreciated the price of oil in the oil regions?—A. No, sir; in 1876 there was less oil produced than the demand, and consequently the price was very high.

Q. With that exception, has there not been a gradual and continued overproduction of oil since 1873; I mean now in the river and Bradford districts?—A. It is difficult to tell what overproduction is. We have got on hand about a four-months' stock, less stock of raw material than is held by any other industry in the world.

Q. I wish you would state whether you did subpoena Mr. Stowell, the editor of the Petroleum Reporter, of this city, to go upon this stand.—A. I did, sir.

Q. I wish you would state whether or not you were present when he was examined.—A. I was, sir.

Q. Did you hear him give the statistics of overproduction from the year 1873 down until the time of his examination, including the month of December, 1878?—A. I heard him give his statistics; with his statistics I was perfectly satisfied; they were not statistics of overproduction.

Q. Were not you present and aiding him when he was being examined in answering the questions by making calculations—aiding him in making calculations?—A. I was, sir.

Q. He stated in that examination in your hearing that the overproduction commenced in 1873, and has gradually increased from that time down to the year 1878; is that true?—A. I agree with Mr. Stowell's statistics; I do not agree with his deductions from them.

Q. Did you hear what he said?—A. I heard it, and his testimony is on record there.

Q. Do you believe his statistics upon that subject to be correct?—A. I believe his statistics of the business, as he gathers them, are correct; but neither he nor any one else can tell what over production there is; we know what stock we have on hand; we have about four months for active shipments.

Q. He stated that he was a man of very great experience in the business of collecting statistics. Is that your judgment of him?—A. I believe he is a very successful collector of statistics; if I had not thought they were true I would not have called him.

Q. Do you think he is as reliable upon that subject as any one we have?—A. As far as his statistics are concerned I agree with him; so far as his statistics of the production are concerned on their face I agree with him.

Q. Did you hear his statement made at that time that it was overproduction that had caused a gradual decrease in the price of oil from 1873 to the end of 1878?—A. I did, and I do not agree with him. I can give you my reasons very shortly. I believe that if the trade in oil was free, that if freight competition in transportation was free,

with free competition in refining, with refiners shipping as good oil abroad as we would then have, the consumption of the world would be so largely increased that we could not make enough for the demand ; therefore I do not believe Mr. Stowell's deductions.

Q. But you take his statistics as true ?—A. Yes, sir.

Q. And do not believe the overproduction he states ?—A. No, sir ; I believe the world would take 50,000 barrels a day if it was put properly on the market.

Q. When you were examined in chief you read a letter, which is to be found on pages 137, 138, and 139 of the printed evidence, signed by yourself and Mr. E. G. Patterson, of Titusville, directed to Thomas A. Scott, president of the Pennsylvania Railroad, and dated September 11, 1877. Who was Mr. Patterson who signed that paper along with you ?—A. The gentleman who is present.

Q. Is he a producer ?—A. I do not know whether he is now ; he was then a large one.

Q. Was he a refiner ?—A. No, sir ; not to my knowledge.

Q. Was he a shipper of oil ?—A. No, sir.

Q. Had he not been shipping oil ?—A. Not to my knowledge ; he can speak for himself.

Q. The facts that you stated in that letter you had perfect confidence in their accuracy at the time, had you ?—A. I really can not tell you all that was in the letter.

Q. I do not ask you whether you recollect all that was in the letter, but whether the facts you stated you believe to be correct ?—A. Mr. Patterson wrote the letter and I signed it, and with the main conclusions and deductions I agreed on, or I would not have signed it.

Q. I see in that letter you said this : "The overproduction of 1873, 1874, and 1875, and the consequent almost entire destruction of petroleum values gave the Standard Oil Company, with its organization and capital, almost the desired monopoly."—A. I think those words are in the letter.

Q. Is it true that the overproduction of 1873, 1874, and 1875 was the destruction of almost entirely the petroleum values during those years ?—A. Prices were very much depressed and I believe were nearer then a fair overproduction than ever since, for that year.

Q. I ask you whether that statement that you made at that time was true in point of fact or not—whether the overproduction of 1873, 1874, and 1875 resulted in the almost entire destruction of petroleum values ?—A. That of 1875 I am satisfied Mr. Patterson is mistaken about.

Q. I am not asking you about Mr. Patterson's mistake. You read this letter at Philadelphia ?—A. I did.

Q. And had it taken down on the notes ?—A. Yes, sir.

Q. Is that statement now correct ?—A. As far as the present day is concerned, I do not think that it is.

Q. I did not ask you about that. I ask you whether this statement that you made on the 11th of September, 1877, was true, in which you said that the overproduction of 1873, 1874, and 1875 had resulted in the almost destruction of petroleum values. Was that true ?—A. To a certain extent, as a matter of course.

Q. Was it true as you stated it there ?—A. In 1872 and 1873 there was—one can only answer by giving you an explanation.

Q. I want an answer to the question.—A. I am giving you an answer as short as I can.

Q. You need not start with 1872.—A. In 1873 and early part of 1874, while there was a large amount of tankage in the Creek region and Butler County, where the great production was, there was not iron tankage. The oil had to be sold for what it would bring until there was a place provided for it. That destroyed prices and destroyed values. It either had to be sold for what it would bring or run on the ground, and so far I would agree with that, that the overproduction injured petroleum values. That was an expression of Mr. Patterson's opinion which I did not combat and do not now. It is his opinion ; I have my own.

Q. Is that your explanation ?—A. Yes, sir.

Mr. HAMPTON. The whole of the foregoing answer is objected to as not responsive to the question, and the witness is now requested to answer the following question : In the letter already alluded to, did you state that the overproduction in the years 1873, 1874, and 1875 resulted in the almost total destruction of petroleum values ?

The WITNESS. I believe that sentence is in the letter written by Mr. Patterson which I then signed.

Q. Is that, taken as it is, there standing on that page true ?—A. It don't agree with my opinion ; it may be that I am mistaken.

Q. Then the representation you made to the Pennsylvania Railroad Company at that time you say is not correct ?—A. It is a mere argument ; it is not a matter of importance. I did not notice it there.

Q. And now I understand you to say while you did write that letter and send it to the Pennsylvania Railroad Company, and while you did put Mr. Stowell upon the

stand and have him prove the overproduction, yet that this opinion is wrong, so far as you are concerned, and that the overproduction of 1873, 1874, and 1875 did not decrease the price of oil?—A. I told you that the quantity of oil thrown on the market without tankage to put it in had the effect of depressing the price.

Q. I have not asked you as to tankage or anything connected with it; the question is directly to the fact whether the overproduction was not the cause, in your judgment, as stated in that letter, of the almost entire destruction of petroleum values in 1873, 1874, and 1875?—A. If you will tell me what you mean by overproduction I can probably answer.

Q. Will you please state what you meant by overproduction in that letter?—A. I judge that the meaning of Mr. Patterson—for I tell you frankly I did not notice it in the letter and would not have paid any attention to it if I had, as it was immaterial—was that the amount of oil was more than could be profitably marketed at the time at the place of production, and, therefore, there was an overproduction.

Q. And there being more oil than the supply called for the supply was greater than the demand?—A. It was an excess of oil at the time when it was beyond the power of the producer to take care of it, of course. A man will take any price rather than let it run on the ground.

Q. Do I understand that you and Mr. Patterson differ as to this matter of fact stated in that letter?—A. I suppose it was a matter of opinion, not of fact.

Q. Is it your opinion that it was the overproduction in 1873, 1874, and 1875 that almost entirely destroyed petroleum values?—A. I will remark that the sentiment of the letter was perhaps this, that it was an overproduction in Butler County of more oil than the market wanted then at that time and that the producers at that time had means to take care of; that created the decline in prices. I believe then the market was comparatively free and untrammelled, which I do not believe is the case to-day.

Q. Have you had occasion to examine the statistics showing the prices of oil in the oil regions from 1873 down to and including 1878?—A. I have knowledge of my own weekly sales.

Q. Have you examined the tables of Mr. Stowell?—A. Of course I have read them, but not as thoroughly as others.

Q. Is it not a fact that there has been, since 1873, a gradual decrease in the price of crude petroleum in the oil regions?—A. No, sir; it is not a fact.

Q. Name the year in which there was not a decrease in the price of oil.—A. In 1876 there was a very large advance—too high for the good of the oil regions.

Q. With the exception of the year 1876 has not the price of oil steadily decreased since 1873, as shown by the statistics of Mr. Stowell?—A. It gradually advanced from the low price reached until it reached \$4.20 a barrel, which is the highest I sold it and from that point the course has been downward. There have been fluctuations and alterations.

Q. I mean from 1873, taking out 1876, has there not been a constant decrease in the price of crude petroleum?—A. No, sir; from 1873 to 1876 there was a gradual appreciation.

Q. I understand you to say that these statistics Mr. Stowell has given us are correct?—A. I consider them so in the main, as near as they can possibly be got at.

Q. You heard his opinion upon the subject as to the price of petroleum in the oil regions being affected by overproduction?—A. I did.

Q. You heard his statement that as the overproduction increased the price increased?—A. I heard him give that opinion.

Q. At this point is it not a matter of contention, with about as many on one side as on the other, with producers that overproduction is the great evil of the oil regions of Pennsylvania to-day?—A. There is, as a matter of course, a variety of opinions; I myself, under the present state of the trade, am satisfied we produce too much. As long as the avenues of trade are blocked we ought to restrict the supply. I was willing to restrict my own drilling.

Q. In your judgment is overproduction an injury or a benefit to the producer in the sale of his oil in the oil regions at the wells?—A. The overproduction over the legitimate wants of the trade would be a disadvantage, unless there could be capital to take care of the surplus.

Q. I mean as a general proposition, overproduction is an evil, and has a tendency, has it not, to decrease the price of oil at the wells?—A. As a matter of course.

Q. So long as that overproduction continues to increase, in your judgment, there will be a consequent decrease in the price of oil?—A. There will be unless the demand is increased and the avenues of shipment facilitated.

Q. But if overproduction continues at a rate wholly out of proportion to the demand, then the price of crude oil at the wells must of necessity decrease, because there are no buyers?—A. Yes, sir.

Q. Can you state what has been the average daily production of the wells in the lower district during the year 1878?—A. I would prefer you to take Mr. Stowell's figures to my own.

Q. You believe those to be correct?—A. In the main I do.

Q. From your knowledge of the business what was the overproduction of that year as compared with the previous year in value?—A. Of what year, sir?

Q. Of 1878 over 1877?—A. There was an increase of stock at the end of the year to the amount of, I think, nearly 500,000 barrels; but I never admitted that there was an overproduction in 1878; I always asserted that there was a choking of the trade, and not an excess of production.

Q. But the fact was, the oil was not bought and taken out of the oil regions?—A. That is a fact.

Q. Can you state about what amount of oil there was in stock in the oil regions in 1878, tanked?—A. As near as I can tell, about 3,500,000 barrels; that, I consider, was about the stock.

Q. Was there any market for it?—A. A very large market all through the year; the largest ever known.

Q. What amount was carried out of the oil regions in 1878?—A. That I can not pretend to tell you; there was as high as over 1,400,000 barrels one month.

Q. I understand you to say there were upwards of 3,500,000 put in stock?—A. No, sir; there was 3,500,000 in stock.

Q. At the commencement of 1878, you mean?—A. I believe the stock at the end of the year exceeded the stock at the commencement of the year by about 500,000 barrels; that is my recollection; of course it is all a vague recollection; we depend upon statistical tables for those things, and not on our memories.

Q. Mr. Stowell's tables on that are reliable?—A. I have complete faith in them; I believe he tries as hard as a man can to get them correct; I do not believe that the amount of oil reported in the tanks is merchantable oil; there is oil reported B. S., and with water mixed with it, that to a large amount is not merchantable.

Q. To what extent?—A. I could not state; I have known large amounts of B. S., and some small; where it is carried from year to year there is necessarily a large amount of B. S., and water will accumulate.

Q. You can state whether the stock in the Bradford region in 1878, and the production, was greater than in the lower river district?—A. During the latter part of 1878, I should judge, the Bradford district produced nearly one-half, if not more than one-half, of the whole.

Q. Of the entire oil regions?—A. Yes, sir.

Q. Can you state of your own knowledge what the average daily production of oil was in the Bradford district in 1878?—A. No man could state from his own knowledge.

Q. I mean from any statistics you have, or knowledge that you have you deem reliable.—A. I would not compare my recollection with Mr. Stowell's tables; I prefer to be governed by them. I think it is over 20,000 barrels in the latter months.

Q. And can you state what was the average daily production for the river district during the same period?—A. I would prefer to be governed by Mr. Stowell's tables.

Q. In your judgment, was there not an average daily production in 1878, in the entire oil regions, of about 45,000 barrels?—A. I do not think it amounted to as much as that.

Q. Was not it very close on to that?—A. I never believed so; I may be mistaken in that; I would put it nearer 40,000 barrels.

Q. During the year 1878, what is your knowledge as to the exportation of oil from New York?—A. Nothing further than what is contained in the published tables, which we accept as correct.

Q. Was there a large demand in that year for oil for export?—A. I think that the exports would probably not reach as much as before, but I considered them as very much fettered.

Q. Was not that due in a great measure to the large stocks held abroad, the oil being bought up during 1877 and taken abroad and put in tankage, and the stock kept by refiners there?—A. I do not think the stock abroad was excessive, but not being a refiner, I would prefer to rely on the tables.

Q. Taking the tables of Mr. Stowell as correct, that the foreign stock was nearly equal to the foreign demand for refining purposes, would not it necessarily have a tendency to decrease the price of refined oil in the market for export?—A. If there was a stock there not equal to the demand?

Q. I say if the stock was not quite equal to the demand.—A. If the stock was not equal to the demand the price would advance.

Q. In other words, I want to get your opinion as to the effect the holding of large stocks abroad has upon the New York market price.—A. If the existence of very large stocks abroad prevented foreign orders coming in, of course the market would be dull.

Q. Is not the necessary tendency of this overproduction from year to year in the oil regions to lower the price of oil in the New York market, and thereby enable the foreign refiners and dealers in oil to hold large stocks at low prices, and consequently the price, for that reason, would be held down in the New York market?—A. I do not

consider that to-day there is an overproduction if the trade was unfettered and free. But, in the present state of the trade, I believe there is more oil produced than they allow to go abroad. I believe, and I have always stated, that we could to-day consume 50,000 barrels of oil a day with free, open transportation and open competition among refiners.

Q. Then it would depend upon the manufacturing power of the country, either here or in England, to bring it up to that?—A. There is plenty of manufacturing power to-day to manufacture 50,000 barrels daily if you would allow it to run.

Q. If refining was carried on to the extent that you mention, would there be, by reason of the competition, any margin of profit left to the refiner? In other words, would not it have a tendency to increase the refining capacity, and consequently the refined product, and lower the price of refined oil in this country and in Europe?—A. I have no doubt it would reduce the present exorbitant profits of the refiner; it would increase the price, I believe, to the producer, to have a free market, and it would certainly increase the revenue of the carrier.

Q. That is your opinion?—A. That is mine, and I have never varied in it.

Q. What is the price of refined in the market to-day?—A. I pay very little attention to it; it is nine and some odd cents, I think.

Q. Taking the price of crude, say at the time this bill was filed, in October last, do you know what it was?—A. No, I do not; probably not very far from where it is now.

Q. Taking it to be the same, how much would that be?—A. Somewhere in the neighborhood of 90 cents, I think.

Q. How much of crude does it take in gallons to make a barrel of refined?—A. Refiners are claiming to get over 75 per cent. Now, 75 to 80 per cent.

Q. How much more than a barrel of crude does it take to make a barrel of refined?—A. They get from 75 to 80 per cent. of refined oil from a barrel of crude, as I understand; that is what they claim, the refiners about here, at least.

Q. Do you know what it costs to make a barrel of refined oil?—A. I am not a refiner, sir; I simply know the estimates that refiners have made.

Q. I understand you do not know what it costs ordinarily to turn crude, the quantity you have stated, into a barrel of refined?—A. I understand that refiners here charge about a cent and a half or a cent and a third.

Q. Can you, by a calculation, tell me what profit there is, if any, in the making of refined oil to-day at the price crude is, and the price it is sold in market?—A. To any one paying the open rate of freight there would be a heavy loss, but with a \$1.10 rebate on a barrel there would be a heavy profit.

Q. I understand you now that you are not familiar enough with refining to tell me what it would cost to make a barrel of refined oil, together with the cost of the barrel?—A. I say that I can get responsible parties to agree to do it for about 1½ cents, and guaranty 75 per cent.

Q. I want to know, if you can tell me, what it costs to manufacture a barrel of refined oil at the rate crude was last fall, including the cost of the barrel?—A. Nothing further is required than to work out that formula; you can get it done for that; men are glad to do it for that, and I suppose they are making a profit on it.

Q. You say you can not tell what it costs to manufacture a barrel of refined oil out of crude, including the cost of the barrel?—A. I am not a refiner.

Q. Then you do not know, at the price of crude to-day, what, in point of fact, a barrel of refined oil costs the refiner?—A. I have seen them figure twenty times to try to ship at the open rates, and always fail; I know I could get my crude oil converted into refined at the rate I have stated; men would put up refineries to do it at that price.

Q. You have stated in your examination-in-chief that you were entirely familiar with the oil business. I want to know if you can tell me to-day what it costs to make a barrel of refined oil?—A. I know that it costs less than 1½ cents a gallon, giving 75 per cent. of refined product.

Q. Taking the open rate and the price of crude, what profit, if any, is there to the refiner?—A. There is a loss.

Q. Of how much?—A. I can not say exactly; I think 40 or 50 cents.

Q. A barrel?—A. Yes, sir.

Q. Have you ever made a calculation so as to arrive at a conclusion on the question I have submitted to you?—A. I have gone over the figures with other parties and examined them; the last time—I can tell you when I did it if you wish.

Q. I wish you to state, as a practical question, even with what you call a rebate of \$1.10, does the refiner make anything?—A. They say they make largely.

Q. How much a barrel?—A. At 60 cents a barrel it is the best business in the world.

Q. But does he make anything; can he make anything even with that rebate?—A. I believe he can.

Q. Have you ever ciphered it out?—A. Not with that rebate, for I didn't know that rebate at the time.

Q. Are you willing to work out that proposition at some other time?—A. I am willing to have it done by some one more competent than I am. I always believe that the New York market is manipulated to a great extent by the Standard Oil Company, and it is to their interest to keep the profit within that rebate to drive the independent refiners out.

Q. Do these refiners in New York buy very largely in the oil regions?—A. All I learned of their business is their testimony; I listened to that.

Q. You understand they pay the open rate?—A. They swore so; that is all I know about it.

Q. Those refineries are still running, and have been, are they not?—A. To a certain extent, I guess they are.

Q. Do you know the amount of oil that they monthly manufacture and put upon the market?—A. I do not.

Q. Don't you know that they can sell all the oil that they make?—A. I don't know anything about their business further than they testified.

Q. State whether the machinery and appliances employed for the refining of crude petroleum are not very costly?—A. They are costly, but much less than they used to be; they are much simpler than they used to be.

Q. Have you any idea what a refinery to run out 500 barrels a day would cost to put up and operate it?—A. That would be 3,000 a week. I suppose it could be built in good order for from \$30,000 to \$50,000; very much less than it used to be. It would probably require three 500-barrel stills.

Q. Can you give me an idea what the percentage of profit is of the New York manufacturers, taking that refinery that I have stated to you and that you have estimated the cost of, on refined oil that they make and turn into the market?—A. I know nothing about their business; I have never figured about it.

Q. Is it not a fact that the profit derived from the refining of oil is much greater in proportion to the plant than any other mercantile business in the United States, taking rolling-mills, iron-mills, steel-works, glass-works, locomotive-works, car-shops and the like?—A. You can turn out a much larger yield from the stock than out of any other manufacture.

Q. The point is this: Is not the profit upon the manufactured article far greater in proportion to the amount of money invested in the production of that manufactured product than any of those manufactures I mentioned?—A. Not when they sell goods at a loss, as they have been doing.

Q. Taking what I gave you, as a refinery turning out 3,000 barrels a week and built at a cost of between \$30,000 and \$50,000, is not the manufacturer's profit on it far greater in proportion than on the manufacture of the articles I have named?—A. The manufactured result is far greater; as to the profit, I know nothing about it.

Q. Is not the cost of producing the raw material, to wit, the oil, far less than the production of iron ore to make iron, or timber to convert into cars, or the elements that enter into the formation of glass, and the placing of them where they are to be manufactured into the product that afterwards appears in the market?—A. Not when we take into consideration the necessary elements of the purchase of the property; the risk of loss, and the getting of dry holes. You start a well, and until you reach a certain depth you do not know whether it is a total failure or not.

Q. Suppose that you get oil just enough, as a producer, to enable you to turn out 500 barrels a day of refined product, is not that raw material, the oil, furnished to you at a much less cost than the raw material is furnished to other manufacturing establishments such as I have named?—A. You might as well ask if a man who draws a prize in a lottery gets his money easily. The man that succeeds will get well paid, but the man that fails of course meets with a total loss. The general producer has to take the average between the two extremes of success and failure.

Q. But taking it as an average, is not it a fact that the successful man in the oil business, with crude sufficient to run his refinery, makes more money on the product than the other manufacturers I have referred to?—A. You are talking about refiners; I have been talking about producers all the time.

Q. I ask you if the profit he gets on his refined does not far exceed the profit on articles that are manufactured ordinarily at places such as I mentioned?—A. I have told you I know nothing about the average profit of the refiners.

Mr. ACHESON. I object if he does not know anything about the business.

The WITNESS. I do not know the profit of refiners; I have never been in the business.

Mr. HAMPTON. He has undertaken to say that on account of rebates there were enormous profits in the business. Now I want to see whether he has any facts to sustain him.

The WITNESS. I can sustain that very easily.

Q. When you say that there are enormous profits to people who get rebates, do you make that statement without any facts to sustain you?—A. Most certainly I do not. Take the refinery you drew my attention to, which turns out 3,000 barrels a week.

The evidence in the case shows that a rebate of \$1.10 is allowed on that. There would be a revenue on that of \$3,300 a week, independent of the ordinary risks of the business.

Q. I understand you to say that with that rebate you can make money?—A. Certainly; if you will give me a rebate of \$1.10 I will give you a refinery as soon as I can get it up.

Q. Do I understand you that a rebate, if allowed, affects the price of the oil in the market?—A. Most certainly, sir; by driving out all successful competition by those not receiving the rebate, and giving the producer of crude but one practical buyer for use. The buyers, as I told you before, of the certificates on exchange do not take it out of the tankage or country, and it is liable to be thrown back on the market the next day. Shippers, for use, get rid of the oil so far as that is concerned. I will make it as plain as I can to you.

Q. Now, let me understand you. If you, then, were allowed a rebate of \$1.10 on the transportation of the oil, you undertake to say that you could make money at the business of refining?—A. Most assuredly; it would put me on an equality, then, with the others doing business.

Q. That is, if you are not mistaken?—A. I would have to take the chances.

Q. Although you do not pretend to know anything about the refining business?—A. I know near enough.

Q. If it could be demonstrated that a \$1.10 rebate on the oil would not enable you to make anything then your whole theory goes to the ground?—A. Yes, sir; provided that the party receiving the rebate is not one that puts the market where it is for a special purpose.

Q. Have you ever been engaged in the refining of oil yourself?—A. No, sir.

Q. You do not pretend to be familiar with the practical operations of a refinery?—A. Not so far as to attend to the practical details of it. I understand the business generally.

Q. Do you know the present tankage capacity of the Bradford district?—A. I do not; it is represented as large, but I do not know what it is; over 2,000,000 barrels, I think.

Q. Have you ever directly undertaken to ship oil by the Pennsylvania Railroad lines to Philadelphia?—A. No, sir; the only direct shipments I made were down the Valley Road at one time.

Q. In the year 1877, or 1878, or 1876, did you make any application to the Pennsylvania Railroad for the transportation of your oil East?—A. No, sir.

Q. Were you in the oil regions in business there?—A. Yes, sir.

Q. Through whom did you make your shipments of oil?—A. What year?

Q. During all those years?—A. During 1878, up until the fall of 1878, the time of the sale, my previous habit before that had been generally to sell to the Empire line; that was my general or usual course; they bought oil on their own account.

Q. Did they sell in the New York market?—A. They ship to New York and Philadelphia—ship their oil East.

Q. You have spoken about the Empire Transportation Company in your examination-in-chief. Was there any difference made as to rates made by the Empire Transportation Company and by the Pennsylvania Railroad after it got possession of the Empire line—after it, I mean, ceased to have possession of the Empire?—A. Rates where?

Q. To New York from the oil region. In other words, were there not rebates allowed by the Empire Transportation Company?—A. I can not speak of my own knowledge; I can speak of what the parties say, the parties receiving them state; for instance, the New York refiners testified that until the 1st of May they got a rebate of 10 per cent.

Q. Had you not yourself with the Empire Transportation Company a contract, you being one of two or three parties that got a pretty large rebate?—A. Not one cent, directly or indirectly, either present receipt or promise in the future. I am very glad you asked the question. Without any reservation, or concealment whatever, during the whole time that I did my business with the Empire line I never asked it, it was never offered to me, and I never received it. I can not be plainer than that.

Q. Did you always ship by the Empire Transportation Company?—A. I piped; I did not ship at all; I piped through the Empire.

Q. All your oil?—A. Generally.

Q. How else?—A. I did some business with the Karna Pipe Line; one time I did some little business with the Relief, and some with the United; I also did business with Parker & Thompson, the predecessors of the Empire, and continued with the Empire.

Q. Do I understand you that you never had a contract with either the Empire Transportation Company or the Empire Pipe Line by which you were allowed a rebate on crude oil at all?—A. I had a contract with them, but never a contract where

I was allowed a rebate of one cent. I stated in my examination-in-chief that I had a contract with them.

Q. Had you a contract in writing for a lower rate of freight than the open rate charged?—A. I had not, sir. I would be very glad to show you the contract if I had it here. I can tell you all that was in it.

Q. Have you no recollection of having entered into a contract in writing with either of those companies for a rebate, or at less rate of freight than the open rate?—A. I never did enter into such a contract. I have a particular recollection of the contract I did enter into.

Q. What was it?—A. It was a contract between the Columbia Oil Company, myself, and R. P. Crawford, I think, on the one side, and the Empire Transportation on the other.

Q. Well, that was in writing, was it not?—A. Yes, sir; I do not know where a copy of it is; I will have one hunted up if you will like to see it.

Q. State what it was.—A. Wherein the Empire Transportation, as we agreed to run out oil through their lines, they were to pay us for our oil a price based on the price of refined oil in the city of New York; they were to refine it, and pay a price based on the price of refined oil in New York, they having their own refineries; there was a limit put at a price at which this sliding scale should take effect; that limit never having been reached—

Q. You got no rebates?—A. The contract was inoperative.

Q. Go on.—A. Shortly after that contract was entered into I made the arrangements with Mr. Potts, that I have already detailed, for a new contract, in which all producers were embraced, which, if signed, would have superseded this.

Q. Did you enter into an arrangement that if refined oil had gone beyond a certain limit you would have been allowed a rebate?—A. No, sir; I was allowed a price for my oil.

Q. But in the end that was substantially a rebate?—A. No, sir; certainly not; the contract was open; everybody knew it when I made it; after it fell into the hands of their successors, the United Pipe Lines, I terminated it as soon as I could; it was to run until terminated on notice; I gave notice the first practicable day.

Q. Have you since the Pennsylvania Railroad Company became the owner of the Union Line asked for cars for the shipment of your oil East?—A. I have not; I am not a refiner.

Q. As far as you are concerned personally, you have no complaint to make of the Pennsylvania Railroad as to furnishing you cars?—A. No further than the refusal to furnish customers for oil—buyers of oil.

Q. You, yourself, never went and made a demand to have any cars placed at any loading-rack for any customer?—A. No, sir.

Q. I understood you to say that you sell your oil at the wells?—A. Practically at the wells; the pipage follows.

Q. The oil is piped by the company to their receptacle, whatever it is, and a certificate is given by the pumper for the amount of oil that comes from the well?—A. A ticket; yes, sir.

Q. Then you have nothing more to do with that oil?—A. No, sir; you get credit for the amount of oil represented by the ticket.

Q. And when you make a sale of the oil you do not look further after it—having nothing more to do?—A. No, sir.

Q. The shipment of the oil belongs entirely to the buyer, and the producer has nothing to do with it?—A. Not unless he ships his own oil, as some do; a majority do not. It is a separate business.

Q. Are there not a great many producers who have loading racks of their own?—A. Not when reached by a system of pipe lines; in early times the oil would be loaded at private loading racks; to-day the railroad lines connect with those kinds of pipes where they can not compel them to attach to a pipe line.

Q. In what counties have you producing wells, and near what lines of railroads?—A. I have producing wells in Butler, Armstrong, Clarion, and Venango Counties.

Q. What pipe lines are in those counties?—A. Practically only two pipe lines for general use, the United Pipe Lines and the American Transfer, which is doing but a limited business.

Q. Are there not other pipe lines?—A. None of any but mere local repute, that no one knows anything about, that run from individual wells and are classed as individual lines.

Q. What is the distance from your wells to the railway?—A. They vary very much—from 15 miles to 1.

Q. What is the average distance of your wells from the railroad?—A. They are spread all through that district.

Q. Have you ever attempted to build pipe lines from your own wells?—A. No, sir.

Q. Along with other producers?—A. No, sir. I foolishly thought that part of the business would not amount to anything.

Q. The producers are men generally of abundant means, are they not?—A. They have been in times past; not very much so to-day.

Q. They have not built any pipe lines, have they? A. They built a number of pipe lines.

Q. And they are operating them, are they not?—A. No, sir; all their main lines have been frozen out.

Q. It was a hard winter that froze them out?—A. It is a long process, continuing summer as well as winter. I was a stockholder in the Karns Line.

Q. Apart from the United Pipe Line, is there not the Pennsylvania Transportation Company?—A. The H. M. Taylor & Co. Lines.

Q. How close to your wells does it go?—A. I have some very close to them.

Q. It is a corporation?—A. Yes, sir; run by a receiver with limited means.

Q. Have you ever tried to compel the Pennsylvania Transportation Company to carry your oil?—A. No, sir; I have not.

Q. You understand it is a common carrier, don't you?—A. I never read their charter.

Q. It is an incorporated company?—A. Yes, sir; it is in the hands of a receiver.

Q. It is still running oil?—A. For limited purposes as ordered by the court.

Q. Is there not a Foxburg Line?—A. They run their own oil almost exclusively.

Q. Oil solely from the Fox farm?—A. Almost exclusively; they are not seeking connections outside of it.

Q. Is that a private line, or under a charter?—A. I understand it to be a private line.

Q. Is there an Emlenton Line?—A. It is a private line.

Q. And a Baum Line?—A. That is a private line.

Q. That is your understanding?—A. Well, I believe so; I have heard Mr. Baum talk about his line.

Q. So that in addition to the United Pipe Lines, with which you connect, you have also the Pennsylvania Transportation Line near you, which is a corporation?—A. Near some of my wells.

Q. And you have never attempted to get that company to pipe your oil?—A. I have asked them if they were ready to take any of my oil, and they said not. The reason is they have to sell their oil to outside buyers only, who in their turn have to pay full freight, and therefore they can not get a market for only a certain amount of oil; they have to sell to parties who are charged \$1.40 to New York from the mouth of the pipe.

Q. Are they this independent combination, as you call it, of outside refiners?—A. The outside parties and refiners are the only parties that will buy their oil. There were originally a great many pipe lines in this region, but one after another were forced into a sale to the United Pipe Lines by the same squeezing process.

Q. Have the producers ever attempted to build pipe lines?—A. They have repeatedly, but as long as one pipe line has control of the freight rates on the railroad it is impossible for an independent line to live; the two are so intimately connected that they can not be separated.

Q. But the producers have never undertaken to build a line that will serve their purpose?—A. Yes, sir; they have repeatedly. I made one mistake in answering a former question. I had \$500 of stock in one line; not in my own name, but that of a well I own: it was lost finally.

Q. State whether or not the United Pipe Lines are not composed of producers in the oil regions?—A. There are a few producers in it.

Q. At the time you say the United Pipe Lines froze the other lines out, were not the lines that that company obtained control of practically bankrupt when they did so, and had they not wholly failed to make anything out of their investment? Was not that the condition of things when the United Pipe Lines took hold of them?—A. By the fact of the control that the United Pipe Lines and its owners had over the freight rates, by the fact that the Standard Oil Company has always shown itself willing to lose any amount of money to crush out an opponent, they crushed them out.

Q. What time did the United Pipe Lines commence to have control of those lines?—A. The best line and the best managed we had was the Union Line, built by the Empire Transportation Company; that was obtained control of when the Empire Pipe Line was sold to the Empire Refineries, sold to them and nominally conveyed to the Pennsylvania Railroad, and a mortgage placed on them in favor of the Standard Oil Company; that was the best pipe line we ever had in the oil region.

Q. If I understand you correctly your assertion is that the price of oil at the wells to the producer is kept below what it otherwise would be by the fact of the United Pipe Lines and the railroad companies combining in fixing a rate of freight; is that your theory?—A. I believe that owing to this general combination we are prevented from having proper competition to sell our oil.

Q. Suppose, as stated in your letter to Thomas A. Scott, there is this constant overproduction such as occurred in 1873, 1874, and 1875, tell me what influence the rate of

freight would have on the price of oil at the wells, when there was no demand for the oil?—A. The cheapening of the freight on oil would of itself induce increased shipments to foreign countries, and the hunting up of new markets for the product, and creating a demand which would remain if once obtained; the oil once introduced into use they would always have it, and this in its turn would benefit the producers.

Q. That is a theory on your part, is it not?—A. That is my belief.

Q. But do you believe as a fact that if the rate of transportation was one-half to-day what it is between the oil regions and New York it would have the slightest effect on the price of crude at the wells?—A. I have no objection to the freight if it is uniform; even a uniform freight would be an advantage to us in the price of oil at the wells.

Q. Suppose the rate of freight is just one-half of what it is from the wells to the sea-board, would that, in the condition of the market where there is a constant oversupply, have any effect whatever on the price of crude oil at the wells?—A. A uniform reduction would be an advantage, because it would cause competition.

Q. If I understand you it is not the rate of freight that is objected to?—A. Not at all; I never objected to that in my life.

Q. But your theory is that it is the preference which may be shown to one party over another?—A. That is my belief entirely; you have got it exactly straight.

Q. So that even with overproduction, I understand you to say, and the supply far exceeding the demand, you claim that a uniform rate of freight would enhance the price of oil at the wells?—A. It would be a great service to the country; it would increase the foreign demand and enhance the price at the wells by putting competitive buyers in the market.

Q. But it would take those conditions to do it?—A. Yes, sir.

Q. But I mean just taking one-half the rate away from what it is to-day, would it increase the value of oil at the wells?—A. Most certainly it would to a certain extent.

Q. If there is this oversupply?—A. There is a constant demand as well.

Q. Taking Mr. Stowell's tables to be correct, and also your letter stating that in 1873, 1874, and 1875 overproduction was the cause of the almost entire destruction of petroleum values during those years, I ask you if that is true, as written to Mr. Scott, and Mr. Stowell's figures are correct, how could it affect the price of oil at the wells, supposing the rate of freight from the wells to the seaboard was one-half or what it is now?—A. I have stated half a dozen times that I do not believe in 1877 and 1878 we had a production over the wants of the world. If the market was free, of course we would have to take a lower price, but we are willing to take that part of the business. I wish to say that it is not the rate of freight we complain of, but it is the inequality of the rate of freight charged, giving advantages to one party over another, whereby they can control the market.

Q. That is the complaint of the producers?—A. The same spirit animates all. If we produce too much oil when the trade is free and open, more than the wants of the world require, a lower price will come, but we are willing to take that price; but we do not want any guardian for the petroleum trade.

Q. That is your theory?—A. That has been my theory; I have been very consistent in it.

Adjourned to meet to-morrow, February 22, 1879, at 10 o'clock a. m., at the same place.

PITTSBURGH, PA., *February 22, 1879.*

Met at 10 o'clock a. m., at Monongahela House, pursuant to adjournment.

Present: The master, John H. Hampton, esq., for the Pennsylvania Railroad Company, and M. W. Acheson, esq., and George Shiras, jr., esq., for the Commonwealth.

B. B. CAMPBELL was recalled, and his cross-examination continued by Mr. Hampton, as follows:

Q. If I understand you correctly, and the parties with you who have caused these proceedings to be instituted by the Commonwealth, your complaint is not that the railroad companies charge too high a rate of freight at any given time, but that they have no right to discriminate in their rates as between customers?—A. That is the position I have always maintained. The open rate is a high rate, probably a little higher than could be safely imposed without stimulating the production in other countries; but we have never complained about the rate of freight, but simply that other parties were given such an advantage that they have obtained the monopoly of the refining business. We therefore had but one refining party to sell to; we could not get the benefit of a competition of buyers, and we could not, if dissatisfied with the bids of any or all, erect our own refineries and refine our own oil.

Q. So I understand the producers represented by you, and their interests set out in the bill filed in this case, deny to the Pennsylvania Railroad the right altogether to

discriminate as to the rates of freight between its customers?—A. As I understand, we deny the right to discriminate to such a degree as to give any party receiving those rebates the monopoly and control of our trade.

Q. Do you deny in toto the right of the railroad companies to discriminate among customers?—A. Our attorneys advise us that there is no such right; we are governed by their advice in that matter.

Q. Prior to filing the bill in this case, before you consulted your attorneys, was it not a proposition maintained by yourself and other producers in the oil regions that the railroad companies had no right whatever to discriminate as between classes of freight?—A. My own belief is that all parties bringing freight to a railroad in wholesale quantities should be treated alike; for small amounts, or amounts less than a car load, I do not consider they would be entitled to the same. But where freight is tendered by one party in large lots he should have his freight carried at as reasonable terms as others has always been my belief.

Q. Does that apply to what is called the local business of the lines in Pennsylvania as well as to what may be termed the interstate traffic between the oil regions and New York, Philadelphia, and Baltimore?—A. Of course this is merely my opinion, but I am very willing to give it to you if of any value. I believe that in no case should a larger amount be charged for a short haul than for a longer haul. Within those limits the longer haul should be protected, but that no greater amount of freight should be charged by a railroad for carrying the same amount of goods a less distance than for carrying it a greater.

Q. Then your view is, as between oil delivered to local points in Pennsylvania and oil delivered to points in other States than Pennsylvania, there ought not to be any difference in freight rates?—A. The amount of the freight to a local point should not be higher than to a more distant point.

Q. State what has been the competition between the New York railway lines, and when it commenced, for the business of the oil regions?—A. I can not speak with any definite certainty about the early years, because I was not then connected with the petroleum trade.

Q. State since the time that you first had knowledge of that competition and to what points it was?—A. The Northern roads, I believe, reached the oil regions, both the New York Central and the New York and Erie, by branches to the creek; I can not describe them to you exactly or the locality, but they early reached there and competed for the oil business to New York.

Q. With what company?—A. The Pennsylvania Railroad Company, which had the shortest and most direct route.

Q. Was there also a competition from Buffalo by canal for the transportation of oil to New York and the seaboard?—A. Not directly to the oil regions; that would be for the manufactured article, after it had been taken from the oil regions to Cleveland.

Q. There was that competition by canal for the transportation of oil eastward?—A. In the early days I believe there was; I have been told so; I do not know of my own knowledge.

Q. Does not it continue yet?—A. Not for the refined oil.

Q. Does it for the crude?—A. Last summer the independent refiners of New York built a lot of bulk-boats, and carried some oil when they were refused cars—absolutely refused cars by A. J. Cassatt. I never saw one of the canal-boats; and therefore the whole thing is on the same basis. They were absolutely refused cars on the roads running out of the Bradford district that were controlled by the Pennsylvania railroad. Answer was given that no railroad—

Q. Are you stating this from your own personal knowledge?—A. I am stating it just as you have asked me in your questions.

Q. Oh, no.—A. Then I will have to refuse to answer almost all your questions.

Mr. ACHESON. You asked him about the transportation by canal from Buffalo, and he has a right to go on and state all he knows on that question.

Mr. HAMPTON. Not from hearsay against my objection.

The WITNESS. I do not wish to give a part of a statement without giving the whole.

Mr. ACHESON. You had better say that your whole information touching this canal traffic is derived the same way.

The WITNESS. It is derived in the same way, sir.

Q. What points in the oil regions do the lines running from the New York railways reach for the purpose of receiving the oil and transporting it?—A. At the present time I can speak with a great deal more definiteness about that. I believe the United Pipe Lines take the oil to Harrisonville by the way of Raymilton, where the oil is transported to Cleveland. They also carry by pipe to Oil City from the Butler and Clarion regions.

Q. What points in the Bradford district do any of these roads reach?—A. Olean, on the New York and Erie—

Q. Salamanca?—A. I think there is a pipe line there.

Q. Can you state of your own knowledge personally what has been the character of the competition between the New York roads and the Pennsylvania road since it commenced for the oil traffic to the seaboard?—A. Of late years the only competition I know of between them was during the spring and summer of 1877, when the Empire Line and the Pennsylvania Railroad Company managed their own oil business, bringing the oil from the wells through their own pipes to the line of their own railroads and carrying it in their own cars to their own refineries. Before that time and since I do not consider that there was any competition between the roads, but that the traffic was pooled.

Q. Apart from this pooling process, have not the New York roads constantly endeavored to take that trade from the Pennsylvania Railroad and carry it to New York?—A. Except that time, the time that I know of the business of my own knowledge, I do not consider that there was a competition; I consider that the trade was divided; but as a matter of course they must have competed, or there must have been some agreement, or they would not have been yielded their pro rata of the freight.

Q. You think the New York lines persevered until they did reach the oil regions and get a part of that business?—A. Certainly.

Q. State whether the Pennsylvania Railroad did not at one time make a very determined stand against the traffic going by the New York lines to New York?—A. It did, sir.

Q. How long did that warfare continue?—A. Three or four months.

Q. What was the result as to rates during that period?—A. From the best information I could get the road got a better rate on a large quantity of oil than she is getting to-day.

Q. I mean the rates proper; were they lowered?—A. The oil was bought in the oil regions by the competing parties; they carried their own oil.

Q. Do you mean the railroad companies?—A. Yes, sir; through the Empire Line; they bought oil in the oil regions, carried it to the sea-board, and refined it themselves.

Q. You say the Pennsylvania Railroad bought oil?—A. Through the Empire Line.

Q. Do you swear that?—A. Through the Empire Line they bought oil.

Q. Do you swear the Pennsylvania Railroad bought oil?—A. Not directly, I suppose; but the rate of freight depended upon the result of the traffic.

Q. During that competition of three months and this fight that they had were not the rates of freight lowered from what they were before?—A. The nominal rates of freight were not lowered; what they actually were I do not know; but I know that the oil was bought by the transporter, and he had the risks of refining; on both sides they were bidding against each other in the field for the oil.

Q. Do you know as a fact that during that competition and contention, which lasted about three months, the Pennsylvania Railroad lost in transportation over a million of dollars?—A. I do not, sir; on the contrary, I believe that by abandoning it she surrendered her whole control of the oil trade, and is to-day a pensioner at the hands of the Standard Oil Company.

Mr. HAMPTON. The foregoing answer objected to as the repeated and often stated declaration of the witness on the stand, being no part of his evidence, but merely a remark upon his part unsupported by facts.

Q. What other competing lines were there besides the New York railroads on the north for the business of the oil regions to the sea-board?—A. None north that I know of.

Q. State whether the Baltimore and Ohio Railroad has not been for some time getting a very considerable amount of business out of the oil regions.—A. That is on the south.

Q. I mean in addition to those on the north.—A. Yes, sir.

Q. About what time did the Baltimore and Ohio Railroad become a competitor for the oil trade with the Pennsylvania Railroad?—A. At the time of the building of the Conduit Line.

Q. That was in what year?—A. I can not recollect.

Q. Eighteen hundred and seventy-four, was it not?—A. I could not remember the date—1874 or 1875; it lay idle nearly a year.

Q. From that period until this time the Baltimore and Ohio Railroad has been enjoying a portion of that business, has it not?—A. A small portion now.

Q. Is there not a considerable quantity of oil carried by that railroad, by the Pittsburgh and Connellsville line?—A. There has been a small portion, I understand, allotted to her by the Pennsylvania Railroad.

Q. So that in addition to the competing lines on the north there is the Baltimore and Ohio, by the Pittsburgh and Connellsville connection, competing with the Pennsylvania Railroad for the business?—A. Yes, sir.

Q. Do you know anything as to the rates of freight over the Baltimore and Ohio Railroad for the transportation of oil to Baltimore?—A. No, sir; I do not know of my own knowledge.

Q. Does it act independent of the Pennsylvania Railroad and seek to get oil in the oil regions?—A. I think not, sir; in fact, I know not; her cars are sent up on the line of the Valley road, which they were not allowed to do before, and are there loaded—sent on the line of the Pennsylvania Railroad connections.

Q. So that a portion of the trade of the Pennsylvania Railroad is diverted in that way to Baltimore?—A. Yes, sir.

Q. That leaves the Pennsylvania Railroad and its lines between these competitors north and south, both competing for the trade that belongs exclusively to the Pennsylvania?—A. Yes, sir; but she has much the shortest and best appointed route for carrying it.

Q. Why was it that the Baltimore and Ohio road was not included as a defendant in this bill, if there be the combination that is charged to exist between the railroads named in the bill?

(Commonwealth's counsel objects to this question.)

The WITNESS. These bills were prepared by the attorney-general, and it would be manifestly impudent and improper for me to attempt to answer the question, I not representing the Commonwealth in any shape.

Q. Did the attorney-general, to your knowledge, prepare these bills?—A. I do not know whether he prepared them; I was informed that they were submitted to him and met his approval.

Q. Where were the bills prepared?—A. That I can not tell you.

Q. Where did you first see the bill filed against the Pennsylvania Railroad Company?—A. I judge that the bills were probably prepared in Mr. Sherman's, Mr. Shiras's, or Mr. Acheson's office, and then sent to the attorney-general for approval.

Q. Did you see it before it was forwarded to the attorney-general for approval?—A. Not in a completed form.

Q. Substantially so?—A. I believe so, one of them—only one of them.

Q. Was it the one against the Pennsylvania Railroad Company?—A. I think it was.

Q. Did you observe at that time that the Baltimore and Ohio Railroad was not named as a defendant in the bill?—A. I do not remember that I ever mentioned the matter to any of the parties connected with it.

Q. The question is, whether you observed at the time that the Baltimore and Ohio Railroad was not mentioned?—A. I very probably did.

Q. You were present with the gentlemen and consulted with them, as you had a right to do, constantly before that bill was sent to Harrisburg?—A. No, sir.

Q. Who was?—A. I can not tell you.

Q. Was Mr. Sherman?—A. I can not tell you that. All I saw of the bill was a rough draft Mr. Sherman prepared. There were material alterations made in it. Who did it I can not tell.

Q. Who employed Mr. Sherman?—A. I had the honor of suggesting to the Attorney-General the names of the counsel that represent the Commonwealth, and they were accepted and adopted by him.

Q. Then you employed Mr. Sherman and Mr. Shiras and Mr. Acheson?—A. And Mr. George A. Jenks. I asked if they would be agreeable associates, the Attorney-General having stated that it would be impossible for him to manage the case, he not having the time nor familiarity with the subject.

Q. As connected with the filing of the bill in this case, please state, Mr. Campbell, what you know in relation to the petition that was presented to Hon. William McCandless, secretary of internal affairs of the Commonwealth of Pennsylvania, dated Titusville, Pa., September 19, 1878, at the rooms of the Petroleum Producers' Union, and signed by James H. Caldwell, James F. Imel, Chauncy F. Lufkin, James Purtil, Lafayette J. Kerr, and Erastus H. Dyer, and sworn to by the parties that I have named.—A. I do not know who prepared that; I believe I know who did it, but I do not absolutely know; I believe it was prepared by Mr. Sherman; I do not know that fact.

Q. Roger Sherman?—A. Yes, sir; he is the regular counsel of the Producers' Union.

Q. This, then, I understand you, was a movement by and on behalf of the Producers' Union?—A. In furtherance of our attempt to get open trade, sir; we did not succeed as well as we might.

Q. Will you state whether Mr. Erastus H. Dyer is a refiner or producer?—A. He is a producer.

Q. How large a producer?—A. I do not know anything about Mr. Dyer's productions; he is a gentleman I know and respect very highly.

Q. Is he not a very small producer in the sense of producing oil?—A. Men's productions vary greatly on account of their wells running down. I know he is a producer in Clarion, and probably produces in Bradford.

Q. Do you know Lafayette J. Kerr?—A. I do not know Mr. Kerr.

Q. Is he a producer?—A. I do not know him.

Q. Do you know James Purtil?—A. I do not know him.

Q. Do you know Chauncy F. Lufkin?—A. I do not know Mr. Lufkin.

Q. Do you know whether he is a producer or not?—A. No, sir.

Q. Do you know James F. Imel?—A. I do not know him.

Q. Do you know James H. Caldwell?—A. I know him very well; he has always been a large producer.

Q. So far as your knowledge extends, he is the only man that signed that petition who is a producer to any considerable extent?—A. I say Mr. Dyer is a producer. One of these gentlemen I have been introduced to; if you want what I have been told, I can tell you that. There is one of them I know, but I do not know which.

Q. At the time this proceeding was instituted, how many persons, to your knowledge, were really consulted or engaged in the getting up of this petition to the secretary of internal affairs other than those who signed it?—A. It was a part of the recognized proceedings that were to be taken by the Producers' Union, as I understand it.

Q. So that it resulted from the Producers' Union of Titusville?—A. Acting through our council. Our council directed the institution of it, and we adopt and sustain what they do.

Q. Was there money raised to carry on this investigation?—A. There has been, sir.

Q. What amount?—A. That I can not tell you.

Q. As near as you can tell?—A. I should judge the expense to the present time would reach \$3,000 or \$4,000. I am very short of money now, and very anxious to make further collections. I am ashamed to see my counsel every day on account of the begrudgingly amounts I have paid them.

Q. You mean the counsel in this case and not the council in Titusville?—A. I mean the associate counsel in this case. I do not think he has fared any better.

Q. How many people have subscribed to carry on this warfare?—A. A very large number. A large number have subscribed that have not paid. The most of the subscriptions are small amounts. Collectors were appointed in every town in the oil regions, and they went to work and collected from everybody that would contribute. The universal complaint we find is the poverty of the people, and not their unwillingness to give.

Q. As near as you can tell, how many people have backed this prosecution of the Pennsylvania Railroad?—A. It is utterly impossible for me to tell. I acted as local collector in one district, and I have on my books, I suppose, one hundred and fifty names in one local district.

Q. Are they producers?—A. The bulk of them were either producer or pumper on lines, or men connected with the oil business.

Q. Have your subscriptions been confined to the oil regions of Pennsylvania?—A. Any man I could get who proposed to assist in opposing rebates, I asked him for money, and I am not backward in asking.

Q. Have the refiners in New York, who do not pay a dollar of tax in this Commonwealth, subscribed anything?—A. They subscribed \$500, which I attempted to collect for four months; but when I found that you kindly made them promise to pay it, I drew on them at sight in Philadelphia and used it in the expenses of the investigation.

Q. Then you are indebted to me on the cross-examination of these witnesses of the Commonwealth for getting them to say, first, that they had promised to pay; and secondly, that they would pay; and thirdly, on getting that information you drew on them and got the \$500?—A. Yes, sir; not that they would not pay, but in the hurry of business they had neglected it.

Q. Such was their backwardness that if I had not come to your aid you would not have got the money?—A. I would have worried it out of them, but I thank you all the same.

Mr. ACHESON. I suppose you do not mean to say that those gentlemen are not interested in the oil-producing regions of Pennsylvania.

The WITNESS. By no means.

Mr. HAMPTON. State who the refiners were that gave the \$500?

The WITNESS. I was not present when that examination occurred. I read it in the first edition of an evening paper. I then hurried back to find them, but they had left for New York. I then telegraphed, I think to Mr. Bush, "Will you pay my draft of \$500?" He telegraphed back to draw on Lombard & Ayres. I drew on them for the \$500, and on the face of the draft I stated the object, "To pay your subscription to the expenses of the investigation in the oil-discrimination cases before Hon. J. B. Sweitzer, master."

Q. Do you expect to get any more money from them?—A. I told Mr. Ohlen if I got in a tight place I would draw on him for \$250 more.

Q. State whether those gentlemen own wells in Pennsylvania?—A. That I can not tell you.

Q. They are refiners in New York, are they not?—A. Yes, sir. They should bear the lion's share of these expenses, as they are deeply interested, as the testimony shows; but I can not make them see it.

Q. Were some of these subscriptions paid before these proceedings were commenced in court and before the commissioner of internal affairs against the Pennsylvania Railroad?—A. When we determined to commence proceedings and invoke the aid of the law, which we were told was ample to protect us, some money was appropriated to pay counsel. But I soon found that the Producers' Council was out of money and it would be useless to depend upon that source, and I urged that collecting committees should be appointed in every town in the oil regions; and I have urged on every occasion that these committees should do their work, as we are compelled to furnish the money for the expense of taking the testimony, the traveling expenses of witnesses; and the associate counsel of the Commonwealth have no other source to look to for any compensation for their labors, the attorney-general telling us he has no funds at his disposal which can be applied to these expenses.

Q. When you were planning this mode of proceeding against the Pennsylvania Railroad, state whether there was anything resolved upon as to undertaking proceedings against the New York roads, whose lines reach down into the oil regions?—

A. There was, sir.

Q. State if that was the proceeding commenced by Mr. Ohlen in New York?—A. No, sir; that was entirely independent; over that we had no control nor any part in it.

Q. What is the proceeding you refer to?—A. The first information we had that led us to apply for these proceedings was from the attorney-general himself.

Q. Who was that attorney-general?—A. Attorney-General Lear; that advice was given to us in the presence of Governor Hartranft, the then governor of Pennsylvania, I being one of a committee that went before him to lay before him the alleged wrongs of the oil-producers.

Q. When was it you had the first interview with Governor Hartranft on this subject?

(Mr. ACHESON, on behalf of the Commonwealth, objects to this question, and to any inquiry as to what may have taken place between Governor Hartranft and the attorney-general and the witness in respect to these legal proceedings, as a matter which can not properly be inquired into by the master, and as entirely irrelevant; and the counsel, entertaining the views expressed in this objection, instructs the witness that in his judgment he ought not to answer to such interrogatories; and Mr. Acheson further says to the master that personally he has no sort of objection to the fullest inquiry into what may have taken place between the witness and the chief magistrate of the Commonwealth and the attorney-general, but he does not think that it is a proper matter for inquiry in this case.)

The WITNESS. The witness, obeying the instructions of the attorney for the Commonwealth, whose witness he is, declines to answer the question, although he regrets he is not permitted to bear the grateful tribute of the gratitude of the oil company to Governor Hartranft.

Mr. HAMPTON. Defendant's counsel proposes to ask of the witness the following question, for the purpose of showing that the legal proceedings commenced against the Pennsylvania Railroad Company, the United Pipe Lines, and the other railroads mentioned in the three bills filed against other railroad companies were the result, so far as the Commonwealth is concerned, represented by its governor, its attorney-general, and prominent politicians of the Republican party, for the purpose of carrying the State for the Republicans at the approaching election; that the governor, in furtherance of this scheme, went into the oil regions, delivered speeches, inflamed the public mind against the defendants named in the five bills, made lavish promises, and stirred up the people to a pitch of excitement which resulted in the success of the Republican ticket throughout the entire oil regions, aided and abetted also with the private understanding that a certain party was to be elected to a very important position in the house of representatives; that this combination was made upon the grounds furnished by the witness and others of certain facts which they sought to lay hold of as the basis of their combination, a political movement, the result being that the name of the Commonwealth in this bill against the Pennsylvania Railroad Company was used not for the purpose of redressing any grievances, but as a political movement to defeat the Democrats; that at the time the speeches were being made by the governor, and his promises made of the prosecution of the railroads, it was understood by the leading men of both parties that the whole thing was a political dodge, and after the election was over the thing would be practically abandoned, as it has been so far as the attorney-general is concerned, he never having ventured to examine a witness in this case, and has been present only on one or two occasions during the progress of the trial.

Having thus stated the purpose had in filing this bill, defendant's counsel now proposes to ask the witness what took place at his interview between the attorney-general and the governor, and what politicians, if any, were present at the time of this interview, and what promises were made by the governor and the attorney-general, and whether they did or not carry out those promises in the filing of these bills, and

whether the people in the oil regions, upon the faith and strength of the promises made, did not turn in almost en masse and vote the Republican ticket.

(Mr. ACHESON, on behalf of the Commonwealth, states to the master that he is still of the opinion that the questions proposed are improper, for the reasons already indicated by him; but inasmuch as the defendant's counsel has placed upon the record a serious charge against Governor Hartranft, the attorney-general, and the witness himself, and inasmuch as the witness upon the stand has expressed a desire to answer the question, he now leaves it to the witness to answer or not as he sees fit.)

The WITNESS. To give an intelligible account of what happened at that interview I will have to go back to a previous meeting of the Producers' Union. I stated that the message of Governor Hartranft to the legislature asking for a commission was, in my mind, an evidence that he was favorably disposed to the producers, and proposed that a committee of twenty-five should be appointed by the council to proceed to Harrisburg and lay our grievances before the governor, and ask for the interposition of the executive. The committee was appointed. I telegraphed to find when the governor would be at Harrisburg. A meeting was appointed, and I telegraphed then to the twenty-five members of the committee to meet the next morning at the Lochiel House, in Harrisburg. Eight appeared.

Q. State who they were.—A. I do not know whether I can, entirely, but three of them were Democrats, three of them were Republicans, and two Greenbackers. Mr. R. B. Brown, of the Clarion Democrat, was one; George H. Graham, a Democratic member of the legislature, was another; James B. Neil, Esq., was another, a Republican of Kittanning; H. W. Bumpus, I believe a Greenbacker, of Clarion County, was another; and Mr. H. O. Robbins was another, I forget his politics; we figured that among ourselves when we were present, but I forget the individual members. I can not remember the names of the other two besides myself, but I can easily supply them.

We met the governor and the attorney-general in the executive rooms at 4 o'clock in the evening. In a conversational way we in turn presented to him a narrative of the grievances under which the oil country lay, the operations of the Standard Oil Company, and, as compelled and induced by them, of the railroads and pipe lines; we stated further that while the constitution contained clear provisions against rebates, which would, entirely, in our opinion, cover our case and give us protection, yet legislature after legislature had met in Harrisburg and had refused to comply with the constitutional obligation of passing laws to enforce those provisions of the constitution. We alleged boldly before the governor what we believed, although it might be difficult to prove, that this result was obtained by bribery on the part either of the railroads or the Standard Oil Company; that in the hurry of the regular sessions these bills could not be passed, but that if an extra session was called for that special purpose, with the people of the State carefully watching every proceeding of the legislature on that subject alone, we were satisfied we could obtain from a specially-called legislature measures that would put in force the constitutional provisions. I asked the governor two questions; first, whether from what he knew of his own knowledge and from our statements, if he believed them worthy of belief, he was convinced of the truth of our assertions. He stated he was. I then asked him if he was convinced that the people of some four or five counties of the State were laboring under unjust exactions, and the greatest article of production of his State was unjustly taxed and borne upon, if he considered it was the duty of the executive to interfere for its production, and he said he did. He then requested us to meet him again, so that he should have time to consult with the attorney-general. When we met in the evening the governor replied that the attorney-general had assured him that the present existing laws of the Commonwealth, when properly evoked, were sufficient for the protection of our rights and the redressing of our wrongs; and he pledged himself that the whole power of the executive and his legal adviser should be used for the redressing of those wrongs in the manner most likely to insure success. I would deny in every shape and form any promise, bargain, or implication of a promise or bargain, made for political support, in return for this exercise of the executive power.

The governor directed us to go home and prepare a memorial, stating in form the matters that we had orally declared before him. At my suggestion, to give it more legal force, it was to be sworn to by reputable citizens of the Commonwealth. And he stated that on the receipt of such sworn memorial he would direct the attorney-general to take such legal steps for the protection of the people of the oil country as in his professional judgment were necessary. I met Governor Hartranft, I think, on one occasion after this, when he was at Titusville attending a meeting of the State Agricultural Association. But in no case, to my knowledge, was a promise made by any one for political support for him or his friends, as either a condition or in consideration of his action. It is my duty to furnish the sworn testimony to my belief of the integrity of the governor's actions.

Q. Is that your answer in full?—A. It is the material substance of all I recollect

that occurred at the interview. I will state further that no effort was made in the Producers' Council, directly or indirectly, to influence its members as to their choice of candidates for governor.

Q. Is that your answer?—A. Yes, sir.

Q. Please state what persons were present at any interviews that you had with Governor Hartranft other than those you have named already?—A. There were two persons of that committee that I can not recollect. There was no one else present.

Q. Did you furnish a memorial such as the governor asked you to do?—A. It was prepared and furnished; I was not present at the interview at which it was presented.

Q. Who prepared it?—A. Mr. Sherman, I think.

Q. The counsel of the Producers' Union?—A. Yes, sir.

Q. Who signed it?—A. B. B. Campbell, Pittsburgh; E. W. Codington, of Bradford, McKean County; Lewis Emery, jr., of Bradford, McKean County; George H. Graham, of Petrolia, Butler County; J. A. Vera, of Saint Petersburg, Clarion County; H. O. Robbins, of Turkey City, Clarion County; L. H. Smith, Petrolia; R. B. Brown, Clarion; D. S. Criswell, Oil City; A. J. Salisbury, Karns City; A. N. Perrin, Titusville, Crawford County; W. B. Benedict, Enterprise, Warren County; H. W. Bumpus, Monroe, Clarion County; Samuel G. Brown, Pleasantville, Venango County.

Q. I wish you would state if you will furnish—to be attached to the evidence as an exhibit—a copy of the memorial?—A. With the greatest pleasure in the world.

Q. Can you state when that was presented to the governor?—A. I see this is marked "presented, August 15;" that agrees with my recollection; I could not be certain as to the date, but I have no doubt that is correct; of course it is difficult to recall a date.

Q. Were the gentlemen who signed this memorial producers?—A. They were, sir, members of the Producers' Union; it was signed in the room, and when we got those names there we thought they were enough; there could have been a hundred more added.

Q. You can state whether this memorial was published in the newspapers throughout the oil regions shortly after its presentation to the governor.—A. It was published in the few papers in the State that we can get such a document published in.

Q. Was it published in the Oil City Derrick?—A. I think so.

Q. Was it published in the Titusville Herald?—A. I do not recollect it.

Q. But you caused it to be published wherever you could get it published?—A. We got it into pamphlet form as soon as possible.

Q. How shortly after was it presented to the governor?—A. That I can not tell you.

Q. Was it not almost immediately with its presentation to the governor that it was published?—A. That I can not tell you; it was certainly not before its presentation.

Q. When did you have it published in pamphlet form and circulated through the oil regions?—A. That I can not tell you.

Q. It was published in pamphlet form at Titusville, was it not?—A. Yes, sir; I think so.

Q. By Graham & Lake, printers?—A. No doubt of it.

Q. The printing paid for by the Producers' Union?—A. No doubt of it; I could not tell you from my own knowledge; we court publicity in these things, and not secrecy.

Q. Was any notice given to any of these parties against whom these bills were filed of the application to the governor, and an opportunity for them to be heard on the question, to your knowledge?—A. I believe that Governor Hartranft stated to me that he would take this memorial to the office of the Pennsylvania Railroad, and would show it to them, and would give an opportunity to the road to desist from this practice before suit was brought, and I think, although I am not certain, that he did so.

Q. How soon after the presentation of the memorial was it that the bills were filed?—A. They were filed, I believe, in October.

Q. What time was it you got a reply to the memorial that the attorney-general would file the bills?—A. I can not state those dates.

Q. As near as you can tell.—A. We commenced the preparation of the bills as soon as the second committee presented the memorial to the governor, which is there marked August 15, and the form of proceedings, I believe, was agitated among the gentlemen who conducted the legal proceedings; I am not familiar with the steps they took; that was their matter.

Q. When was it that you got any reply, written or verbal, from the governor, after the presentation of the memorial that the bills would be filed, and that the name of the Commonwealth might be used?—A. I do not know from my own knowledge, but I believe that the committee that presented the memorial received such assurances from him.

Q. Did this committee, whose names are signed to this memorial, take it to Harrisburg?—A. Some went down; I don't suppose all of them went.

Q. You say that almost immediately the order was then given by the governor, or

his permission rather, for the filing of the bills in the name of the Commonwealth?—  
A. I can not tell you of all the steps that were taken.

Q. How was the permission of the governor to file the bills in the name of the Commonwealth made known?—A. He assured our committee that the Commonwealth would take up the case; as to the dates when the various steps were taken I do not know; I was hurrying it as fast as I could.

Q. What I want to get from you, if I can, is this: That committee, after presenting the memorial, returned with the assurance of the governor that the bills should be filed?—A. Except that the governor kept to himself time to see the Pennsylvania Railroad Company before proceedings were taken.

Q. When was it that the governor announced to you, or to the Producers' Union, or to any person connected with you, that the bills would be filed in the name of the Commonwealth and that he had directed the attorney-general to have those bills filed?—A. My understanding was that this committee returned with the assurance that unless relief was immediately given proceedings would be taken, and from that time until the bills were filed in November last I have been hurrying it up, because delay is what is killing the oil regions.

Q. Did you telegraph the governor?—A. No, sir.

Q. Did you telegraph the attorney-general?—A. I telegraphed him, asking for a meeting; there may be some other telegrams between us, but if so I do not know what they are; between myself and the governor I do not think there were any telegrams; but through this whole proceedings I was urging the utmost celerity.

Q. When this committee returned to the oil regions, was not the whole thing made public throughout the oil country?—A. That the governor had consented?

Q. Yes, sir.—A. I do not remember, but I think they would have been very derelict in their duty if they had not made it known.

Q. Was not it publicly known that the committee had returned with the governor's assurance that the bills would be filed, and did you not see in the newspapers in the oil regions statements to that effect?—A. The committee came back with the understanding that proceedings were to be commenced at once, with the exception that the governor retained the right to see the Pennsylvania Railroad first, and I was very much disgusted when I heard of it.

Q. And the thing was made public by this committee?—A. We had no secrets in the matter; we were working openly and aboveboard.

Q. Was not the fact made known publicly throughout the oil regions when the committee returned?—A. I have no doubt of it. The first proceedings instituted were the *quo warranto* against the United Pipe Lines. But I would beg leave to say, in vindication, that I am not responsible for the delay in the proceedings. I was anxious and was working for immediate action.

Q. Will you state why it was that on the 12th of September, 1878, the petition was prepared and sent to the secretary of internal affairs, signed by James H. Caldwell, James F. Imel, and the others you have named?—A. As an additional and collateral proceeding invoking the power of the government in our protection; and others we could have found out we would have used with alacrity.

Q. Then, from the 15th day of August, the time that this memorial had been presented, until the 19th of September there had been no bill filed by the Commonwealth, had there?—A. I can not remember the date of the proceedings against the United Pipe Lines; that was the first active step taken.

Q. The bills in the supreme court were all filed on the same day?—A. Yes, sir.

Q. The point is, from the 15th of August, the time your memorial was presented, up to the date the petition was presented to the secretary of internal affairs, there had not been any bills filed in the supreme court?—A. No, sir; that was before.

Q. Who was secretary of internal affairs at that time?—A. General McCandless.

Q. Was General McCandless a Democrat?—A. He is, sir, I believe; candidate for Democratic governor the year before.

Q. Do you know the politics of Mr. James H. Caldwell?—A. He is a Democrat, I believe.

Q. Do you know the politics of Channcey F. Lufkin?—A. I do not; Mr. Patterson knows all those men; they are Titusville men.

Q. James Purtil; is he a Democrat?—A. I do not know; not to my knowledge.

Q. Is Lafayette J. Kerr a Democrat?—A. Not to my knowledge.

Q. What is the politics of Erastus H. Dyer?—A. I do not know his politics.

Q. You do not know the political complexion of that committee?—A. No, sir; Mr. Caldwell was a candidate for a local office in Titusville, and I happen to know his politics; but on the question of politics I never talked with any of them.

Q. What office was he running for at the time?—A. Some local office. He was beaten.

Q. You can state whether or not General McCandless, through a deputy, took testimony as to the grievances that the oil men had to make.—A. Mr. James H. Atwell, I think, took the testimony.

Q. State whether Mr. Atwell had a meeting to take testimony at any point in the oil regions; and, if so, where?—A. At Titusville he met, here I believe, and I do not remember what other points—Harrisburg.

Q. And heard evidence for a considerable time?—A. Yes, sir.

Q. Did you appear before him?—A. I do not remember.

Q. You can state whether Mr. Atwell made a report or not on the 14th of October to Hon. George Lear, the attorney-general, of the result of his investigation.—A. Mr. McCandless, I believe, made the report.

Q. Mr. McCandless made the report to the attorney-general?—A. Yes, sir.

Q. You read that, and have seen it?—A. I have seen it.

Q. Now state when it was that Governor Hartranft attended the State agricultural meeting at Titusville.—A. It was the second Tuesday in either September or October, I can not tell you which.

Q. Did he make a speech on that occasion?—A. I did not hear him make one.

Q. Do you not know he made one?—A. I do not know of his making one.

Q. Did you read any reported speech he made?—A. No, sir.

Q. You were not in the oil regions at the time?—A. I was, sir; in the city of Titusville.

Q. Did he make a speech, to your knowledge, during the canvass in the oil regions in which he repeatedly assured and promised the people that they should have redress?—A. I heard that he did speak at Petrolia; I do not know that this was the subject-matter of the speech, but I have no doubt he was true to the promises he made.

Q. And that is his successor, his friend in politics, General Hoyt, would carry out his views if elected?—A. I do not think he stated that; fortunately for us all the candidates for governor stated they would carry out Governor Hartranft's policy, so we were safe whoever was selected.

Q. So you got the question for your grievances brought into the political canvass, did you?—A. Not until we found all the candidates were equally willing to pledge themselves to protect us.

Q. The Democrats, did they through Dill?—A. We received a letter from Mr. Dill that was perfectly satisfactory; also from Mr. Mason, and last from Colonel Hoyt.

Q. All bidding for the vote of the oil regions?—A. By no means.

Q. Pledging their support, did they not, of the relief that Governor Hartranft had promised?—A. All stating that if they were elected governor they would protect the oil regions in all parts of the State, and that they would carry out any proceedings for its protection commenced by the preceding governor; therefore there was no effort throughout the oil regions to concentrate the vote on any one candidate for governor, but all parties voted according to their political predilections.

Mr. ACHESON. These letters of the candidates were published, were they not?

The WITNESS. Yes, sir.

Mr. HAMPTON. Of your own knowledge, do you know how many speeches Governor Hartranft made through the oil regions?

The WITNESS. I do not.

Q. Do you know how long he was up there?—A. Well, in Titusville, he was there during the meeting of the State Agricultural Society, of which he was president, which had adjourned the year before to meet on that day. It happened to be on the same day of the meeting of our council.

Q. There were a number of county fairs held throughout the oil regions about that time that he attended?—A. I think not; I never heard of his attending any county fairs.

Q. Was Mr. Dill, the Democratic candidate for governor, through that region during the campaign?—A. I can not state that fact.

Q. Were not members of the legislature nominated and voted for upon the basis of carrying out the platform that Governor Hartranft had adopted in relation to the oil people and their grievances?—A. We voted for representatives to the legislature whom we thought and believed would be true to protect the interests of their constituents.

Q. That was the main question, was it not, in those oil counties on which the vote was given?—A. I hoped that it would have been, but it was not; a great many stuck to their old party predilections. I endeavored to throw the entire vote of the oil country for a Democrat, Mr. Africa, and, while he held his ticket very handsomely, he failed of an election.

Q. To your knowledge, before this application was made to the governor, had there been any legal proceedings commenced in the county courts by any of the producers to redress what you claimed to be your wrongs?—A. There had not, sir; my remedy had always been very clear in my mind, but I could not get at the data to commence it.

Q. To your knowledge, I understand no proceedings, either by mandamus or actions at law, had been commenced against any of the corporations named in the five bills that were filed in October in the supreme court for the recovery of the damages alleged

to have been sustained by the oil producers?—A. There were no proceedings contemplated looking to the recovery of damages. We wished to proceed by injunction, but we were informed by our attorneys that private citizens could not use those methods to protest against a public wrong. The proceedings I always advocated was a criminal prosecution for conspiracy; I have never varied in my faith of that and never will.

Q. You state that as a professional man and not as a witness?—A. No, sir; the trouble was we could not reach the definite testimony, such as we now have.

Q. You stated that a number of refineries that used to be in existence about Pittsburgh had ceased operations, at least so far as the parties who held them some years ago are concerned?—A. Yes, sir.

Q. Were any of the refiners invited or requested to join in the proceedings against the companies?—A. No, sir.

Q. The movement was then wholly and solely by the producers?—A. By the producers.

Q. Where not the parties in whose interest the bill was filed in the name of the Commonwealth residents chiefly of the lower river district?—A. No, sir; they may be residents.

Q. At the time of the commencement of these legal proceedings were they not living in the lower or Butler district, where you are?—A. I have always lived in Pittsburgh, and I have but few interests in the upper country; Mr. Codington lives in Bradford; Mr. Emery also lives in Bradford; Mr. Graham lives in Butler, he has interests I believe in Bradford; J. Vera lives in Saint Petersburg, but principally operates in Bradford; H. O. Robbins, I think, has Bradford interests; L. H. Smith is very largely operating in Bradford; R. B. Brown is now editing a Democratic newspaper; D. S. Criswell, of Oil City, is operating largely in Bradford; Mr. Salisbury, of Karns City, is a large Bradford operator; Mr. Perrin, of Titusville, while operating in the lower district his main operations are in Bradford; Mr. Benedict lives in Warren County, and is also operating there; Mr. Bumpus, I think, is also operating in Bradford, and Mr. Brown I know is; out of that list I think I mentioned only one who is not operating in the upper district.

Q. You are speaking now of those who signed the memorial to the governor?—A. Yes, sir.

Q. State if there are not as many, if not more, producers who believe that overproduction is the cause of their injury, and do not go with the members of the Producers' Union?—A. Of course I can not answer that question. Some producers have the views you mention, and men who, I believe, are sincere. Many large producers have Standard interest and affiliations; of course they are deadly opposed to all these proceedings. Others again are timid and afraid to face the power of the Standard, and think we must yield as the only redress. But I believe the large majority of the producers of western Pennsylvania are heart and soul in this proceeding.

Q. So there is a division of opinion upon the subject of whether the measures you have stated are sufficient for relief or not, and that it is not the constant overproduction which has brought all the misery that now exists?—A. I have stated my belief as fully as I can in the foregoing answer.

Adjourned to meet at the office of George Shiras, jr., Esq., at 10 o'clock a. m. on Friday, February 28, 1879, to continue the cross-examination of Mr. Campbell.

---

PITTSBURGH, PA., *February 28, 1879.*

Met at the office of George Shiras, jr., Esq., Fourth avenue, pursuant to adjournment, and the cross-examination of Mr. Campbell continued.

B. B. CAMPBELL was recalled and further cross-examined by Mr. Hampton, as follows:

The WITNESS. I wish to make one addition to my testimony. Of the committee of eight that waited on Governor Hartranft I gave the names of six correctly. The other two were C. C. Camp, defeated Greenback candidate for Congress from the Venango district, and Willis Benedict, of Warren County, a Republican. I also wish to correct my cross-examination on folio 34, where I was asked the question, "Are there any refiners in it?" My answer was, "No, sir." I would state that in answer to an inquiry of mine I have received from the secretary of the Producers' Union, Henry Byron, the following list of names of gentlemen who have been refiners of petroleum and are members of the Union: David Emery, D. O. Wickham, Lyman Stewart, G. O. Emery, H. B. Porter, J. A. Cadwallader, Lewis Emery, jr., J. W. Doubleday, F. M. Chandler, W. P. Low, James H. Davis, Milton Stewart, G. C. Hyde, S. P. Boyer. These gentlemen were refiners in the Creek section I was not familiar with, and hence I was not aware they had been refiners as well as producers.

Q. Are they members at the present time?—A. Yes, sir.

Q. Are they refiners and operating in the oil regions?—A. Not to my knowledge. I know of one refinery, which a number of these gentlemen was in, that has been sold out to the Standard or the Acme.

Q. But these gentlemen whom you have named are at present producers, are they not?—A. Yes, sir; to the best of my knowledge.

Q. They were refiners?—A. They were refiners.

Q. They have no refineries?—A. No, sir; not to my knowledge.

Q. At the close of the examination at the last meeting your attention was drawn to the question of the overproduction of oil in the oil regions. I wish you would state, if you can, what, in your opinion, is the present daily average production in barrels of the entire oil regions, as near as you can estimate it?—A. I will state that I believe the average production to be over 40,000 barrels a day.

Q. What, in your opinion, is the daily average cost of the production of that oil, including the cost of new wells, the depreciation in territory, the depreciation in machinery, and all other matters that may be included in and as necessary to the production of oil?—A. It is a question of magnitude; I would not attempt to answer it; I am satisfied oil is to-day produced at a loss.

Q. State whether it would not be about \$1.25 a barrel, including everything that I have stated?—A. No, sir; I believe it to be over that, but it is a matter of belief, and not of evidence.

Q. Is that your best judgment as a producer, and from your observation, that to produce 40,000 barrels a day it costs over \$1.25 a barrel?—A. In the lower field, undoubtedly; as to the upper I am not so familiar. In the lower field it can not be produced at \$1.25 on account of the value of the territory and the risk of putting down wells; the mere actual pumping does not cost that.

Q. If the producers would limit the amount produced to the actual demands of the trade, would not that be very considerably less than 40,000 barrels per day?—A. I will have to answer that question at length, Mr. Hampton. I want to put down my opinion on the question of overproduction fully and entirely. As in the fettered state of the trade where none but one party can obtain transportation on anything like equal or uniform terms, with the fettered state of the refining interest where the rebates paid to one party are more than the value of the crude oil at the wells, undoubtedly too much oil is produced for the present wants of the trade. But my firm belief is, that with free equal transportation, with free equal refining, with competition for shipments to all the markets in the world, each seeking to put in the best oil instead of the poorest, as the Standard are at present doing, that the wants of the world would take more oil than the oil country has ever produced. Therefore, while I am willing to admit that there is overproduction on a fettered trade, with the whole supply going practically through the hands of one monopoly, yet I do not believe there would be overproduction on a free trade. But if there was, the producers would never have applied to the governor for relief against low prices produced by their own excessive drilling. My belief is that the oil business, like any other business, should be governed by the natural laws of supply and demand. If we produce more oil than the world wants on a free trade, we will be rightfully compelled to take low prices for our product. And if, on the other hand, the fair natural demand for our product is greater than the price given to us by a monopoly, we are not satisfied. To put it in as terse a way as I can, if oil on an open market is worth 50 cents a barrel, I am perfectly willing to take for my product 50 cents; if it is equally fairly worth \$5, I am not satisfied to receive \$4.95. I can not say anything more, Mr. Hampton, if you examine me for a week.

Q. The question to which I would like to have an answer is this: Suppose what you term overproduction was checked and no more oil produced than there was an actual market for, say inside of 40,000 barrels a day—38,000—could not oil then be held and sold at the wells at \$3 a barrel?—A. I have already told you that if the supply of oil is less than the demand the price must advance. And it is utterly idle to attempt to restrict production. Men owning property will put down wells, and they can not be controlled.

Q. What I want you to state, if you can, is, what your opinion is, from your knowledge of the business, as to the effect that would result from the production being equal to the demand and no more; would it not enhance very greatly the price of oil at the wells?—A. It would, but I would further state that it is absolutely impossible to stop production.

Q. But the question I propose to you is this: Suppose what we term overproduction was stopped?—A. I do not admit overproduction.

Q. More oil produced than there is a demand for; would it not necessarily greatly enhance the price of oil at wells?—A. At the present time, I told you, I know of no overproduction, because there is no open demand. There is more oil than the Standard will take.

Q. For that reason would you say there is no overproduction?—A. I do not know

that; when I find what the world will use on an open, free market then I will tell you whether there is overproduction. I would wish to say here further that the great bulk of the wells in the northern district, as far as I know, have been drilled either by new men in the business, or men who have been or are in the Standard interest, who are among the largest operators there.

Q. Could you state, if the supply were equal to and no greater than the demand, what would be the price of oil at the wells to-day, or at any time shortly prior to the filing of the bill in this case?—A. That is one of those questions it would be impossible for me to state.

Q. You can not answer?—A. No, sir; it is merely a surmise.

Q. Can you state during the year 1878 whether the export of oil was less or greater than during 1877?—A. I prefer to refer that answer to Mr. Stowell's tables.

Q. In your examination-in-chief your attention was called to the fact of there having been certain refineries in and around Pittsburgh some years ago; are there not now as many refineries in and about Pittsburgh as there were some five or six years ago?—A. I think not, sir.

Q. As a fact, was there not more oil refined at Pittsburgh, or near it, last year than any previous year since the refining business commenced?—A. I can not answer that as to the amount of barrels; as a percentage, it was very much less.

Q. What do you mean by a percentage?—A. The proportion to the whole trade; it was far exceeded in former years.

Q. I understand you, then, you don't undertake to state or to have any knowledge of the number of barrels of refined oil that were made here and shipped eastward last year?—A. I have, of course, read and studied the tables, but I would prefer to be governed by them rather than by memory, which is always defective; we act on those tables, although we do not carry them in our minds.

Q. When you were having this bill prepared, were you authorized by any of the refiners who had owned refineries here to represent them in the case?—A. I would want to correct your phraseology; I did not have the bill prepared—the Commonwealth prepared the bill; but I never was authorized by any refiner here.

Q. Have you any knowledge of the financial condition of those several refineries before they were sold out?—A. Which one?

Q. Any one of them?—A. I know very well the entire process by which the Standard obtained control of those refineries.

Q. Have you personal knowledge of the transaction?—A. As much as any one in a business where it is a matter of daily and hourly observation.

Q. Were you ever present when the parties came together and sold their property?—A. I was not.

Q. Were you ever present at any public sales when these properties were sold and bought?—A. I was not, sir; but to men who are in the business these matters of vital interest are matters of public notoriety.

Q. Then of what part of your examination-in-chief in relation to these refineries being squeezed out, as you used the term—driven into bankruptcy and out of the business—and of men being paid money, you have no personal knowledge?—A. I heard from the refiners themselves; I was not present at the transaction; I was examined as an expert, and gave my testimony accordingly.

Q. So far as that evidence is concerned it rests upon mere hearsay?—A. Upon matters that were current and notorious in the trade. But my information has been rendered much more definite by the testimony of Mr. Brooks, who was on the stand.

Q. You spoke in your examination-in-chief of an interview with John Scott, in June, 1877.—A. No, sir; there was no interview; I did not speak of an interview; I telegraphed him, and I met Mr. Shinn, but Mr. Scott was not present.

Q. In your examination-in-chief you stated that you had telegraphed to Mr. John Scott in relation to a supply of cars.—A. Yes, sir.

Q. Do you know what number of cars Mr. Brundred had at that time for distribution?—A. I know nearly the amount of cars the Green Line own.

Q. At that time do you know of your own knowledge what cars he had to distribute?—A. I think about between ten and eleven hundred cars.

Q. Do you mean there on hand?—A. I do not know that.

Q. The point is this: on the day that you made application to Mr. Scott, telegraphed him that you apprehended trouble, do you know how many cars Mr. Brundred had at his disposal at that time and place?—A. I do not, sir.

Q. Do you know what demand he had from the upper Bradford region for cars at that time?—A. Of my own personal knowledge I do not; as a matter of notoriety in the trade I know how the whole scheme was managed.

Q. I am asking you about your own personal knowledge on the subject. Mr. Brundred has kept an accurate account of all the cars he had and the supply of cars, and we assert that he had not any more cars to distribute at that time than he had in use.—A. I know that the shipments were from 25,000 to 28,000 barrels a day; I

know that the railroads claimed generally that they could not furnish any more, and that was a proof of the conspiracy between them.

Q. Was not that trouble started principally between the producers and the United Pipe Lines?—A. The United Pipe Lines refused to run oil unless it was sold. At Parker there was but one buyer, the Standard Oil Company, and they said they could not buy because they could not get the cars, which amounted to a practical suspension of business, with the oil running over in the tanks.

Q. The difficulty started in the way you have suggested?—A. If I had not believed that there was a systematic attempt to hold cars I would never have telegraphed as I did, and the result of the telegram was the best proof I deem of the facts.

Q. I want you to state, if you know of your own personal knowledge at the time this telegram was sent, how many cars there were then in and around Oil City.—A. All I can tell you is of the increased shipments immediately after the telegram.

Q. Do you know of your own knowledge whether those cars had not been East and had not returned at that time? You say you were half an hour in passing through trains of empty oil cars when you were on the train?—A. Yes, sir.

Q. Do you know of your own knowledge how long those cars had been there, and where they came from?—A. Yes, sir; I knew they came down the low-grade road, and I considered it a most happy coincidence.

Q. But you had no knowledge personally of the number of cars there?—A. No, sir.

Q. You did not count them?—A. No, sir.

Q. And don't know where they came from?—A. But I did examine the shipments that day.

Q. You say you got your information from the record?—A. No; on the Parker Exchange, from the daily report of the United Pipe Lines.

Q. How had you knowledge of where the cars came from?—A. I saw a great quantity of empty cars; it looked like mosquitoes coming out of a swamp.

Q. You judged from the appearance of the cars there it was the result of your telegram?—A. I had that idea.

Q. That is the reason you made your statement in your examination in chief?—A. It was.

Q. So that if those cars were East and returned the usual time, your whole theory was wrong?—A. Most certainly not; I know that two-thirds of the cars in the oil regions at that time, being Standard cars, were side-tracked, and one-third, the only public cars, they tried to make do duty for the whole country and they could not do it.

Q. To your knowledge, had there not been at times prior to that as great a demand for cars as at that time?—A. There was never any such on shipments of from 25,000 to 28,000 barrels a day.

Q. Don't you know that at times previous there had been as great a demand for cars as then?—A. There was not; I say the capacity was much greater than were furnished; those cars did not disappear—they were withheld.

Q. Although you have no personal knowledge where those cars came from that you saw at the time you went along in the train to Pittsburgh?—A. I know they came from the low-grade road, because they could not come from Pittsburgh here.

Q. You don't know whether they had just come from New York, having taken oil over there and unloaded and returned?—A. I do not; I know that the shipments for the next week were nearly double what they were the week before; one week they reached 30,000 barrels, and the next week they made an average of about 50,000. The dispatch was sent solely in hope of averting trouble, which would have happened if it had not been sent, I believe. There are limits to human endurance.

Q. You stated in your cross-examination that the complaint of the producers is that others are given what you term rebates, or a discrimination in rates.—A. Yes, sir, undoubtedly; to an amount more in value than the present value of crude or refined oil.

Q. Do you mean by that that it is confined to oil that is shipped from the oil regions to New York only?—A. No, sir; the system embraces every State in the Union, giving advantages to the Standard Oil Company over any other shipment.

Q. The point I want to draw your attention to is this: The complaint is that there is a rebate given above the open rate from the oil regions to New York; I wish you to state what, in your view of the subject and those associated with you, would be the result of an injunction against the Pennsylvania Railroad practising a thing of that kind when the New York roads on the one side, and the Baltimore Road on the other side, are left wholly without an injunction; how is the evil to be remedied, if it be one, if you tie the hands of the Pennsylvania Railroad Company and the other corporations are left free to take the trade of the oil regions?—A. I have from the very commencement of my oil business done my business by preference over the Pennsylvania Railroad and Empire Line as long as I could. As I understand, the proceedings of the Commonwealth are to place the same wholesome restrictions on all railroads carrying oil out of the oil regions.

**Q.** So that the view you entertain, and the parties whom you represent in this bill, the producers, is that any attempt to redress what you claim to be your wrongs there must be a restraint placed upon all the railroads carrying oil out of the Commonwealth?—**A.** Practically the only railroads that can reach oil through the United Pipe Lines are the Pennsylvania Central, the Erie under its new organization, and the New York Central; whatever oil is given to the Baltimore and Ohio road is given to her by an allotment of the Pennsylvania Railroad, and over the tracks of the Valley road controlled by it; but the interests of the railroad stockholders, as well as of the producers, requires, in my opinion, that the wise prayers of these bills should be enforced by the supreme court, giving equal rates to all shippers, and giving the stockholders of the railroads the benefit of a fair, open, remunerative rate.

**Q.** I call your attention again to the question. What relief, if any, will it be to the producers and shippers of oil out of Pennsylvania to have the Pennsylvania Railroad tied by an injunction against any discrimination, and the New York Central and the Erie Railway, with their lines reaching into the oil regions on one side and the Baltimore and Ohio Railroad on the other, free to act—an injunction not being asked as to them?—**A.** The effect at once would be of open rates on the Pennsylvania Railroad, and the erection of new independent refineries, which would give her, in my opinion, what she possessed before the sale of the Empire Line, the control and hold of the oil business.

**Q.** But practically, however, if the Pennsylvania Railroad is enjoined from making any discriminations in rates, it could extend only to the State line. How would you affect the transportation of crude to the sea-board, and have any control of the rates to New York, as the law exists there at present?—**A.** The Pennsylvania Railroad would probably have to carry oil at competitive rates, which I believe would be better rates to her than she is receiving to-day from the combination, so far as I get it from the evidence in this case.

**Q.** Have the producers in Pennsylvania, and the refineries in Pennsylvania and New York, or either of those States, commenced similar proceedings in the State of New York against their railroads to those that have been commenced here, with the same purpose in view, to prevent any discrimination or granting of rebates?—**A.** Yes, sir; the New York refiners commenced by a more summary proceeding than we have I believe—by writ of mandamus.

**Q.** That is against one railroad?—**A.** That was the only one reaching the Bradford field, I think, then.

**Q.** There is another road, is there not, having connections down in the oil regions?—**A.** Proceedings have been commenced against her by the Commonwealth of Pennsylvania.

**Q.** When?—**A.** Against the Dunkirk, Allegheny Valley and Pittsburgh Railroad Company. They are a defendant, I believe.

**Q.** That relates solely to the road as operated in the limits of Pennsylvania?—**A.** I suppose so.

**Q.** There has been no proceeding, however, commenced against its connection in New York to prevent any discrimination or rebate to New York, has there?—**A.** Not to my knowledge.

**Q.** So that practically you are carrying on this warfare against the Pennsylvania Railroad, and in case of an injunction it can amount to nothing practically, can it, in preventing a rebate or discriminations in freights?—**A.** I believe it will. I believe if this injunction was granted we would have open, fair, and free rates.

**Q.** You don't undertake to say that, if the New York roads are left free, without any injunction, so they can do as they please as to rates, and the Baltimore and Ohio the same way, and the Pennsylvania Railroad Company enjoined, such would be the effect?—**A.** The Baltimore and Ohio road can not reach the oil region for themselves; so I consider her as practically out of the business in the present state. So far as the Erie road is concerned, proceedings are commenced against her, and also against the New York Central, or two of her branches—the Lake Shore and Michigan Southern, and the Dunkirk, Allegheny Valley and Pittsburgh.

**Q.** But so far as the New York Central road proper is concerned, for a distance of about 400 miles, there is no proceeding against her?—**A.** Not to my knowledge.

**Q.** So that while you might control the prices of carrying oil to New York line, when you come there the corporation in New York might carry at any rate it saw proper for that 400 miles to New York?—**A.** The world was not made in a day, and I have no doubt similar proceedings will be enforced there.

**Q.** I want to get your views on the practical operation of the bill or your method of relief. Would it not be the case, if that road for a distance of 400 miles in New York could take the oil at a very low figure, that it could in that way get the entire business into the State of New York by that line?—**A.** If the Pennsylvania Railroad would carry for the public at the same price to-day as for the Standard Oil Company, my belief is its oil trade would be doubled.

Q. I did not ask you that. I ask you if the New York roads could not carry the oil for a distance of 400 miles in New York at a very low rate, and in that way get the entire business?—A. No, sir; I do not think so. You asked my views and I have given them. If the present rate to the Standard Oil Company was held out to everybody the Pennsylvania Railroad, having the shortest and most direct route, would govern the rates of freight. The other railroads would get tired of carrying it for below cost, and the Pennsylvania Railroad, by her facilities, could dictate the rates of freight.

Q. Even with the Pennsylvania Railroad enjoined and the New York roads left free?—A. Certainly; because the Pennsylvania Railroad could place her open rate at the best competing price and get the trade; the others, growing tired of losing money, would compel the Standard to fix their rates equal to hers.

Q. Practically you do not pretend to understand the operation of transportation by rail and its cost?—A. I did not think I did when I examined those tables.

Q. I did not ask you if you examined the tables. Answer the question without injecting an argument or speech.—A. I am not a railroad man.

Q. Have you ever sought an interview with the presidents of the New York roads with a view of fixing the rates of freight over their lines?—A. I have not.

Q. Has any committee of the Producers' Union ever waited upon those roads, or their officers, and demanded what is sought in this bill here—an open rate of freight, without discrimination, on oil?—A. As a rule the producers are not shippers; the testimony shows repeated attempts to obtain rates from the New York roads; the producers are not shippers as a rule.

Q. I understand you, though, that the rate of transportation, as at present practiced, works injuriously to the interests of the producers?—A. It certainly does, sir.

Q. Did any committee of the Producers' Union ever go to these New York roads and make the demand of them that you are now making of the Pennsylvania Railroad?—A. We did not, no more than we would send a committee to the officers of the Pennsylvania Railroad, knowing it would be labor lost.

Q. So far as the Producers' Union is concerned, or its branches, you have never taken any steps to bring about an interview with the two New York railroads on the question of rates?—A. We have not, sir.

Q. Has the Producers' Union, or its counsel, taken any measures, by resolution or otherwise, to bring the two New York railroads before the courts on this question of discrimination?—A. The Producers' Union adopted a resolution to employ counsel after the governor had said he would interfere for the protection of the oil regions; the parties against whom proceedings have been brought have been settled upon by interviews between the associate counsel and the attorney-general of the State. I may state I was not present at those interviews.

Q. I understand you to say, so far as the two New York roads are concerned, this committee that waited on Governor Hartranft never waited on the governor of New York?—A. No, sir; we did not.

Q. Or any officer of that government?—A. No, sir.

Q. Or upon any officer of the New York Central or Erie road, or have any interview with them on the subject of transportation, and the committee never have, to your knowledge, commenced any proceedings in New York similar to those commenced in Pennsylvania?—A. No, sir.

Q. So that, practically, with the exception of the case brought by some refiners of New York, the New York roads have not been molested either by the producers or refiners of Pennsylvania?—A. By no means; legal proceedings have been instituted by the Commonwealth of Pennsylvania against the Atlantic and Great Western, a branch of the Erie, and the Dunkirk, Allegheny Valley and Pittsburgh, and the Lake Shore and Michigan Southern, branches of the New York Central.

Q. But against the New York Central itself, in the State of New York, there have been no proceedings commenced?—A. No, sir.

Q. To your knowledge have the counsel retained by the Producers' Union ever been in consultation with any New York counsel on the question of redressing the wrongs of the producers by proceedings against the New York corporations?—A. Not to my knowledge.

Q. Or in Baltimore, to redress the wrongs against the Baltimore and Ohio Railroad?—A. Not to my knowledge.

Q. I understand from your opinion of the mode of transporting oil that the Baltimore and Ohio Railroad is in the combination as much as the other railroads against whom bills have been filed, other than the Pennsylvania Railroad.—A. There is evidently some arrangement between the Baltimore and Ohio Railroad and the Pennsylvania Railroad, because I see the Baltimore and Ohio cars every day on the Valley road, a branch of the Pennsylvania.

Q. These allotments you understand to be a part of this combination?—A. Of course I know nothing about the allotments further than the general report; the general

report is that there is an arrangement between the Pennsylvania Railroad and the Baltimore and Ohio.

Q. By which the cars of the latter go up into the oil regions and get a certain portion of the trade?—A. No, sir; they go to these refineries; they do not go to the oil regions.

Q. How long before these bills were filed in Pennsylvania in the supreme court had the subject of litigation against the various companies been discussed in your general council of the Producers' Union at Titusville?—A. Almost from its first organization. We determined to use all our endeavors to open trade. Our principal efforts were made first with Congress and the legislature for the passage of the anti-discrimination bills.

Q. Has there ever been any action at law brought against the Standard Oil Company in Pennsylvania to recover damages on account of this alleged combination by the producers or refiners of Pennsylvania to your knowledge?—A. Not to my knowledge.

Q. Have there ever been any legal proceedings of any kind against them?—A. Not to my knowledge.

Q. They are not included in any bills filed in this case?—A. No, sir.

Q. Neither the Standard Oil Company of Pittsburgh nor the Standard Oil Company of Cleveland, Ohio?—A. No, sir.

Q. Has not the Standard Oil Company of Cleveland, Ohio, offices and places of business in the State of Pennsylvania?—A. It is very hard to tell; I believe they have.

Q. There has been no suit brought, and no effort made to serve them with processes of any kind?—A. No, sir.

Q. You stated on your former examination that the general council of the Producers' Union meet at Titusville?—A. Yes, sir.

Q. Its discussions are public?—A. No, sir; its discussions are not public; its resolutions and acts are; its sessions are not open, but any act that passes is open.

Q. Their deliberations are in secret?—A. Yes, sir; because we do not want at business meetings to have reporters there.

Q. These branch councils you have enumerated, are their deliberations secret?—A. They have no deliberations but to pass upon the acts of the general council.

Q. They are secret?—A. Certainly.

Q. Do you know whether the party entering is required to take an oath of secrecy?—A. He was, but that has been done away with.

Q. They were oath-bound societies?—A. Yes, sir; I can repeat the oath if you wish it.

Q. Can you repeat the oath from memory?—A. Yes, sir.

Q. You have administered it, have you, frequently?—A. Yes, sir.

Q. In that way you came to know it?—A. Yes, sir.

Q. What office do you hold?—A. President of the council.

Q. You organize these different subcouncils?—A. No, sir.

Q. Where do you do the swearing in?—A. I administered the oath to members of the council so long as it was a secret organization.

Q. Its deliberations are secret yet, I believe?—A. They are not open yet. Any act passed by action of the general council is not a matter of secrecy.

Q. Its discussions and everything of that character that led to that action are secret?—A. Yes, sir.

Q. Minutes are kept of what was done?—A. Yes, sir. I would further state, in explanation, that it is made the duty of the president or secretary to produce those minutes any time they may be inquired for in any proceeding directly or collateral in any court of justice, and thoroughly explain any resolution that has been passed.

Q. That is your general council?—A. That is where all the business originates. Local councils have merely the right to ratify.

Q. They send delegates to the general council?—A. Yes, sir.

Q. Is it required of a party entering one of these subcouncils to take an oath when he enters it?—A. I can not tell you whether that obligation has been removed or not at this time; it did; I can give you the obligation.

Q. They originally required the party to take an oath when he entered it?—A. Yes, sir.

Q. You can repeat the form of the oath if you can; I suppose you have administered it a great many times?—A. Not in the local councils; I took it there.

Q. Into what council did you enter?—A. The one at Parker.

Q. Who administered the oath to you?—A. Major Hawkins. The oath of the general council before it was repealed was this: "You do swear by Almighty God, the searcher of all hearts, that you will discharge your duties as a member of this council with fidelity and to the best of your ability; and further, that you will not disclose the password or any business of this council to any one not a member of the Producers'

Union." That was the oath. The present form is this. I will also state that any party wishing to affirm could do so in place of taking the oath.

Q. You have some Quakers, then?—A. Yes, sir. The present pledge, which I consider a great deal more binding, is this: "You do pledge your honor that you will discharge your duties as a member of this council with fidelity and to the best of your ability, not seeking your own private benefit or advantage, but the general good of the producers you represent. And to this you pledge your honor."

Q. Why do you consider the latter obligation a more binding and solemn one than the one you administered before?—A. Because all my life I have been opposed to extrajudicial oaths; it was with great qualms of conscience I joined the general council, it being a secret society.

Q. When was the form of the oath changed?—A. At the last meeting.

Q. When was that?—A. The second Tuesday of this month.

Q. But the first oath that you recited here was the one in force from when?—A. From the formation of the council.

Q. Down until—A. Until that time.

Q. This committee of twenty-five that went to Harrisburg to get the governor's permission to file this bill in the name of the Commonwealth—were they members of the council?—A. They were, all but one; there were eight attended, not twenty-five; seven were members of the council, and one was not.

Q. That was in pursuance of action taken in the general council, was it not?—A. Yes, sir.

Q. I understood you, did I correctly, that the committee consisted originally of twenty-five?—A. Twenty-five was the committee originally, but only eight attended.

Q. And all but one were members of the general council of the Producers' Union?—A. Yes, sir.

Q. And they went there in pursuance of the action taken by the general council?—A. Yes, sir.

Q. There was action also taken by the general council to raise funds to carry on this proceeding?—A. I stated so in my testimony the last day; the form of it was the appointing of a collecting committee in every town. I appointed myself in Parker, and I obtained, I told you, 150 names.

Q. I didn't ask you how often you were at Harrisburg to see the governor and the attorney-general before these bills were filed.—A. I never was there but once—the time I was on the committee; I never went again.

Q. You saw the governor and attorney-general at that time?—A. Yes, sir; there was no one present besides us eight.

Q. Had that committee or you interviews with outside parties in Harrisburg, connected directly or indirectly with this matter?—A. None whatever; we took special pains to keep our business secret.

Q. Was it explained to the governor that this committee had been appointed by the Producers' Union?—A. It was; I had stated that to him before by wire.

Q. You had made him acquainted with the action of the Producers' Union on the subject?—A. Yes, sir; and arranged as to the interview. The interview was fixed for a certain date. He came to Harrisburg from Long Branch, and we came from Pittsburgh.

Q. Where did you meet?—A. In the executive parlor.

Q. In the governor's private residence?—A. No, sir; the public parlor—the executive chamber.

Q. You telegraphed the governor to come up from Long Branch, did you?—A. I telegraphed to Harrisburg to know when we could get an interview; the answer came from his private secretary that he was away, and that he would fix an interview; and we then got a date fixed at which he would meet us.

Q. Did you see the attorney-general at this time, or any time prior to filing the bills?—A. I never saw the attorney-general until I met him in the governor's presence that day.

Q. He was there?—A. He was there.

Q. What did he say about filing a bill?—A. We made no demand for the filing of bills. We asked for an extra session of the legislature. The governor took the ground that there was a remedy with the laws at present. We made but a single demand, that for an extra session of the legislature.

Q. What was the date of that interview when the governor came up from Long Branch, as near as you can tell?—A. It was probably ten or fifteen days before August the 15th—very near the 1st of August, a few days either one side or the other, I can not say which.

Q. In 1878?—A. Yes, sir.

Q. How long was it from that interview until a resolution was passed by the Producers' Union, if there was one, to present a petition to the secretary of internal affairs General McCandless?—A. I do not think a resolution was passed to present that petition; I think that was done without a resolution of council; I would not be certain about that; that is to the best of my recollection.

Q. That movement by petition to the secretary of internal affairs was outside and independent of any action of the council as a body?—A. I did not say that; it was recognized as a part and parcel of this proceeding; but I do not think it was ever done by resolution; there was discretion given to use every method.

Q. There was no action taken, such as in the case of the appointment of the committee of twenty-five to see the governor?—A. I believe not; I would not be positive; I do not remember those things.

Q. Who first, to your knowledge, suggested the presentation of that petition to the secretary of internal affairs?—A. Mr. Africa, I believe, stated that the secretary of internal affairs had powers of investigation.

Q. J. Simpson Africa?—A. Yes, sir.

Q. What position did he hold at that time?—A. I understood he was chief clerk in that office.

Q. What office?—A. Secretary of internal affairs.

Q. Is he a Republican or Democrat?—A. A Democrat.

Q. When he made that suggestion out of which that petition grew to whom did he make it?—A. I can not tell you.

Q. As near as you can recollect?—A. I can not tell; it would be impossible for me to say.

Q. What makes you say that it was J. Simpson Africa that made the suggestion?—A. He first brought to our notice, as I understand, the act of assembly under which an investigation might be performed.

Q. To whose notice did he bring it?—A. Probably to the counsel of the Producers' Union.

Q. Do you know whether it was to Mr. Patterson?—A. I do not; it is mere guesswork to attempt to tell you; the first knowledge came from him.

Q. Was that in a communication from him to Mr. Sherman, counsel of the Producers' Union?—A. I think not, sir.

Q. But it did lead to an investigation eventually?—A. As a matter of course; we were willing to try every means of redress.

Q. But it was rather an outside movement than one authorized by the Producers' Union?—A. I am not prepared to say whether there was a resolution or not authorizing it.

Q. I understand you that the idea of redress by petition to the secretary of internal affairs originated with Mr. J. Simpson Africa?—A. I did not say that; I say Mr. Africa first brought to our notice knowledge of the law giving that power to the secretary of internal affairs.

Q. How long was that after the committee of twenty-five had been selected and had the interview with the governor?—A. I can not tell you.

Q. Was it a week?—A. I cannot tell you.

Q. It was after, was it?—A. I can not tell you that; I have a great many things to think of, and I can not tell you.

Q. I asked you on the former examination if you would state the membership of the Producers' Councils in the oil regions?—A. I can not.

Q. Having had time to think of it can you tell?—A. I have no data; I could not get any actual data; we have had some eight reports of the union, but they are changing very much.

Q. What would be your best estimate of the membership?—A. It would be mere guesswork, sir; we have over 2,500 names on the roll, but whether it has increased or diminished it would be hard to say.

Q. Does it contain a majority of the oil producers of Pennsylvania?—A. I can not say that; in the region where I am it has a very large membership; you can judge from that.

Re-direct examination by Mr. SHIRAS:

Q. When you spoke, in reply to a question from Mr. Hampton, that if the supply were less than the demand of this crude oil production, or if the supply and demand were equal, that it would cause a rise of price at the wells; were you speaking of a case where the facilities of sale and transportation were open and free, or did you have in view the case of sale and transfer, or power of sale and transfer, being hampered by the arrangements of others?—A. I believe it would have a certain effect in either case—a much greater one in case of unlimited trade. I can give a fair example of what occurred in the trade. In the fall of 1876 refined oil reached the price of 32 cents a gallon in New York. If the producer had received his fair share of that he would have got from \$8 to \$10 a barrel for his oil, the transporter could have received the open rate, and yet with the refiner there would be a larger profit than ever known; we received only \$4.20, the highest price paid at the wells with refined at 32 cents at New York.

Q. Is it not a fact that the effect upon the market price of oil, of the relation of supply and demand, would largely depend upon the freedom of sale and transporta-

tion of the product?—A. Certainly, because then you get the real demand instead of the demand that was permitted to reach you.

Q. With respect to your visit to the governor and by the committee and of your request of him to call a special session of the legislature, if I understand you, the suggestion came from him that there were remedies granted by the laws as they then existed which could be enforced without the necessity of calling a special session?—A. Entirely from the governor.

Q. After an attempt to enforce the laws as they now exist was agreed upon, state whether or not the forms of remedy and the selection of defendants, to make the laws effective, was dictated and arranged by the attorney-general and his assistants.—

A. I have already stated that I believe that matter was settled solely between the attorneys engaged in the case—they and the attorney-general. I wrote to the attorney-general shortly after these proceedings were commenced asking for permission to employ associate counsel, stating the names of the gentlemen now engaged in the case. He answered that if I had not written to him he would have required us to do it, as he was not sufficiently posted on the subject and had not time to attend to it, and he approved of the selection I had made. Since that time they alone are responsible for the form of legal proceedings—they and the attorney-general, representing the Commonwealth, are solely responsible for the form of the legal proceedings.

Q. You have been asked your opinion as to the effect of an injunction, if obtained in this proceeding, against the Pennsylvania Railroad Company; state whether or not the result of the finding of the law and the declaration of the law by the supreme court against the right to discriminate by common carriers, and taking the form of an injunction against the principal common carrier of the State would or would not have an effect in regulating the transportation of oil and the establishment of open rates in respect to all common carriers from the oil regions proceeding through or out of Pennsylvania.—A. It is my belief that if the railroads were to charge an open rate as low as the present actual rate is shown by the evidence given that it would fix and establish the rate, as the Pennsylvania Railroad, in my belief, is better able to carry at that rate than any of its competitors carrying a much longer distance.

Q. Is it or not your opinion if by injunction the Pennsylvania Railroad were restrained from making discriminations as between shippers in the carriage of oil that that would itself tend to regulate and prevent discrimination by other common carriers from the oil country?—A. I do, sir.

Q. Is the Producers' Union open to all producers who may desire to join it?—A. To any one, sir.

Q. With respect to the Standard Oil Company being proceeded against within the State of Pennsylvania, has that organization such known officers or such avowed agents that they could under any law that you know of be served with processes?—

A. Certain gentlemen have declared themselves to be directors in that company—Mr. Vandergrift and Mr. Lockhart, I believe; I do not know whether that would be sufficient to base an action against them or not.

Q. In the estimates and judgments formed, and as to which you have been interrogated in various forms, as to the amount of production, what is your source of information or data on which you form your judgment and express it?—A. The reports of the United Lines and of other pipe lines, although the United is so much larger than the others that it is the great source.

Q. Do they form the basis of the reports of statisticians, Mr. Stowell and others?—A. Mr. Stowell stated in my presence in his testimony that he gathered his information from the pipe lines.

Q. Is there any mode whereby to those who act upon, or are expected to act upon them, the correctness of those reports of the pipe lines is verified to the public?—A. We take their monthly reports; that is all we have.

Q. Are those monthly reports confided in as being beyond doubt correct by the people up there?—A. There is a wide diversity of opinion on that.

Q. State whether there has been, if you know, complaint or distrust entertained in the oil community there of the correctness of the pipe line reports.—A. I have heard that discussed and expressed; whether correct in it or not I am unable to state.

Q. Do you know whether the act of assembly prescribed the method whereby the reports of these pipe lines are to be verified to the public?—A. It does.

Q. That is by the act of assembly, May 22, 1878, I believe; I wish you would state whether the reports of the pipe lines, under the act of 1878, have in point of fact been verified by the officers of the pipe lines in the way and manner prescribed by that statute, if you know.—A. In my opinion they have not.

Q. In what respect, in your judgment, are those reports not verified as prescribed by the statute?—A. I never considered them signed by the proper officer.

Q. Who is the president of the United Pipe Lines?—A. Mr. Vandergrift.

Q. Who is the secretary?—A. Mr. Hughes.

Q. Who is the treasurer?—A. Mr. Campbell is the treasurer; Mr. Hopkins is the general superintendent.

Q. Do any of those officers, in point of fact, verify any of these monthly reports?—A. They do not, to my knowledge; I have seen a great many of them.

Q. Who do verify them?—A. The first report was verified by one man alone, Mr. Lay, a man I do not know. Latterly they have been verified by Mr. Moore and Mr. Lay—the last I saw.

Q. Do you know whether there are in the oil regions any refiners not connected with the Standard Combination who are not members of the Producers' Union?—A. I only know from the testimony that there are two outside refineries, the testimony of Mr. Archbold, that there are two outside refineries in Titusville; I know of one small one of about 20 barrels in Parker; that man belongs to the union. I know of one refiner here, Mr. Reichard. Those are all I know in western Pennsylvania.

Mr. HAMPTON. There is one down at Beaver.

The WITNESS. I said all that I know of. There is one at Beaver, I believe; at Freedom, I think I stated.

Mr. SHIRAS. You were asked by Mr. Hampton, on cross-examination, whether oil was not shipped to refiners at Philadelphia. I want to know what refiner's oil is shipped to Philadelphia outside of the combination; can you name any?

The WITNESS. Malcolm Lloyd, I believe.

Q. What is the size of his establishment?—A. I do not know, sir.

Q. Is that the only one you know of?—A. Mr. Logan has a refinery there, but I think it has never run any yet.

Cross-examination by Mr. HAMPTON resumed:

Q. What year was it that refined oil reached 32 cents in New York?—A. Eighteen hundred and seventy-six.

Q. What did that make a barrel in New York?—A. There are about 50 gallons to a barrel—about \$16.

Q. Then you got during that time, you say, \$4.20 at the wells?—A. Yes, sir; of 42 gallons.

Q. At that time what was the average cost of producing a barrel of crude at the wells?—A. I could not pretend to tell you; no man can answer those questions; we do not know.

Q. Would it cost \$1.50?—A. In the country where that was produced we had to pay very large prices for the land, high prices for the machinery, and high prices for drilling the wells.

Q. Would not \$1.50 fairly cover the cost of production?—A. No, sir; it would not.

Q. Would \$2?—A. It would leave no margin of profit.

Q. Would not \$2 cover the entire cost of producing a barrel of crude oil in the oil regions at this time?—A. I do not believe it would; I never figured as low as \$2; not on the basis of the price we paid for property.

Q. I am speaking of the actual cost of the production of the oil, considering the appliances used in getting the oil out of the earth, and the labor employed at the well?—A. As oil advances, the price of property advances very much, the price of machinery goes up, and the price of drilling goes up.

Q. I am speaking of that particular time. At the wells you have knowledge of, would not \$2 pay a very large margin over the cost of production?—A. I do not consider it would, considering the risk of the business; the producer runs the risk, the refiner does not.

Q. Would \$2.50 cover the actual cost of production, including the wear and tear of machinery, etc.?—A. We could live at that, I suppose.

Q. So that it would leave in the neighborhood of \$2 clear profit at the well?—A. You will have to figure very fine to put the cost at \$2.50.

Q. It would leave you about \$2 at the wells as a profit on your oil?—A. Yes, sir.

Q. In 1876 what were the rates of freights as compared with what they were in 1878?—A. I can not tell you that.

Q. Were they higher or lower?—A. I could not tell you that. The open rates were the same, I believe. I can not tell you as to those rebates; we had hard work to get at 1878.

Q. Mr. Shiras asked you if the service of legal process could be had on the Standard Oil Company through any of its agents in Pennsylvania. You can state whether one or two of the directors do not live here.—A. I said two of the directors.

Q. Who are they?—A. Mr. Vandergrift and Mr. Lockhart say they are directors.

Q. Where does Mr. Vandergrift live?—A. At Oil City.

Q. Mr. Lockhart lives where?—A. In this city.

Q. During this examination and cross-examination of yourself, have you not repeatedly affirmed the accuracy, in your judgment, of Mr. Stowell's statistics?—A. The accuracy of his making the statistics.

Q. And the source from which he derived them?—A. As to the source, he stated very clearly he took them from the pipe lines. We have to govern ourselves by them as all we have.

Q. The statistics are made up from reports of the pipe lines and from the report of oil carried by the different railroads out of the oil regions?—A. He stated that he got them from the railroads and pipe lines.

Q. And from the monthly reports of the export of oil from New York?—A. Yes, sir; I have no doubt that is correct; the local trade we do not know so much about. What I want to say is, that I believe Mr. Stowell did his work faithfully from the data he had.

By Mr. SHIRAS:

Q. You do not wish to say that those data in themselves are correct?—A. I do not know anything about that.

By Mr. HAMPTON:

Q. Don't you know that Mr. Malcolm Lloyd, of Philadelphia, has a very large refinery in constant operation not controlled in any way by the Standard Oil Company?—A. Personally I do not know anything about it; it has been so stated.

Q. You do not know its capacity?—A. No, sir; I never was there.

Q. Do you know how many refiners there are in Baltimore?—A. To my own knowledge there are none outside of the Standard.

Q. How are they supplied with crude oil?—A. I can not tell you, sir.

Q. You don't know that fact?—A. I do not know. They used to receive some oil by the Baltimore and Ohio road, and some by the Northern Central.

Adjourned to meet at the Girard House, Philadelphia, on Tuesday, March 4, 1879, at 10 o'clock a. m.

A. J. CASSATT was duly sworn in the case *The Commonwealth v. The Pennsylvania Railroad Company*, and testified as follows:

Mr. MACVEAGH. I desire to make the suggestion that in view of the knowledge Mr. Cassatt has of this business generally, that instead of the detailed form of questions which have been used with other witnesses whose knowledge is not so extensive the gentlemen will perhaps find it to their advantage to ask some general questions which will enable him to state in a connected way his knowledge about a particular subject, and then supplement that by any detail questions that they may wish to ask, so as to enable us to get at the substance of this thing rather than not to get at it.

Direct examination by Mr. ACHESON:

Q. What is your connection with the Pennsylvania Railroad Company?—A. My title, sir, is third vice-president, and I have charge of the transportation department, including the freight and passenger business also.

Q. How long have you filled the position of third vice-president?—A. Since July, I think, 1874.

Q. I wish you would state, sir, whether or not on the 1st of January, 1877, and at and about that time, petroleum from the oil-producing regions of Pennsylvania was transported over the Pennsylvania Railroad and its connections; and if you say it was, state briefly the mode in which the business at that time was conducted.—A. The route by which it was carried?

Q. And the facilities for transportation and the method of conducting the business.—A. Well, at that time nearly all the oil business of the Pennsylvania Railroad was done by the Empire Line, a private corporation with which we had a contract; the routes to the sea-board, Philadelphia, Baltimore, and New York by our lines from the different regions—do you want me to state the routes?

A. Yes, sir.—A. From Pittsburgh by the West Pennsylvania road to Blairsville; thence by the main line to Philadelphia; oil by that route going to New York went off at Harrisburg over the Reading line and Lehigh Valley and New Jersey Central; oil going to Baltimore was diverted at Harrisburg to the Northern Central; oil from the old Parker district was carried over the low-grade line to Driftwood; thence to Sunbury, and from there over the Danville, Hazelton, and Wilkes Barre road to Tomhicken, and thence over the Lehigh Valley and New Jersey Central to New York, or to Philadelphia it was carried over the Northern Central to Harrisburg, and thence by the Pennsylvania main line, or to Baltimore it went direct to Baltimore on the Northern Central; oil from the Bradford district was carried by the Buffalo, New York and Philadelphia Railroad to Emporium, and thence to Philadelphia over the Northern Central and main line of the Pennsylvania Railroad from Harrisburg, and if to Baltimore, directly to Baltimore by the Northern Central, and if to New York, it was carried by Tomhicken, the Lehigh Valley and New Jersey Central route.

Q. Now state, if you please, in a general way, what the connection, at that time, was between your company and the Empire Transportation Company with respect to the

transportation of oil.—A. The Empire Transportation Company had a contract with us by which they provided the cars, the soliciting agents, and did all the business connected with the transportation of oil, except the mere hauling of the cars, from every district except Pittsburgh; there they did not go; there we carried with our own cars as a local business. For the work they did in soliciting, collecting freights, and managing the business generally we paid them a percentage of our net receipts from the business after paying the rebates, etc.; the rates were made by the Pennsylvania Railroad Company always.

Q. That, you say, was under a contract?—A. Under a contract.

Q. Now, I wish that you would state what the then facilities of the Empire Transportation Company were for transporting oil from the oil regions of Pennsylvania—from the oil wells—to the Eastern markets and the sea-ports.—A. Do you mean as to the number of cars, and so on?

Q. Yes, sir; and their facilities generally for gathering the oil and transporting it.—A. They had a thousand, in round numbers, tank cars—iron tank cars—for carrying crude oil, and they had 400 cars known as rack cars for carrying refined oil; that was the extent of their car equipment. The Empire Transportation Company also owned or controlled the Union Pipe Line Company, which had pipe lines from the region reaching nearly every source of supply and carrying oil to the railroad connections in the region; those were the facilities.

Q. Did the Empire Transportation Company own or control any refining interests?—A. At that time they did, I believe.

Q. Where were their refineries, sir?—A. They had an interest in a refinery at Communipaw, at New York, on New York waters, close to the Jersey shore, and they were building at that time, I think, a refinery in Philadelphia known as the—I have forgotten it—down here on the Neck.

Q. State whether subsequently, in the year 1877, the Empire Transportation Company increased its refining facilities by leases.—A. I do not recollect that it did; it increased its capacity in New York, I believe, by increasing the size of the works there; I do not recollect that they leased any refineries.

Q. How was it in Philadelphia as to increasing their refining interests?—A. This was entirely new in Philadelphia; they commenced building in Philadelphia either the latter part of 1876 or the early part of 1877, which was not completed until the middle of 1877.

Q. What was its capacity?—A. About 6,000 barrels of crude per day, I think, was its capacity; I don't think they worked it up to that.

Q. Are you acquainted with the organization known as the Standard Oil Company?—A. Yes, sir.

Q. Was, sir, the Standard Oil combination, about the 1st of January, 1877, and shortly thereafter, transporting its oil over the Pennsylvania Railroad or the routes operated by the Empire Transportation Company?—A. It was; yes, sir.

Q. State whether or not in the year 1877, and subsequent to the 1st day of January, that combination ceased so to transport its oil.—A. It did, about March or April, of 1877, cease to ship any oil by the Pennsylvania Railroad Company's lines.

Q. It ceased to ship any?—A. Yes, sir.

Q. And how long did that condition of things continue?—A. Until the 17th of October of that year.

Q. That was the date, sir, at which the contract in evidence in this case was made [paper shown witness]?—A. Yes, sir; that day.

Q. You say, sir, the Standard Oil combination ceased to transport its oil by the Pennsylvania Railroad route, in March, I think you said?—A. In March—March, I think—March or April.

Q. Can you state, sir, and if so, please state to the master if you know the reason why the Standard combination at that time ceased to transport its oil by the Pennsylvania routes?—A. Because the Empire Transportation Company, which was the organization which transported the oil over our lines, had engaged in the business of refining oil; the Standard Company complained to the officers of the Pennsylvania Railroad Company that they did not get fair treatment from the Empire Transportation Company in the matter of the distribution of cars when cars were scarce; that they did not believe they got as good rates as the Empire Transportation Company did, and that in every possible way the Empire Transportation Company, they believed, favored their own refineries as against theirs, and they took the position and stated that they would not be subject; they would not transport their oil by an organization which was also a rival of theirs in the refining business. We endeavored to try to get those difficulties harmonized; talked of getting the Empire Transportation Company to lease its refineries to the Standard Oil Company or put them into other hands, but we did not succeed in doing that and bringing these two companies together in that, and it resulted in a complete breach, and the Standard Oil Company took their business off our road, and we had a very severe contest from the time they did so until the 17th of October. During that time the Empire Transportation

Company itself did all the refining it could in competition with the Standard, and all the other refineries not connected with the Standard Oil Company we induced to come on our line and ship, but we did it at a very great loss to the company. We paid very large rebates; in fact, we took anything we could get for transporting their oil; in some cases we paid out rebates more than the whole freight. I recollect one instance where we carried oil to New York for Mr. Ohlen, or some one he represented, I think at 8 cents less than nothing.

Q. What time was that?—A. That was between March and the 17th of October. The way the business was done we instructed the Empire Line to get all the trade they could. They bought of the owners of the pipes. They bought the oil; we practically bought of the pipe lines at that time. They bought the oil from the producers, and we instructed them to sell to the refineries in New York, other than the Standard, at such prices as they could get. Then the difference between what they paid for it in the region and what they got at Baltimore, Philadelphia, or New York was our freight. They rendered us a statement every month. As I say, there was oil carried there at 8 cents less than nothing during the fight; I do not say any large quantities, but oil was carried at that rate. The rates were very low. The difference between the selling price in New York and the purchasing price we repaid to the Empire Line, who repaid it to their shippers.

Q. That is to say that the price in the oil region was 8 cents higher than at the sea-board?—A. On that particular lot I speak of; yes, sir. I merely mention that as an instance of how low we carried in some cases.

Q. Do you know, and if so, explain, how the price in the oil regions became so elevated and the price at the sea-board depressed?—A. That is rather a difficult thing to explain; the markets fluctuate. I am not familiar with the oil market, but I know it was the case in this instance.

Q. Was not it because the Standard combination manipulated the market?—A. They did it to our detriment all they could, no doubt about that; they endeavored to injure us and our shippers all they could during that fight.

By Mr. MACVEAGH:

Q. You pursued the same policy, I suppose?—A. We did the same thing.

By Mr. ACHESON:

Q. At that time through whom was the Standard combination doing its business from the wells to the sea-board?—A. By the New York Central, and the New York and Erie Railroads, the Baltimore and Ohio Railroad, and to a limited extent to Philadelphia by the Reading Railroad, by the New York and Erie road to Waverly, thence by the Lehigh Valley and Reading to Philadelphia.

Q. And from the wells, how was the Standard combination doing its business?—A. Through the connections of these several roads. For instance, the Baltimore road; they had a pipe line leading to Pittsburgh by which they transported oil to the Conellsville road.

Q. Was that pipe laid in 1877?—A. The Conduit Line was laid in 1877; they used that line.

Q. Do you know when the Conduit Line passed into the control of the Standard Oil Company?—A. Not of my own direct knowledge; I understood it was about the time we made our contract, in October some time, 1877.

Q. What were their connections with the northern roads from the wells?—A. They had various connections; the New York and Erie Railroad got its oil from Bradford through a pipe line running directly to its own road, at or near Olean.

Q. Who owned that pipe line?—A. It was owned by the United Pipe Lines. The New York Central got oil from Oil City through the Pittsburgh, Titusville and Buffalo Railroad to Titusville or to Irvington, and thence over a line from Irvington to the Lake Shore road; I have forgotten the proper title for it.

Q. Through what pipes was it received from the wells?—A. The United Pipe Lines in each case.

Q. Who then, at that time, were in league with the Standard Oil Company and in combination against you?—A. The New York Central Railroad, the Erie Railroad Company, the Baltimore and Ohio Railroad Company, the Lehigh Valley Railroad Company, and the Reading Railroad Company were the railroad companies that transported the Standard Oil Company's oil in competition with us.

Q. And the Atlantic and Great Western?—A. Yes, sir; and the connections of these different roads.

Q. State whether the United Pipe Lines were a party to that combination against you.—A. Yes, sir; they were to the same extent as the other companies were; that is to say, they transported the oil shipped by the Standard Oil Company, or for their account, in competition with us, and in competition with our pipe-line connections.

Q. I understand you to say that these railroad companies you have named united with the Standard Oil Company and with the United Pipe Lines in combination against the Pennsylvania road?—A. Well, yes; I suppose it might be called a combination;

they transported their oil in competition with us at rates we didn't know anything about, but in competition with us.

Q. And the Standard, as you have already explained, manipulated the market?—

A. I don't know as I stated that exactly; you stated it and I stated it might be so; you asked me how the oil happened to be sold at higher rates in the region than in New York; I said it was because of the fluctuation of the market; I could not explain; you asked me whether the Standard Oil Company manipulated the market; I said I supposed so—so much as they could.

Q. Did you intend to say that the Standard Oil Company, in your judgment, depressed the market in New York in order to coerce the Pennsylvania Railroad?—A. I really can not say whether they did or not; they were not aware of this arrangement we had with our shippers; that is, I think they were not; they believed we made certain rates to shippers, and they were fighting them and not us.

Q. But they were really engaged in a war upon you?—A. Undoubtedly, backed by all these other lines I speak of.

Q. Did you understand at that time that these railroad companies and the United Pipe Lines had united with the Standard Oil Company in order to force the Empire Transportation Company out of the refining business?—A. I believe they did; I believe that was the object of their onslaught upon us.

Q. In the summer of 1877, state whether any of the officials of the Standard Oil Company, or persons representing that combination, were in treaty with the Pennsylvania Railroad Company in reference to the matter of oil transportation?—A. They were, sir.

Q. About what time did these negotiations begin?—A. In August, 1877.

Q. Who, on behalf of the Standard Oil Company, made negotiations with your road?—A. Mr. John Rockafeller, the president of the company, and Mr. H. M. Flagler, the secretary; there were others, of course, who were talked to, but these were the gentlemen principally conducting it.

Q. John B. Rockafeller, I believe, is president of the Standard combination?—A. President, yes, sir; and Mr. Flagler the secretary.

Q. Will you name any other parties connected with the Standard combination that were active in the negotiations with your road?—A. Mr. Warden, of Philadelphia.

Q. William G. Warden?—A. William G. Warden, to a certain extent. I think that comprises them all; Mr. William G. Warden was the only other that took an active part.

Q. Was Mr. Charles Lockhart, of Pittsburgh, present at any of these negotiations?—A. I think he was towards the close, when we had agreed upon all the terms of the arrangements, not at the outset; he took very little part in it.

Q. On the part of the Pennsylvania Railroad Company, who conducted the negotiations with the Standard people?—A. I did in the outset; I went to Cleveland in August of 1877; I went there twice, either both times in August, or once in August and the second time in the early part of September; afterwards they came here.

Q. Whom did you meet in Cleveland?—A. Mr. John Rockafeller, Mr. Warden, who was staying there with him paying him a visit, and Mr. Flagler; afterwards those three gentlemen came on to Philadelphia, and then Mr. Scott took part in the negotiations, took charge of the negotiations.

Q. You mean Thomas A. Scott?—A. Yes, sir; I was present at all the interviews, however.

Q. Be kind enough to state when those gentlemen representing the Standard combination first met the representatives of the Pennsylvania road in Philadelphia, and where?—A. I can not state exactly the date. It was during September, and it was at the St. George Hotel.

Q. Will you now state who were present at that interview?—A. Mr. John B. Rockafeller, Mr. H. M. Flagler, Mr. Scott, and myself.

Q. Were there any counsel present at that interview?—A. No, sir.

Q. I wish you would state what was the subject of discussion at that interview, and what it led to, if anything.—A. The subject of discussion was to see whether we could not make some contract or agreement with the Standard Oil Company by which this contest would cease, which was costing our company a great deal of money and loss of revenue, and the object to be obtained was that of making some arrangement with them, which was done. The nature of the arrangement you have before you in this letter.

Q. In this contract of October 17, 1877?—A. Yes, sir; there were other collateral questions involved—this purchase by our company of the Empire Line's plant and rolling stock, and the purchase by the Standard Oil Company from the Empire Line of its refining interest and its pipe lines. That came about in this way: We made up our minds that it was a mistake for the Empire Transportation Company, as a transporter, as representing us in the transportation of oil, to be in the refining business. The New York Central and the Erie railroads, and the Baltimore and Ohio Railroad looked upon it with jealousy, and the Standard Oil Company also, and we endeav-

ored to get the Empire Line to assent to disposing of its refining interest, which they declined to do; and then they said, "Rather than do that, we had rather you would buy us out and close our contract with you."

Q. The Pennsylvania Railroad had the option, under its contract with the Empire Transportation Company, to purchase it out?—A. They had. The position the Empire Line took in that matter brought up these collateral questions.

Q. What did the Standard people insist upon with reference to that purchase?—A. They simply insisted that they could not make any arrangements with us for the transportation of their oil so long as that transportation was carried on by an organization which was their rival in the refining business. They insisted that the first step towards making a specific contract with them must be that we, or our representatives in the oil business, must go out of the refining business. In that they were supported by the New York Central Railroad, the Erie Railroad, and by the Baltimore and Ohio Railroad, all of which companies looked with a great deal of jealousy upon our having any control of the refining business, which we had through the Empire Line. They claimed it was not our legitimate business, and that it gave us a control of the business they did not have, and it was a constant menace to them.

Q. I want to ask you here when it was that the Empire Transportation Company commenced building its refinery in Philadelphia?—A. It was the latter part of 1876 or the early part of 1877; I can not exactly state when.

Q. Was it after the Standard had threatened to withdraw its patronage from your road?—A. Well, they had not threatened to withdraw their patronage from our road at the time but they had protested very strongly against the Empire Line being interested in that New York refinery I spoke of before, and had complained that the Empire Line was giving facilities to that refinery on account of their interest in it they did not give to them, and had been endeavoring for several months to get us to insist upon the Empire Line going out of that refining business.

Q. That is, the refining business in the city of New York?—A. Yes, sir.

Q. And it was subsequent to this complaint that the Empire Transportation Company built its refineries in the city of Philadelphia?—A. Yes, sir; and it was the building of this refinery that caused the final rupture with the Standard Oil Company.

Q. The Standard Oil Company were engaged in part in refining oil at that time?—A. That was their business.

Q. At that time was the Standard combination the owner, or had they a controlling interest in the United Pipe Lines?—A. I can not answer that of my own knowledge. It is a matter of general belief that they had. I do not know that they have a controlling interest. I should correct that.

Q. Did you at the time of these negotiations, and at the time this contract was entered into, understand that the Standard Oil Company controlled the United Pipe Lines?—A. No, sir; I did not, and I do not understand it now. They say they do not control the United Pipe Lines as a company. They tell us that they do not control the United Pipe Lines.

Q. Notwithstanding what they say, is it not a fact that they do?—A. What I know I only know from what they tell me.

Q. At the time of these negotiations, and at the time this contract of October 17, 1877, was made, was it not your understanding that they practically controlled the United Pipe Lines?—A. No, sir; it was not; because they always assured us that they did not control it. They had a large interest in it, I have no doubt.

Q. At that time the United Pipe Lines were co-operating with the Standard Oil Company?—A. Undoubtedly.

Q. I understood you to say that the Standard people insisted that you should purchase out the Empire Transportation Company.—A. No, sir; they did not.

Q. What did they insist upon?—A. What I stated was this: They insisted that the first condition of their coming back on our line to ship oil over our road must be that the Empire Transportation, which company did all our oil business, represented us in the oil business, must cease refining oil in competition with us. The Empire Transportation Company objected to going out of the refining business, and called upon us and asked us to buy them out and close out their contract; they said they would prefer to be bought out and go out of the business entirely rather than to go out of the refining business.

Q. That is to say, the Standard people insisted that they should?—A. Cease the refining of oil as a rival of theirs. As I said before, in that they were supported by the other three trunk lines.

Q. Who, representing these trunk lines, communicated that to you?—A. Mr. Vanderbilt on many occasions objected to our having any interest, directly or indirectly, in the business.

Q. Was he present at Philadelphia?—A. No, sir; at New York he did at various times. Mr. Jewett took the same position. Both on many occasions objected strongly to our company, directly or indirectly, or through any of its agencies, being inter-

ested in the refining business; so did the Baltimore and Ohio Railroad, through Mr. King and Mr. Garrett and others at various times.

Q. Was either Mr. Vanderbilt or Mr. Jewett a member of the Standard combination?—A. Not to my knowledge. You mean stockholders or interested personally in it?

Q. Yes, sir; either as stockholders or otherwise.—A. Not to my knowledge.

Q. What other terms, if any, did the Standard combination insist upon?—A. That was the only point that they insisted upon; that was the first condition that they made. Then, when the Empire Transportation Company decided that rather than sell out their refining interest, which they thought was bad policy—there we differed, you know—then the question came up as to who should buy this plant of the Empire Transportation Company. The Standard Company wanted us—somebody had to buy it. They offered to buy the refining interest. They wanted us to buy the pipe line and cars. We objected to buying the pipe lines; said that was out of our province, and we insisted that they should buy the pipe lines, and it resulted in their buying the pipe lines and refining-plant property.

Q. Did they buy from the Empire Transportation Company or the Pennsylvania Railroad Company?—A. They bought directly from the Empire Transportation Company. We bought the cars directly from the Empire Transportation Company, paying them in car stock certificates, and they bought the refining interest in pipes, paying them in cash, and the negotiation, the principal part of the negotiation after we got that far, was to bring these two parties together as to the price.

Q. Where were these negotiations conducted?—A. In Philadelphia.

Q. Who represented the Standard people?—A. Mr. Rockafeller and Mr. Flagler, mainly.

Q. John D. Rockafeller?—A. John D. Rockefeller, president, and Mr. Flagler, secretary; Mr. Warden had something to do with it; and I think when the proceedings got pretty near the close Mr. Lockhart was here.

Q. Was he here more than once?—A. I think only once; but he did not take an active part, so far as we were concerned; he might with his partners.

Q. Did any one in these negotiations represent the United Pipe Lines?—A. No, sir; we had no negotiations with the United Pipe Lines at all.

Q. Are we to understand you that the proposition from your road was that the Standard combination should buy the United Pipe Lines?—A. The Union Pipe Lines; no, sir; the Standard Oil Company wanted us to buy the pipe lines, which we, as I said, declined to do; we did not care about investing a large sum of money in that sort of property, and we insisted that they must be the ones to buy them, which they did; I am not positive about it, but I think they afterwards consolidated that Union Pipe Line with the United Pipe Line; but our negotiations were entirely with the Standard Oil Company; what they did with the property afterwards I am not positively able to state, but I think that Union Pipe Line property was all consolidated afterwards with the United Pipe Line.

Q. Who, if anybody, represented the Empire Transportation Company at your negotiations with the Standard people?—A. Mr. Joseph D. Potts, the president of the company, Mr. H. H. Houston, and Mr. William Thaw, of Pittsburgh.

Q. When did you finally come to an agreement?—A. On the 17th of October.

Q. The paper bears date the 17th of October. Did you not come to an agreement before that day?—A. No, sir. The agreement can not be said to have been settled until the papers were signed. There were open questions up to that day that were settled on that day.

Q. At what time had you reached a substantial agreement?—A. I think about the 1st of October. The agreement would have been probably perfected about that time, except the counsel for the Empire Line thought it was necessary they should advertise the fact that they were going to sell this property, and have a meeting of their stockholders, and get the assent to the sale before the papers were finally signed. I do not know what length of time that was, but I think it was about the 1st of October, and they advertised for two weeks, and had their meeting, I think, on the 17th. That day, and after the meeting was over, the papers were finally signed and the transfer made.

Q. Who were present representing the various parties on the 17th of October 1877?—A. When the papers were finally signed and the transfer made, you mean?

Q. Yes, sir.—A. The meeting took place at Mr. Potts's office, at Girard street, Philadelphia, and there were present, on behalf of the Pennsylvania Railroad Company, Mr. Scott and myself; on behalf of the Empire Transportation Company, Mr. Potts, Mr. Houston, and, I think, Mr. Thaw; on behalf of the Standard Company, there were Mr. William Rockafeller, the vice-president, Mr. Flagler, Mr. Chester, who is counsel for the Standard Company, Judge Porter, of Philadelphia, who is counsel for the Empire Line, and there were several other gentlemen present connected with the Standard Oil Company; I do not think I could name them all.

Q. Was Mr. Lockhart present then?—A. Mr. Warden was present, and, I think, Mr. Lockhart.

Q. William G. Warden and Charles Lockhart?—A. Yes, sir.

Q. Mr. Charles Pratt also?—A. Mr. Pratt was there also.

Q. Was Mr. J. A. Bostwick present?—A. Mr. Bostwick; yes, sir.

Q. Mr. Daniel O'Day?—A. I think he was, but I am not positive.

Q. Do you know what interest Mr. O'Day was representing?—A. I do not; I know that he is manager of the American Transfer Company, but what he was representing there I do not know; he has nothing to do with us—with our negotiations—oh, Captain Vandergrift was there also.

Q. You mean Mr. J. J. Vandergrift?—A. Yes, sir; known as Captain Vandergrift.

Q. Did you understand at that time that he was president of the United Pipe Lines?—A. I knew that he was; yes, sir.

Q. Who was he representing?—A. He is director of the Standard Oil Company; I was not aware who he was representing there; he never took any part in the negotiations before.

Q. He then stood in the double relation of director of the Standard Oil Company and president of the United Pipe Lines?—A. Yes, sir; as I said before, we had no negotiations or direct dealings with the United Pipe Lines at all, or indirect either.

Q. Had he no negotiations with the gentlemen who were present there at that time?—A. I do not think Mr. Vandegrift took part in the discussion at all.

Q. He was present?—A. He was present; I do not know why; he was present and saw the checks pass, the contracts signed, and all that; I did not ask him what he was doing there. Mr. W. J. Howard was there as counsel for the Pennsylvania Railroad.

Q. Was there present any parties representing the refining interest?—A. Yes, sir; the partners with the Empire Transportation Company in the refinery in New York, of which they were part owners; they were Messrs. Sloane and Fleming, of New York; these gentlemen were also interested in the refinery the Empire Transportation Company had built in Philadelphia.

Q. So that the Empire Transportation held merely an interest in these refineries?—A. An interest only—a controlling interest, I believe.

Q. Now, you have named all that were present at that interview, so far as you can recollect?—A. So far as I can recollect, I have, sir.

Q. Please state what was done at that interview.—A. Well, the papers were signed. In the first place, this contract you have before you between the Standard Oil Company—this letter which is intended to be a contract, the letter addressed to Mr. Scott, and his reply—were both signed at that meeting; in the next place, the contract between the Pennsylvania Railroad Company and the Empire Transportation Company for the purchase from that company by the Pennsylvania Railroad Company of its cars and depots; in the next place, the contract by which the Standard Oil Company bought of Messrs. Sloan and Fleming and the Empire Transportation Company the refineries in Philadelphia and New York; and, also, the contract by which the Standard Oil Company bought from the Empire Transportation Company its pipe-line interest—its stock in the Union Pipe Lines; they owned all the stock; that was the form in which it was done, that of transferring the stock; and then the checks for the money payments were passed.

Q. All was done at this meeting?—A. All at this meeting; yes, sir.

Q. You say that the cars, the rolling-stock of the Empire Transportation Company, was transferred to the Pennsylvania Railroad Company; state what, if anything, was done in the way of putting those cars into a trust and the issuing of a mortgage.—A. The cars were bought and paid for in car-trust stock; a trust was formed for the purchase of these cars, and that trust issued this stock.

Q. What was the amount of that?—A. They were two trusts formed—one of about \$900,000 for the purchase of the tank cars, the oil cars; and one of \$1,600,000 for the purchase of the general-merchandise cars of the Empire Line; that trust stock bore 6 per cent. interest, and then, I think, there was 10 per cent. sinking fund; I can give you a copy of the trust papers to show exactly the nature of them.

Q. State whether the Standard Oil Company took that car-trust stock or any amount of it.—A. As a part of the general arrangement the Empire Transportation Company sold at par to the Standard Company and that company bought from them the car-trust stock issued for the payment of the oil cars.

Q. That is to say, in other words, the Standard Oil Company furnished the money to purchase and took the stock.—A. Exactly; and took the stock. Our company did not care to furnish that much cash.

Q. You are now speaking of the \$900,000?—A. Yes, sir; the \$1,600,000 was distributed by the Empire Transportation Company to its stockholders in liquidation; the payment for the refineries which the Empire Transportation Company sold to the Standard was made in cash, so they really got cash for their refineries, the oil cars, and the pipe lines.

Q. The Standard Oil Company furnished all the cash that was paid on that occasion?—A. They furnished cash for their purchase, and, in addition, bought this car-trust stock.

Q. So that all the money that was paid was paid by the Standard Oil Company?—A. Yes, sir.

Q. You say that on that occasion the letter dated October 17, 1877, and addressed by the Standard Oil Company to Thomas A. Scott, president of the Pennsylvania Railroad Company, and Mr. Scott's reply of the same was signed?—A. Yes, sir.

Q. How long before that was the letter of the Standard Oil Company, bearing that date, prepared?—A. It was prepared several weeks before when the whole question was under discussion.

Q. Although it bears that date, it had been submitted to Colonel Scott, or the Railroad Company, prior to that time?—A. Yes, sir; it was signed on the 17th, because it went into effect on that day.

Q. This contract, as embodied in these letters, was then a part of the general arrangement that was consummated at that time?—A. It was a part of the general arrangement; yes, sir.

Q. Was there any understanding, or agreement, between the Standard Oil Company and the Pennsylvania Railroad Company entered into at that time other than what appears in these letters?—A. No, sir.

Q. Mr. Cassatt, I notice in this contract of October 17, already in evidence, that there is a provision contemplating that your company might be compelled to fill certain contracts for transportation made by the Empire Line with refiners and producers; can you state what those contracts were; with whom they were?—A. They were with a number of refiners, other than the Standard Oil Company, shipping over our line—refiners in the oil regions, refiners in Pittsburgh, Philadelphia, and in New York.

Q. They were parties other than the Empire Transportation Company?—A. Yes, sir.

Q. Could you name those parties?—A. I could not name them all, sir; I could procure a list of them, I suppose, for you; Lombard & Ayres, and Ohlen, and Bush, and several refineries in Pittsburgh, and several in the region; I think, perhaps, eighteen or twenty contracts.

Q. Were there more contracts with producers as well?—A. I think they had a contract with the Columbia Oil Company, represented by David Stewart; that was not, however, a transportation contract; that was a contract between the Empire Line's refineries and the refining companies in which they were interested and controlled with this particular company, by which they agreed to take the oil produced by that company on a sliding basis as to price—a price fixed upon the selling price of oil; but that was not a contract made by the Empire Transportation Company as a transporting company; it was made by them as refiners; that is my recollection. I know of no arrangement with producers other than that.

Q. I notice that the language of the contract is to fill certain contracts for transportation made by the Empire Line with refiners and producers.—A. Well, I do not think there were any with producers; I think that was superfluous, that word.

Q. Were those contracts carried out; that part of the stipulation complied with?—A. Yes, sir; they were carried out.

Q. When did those contracts expire?—A. They expired, all of them, on or before the 1st of May, 1878.

Q. I notice in your testimony the other day you spoke of certain efforts or methods used by the Standard Oil Company to depress prices here at the sea-board, and, as you say, intending it to the detriment of the Pennsylvania Railroad Company and your shippers, and you say that the Pennsylvania Railroad Company pursued the same policy at that time. What were the acts?—A. Won't you be kind enough to read what I said there?

Q. Yes, sir; I will just read the whole passage [reads]:

“Q. Do you know, and, if so, explain, how the price in the oil regions became so elevated and the price at the sea-board depressed?—A. That is rather a difficult thing to explain; the markets fluctuate. I am not familiar with the oil market, but I know it was the case in this instance.

“Q. Was not it because the Standard Oil combination manipulated the market?—A. They did it to our detriment all they could; no doubt about that; they endeavored to injure us and our shippers all they could during that fight.

“By Mr. MACVRAUGH:

“Q. You pursued the same policy, I suppose?—A. We did the same thing.”

Now, I ask you what were the acts, or what were the steps, in that direction taken by the Pennsylvania Railroad Company?—A. I would like to correct that by stating that it was our shippers, that is, the refiners and shippers who patronize our lines, that did the same; of course we, as a company, had nothing to do with it at all; we simply hauled the cars, and the Empire Transportation furnished them and

procured the business, and did all the business but the hauling of the cars. The oil was all bought in the region by the Empire Transportation Company and sold to the refiners at the sea-board, and the difference was our freight. That is all we knew about it; they made us a statement each month.

Q. Were the terms and conditions which regulated the business between the Pennsylvania Railroad Company and the Empire Transportation Company in the form of a contract?—A. Yes, sir.

Q. Written contract?—A. Written contract.

Q. Can you furnish us with a copy of that?—A. I can, sir.

Q. I would like to have a copy of it.—A. Yes, sir; you want a copy of that part relating to the oil 'raffle'?

Q. Yes, sir; that is, of the oil business.—A. I can have a copy of it furnished; the whole thing is printed in pamphlet form; I stated on Saturday what that contract was.

Q. Are we to understand that your parties, that is, the refiners and shippers here that you identify with the Pennsylvania Railroad Company, or the Philadelphia interest, that they had a contest with the Standard Oil Company at that time, with the purpose of breaking down the price here at the sea-board, or are we to understand you to mean that that merely followed the depressed rates that the Standard was endeavoring to fix?—A. That is a thing that would puzzle me to answer. The two parties, the Standard Company on the one hand, backed up by the other three trunk lines, and our shippers on the other hand, were in a contest to secure the oil market and secure the trade; whether they reduced first, and the Standard followed, or the Standard reduced first and our shippers followed, it is impossible to say; I have no doubt there were times when they reduced first and the Standard followed, and times when the Standard reduced it first and they followed.

Q. Having reference, however, to the particular juncture that you are describing here at this time, are we to understand you as stating that there was that kind of contest between those opposite parties in which they each endeavored to break down the market here at the sea-board, or was the effort of the parties here—of the Pennsylvania shippers and refiners—were they merely compelled to follow suit as to prices at the sea-board that had been established by the efforts of the management of the Standard?—A. That I am unable to say. All I know is in this particular instance I speak of, oil was selling at a lower rate at the sea-board than at the oil regions. I do not know what produced that result.

Q. Upon page 9 of your testimony you enumerate certain transportation companies that were in league with the Standard Oil Company in this alleged combination against the Pennsylvania Railroad; you mentioned the New York Central, the Erie, the Baltimore and Ohio, the Lehigh Valley, the Reading Railroad Company, and the Atlantic and Great Western. Should you also name or include the Lake Shore?—A. Yes, sir; they were carrying oil in competition with us at that time.

Q. It is said that you did mention them, but the scribe has not it down here?—A. I think that I did mention them. You refer to it as a league against us. Of course I have no knowledge whether there was any combination or league between those companies. All that I know is that the Standard Oil Company shipped by those roads, and those roads carried it in competition with us at rates that must have been very low. Whether there was any combination or league I do not know.

Q. Your knowledge of any such league would be a mere matter of inference and not of positive knowledge?—A. A mere matter of inference.

Q. In your testimony you stated that the Pennsylvania Railroad Company in its contract with the Empire had the right to purchase out the properties of that company, and you have described later in your testimony the methods by which that right was subsequently exercised. Will you please state whether the Pennsylvania Railroad Company gave notice to the Empire of their design or desire to exercise this right of purchasing at any time before?—A. No, sir; it was not a matter of notice; it was a matter of arrangement between us—a matter of negotiation. As I said before, the Empire Transportation Company differed with the officers of the Pennsylvania Railroad Company, or the management of the Pennsylvania Railroad Company, as to the policy of their remaining in the business of refining oil, and they said to us rather than go out of the refining of oil—the business of refining oil—they would prefer we would buy them out. We had no right to force them to stop refining oil. We had a right to buy them out, and when they requested we should we agreed to it.

Q. Are you confident that the notice or the request to purchase came from the Empire people?—A. Entirely so; yes, sir; entirely so.

Q. Was that wish expressed in the shape of any written paper or letter?—A. No, sir; it was expressed verbally; it was expressed at a much earlier day than the date of this contract or these negotiations took place. It was expressed first in the fall of 1876, when the question of the advisability of the Empire Line being in the refining business first came up, and it was then that it was suggested by officers of the

Empire Line that we had better take control of this traffic ourselves and buy them out.

Q. Were those intimations made for the purpose, if you know, of resulting in the selling by them and the purchasing by your company, or were those references to a sale made for the purpose of inducing the Pennsylvania Railroad Company to comply or accede to their terms with respect to transportation?—A. I think they were made in good faith; I think that they felt that rather than cease refining they would prefer to go out of the business. When that suggestion was first made, we did not exercise the option to buy them out, but after this fight, after this contest with the Standard Company, when we renewed our negotiations with that company, then this suggestion to purchase their property came from them again, and then we acceded to it.

Q. At or about the time that these negotiations between the Standard and the Pennsylvania Railroad Company came to a settled form in the contract of October 17, was there a combination or arrangement effected between the various trunk lines, including the Pennsylvania and the other principal routes connected with the oil country, providing for a distribution or division of that traffic between the lines?—A. No, sir; there was no combination of that kind made between the lines; the sole arrangement made was that expressed in that letter.

Q. That is the one adverted to in the answer.—A. The 17th of October.

Q. Was there no stipulation entered into or arrangement effected between the trunk lines looking to a division of this oil traffic?—A. A contract made between the trunk lines looking to a division of this oil traffic? No, sir; there was not.

Q. Were there no arrangements effected which you would not characterize as a contract? You say there was no contract. Was there no arrangement or understanding in some form?—A. Not direct, sir; no; we understood at that time that the other trunk lines would not object to the arrangement or to the contract which we made with the Standard Oil Company by which we were guaranteed by that company a certain percentage of the total shipments to the sea-board.

Q. Was it your understanding that the Standard Oil Company had a similar, or a somewhat similar, contemporaneous contract or arrangement with the other trunk lines?—A. We understood that the other trunk lines would not object to this arrangement being made with us.

Q. Did your information go so far as to let you know that the Standard Oil Company had, in point of fact, effected a similar, or somewhat similar, arrangement with the other trunk lines looking to a division of the oil traffic?—A. We had no direct information on that subject, but we understood and believed they had an arrangement with the other trunk lines by which they made them similar guarantees of tonnage; just exactly the nature of that arrangement I do not know anything about.

Q. That is the precise nature of the agreement between the Standard and the other trunk lines?—A. Yes, sir; we had no knowledge of it at all.

Q. How did you get your information as to the existence of some understanding or arrangement between the Standard and the other companies?—A. In conversations with the officers of the Standard Oil Company and in conversation with officers of the other trunk lines.

Q. Was it not fully and fairly understood between these various trunk lines, including your own company, that, by some arrangement made with the Standard Oil Company, the contest for the oil traffic was regulated and had become a matter of agreement?—A. By some arrangement with the Standard Oil Company? No, sir.

Q. Was it not understood and expressly recognized between these trunk lines, through their officers, that the oil traffic was, in point of fact, to be apportioned between them upon some recognized plan?—A. No, sir; there was no agreement as to—there was an understanding that the percentages which we received were to be satisfactory to the New York lines and the Baltimore and Ohio Railroad; we, on our hand, not objecting to the percentage they would receive; but there was no agreement between us that this business should be divided by the Standard Company. The Standard Oil Company's agreement with us stands, so far as we know, by itself. Whether they have any agreement with the New York and Erie, or the New York Central, we do not know anything about.

By the MASTER:

Q. You speak now of the percentage of freight to be carried?—A. Of the quantity; yes, sir.

By Mr. SHIRAS:

Q. I have understood you to say that you understood that the other trunk lines were satisfied with the percentage that your road was to get of this traffic, and that you were satisfied with the percentages which they respectively were to get?—A. Yes, sir.

Q. How were those percentages fixed?—A. How were they fixed? How were they agreed to?

Q. How were they agreed to?—A. We had various discussions with them during the whole continuance of this contest as to what percentage our road should have.

Q. Now, as I understand you, about the time this agreement with the Standard was effected, it took the shape, not of an agreement, but it took the place of a contract, in which you agreed or acquiesced in the percentage they were to get, and they the percentage you were to get?—A. Yes, sir.

Q. How were those percentages fixed?—A. They were fixed at a meeting in New York at which the subject was discussed, and at which the Erie, the New York Central, and the Baltimore and Ohio agreed to our having this 47 percentage, or whatever the percentage was, and in which we assented to their having the percentage assigned to them. There was no agreement at that time, however, that the Standard Oil Company should make these divisions. On the contrary, afterwards, some time subsequent to that, the Baltimore and Ohio Railroad called upon us to see that they got their share of the oil. We denied having made any arrangements of the kind with them, and had not, we simply assenting to their getting it; we told them they must make their own arrangements for getting it; we did not care what they were.

Q. About what time was that conference?—A. That conference was some time, I think, in September of 1877.

Q. It was at or about the time of the making of this contract with the Standard?—A. It was before that contract was made.

Q. Were you present at the time?—A. Yes, sir.

Q. Who else were present that you remember?—A. I am not able to state; I don't recollect exactly when the conference took place, or who was there, but I know that such a meeting took place. I do not know whether all the trunk lines were represented or not; whether we didn't see one first and the others afterwards; but the gentlemen who would represent the trunk lines would be William H. Vanderbilt on the part of the Central, Mr. Jewett on the part of the Erie, Mr. Garrett on the part of the Baltimore and Ohio, and Mr. Scott and myself on the part of the Pennsylvania Railroad; we had consultations with those three gentlemen; I am not sure whether it was a meeting at which they were all present, or separate meetings; I could refresh my memory on that.

Q. Were not representatives of the Standard combination present at those conferences?—A. Not to my recollection, sir. The Standard Oil Company never had anything to say as to what the division should be between the lines; that was something out of their province entirely; we never allowed them to have any discretion about that, and they never desired to have any.

Q. What was the method taken or agreed upon between you as to assuring to the respective companies their allotments of the traffic?—A. There was no method agreed upon, as I before stated.

Q. How, as a practical railroad man, was it expected that the agreement would operate? How could it be so watched as to insure this division?—A. We made our arrangement with the Standard Oil Company to get our percentage.

Q. But you don't know what methods the others took?—A. No, sir; not of my own knowledge; that was a question in which we have no interest.

Q. The means by which you say you secured your share of the traffic; by that you advert to this agreement with the Standard Oil Company?—A. Yes, sir.

Q. How, under that, would you be assured or know that you were getting your 47 per cent.?—A. Because they contracted to give it to us.

Q. But a contract is one thing and a performance another; how would the Pennsylvania Railroad Company and its officers be warranted in thinking or believing that they were getting their 47 per cent.?—A. Oh, I understand you now. The different roads exchange statements of the amount of oil they carry, and we make up a statement for the month to see whether we get our 47 per cent.; if we do not get it we call the attention of the Standard Oil Company to the fact, and they would increase the shipments over our road the next month.

Q. When did the trunk lines begin that exchange of statements?—A. The 1st of November, I think, 1877, shortly after this agreement went into effect; I think the agreement went into effect about the 1st of November.

Q. In the case of those reports exhibiting any casual inequalities or departures from the agreed proportions to be carried or received by the respective railroad companies, what were the methods of correcting those inequalities?—A. When we found we were short our percentage, which was the only thing we had any interest in, we called the attention of the Standard Oil Company to it, and called upon it to make it up.

Q. Was that made up by increased shipments at some successive period?—A. Yes, sir.

Q. Was it ever made up by the payment of moneys?—A. No, sir; you mean by payments of moneys by the Standard Oil Company?

Q. By the Standard Oil Company to the companies.—A. No, sir; never—well, I should correct that—never to my knowledge—never to the Pennsylvania Railroad Company; I do not know whether they ever paid any to the Central or to the Erie; I do not know that they did.

Q. Did this arrangement between the trunk lines cover or include an agreement as

to the rates at which the oil should be carried?—A. Yes, sir; there was an agreement that the rates should be equal on the lines, and the rates are fixed, or have been fixed, from time to time by conferences between the trunk lines.

Q. At that time that you succeeded to the effects of the Empire Line, its transportation facilities in the way you have described; did that company have any contracts with other railroad companies?—A. It had with a great many railroad companies throughout the country.

Q. Did you succeed to those contracts—undertake to carry them out?—A. They were nearly all assigned to the Pennsylvania Railroad Company.

Q. Do you keep up in any formal way the organization of the Empire Line?—A. We do; we divide their business into two branches—one the oil business, which we keep up under the name of the Green Line, and the general merchandise business, which we keep up under the name of the Empire Line. In all of our statements and accounts we treat those two lines as though the original contract of the Empire Line was still in existence. We do that to show whether the purchase was a favorable one to us or otherwise.

Q. Among those contracts you succeeded to in the way you have mentioned was there one between the Empire Line and the Buffalo, New York and Philadelphia road?—A. There was.

Q. Do you carry on the work under that contract?—A. Yes, sir; we have worked under it ever since.

Q. It is still a subsisting contract?—A. Yes, sir.

Q. Can you furnish us with a copy of that?—A. Yes, sir; I can.

Direct examination by Mr. SHIRAS:

Q. We requested that you bring a certain contract with the Empire Transportation Company and one with the Buffalo, New York and Philadelphia Railroad Company. Have you got them?—A. Here is a printed copy of the one with the Empire Transportation Company—and this was the one between the Empire Transportation Company and the Buffalo, New York and Philadelphia Railroad Company, which has assigned to the Pennsylvania Railroad Company upon the transfer of the Green Line property to the Pennsylvania Railroad Company.

Q. This is a copy?—A. Yes, sir. [Witness hands papers to Mr. Shiras.] There is an indorsement on the back, you will observe.

Q. Mr. Cassatt, was the contract that is set forth in this agreement between the Empire Transportation Company and the Buffalo, New York and Philadelphia Railroad Company subsequently modified or changed?—A. Not to my knowledge, sir; it was assigned to the Pennsylvania Railroad Company at the time we bought out the Empire Line in October, 1877, or about that time. Will you allow me to look at it? [Mr. Cassatt reads over the contract.] Yes, sir; this is the contract under which we are operating now; that is, so far as it relates to railroad transportation. That contract refers also to the construction of pipe lines by the Empire Transportation Company; we had nothing to do with that; only that part of the contract which refers to the furnishing of cars and transportation was assigned to us. It was understood that we should carry out the provisions of the contract referring to that part of the business.

Q. The part, however, that pertains to the transportation business has not been modified?—A. Not to my knowledge; no, sir.

Q. Recurring, Mr. Cassatt, to these statements produced here, contracts between the Pennsylvania Railroad Company and settlements passing between the Pennsylvania Railroad Company and the other railway companies with respect to this oil traffic, and particularly these statements of the month of May, 1878, for instance, I notice in the first entry in the statement of that month a certain amount of crude oil was transported by the Pennsylvania Railroad Company, and marked on this paper "A. V., north of J. C." What do those words signify on the first left-hand corner?—A. I never saw any of those statements. I could not tell anything more about them than you can, I guess. It is not part of my business to see them, and I may say I never have seen them to examine them.

Q. Do you know enough about the method in which those accounts are kept to tell us the meaning of those entries?—A. No, sir. Well, I could guess at this.

Mr. MACVEAGH. We do not care about that.

The WITNESS. I could tell you, probably. A. V., north of the junction, isn't it?

By Mr. SHIRAS:

Q. What junction is that?—A. It is Allegheny junction, I presume.

Q. Does this signify that the oil carried, which appears in that entry, came from points north on the Allegheny Valley Railroad—north of the junction?—A. North of the junction.

Q. Does the entry there of the amount charged on the crude, which I believe is entered there at 30.899 per 100 pounds, signify the charge made by the Pennsylvania Railroad Company for the carriage?—A. That I can't answer; as I say, I am not

familiar with those statements in the form in which they are made out at all. It is my business to make the rates and arrangements for transportation and notify the controller what they are, and he makes the statements. It would be utterly impossible for me to give time and attention to go over the details of those statements.

Q. You spoke in your testimony heretofore of the fact that an agreement had been reached between the trunk lines as to the rates at which the oil should be transported at or about the time that the Pennsylvania Railroad Company had entered into a contract with the Standard Oil Company already in evidence. I wish to ask you, Mr. Cassatt, how the points that are known as common points were fixed; what were common points?—A. All points in the oil regions are common points from which oil is shipped. We do not use the term common any longer; that is a term used some years ago; there were common points made when there were rates made from what were called local points; that term is not used any more in our arrangements.

Q. When did you depart from that phraseology?—A. When we made uniform rates from all points in the regions; that was, I think, about 1875.

Q. Then, if I understand you, it is a characteristic of this agreement between these railroad companies that all oil transported from any point in the oil-producing territory to the sea-board is regarded as starting from a common point?—A. I do not exactly understand that term common point. It is understood that the rate shall be equal and uniform from all points in the region to the same points on the sea-board, with this exception, that the rates on oil from the Bradford district are lower than from the lower district.

Q. Then there is a distinction between oil transported from the Bradford district and that from other districts of the oil country?—A. There is a difference in the rate; that is, the rate from the Bradford district on crude oil is lower than from the other districts, the distance being nearer somewhat, and it is also made lower because the oil is of an inferior quality and won't bear as high a rate of transportation. That is one of the reasons.

Q. Is that distinction observed, so far as you know, by the other carrying companies as well as your own?—A. Yes, sir; that is part of the understanding between the companies.

Q. What is that rate, Mr. Cassatt, at which that oil is carried and which is agreed upon?—A. What is the difference in rate?

Q. No; first, what is the rate from the oil country exclusive of the Bradford district?—A. On crude oil to New York?

Q. Yes, sir.—A. One dollar and forty cents per barrel is the tariff rate.

Q. What is it from the Bradford district?—A. Twenty-five cents less.

Q. This rate given in this account of May, 1878, being 30.889 per 100 pounds, what would that come to at a barrel?—A. We count a barrel of crude oil at 300 pounds.

Q. So that this would be three times that?—A. Yes, sir.

Q. That would be 92 cents and 6 mills?—A. Yes, sir.

Q. This account between the Pennsylvania Railroad and the Philadelphia and Reading, already in evidence, shows, Mr. Cassatt, that 92 cents and 6 mills per barrel were charged. What became of the balance between that rate and your tariff rate?—A. As I said before, I don't understand this account at all, not as made out; and allow me to suggest that Mr. Justice would be the proper man to answer those questions; he could tell a great deal better than I could.

Q. We have no objections to your asking Mr. Justice; he sits near you. It don't matter much which answers.

(Mr. Cassatt consults Mr. Justice.)

A. Under our contract with the Reading Railroad Company, while we count the barrel of oil at 300 pounds in our settlement, and while the 45 gallons of oil do actually weigh about 300 pounds, by the contract which the Empire Line had with the Reading road, which was afterwards assigned to us, a barrel is counted at 360 pounds, and if you will divide 360 into 115 you will find that it comes to about 30.889. As Mr. Justice called my attention to now, and which I recollect, under that contract with the Reading Railroad, as I said before, we settled with them on the basis of 360 pounds to the barrel up till last November, when they asked for a modification of the contract on the ground that that bore heavily on them, and we agreed to modify it and charge for the actual weight.

Q. In respect to that oil that this account shows was transported from the junction and received as from different points on the Allegheny Valley Railroad north of that point, where does the Allegheny Valley Railroad Company get its compensation for its carriage of this same oil?—A. We make settlements with them similar, I suppose, in form with the one we made with the Reading Railroad.

Q. That settlement is not included in the charges here?—A. Well, I think not. It does not show the proportion due the Allegheny Valley Railroad.

Q. Why?—A. Well, this is a settlement showing the Reading Railroad Company what is due to it, and, of course, it would be unnecessary to state what was due the other companies.

Q. What does the Allegheny Valley Railroad Company get from your company for this transportation?—A. It gets, first, a terminal of 5 cents a barrel, which is taken out for the Allegheny Valley Railroad; it is a commanding charge; it is not terminal exactly; 5 cents a barrel is taken out, and then the remainder of the rate is prorated on the average distance which we have agreed upon between us to be a fair average distance, and they get that portion, whatever it may be, of the rate.

Q. Is that the average distance between the points where the oil is shipped and the point to which it is carried?—A. No, sir; the average haul out of the total or average distance from the point of loading to the junction.

Q. What rate is it that you allow them?—A. He takes the actual net rate, after paying all rebates and drawbacks on the oil; then we deduct 5 cents, which we set aside for them; then we prorate the remainder of the rate, taking the distance to the sea-board from the point of shipment, and we allow them their proportion based upon this average distance which is assigned to them.

Q. Then this charge, in point of fact, includes the charge of the Pennsylvania Railroad Company and the Allegheny Valley Railroad Company together?—A. This rate of 30.889 is the through rate to the sea-board, and that is divided up among the different roads that transport oil, and divided in each case upon a different basis. You see in the case of the Reading Railroad we count a barrel at 360 pounds, or did then, and then allowed them their actual distance, took out certain terminals, etc. It was a separate understanding with each road.

Q. You notice in the accounts furnished here for the month of May that this same first lot, which we take by way of specification of lot shipped from points north of the junction, and taken at the junction by the Pennsylvania Railroad, a special allowance made of 5 cents upon 6,332½ barrels, which is about half of the first shipment.—A. That is the amount paid out for lighterage in New York. Under our contract with the Standard Oil Company (and we do in fact for all shippers) we deliver this crude oil to any point in the harbor of New York or alongside of vessels, and this is what we pay out to have this work done.

Q. Do the other railroad companies do the same thing?—A. They do the same thing. You will observe in the contract with the Standard Oil Company (and, as I said before, we pursue the same practice with other shippers) we agreed, so long as we had no wharves on deep water, to deliver to any point in the harbor or alongside vessels.

Q. This same oil that was shipped in May, and of which I have spoken, I notice that in the month of June the statement furnished here exhibits, upon an amount of 12,557 barrels, a rebate or reduction allowed of 22½ cents; what is that?—A. That is paid to the American Transfer Company.

Q. Where did they handle that oil?—A. We have an arrangement with the American Transfer Company by which we pay them 22½ cents on all crude oil received and transported by us. We pay that as a commission to them to aid in securing us our share of the trade.

Q. Is the American Transfer Company a corporation, or is it a private association?—A. I believe it to be a corporation. It has a corporation name and the officers of a corporation.

Q. When did it come into existence, or when did you begin to deal with it in this way?—A. I think in February, 1878, we made an arrangement with them by which we paid them 22½ cents per barrel on all crude oil received by us for transportation. We did that in consequence of the other roads having done the same thing. In order to protect our interests and secure our share of the business we thought it best to do the same.

Q. Is it a Pennsylvania corporation?—A. I do not know, sir.

Q. Who are the officers of it?—A. Mr. Daniel O'Day is the general manager.

Q. Do you know any of the other officers?—A. Mr. Justice informs me George W. Girty is cashier. I do not know him personally; I do not think I ever saw him—but he is cashier.

Q. Can you name any of the other officers or leading officials connected with it?—A. I can not, sir.

Q. Can you name any of the stockholders?—A. I can not; no, sir.

Q. This 22½ cents that you say you agreed to pay them, to what officer was it paid?—A. I believe the checks are made to Girty, cashier—Mr. Justice informs me.

Q. Was your contract with the American Transfer Company in writing?—A. We have no contract with them. There is a letter addressed to me, I believe by Mr. O'Day, asking to have this allowance made them, and setting forth the reasons why they thought they should have it, which I can produce if necessary.

Q. We would like to have a copy.—A. I will send it to you, and I think I replied to him in writing, saying we would make it until further notice. It is not in the nature of a fixed contract; it is an arrangement.

Q. Will the nature of the arrangement appear from this letter and your reply?—A. I think it will, fully.

Q. What is the business of the American Transfer Company, as you understand it?—A. It owns pipe lines in various parts of the region, as I understand it.

Q. Do you know any parts of the oil country in which they have pipe lines?—A. I think in all the parts. It has pipe lines in the Bradford district; it has a pipe line running to Kane, on the Philadelphia and Erie Railroad; I understand it owns and operates a pipe line at Pittsburgh, and the one which formerly belonged to the Conduit; I do not know whether that company is still in existence or not; I think the Standard operates it; I do not know this of my own knowledge; I am simply stating what I understand to be the case.

Q. You have stated, Mr. Cassatt, that you deemed it politic or prudent to make this arrangement, the other railroads having made similar arrangements. How did you become informed of that fact that the other railroads had made such arrangements?—A. *I was shown in February, 1878, I think, a statement of the monthly settlement made by the New York Central and Erie roads, in which it appeared that they paid an allowance or commission larger than the one that we paid to the American Transfer Company.*

Q. Who exhibited to you those statements; do you remember?—A. Mr. O'Day, I think.

Q. You say he showed you such statements, if I understand you?—A. He showed me the monthly settlements made.

Q. Did he state to you how long those contracts had been running with the other companies?—A. He stated to me that they had been receiving that allowance since the previous fall.

Q. Was Mr. O'Day the same Mr. O'Day who was present at the interview when the contract of October 17, 1877, was agreed upon?—A. I find, upon refreshing my memory a little upon that, that I can't say that Mr. O'Day was present at that meeting. I have read over the testimony which I had given here, and in which Mr. Acheson asked me the names of the gentlemen who were there. I think I named one or two who were not there. I think I made a mistake.

Q. You think that was true in the case of Mr. O'Day?—A. I don't think Mr. O'Day was present, and I don't think Captain Vandergrift was present on that occasion. He was probably on a subsequent occasion, but not then. As I stated at the time, I could not recollect all the men who were there.

Q. Was there anybody there at that time who purported to represent this American Transfer Company?—A. No, sir; the American Transfer Company was not represented at that time, and I did not know of its existence at that time; I don't think I did.

Q. Is the Pennsylvania Railroad Company still operating under the arrangements of that contract with the Standard Oil Company, as of that date?—A. Under that letter.

Q. Of October?—A. Yes, sir.

Q. Do you pay this rebate of 22½ cents upon all oil carried by your road?—A. Upon all crude oil carried by our road.

Q. Irrespective of the points from which it is shipped in the oil country?—A. Yes, sir; irrespective of that.

Q. To what point is this money remitted and paid to Mr. Girty? Where are his headquarters?—A. I do not know, sir. Mr. Justice informs me they are in New York.

Q. At the time you made this arrangement with the Standard Oil Company, of which you have heretofore spoken, was it a feature of that arrangement that the American Transfer Company was to receive a rebate or allowance of 22½ cents for oil carried?—A. No, sir; that question was not brought before us until February, 1878.

Q. I understand you, Mr. Cassatt, that 22½ cents paid to the American Transfer Company is not restricted to oil that passed through their lines?—A. No, sir; it is paid on all oil received and transported by us, as I have before stated.

Q. What, by this subsisting arrangement between the companies, is the rate on refined oil from the refineries to the sea-board?—A. It is \$1.90 per barrel to New York, and 15 cents less to Philadelphia—\$1.75 to Philadelphia and Baltimore.

Q. Please look at this May statement; and I observe here that 14,420 barrels of a given weight of refined oil is entered as having been carried from the Allegheny Valley Railroad, south of the junction, to Communipaw; that refined oil would come—would it not, sir—from refineries along the Allegheny Valley Railroad, between the junction and Pittsburgh?—A. Yes, sir; mainly in and about Pittsburgh.

Q. Now, I notice that that refined oil, that particular lot which I now refer to by way of sample, is carried at a rate of 47.882 per 100 pounds. How much would that make a barrel?—A. That weight per 100 pounds is got at by dividing the rate per barrel by the assumed weight of a barrel.

Q. Which was how many pounds?—A. It is 340 pounds, which would make \$1.62 and 8 mills. As we make the rate per barrel it makes very little difference whether we assume the barrel to be 340 or 380 pounds, because it works both ways.

Q. The difference between the exhibit which would show \$1.62 and 8 mills was paid to the Pennsylvania Railroad Company for the carriage of this particular lot of oil, and

the figures which you have given as to the total rate of \$1.90 is paid to the Allegheny Valley Railroad Company?—A. I believe so. We prorate from the junction, then, on the other roads each.

Q. As you explained before about the crude?—A. Yes, sir.

Q. In this statement already referred to, in the account between the Pennsylvania Railroad Company and the Philadelphia and Reading Company of the month of May, 1878, on this particular lot of 14,421 barrels which was carried to Communipaw from the Allegheny Valley Railroad, south of the junction, we notice that there is an allowance or deduction made here of 1.3 per cent; what is that?—A. That is decreasing it to the crude equivalent.

Q. I notice that by some mode of calculation the barrels are converted into some corresponding amount of crude oil, or supposed to be, for the purposes of carriage; how is that done?—A. This rate of \$1.90 on refined oil is made from the mouth of the pipe. We agree for \$1.90 to transport a sufficient quantity of crude oil to the refinery in Pittsburgh to make a barrel of refined, and to transport that barrel of refined thence to New York. Now, it takes  $1\frac{3}{4}$  barrels of crude (or we assume that that is the quantity which it takes) to make a barrel of refined oil, and the refinery having paid 35 cents to the Allegheny Valley Railroad Company for each barrel of crude carried—

Q. That is, carried from the place of shipment to the refinery?—A. Yes, sir; and it requiring  $1\frac{3}{4}$  of crude to make a barrel of refined, we multiply 35 cents by  $1\frac{3}{4}$  and we pay that back to the shipper, who pays us \$1.90 from the refinery to New York.

Q. That 35 cents is the rebate that you pay the shipper after the crude which has been converted into refined has been shipped east on your road?—A. It is refunded to him to cover what he paid to get the crude to the refinery, and that is done to carry out our agreement with him, which is that \$1.90 shall cover that transportation.

Q. And it is allowed and paid him upon his shipment of refined East?—A. Upon his shipment of refined East; yes, sir.

Q. And which is how much on a barrel of refined?—A. Which is \$1.90.

Q. Then how much does the rebate of 35 cents on the barrel of crude make on the barrel of refined?—A. It amounts to  $45\frac{1}{4}$  cents. That is simply a method resorted to to carry out our arrangement, by which \$1.90 covered the transportation of the crude to the refinery.

Q. Does the arrangement whereby that rebate is allowed apply to all the other railroad companies too; do they make the same allowances?—A. Yes, sir; they make their through rate to the sea-board on refined oil cover the cost of transportation to the refinery, and I presume that they have the same plan which we have, viz, we allow that by their rate on the crude and then refund it to them after they ship their refined.

Q. Is the rebate or allowance the same, so far as you know?—A. I presume that it is. I do not know how; that is, they pay back whatever it costs to get to the refineries. It may not be the same, because the rate from the mouth of the wells to the refineries, in Cleveland, for example, may be more or less than 35 cents a barrel; whatever it is, they pay back.

Q. Now, we will refer to this account of May, 1878, and this same shipment of 14,421 barrels. We observe a special allowance with respect to it of  $44\frac{1}{4}$  cents. What is that further allowance?—A. It is an additional rebate paid to the receiver of the oil.

Q. To the receiver of the oil?—A. Or shipper of the oil; paid to the shipper; the net rate to New York at that time, by agreement with the other lines, was made \$1 per barrel, and this  $44\frac{1}{4}$  cents was the additional rebate paid after paying  $45\frac{1}{4}$  cents crude, equivalent to bring the rate down from \$1.90 to \$1.

Q. When was that arrangement made by which it was brought down from \$1.90 to \$1?—A. What is the date of that settlement?

Q. This is, May, 1878, this allowance was made.—A. I can't recollect exactly when it was made; it was made, whenever it was made, to take effect May 1; made some time probably during the early part of May.

Q. You think it was made to take effect as of May 1, 1878?—A. Yes, sir.

Q. We observe a further allowance of 6 cents paid for literage; that you have already explained.—A. That is not an allowance.

Q. It is so called in the paper; special allowance per lighterage.—A. It is the amount paid out for doing that work; the shipper does not get that.

Q. With respect to getting the oil to the ships?—A. To the different ships; yes, sir.

Q. We notice here, Mr. Cassatt, in the report of the account between the Pennsylvania Railroad Company and the Philadelphia and Reading Railroad Company, as of the month of July, that the further allowance is made, as of the month of May, of 20 cents a barrel on this same May shipment of 14,000 barrels and upwards. What allowance was that? The May account shows no other shipment from south of the junction, except of 14,421 barrels. There appears to be a few barrels more, but evi-

dently it is the same shipment.—A. I can't explain that now, sir; I don't understand it.

Q. The July voucher will show that, won't it?—A. This is the May account, as I understand it.

Q. But it is in the July report, and goes back to the May shipment, and will appear in the July account.—A. You are figuring on the July?

Q. No, sir; that is the July statement you have before you.—A. Mr. Justice explains to me now that in July, at Saratoga, by an agreement among the trunk lines, the rate was reduced to New York to 80 cents per barrel net, clear of all rebates. We learned at that time the fact, which the New York Central and Erie roads admitted, that they had made this 80-cent rate from May, and under our arrangement with the Standard Oil Company we were to make the same rates that the other line did. We therefore rebated to them back the 20 cents; refunded it to them.

Q. Was that shipment of 14,000 and odd barrels there a Standard Oil Company shipment?—A. I presume it was; yes, sir.

Q. Why did those companies put down the rates at that time to 80 cents?—A. I do not know what moved them to do it, unless the trade required that it should be done. That is to say, the trade would not bear a higher rate. After we learned that this had been done we made an arrangement or an agreement with them that hereafter no rate should be made except on consultation with the other lines interested—no reduction should be made.

Q. Was that feature incorporated in your arrangement at this Saratoga conference?—A. I think that was the time we had an understanding with the other roads that they would not make any concessions to any of their shippers without consultation between the four trunk lines.

Q. In order to save time I will put the question in this way: Wherever, in these accounts, there is a similar entry of 20 cents allowed on back shipments that have been already reported in these accounts between Philadelphia and Reading Railroad and Pennsylvania Railroad Company, it is explicable in the same way?—A. I believe it would be. I could not state that, because there might be some other circumstances affecting it. I think I could state that it would be, to the best of my knowledge. I have not gone over the papers.

Q. Would that correction tend to equalize, in view of what the other companies have done? Did that go back to the 1st of May?—A. No, sir.

Q. This allowance of 20 cents was paid to the shipper?—A. Yes, sir.

Q. And in the case of these shipments of which we have inquired, that was a Standard shipment from their refineries near Pittsburgh?—A. Well, I presume that it was, from the fact of disallowance having been made.

Q. Why would you infer it from the fact of this allowance having been made that it was a Standard shipment?—A. Because that particular allowance was made to the Standard Oil Company only. When I state the Standard Oil Company you will understand that I mean the Standard Oil Company or some of the organizations controlled by it—some one of the parties who guaranteed us the percentage of traffic in that agreement.

Q. And in the allowances by the Pennsylvania Railroad Company you pay them to the Standard Company, and they adjust it among their different interests, do they not, sir?—A. I think not in all cases.

By Mr. MACVEAGH:

Q. Do you know really?—A. Well, I have a general knowledge of how it is done; I believe they have a variety of their organizations under their general organizations, suborganizations.

Q. Does the Pennsylvania Railroad Company transact with them or with the Standard Oil Company?—A. We pay the rebates and make the allowances to the consignee of the oil, whoever that may be. For instance, at Philadelphia to Warden, Frew & Co.; in New York there are several parties. Here, nearly all the oil is consigned to J. A. Bostwick & Co. Generally, I can state that our business is transacted with the party to whom the oil is consigned, whoever it may be—that is, to the best of my knowledge; there may be exceptions to that. Mr. Justice corrects me; he says that on all shipments to New York, consigned to any one of the various branches of the Standard Oil Company, we settle our transactions with the Standard Oil Company direct; on shipments to Philadelphia we settle with Warden, Frew & Co.

Q. I observe, sir, that in the account between the Philadelphia and Reading and the Pennsylvania Railroad Company of the month of July, 1878, that there was carried over the Allegheny Valley Railroad, north of the junction to Communipaw, the amount of 61,358½ barrels of crude oil, and that on a portion of that, as appears in the account rendered, there was an allowance of 37½ cents, and on another portion, of 22½ cents; what were those?—A. The allowance of 22½ cents was made to the American Transfer Company, as before stated; the 37½ cents was made up, first, of an allowance of 10 per cent. to the Standard Oil Company on all shipments consigned

to it—on all its own shipments—and then an additional allowance of 15 cents per barrel, which, some time in July, was agreed to with the other lines at a meeting at Saratoga. The allowance we actually made them was this: We paid 22½ cents on all oil to the American Transfer Company, and then on all which the Standard Oil Company shipped itself we allowed them 10 per cent. and 15 cents additional—10 per cent. on the rate. Mr. Justice informs me that by some error that additional 15 cents was paid to the American Transfer Company through part of the month of July, but when the error was discovered it was adjusted between the Standard Oil Company and the American Transfer Company, and they transferred the amount over.

Q. We observe that some is charged at one rate and some at another?—A. That was an error in the fore part of the month, but the 15 cents on that particular lot was not charged together. It is merely a grouping of two items, showing 37½ cents instead of one of 22½ cents, and the other of 15 cents.

Q. You paid 22½ cents on all oil and 15 cents on part more?—A. Yes, sir; you won't find the 15 cents on that oil elsewhere.

Q. Was this arrangement that was made in July, 1878, to allow the Standard a further reduction of 25 cents a barrel, entered into by all the companies?—A. It was agreed to by all the companies. The agreement with the other companies was not that we should allow it to the Standard only, but that we should allow the additional 15 cents a barrel on shipments until further agreement was entered into. In point of fact, we did allow it to the Standard Oil Company and one other shipper.

Q. Who was that?—A. Malcolm Lloyd, of Philadelphia. I don't know whether we allowed that exact amount, but we made a corresponding concession in rates, he being the only shipper, other than the Standard Oil Company, who was not engaged in carrying oil in opposition to us to Buffalo and thence by canal. That was the cause of this further reduction in July.

By Mr. MACVEAGH:

Q. What was that?—A. The fact that an opposition route had been opened to New York by rail to Buffalo, and thence by canal to New York, enabled shipments to be made cheaper than by our line, and forced us to reduce rates; to make that additional concession in July apply to all shipments except these which were made by that other route in opposition to us. The one shipper who was not was Malcolm Lloyd.

By Mr. SHIRAS:

Q. If I understand you, the other companies agreed that you should make that allowance?—A. We all agreed among ourselves that we would make that additional allowance. It was not specified on whose particular shipment we would make it; we might make it on all shipments, or we might make it on part of our shipments, but we could not go below that. That was the agreement.

Q. In this same lot of oil we notice a still further allowance of 14 cents on 13,481 barrels as of the month of July. What is that allowance?—A. That is the 10 per cent. I mentioned a few moments ago; 10 per cent. on the rate of \$1.40.

Q. That would be on shipments of the Standard?—A. Yes, sir.

Q. And that is in addition to the 37½ cents?—A. No, sir. By an error that 15 cents is included in this case; is added to the 22½ cents paid the American Transfer Company; that was afterwards corrected. Of that 37½ cents 15 should have been added to the 14.

Q. By the settlement between the Pennsylvania Railroad Company and the Reading Railroad Company as of the month of August, 1878, we observe here that there has been a shipment carried to Communipaw from the Pittsburgh, Titusville and Buffalo?—A. Pittsburgh, Titusville, and Buffalo.

Q. A carriage of 31,137 barrels, and an allowance made to begin with of 32½ cents. What allowance is that?—A. That is refined oil.

Q. Yes, sir. What was it carried for per barrel?—A. You mean the net rate or manifest rate?

Q. I mean the tariff rate.—A. One dollar and ninety cents.

Q. What was the actual rate?—A. If shipped to the Standard Oil Company at that time it would be 80 cents a barrel.

Q. It is billed at \$1.51. Look at the rebates or allowances for that lot, Mr. Cassatt. The first one was 32½ cents. What was that?—A. That is the crude equivalent. That is the cost of getting the crude to the refinery at Oil City, where this oil was refined; the rate being 25 cents a barrel, and 1.3 times 25 would be 32½.

Q. How much is that on a barrel of refined?—A. Thirty-two and a half cents.

Q. You have spoken of this 6 cents lighterage; then there is one of 64½ cents?—A. That should bring it down to 80 cents a barrel, which was the net rate.

Q. Then a final one of 13 cents. What was that?—A. The two together were necessary to bring it down to an 80-cent rate. The total deductions from \$1.90 bring the rate down to 80 cents.

Q. Now, if you will look at the November account, Mr. Cassatt, you will find ship-

ments there of refined oil 56,388 barrels. They begin again with an allowance of 32½.—A. It is the same.

Q. And then 6 cents lighterage?—A. Yes, sir.

Q. And then the 10 cents for terminal charges?—A. That is paid to the National Storage Company.

Q. Then the 64½ and the 13 together?—A. Yes, sir; they are to reduce it to the 80-cent rate.

Q. Yes, sir; the 10 cents are not?—A. The 64½ cents goes to the Standard Oil Company, and the 13 cents, they having paid \$1.90; that brings it down to 80 cents. Then there is a further allowance of 10 cents to the Pittsburgh, Titusville and Buffalo. At this time, before the month of November, we made made the arrangement with the Pittsburgh, Titusville and Buffalo road by which we paid them a specific rate per barrel for carrying the oil to Irvington, where it connects with the Philadelphia and Reading Railroad Company. That amount was deducted before prorating with the other road—with the Reading Railroad—as shown in this receipt.

Q. What rate, then, per barrel was actually received or retained by the Pennsylvania Railroad Company on this shipment?—A. Eighty cents per barrel, that is what the shipper paid; we had to, of course, divide that rate with our connecting companies. We had out of that also to pay any terminal charges in New York.

Q. That 80 cents was, then, prorated between you and the other shipping railroad companies co-operating in the transportation of the oil?—A. Yes, sir; 26 comes out of the 80 before there is any prorate; there is a specific charge of 10 cents to the Pittsburgh, Titusville and Buffalo; 6 cents lighterage, and 10 cents terminal New York; we prorate them only from Irvington, instead of prorating from the point of shipment.

Q. There was another paper we requested to have produced; a statement of shipments in certain months.—A. You ask for statements of shipments from May 1, 1877, to October 17, 1877; I have it here. [Witness hands paper to Mr. Shiras.]

Q. Included in the 80 cents was a charge that the Pennsylvania Railroad Company had for the use of car service?—A. Certainly.

Q. And that was how much?—A. How do you mean?

Q. What rate was that?—A. Of course, over our own road was nothing; the other companies paid us 30 cents for car service and commission for doing business.

Q. And then in that case, where you were transacting business with the other roads or dealing with them, that car service was to be deducted from this net amount given before, 54, before you prorate with them?—A. That amount comes out, or rather it is not settled in that way exactly. It is prorated and then taken out afterwards, and then we deduct in our settlement 30 cents of what is due to them.

Q. That would then actually leave, would it not, on these shipments, a net sum of 35 cents per barrel for apportionment?—A. We don't make the settlement in that way; we prorate and it comes out afterwards.

Q. It would amount to 35 cents and 20-100?—A. I didn't figure, but believe it would.

Q. What rate per ton per mile would that be?—A. I have not figured it up; you can readily do it if you know the distance; I don't know the exact distance.

Q. At the time in July, 1878, Mr. Cassatt, when this reduction was made on refined oil, was there any corresponding or similar reduction made in respect to crude?—A. There was; yes, sir. It was crude that I stated; I think I stated the reduction on crude some time ago. I stated that we paid the American Transfer Company 22½ cents per barrel on everything, and we paid the Standard Oil Company on its own shipments, and 15 cents per barrel additional.

Q. You were speaking of crude?—A. That applied to crude.

Q. Then what were the rates actually left with respect to crude and with respect to refined?—A. On shipments of the Standard Oil Company do you mean?

Q. Yes, sir.—A. Eighty-eight and a half cents per barrel.

Q. On what?—A. On crude oil.

Q. And what on the refined?—A. I have just stated that the refined we made at 80 cents clear of all drawbacks and commissions.

Q. How was that reduction made from \$1.40 to 88½ cents?—A. It was made by an allowance of 22½ cents to the American Transfer Company, and by an allowance of 10 per cent. to the Standard Oil Company, according to that letter; and by an additional allowance of 15 cents, making 51½ cents reduction, which leaves a net rate of 88½ cents.

Q. Was that allowance on crude made to any other shipper than the Standard Oil Company?—A. Not an allowance of that amount, exactly. We did make an allowance to one other shipper, as I before stated.

Q. That is to Mr. Lloyd, of Philadelphia?—A. Yes, sir; he being the only other shipper of crude over our road that was not running oil over this opposition route at reduced rates.

Q. Mr. Cassatt, do you know Lombard & Bush, who are they?—A. Yes, sir; I do. They are a firm of refiners in New York.

Q. They are what are spoken of here in the testimony as outside refiners; that is, not connected with the Standard?—A. They are not connected with the Standard Oil Company, I believe.

Q. Who represented them in their shipping matters—Mr. H. C. Ohlen?—A. He did, to a certain extent; they represented themselves very often.

Q. When you bought out the Empire Line in the way you have already mentioned, were not these outside New York refiners holders of contracts with the Empire?—A. They were.

Q. Did not these contracts that they held with the Empire stipulate for equal rates with any other shippers?—A. They did.

Q. I think you stated that their contracts expired May 1, 1878?—A. One or two of them April 1; the remainder on the 1st of May.

Q. Did, or did not, the Pennsylvania Railroad Company allow them and the Standard equal rebates or allowances up until the expiration of the contracts?—A. They allowed them both equal rebates, 10 per cent. on their shipments of refined and crude.

Q. After the 1st of May, did you, or did you not, allow the Standard Company and the Atlantic Refining Company, and Warden, Frew & Co., and the American Transfer Company, and the other several parties that are known as the Standard Oil Company, or combination, a rebate for the business of the months of December, January, February, March, and April, which was not given to the New York parties?—A. We did not allow them any rebate excepting the 10 per cent. on their shipments. As I stated before, we allowed the American Transfer Company, a company owning pipe lines in the region, a commission of 22½ cents a barrel, taking effect February 1. I mention that now because you mentioned in your question the American Transfer Company.

Q. Yes; I confused it as if itself were a shipper. These other rebates and allowances which you have been explaining, and to which your attention has been called in these particular accounts, you speak subject, of course, to your explanations with respect to them when you say that you allowed only the 10 per cent?—A. We made them no allowances excepting the 10 per cent. during the months you named; up to the 1st of May we charged the Standard Oil Company exactly what we charged the other parties, in accordance with the contracts the Empire Company had with them, and which we agreed to carry out.

Q. Up to the 1st of May, 1878?—A. Until the contracts expired.

Q. Mr. Cassatt, was not and is not this American Transfer Company identical with the Standard people; is it not an instrument of theirs?—A. I have no knowledge on that subject just now.

Q. Isn't this allowance of 22½ cents to the American Transfer Company in effect a disregard of the agreement that these other shippers were to have equal rates under these contracts with the Empire?—A. I don't think that it is, sir.

Q. In this account that has been furnished us by Mr. Justice of the crude oil shipments by the Green Line during the months of February and March, 1878, to New York, Philadelphia, and Baltimore, I notice an entry of an allowance of an aggregate total of \$68,753.50, as paid to the American Transfer Company through Daniel O'Day, general manager; is that the payment of this 22½ cents, of which you have already spoken?—A. Yes, sir; that is; so Mr. Justice tells me.

Q. That would not be 22½ cents; that would be only 20 cents.—A. The first allowance was only 20 cents; it was afterwards increased to 22½ cents.

Q. Then, during the months of February and March, which this gives, it was only 20 cents?—A. I do not know when it was increased to 22½ cents, but some time in the spring or summer of that year.

Q. This you have stated, Mr. Cassatt, that you agreed to and did pay this money upon being informed by Mr. O'Day that similar or larger sums had been paid by the other railroad companies to the American Transfer Company?—A. After seeing the papers under which the settlements between those companies and the American Transfer Company were made, I had them here in Philadelphia. They sent them here to me for inspection before I agreed to make that allowance.

Q. Mr. O'Day exhibited them to you?—A. He sent them to me. I had them in my possession for several days and sent them back.

Q. Did Mr. O'Day make a demand for the equivalent off your road?—A. He asked that we should make the same allowance by letters which you have asked me to produce, and which I will produce.

Q. In the account with the Pennsylvania Railroad Company with the Lehigh Valley Railroad Company for the month of August, 1878, we notice a shipment from Olean to Communipaw of crude oil of 30,644,400 pounds.—A. That would make 85 cents and a fraction per barrel.

Q. Where is that rate from, Mr. Cassatt? Is that the Emporium rate or the Olean rate?—A. There is no Emporium rate. It is prorated from the mouth of the pipe.

Q. Am I to understand that the rate you give there is the rate from Emporium or

from Olean?—A. From Emporium; but it would appear that some reduction was made before this rate per 100 pounds was made.

Q. Now, you will find a drawback paid of \$34,000, \$41,000 less the \$7,000, the Buffalo, New York, and Philadelphia proportion. Could you tell who that drawback was paid to?—A. Forty-nine cents went to the American Transfer and the Standard Oil Company under the arrangements which I have already explained.

Q. Could you give us the net rate per ton per mile upon that haul?—A. It amounts to about a cent and a tenth per ton per mile on the net rate, and for November it is about the same, being 49 cents per barrel rebate on \$1.15 rate from Olean.

Q. We notice, Mr. Cassatt, that by the abstract of the exports between the Pennsylvania Railroad Company and the Lehigh Company for the month of November, 1878, there was shipped from Olean to the Communipaw 128,211½ barrels of crude oil at the rate of \$1.15 per barrel, and which earns according to this statement, the sum of \$147,443.55, and that the deductions are placed at the sum \$99,167.05. How much after those deductions were made was left to be prorated upon that lot of oil between the carrying companies per barrel?—A. About 38 cents a barrel.

Q. Mr. Cassatt, have you found the letters which you were to furnish this morning?—A. Yes, sir. [Witness hands to Mr. Shiras copy of letter dated February 15, 1878, being marked Exhibit 45, and a copy of letter dated May 15, 1878, being Exhibit No. 46.]

Q. Mr. Cassatt, in your testimony yesterday you stated, if I understood you correctly, that at the conference between the railroad managers that took place in July, 1878, at Saratoga, when the rates were cut down to 80 cents per barrel, that these rates were allowed to the Standard and its shippers, and not to the outside shippers; am I right?—A. You are referring now to the rate on refined oil?

Q. Yes, sir.—A. I am not aware that there were any outside shippers of refined oil, so called; I do not know of any refiners in the region or in the West that were shipping refined oil by our road.

Q. Excepting those who belonged to the Standard?—A. Yes, sir. The reduction on crude-oil rate, however, was made to apply only to the Standard Oil Company and to Malcolm Lloyd, of Philadelphia.

Q. Then I did apprehend you correctly. What was that reduction of the crude-oil rate to the Standard?—A. It was an additional rebate of 15 cents per barrel.

Q. The open rate at that time to all shippers was how much?—A. One dollar and fifteen cents and \$1.40, respectively.

Q. And the rate to the Standard was then how much?—A. It was 14 cents off the \$1.40 rate, and 15 more, making 29, and 11½ and 15, making 26½ for the \$1.15 rate.

Q. And then the refined rate was 80 cents?—A. Eighty cents net to the Standard.

Q. And to all others \$1.90?—A. One dollar and ninety cents less 44½.

Q. One dollar and forty four and a-half cents?—A. But there were no other outside shippers, to my knowledge, that shipped refined oil.

Q. Was there any answer directly by you to that letter, Exhibit 45?—A. I have asked my clerk, who brought this up this morning, to go down and see if there was, and, if so, to send a copy of it. If there was an answer, it was simply agreeing to his terms until further notice. It may have been given verbally on some subsequent occasion.

Q. This letter to Mr. Downing of the date of May 15, 1878, being Exhibit 46, was written as a mode of giving directions in respect to the proposition contained in this letter of Mr. O'Day's?—A. Yes, sir; it was simply instructing him that we had agreed to this.

Q. These are correct copies?—A. Yes, sir. (Exhibits 45 and 46 offered in evidence.)

Q. I understand you to say, Mr. Cassatt, that the nature of this American Transfer Company, as to whether it is a Pennsylvania or New York corporation you don't know?—A. I do not know, sir.

Q. Do you remember when first your company came into contact with it?—A. I think the first knowledge I had of there being such a company was when Mr. O'Day, in February, asked this commission to be paid to them, and explained to me what pipe lines they owned and controlled, and what the other roads had been doing for them.

Q. It was in February, 1878?—A. I think so. I do not think I had any knowledge of this before. Up to that time I supposed the pipe lines which were controlled and owned by the American Transfer Company were controlled by the United lines.

Q. When did these shipments by way of canal that were sent to Buffalo, and of which you spoke of yesterday, begin?—A. I think some time in July.

Q. What year?—A. July, 1878, or possibly earlier than that. I can't say positively.

Q. Could you, by reflection, give us a closer date than that, Mr. Cassatt?—A. I could only fix the date by the fact that this meeting at Saratoga was held in consequence of the canal line having been opened at reduced rates.

Q. Mr. Cassatt, on shipments made by the Imperial Company of Oil City, or from

the Standard Oil Company at Pittsburgh, over the Pennsylvania Railroad and Allegheny Valley Railroad, and consigned to Warden, Frew & Co., Philadelphia, what rebates were paid?—A. At what time, sir?

Q. During the year 1878.—A. What part of 1878; because rates varied after July?

Q. Say from July to November, inclusive.—A. From July to November there was a net rate made to Philadelphia of 66½ cents—13½ cents less than the net rate to New York.

Q. Well, how in the earlier part of 1878 was it?—A. It was \$1, less 13½ net; rebates were paid sufficient to bring the net rate down to 86½ cents.

Q. That is on refined oil?—A. Yes, sir.

Q. And how was it with respect to crude?—A. Let me explain. When I say the net rate, I mean the net rate to the refiner, irrespective of the charge of getting the crude to the refinery, which was paid by the refiner—that is, the 35 cents rebate was paid by themselves. The crude oil was the same. The difference in the rate was 13½ cents to Philadelphia below the rate to New York, which you have.

Q. That is \$1.26½, then?—A. I wish to correct myself. [Witness refers to memorandum.] The tariff rate on crude to Philadelphia is 15 cents below the rate to New York. The net rate was, however, on all occasions, 13½ cents less, which arises in this way: We deduct the 10 per cent. from the gross rate.

Q. Those were the rebates that were allowed, then?—A. Yes, sir.

Q. There was no such rebate allowed others?—A. There were rebates allowed to Malcolm Lloyd, who was the only other receiver of petroleum in Philadelphia.

Q. What were the rebates allowed him?—A. They were such as to bring his net rate down to within a few cents of the Standard rate.

Q. With respect to these Standard rebates that were allowed on their shipments to Philadelphia of refined and crude, to whom were they paid?—A. To Warden, Frew & Co., of Philadelphia.

Q. To what member of that firm?

By Mr. MACVEAGH:

Q. Does he know?—A. I am not able to say, but I presume in the firm name; I do not know; that is, they were paid as they might direct themselves.

Cross-examination by Mr. MACVEAGH:

Q. Mr. Cassatt, I want to direct your attention to a personal matter, which was asked you, to a certain extent. You were asked whether you had any knowledge that Mr. Vanderbilt, representing the New York Central, or Mr. Jewett, representing the Erie, had any interest whatever in the Standard Oil Company or any of its affiliated companies. I wish to extend that question to the other trunk lines. I wish you would state whether or not, to your knowledge, Mr. Garrett, or anybody representing the Baltimore and Ohio, had any such interest.—A. They have not, to my knowledge.

Q. Mr. Garrett, or Mr. King, representing the transportation department, or any other officer of that company?—A. Not to my knowledge.

Q. Then I wish you would state whether Mr. Scott or yourself, or any other officer of the Pennsylvania Railroad Company, had any such interest.—A. Never to my knowledge. I speak of absolute knowledge as to myself, but as to Mr. Scott to the best of my knowledge and belief.

Q. And as to any other official of the Pennsylvania Railroad Company you speak to the best of your knowledge and belief?—A. Yes, sir.

Q. Has anything ever occurred to lead you to suppose that any such interest existed?—A. Never.

Q. I desire that question to be considered by you as searching and explicit as I can possibly make it.—A. I so understand it.

Q. Now, as to the history of the oil transportation. I wish you would state whether or not this oil about which we have been inquiring is, or is not, wholly produced in the State of Pennsylvania for which you have been competing?—A. It is not.

Q. What proportion of it is?—A. A part of it is produced in the State of New York. I can't state the exact proportion, but a considerable proportion.

Q. What district is that known as?—A. That is the Bradford district.

Q. How long has the Bradford district been producing oil in considerable quantities?—A. I think for about four years. I can't be positive as to that. I have forgotten when. I think the date of this contract, if I am allowed to refer to the date of the contract between the Empire Line and the Buffalo, New York and Philadelphia road, will show that it was about that time that they first commenced to produce oil.

Q. When was your attention first directed, as representing the Pennsylvania Railroad Company in its transportation business, to the Standard Oil Company as a customer of the road?—A. My first connection with the oil business of the Pennsylvania Railroad Company was in the spring, I think, of 1873; at that time the Standard Oil Company was not shipping over the Pennsylvania Railroad, but was shipping over the Erie and New York Central roads.

Q. Shipping from where?—A. Shipping mainly from Cleveland.

Q. In small or considerable quantities?—A. In very large quantities. They were the largest refiners at that time in the country. Subsequently to that they consolidated with Warden, Frew & Co., of Philadelphia; bought them out and paid them in stock. Warden, Frew & Co. had been before that our largest customers. All other of our largest customers had failed. I think I am correct in stating that they had failed at or about that time.

Q. They had ceased the refining business, at any rate, had they?—A. They had, I believe.

Q. Failed to ship in considerable quantities by your line?—A. I meant failed financially; and in 1875, I think it was, we made our first contract with the Standard Oil Company, for the reason that we found they were getting very strong, and then had the backing of the other roads, and, if we wanted to retain our full share of the business and get fair rates on it, it would be necessary to make arrangements to protect ourselves.

Q. Up to that time had any arrangement, so far as you know, been made with the Standard Oil Company by the Pennsylvania Railroad Company?—A. None had been made; no, sir.

Q. It has been already stated that the Empire Transportation Company was the organization which conducted the oil transportation which passed over the lines of the Pennsylvania Railroad Company.—A. All the oil business except the refined from Pittsburgh, which we did on what is called our slow-line regular business.

Q. On the main line?—A. Yes, sir.

Q. All the rest of your oil transportation was made for your lines by the organization known as the Empire Transportation Company, was it?—A. Yes, sir; it was secured by them.

Q. In 1875 did the Pennsylvania Railroad Company secure its traffic from the Standard Oil Company directly or through the Empire Transportation Company?—A. The contract was made directly with the Pennsylvania Railroad Company. The oil was carried by the Empire Transportation Company.

Q. Was that contract with the knowledge of the Empire Transportation Company?—A. With the knowledge of the Empire Transportation Company.

By Mr. SHIRAS:

Q. That is, you are speaking of the contract between the Pennsylvania Railroad Company and the Standard?—A. Yes, sir, of July, 1875; I think that is the correct date; July or August, 1875.

By Mr. MACVEAGH:

Q. I wish you would detail in your own way the history of that arrangement; how long it lasted and what brought it to an end?—A. That arrangement lasted until March, 1877. It was brought to an end by the Standard Oil Company giving us notice that they desired to terminate it, and did terminate it.

Q. In March, 1877?—A. Yes, sir; I may want to correct that date of July, 1875; I have not looked at that contract for some time, and it may have been later; I think it was not, though; I think it was in July, 1875. I will refresh my memory by looking at the contract. I merely state now from recollection.

Q. During the continuance of the arrangement of 1875, calling it by that date, was the Standard shipping over other lines competitors of yours?—A. It was.

Q. Over what other lines?—A. Over the New York Central and Erie Railways, and during part of the time, during the latter part of the continuance of that contract, with the Baltimore and Ohio road.

Q. That is, it was dividing its transportation between these different roads?—A. Yes, sir; it was only some time after that contract had been entered into that the Baltimore and Ohio became a competitor for the oil business.

Q. About what time would you state that the Baltimore and Ohio became an active competitor to the oil business, to the best of your recollection?—A. I think it was during 1876.

Q. Then from the year 1876, taking that as the date, were or were not the four trunk lines active competitors for the transportation of oil?—A. They were.

Q. Until now?—A. From what time?

Q. From 1876 were they all so situated as to share in the transportation of the oil business?—A. They were.

Q. And have they all shared in it?—A. They have.

Q. From that date?—A. Yes, sir.

Q. State whether or not there was anything in the situation of the refining works, or in its conduct of its business in the oil regions, which gave the Pennsylvania Railroad Company any decided advantage in competing for that traffic over the other trunk lines, or whether the Standard could, if it chose, ship over the other trunk lines to the exclusion of the Pennsylvania.—A. It could do so, and, in fact, did so. From the spring of 1877 until October 17 they did not ship a barrel over our road.

Q. Can you state any reason why the Standard should be willing to pay you a higher price for shipping its oil than it could secure its shipments for over the lines of your rivals or your competitors?—A. I know of no reason why they should do so.

Q. Have you, to the best of your knowledge and belief, ever shipped a barrel of oil for the Standard at less price than could secure a shipment of the same over the lines of your rivals?—A. To the best of my knowledge and belief, we have never carried a barrel of the Standard's oil at a lower rate than the rates of the other roads. I know of certain occasions when we got a little better rate.

By Mr. SHIRAS:

Q. This is, than the rates of the other roads to the Standard?—A. Yes, sir.

By Mr. MACVEAGH:

Q. What, in your judgment, was the occasion of the notice from the Standard to your company in the spring of 1877 that it would cease to ship oil over your lines?—

A. They stated their reason, not, perhaps, in the formal notice, but in many interviews between us, to be that they objected to the Empire Transportation Company, which was the organization having charge of the oil traffic of the Pennsylvania Railroad and its connecting lines, being in the oil refining business as a competitor of theirs. They claimed that in many ways this gave the Empire Transportation Company the advantage, if they chose to take the benefit of it, and believed that they did take advantage of them in the distribution of cars and in many ways.

Q. At that time were any of your competitors for the business of the Standard Oil Company engaged or likely to engage in the refining business as a competitor of the Standard?—A. No, sir; they were not. On the contrary, they protested strongly against our having any direct or indirect interest in, or control over, the refining business. They claimed that the fact that the Empire Transportation Company controlled a refining business gave us indirectly a control of the refining interest, and that that gave us an advantage over them that they would not submit to.

Q. In other words, was or was not the complaint that you were annexing to the business of transportation, by the indirect mode of using the Empire Transportation Company as a refiner, the business of a manufacturer also?—A. They claimed that.

Q. And were thus at the same time assuming an unfair relation to the other transporting companies and to the Standard as a refining company?—A. That was their statement.

Q. Was or was not the effort to compel you to adopt that view the real cause of the struggle in the oil traffic in the summer of 1877?—A. It was.

Q. Did or did not the Pennsylvania Railroad Company endeavor for a number of months to maintain the right of the Empire Transportation Company to engage in the business of refining?—A. It did, from the spring of 1877 until October the 17th. It carried on a contest with the other roads, the object on the part of the other roads being to compel us to take the Empire Transportation Company out of the refining business.

Q. And did or did not the Standard join heartily in the effort?—A. It did.

Q. So far as your knowledge extends, was there any division of counsels whatever on that subject between the other three trunk lines and the Standard Company or were they all heartily in accord in the effort to compel you to cease from being a manufacturer by means of the Empire Transportation Company?—A. They were, I believe, entirely in accord on that subject.

Q. You stated before substantially that, and you also stated, as I recollect your testimony, that you supposed the United Pipe Lines was a party to that arrangement. Have you any knowledge on that subject, or is there any correction of your testimony in that regard that you desire to make?—A. I really have no knowledge of the fact that the United Pipe Lines united with the other roads and the Standard Oil Company to make this warfare upon us.

Q. Do you know of any action upon their part discriminating against you or the Empire Transportation Company, of your own knowledge?—A. I do not. I stated that because I supposed them to be in accord with the other roads, for the reason that nearly all their oil was carried to the other roads. I do not know, though, that they ever discriminated in rates on oil carried to our lines or connecting lines, or that they ever charged more for oil which was delivered into the cars of the Pennsylvania Railroad.

Q. Did they ever refuse facilities for transportation over your lines?—A. I do not know that they did; I believe they did not. Nearly all their oil was carried to the northern lines, and that was what I based my statement on before.

Q. I wish you would give, to the best of your judgment (and I have not called your attention to this, and therefore it must be a mere estimate, subject to correction), the gross value of the tonnage to the Pennsylvania Railroad Company it was receiving from the Standard Oil Company before the break in the spring of 1877, or, if you prefer, state whether it is very considerable or inconsiderable?—A. It was very considerable indeed. It must have amounted to considerably more than half our entire oil traffic, probably 65 per cent. of it.

Q. State whether it was a considerable or inconsiderable element in the capacity of your company to earn any adequate return on its investment for the oil business.—

A. The oil business was a very important business to us.

Q. Was the business of the Standard a considerable or inconsiderable element in enabling you to earn any decent return upon your investment for that business?—A. The business of the Standard Oil Company was of very great importance to us.

Q. In the exhibit presented by you yesterday, Mr. Cassatt, of the net revenue derived by the company from the oil business from May 1, 1877, to October 17, 1877, I notice there is no division by months. I wish you would state whether or not there was any difference in the months of that period, or the periods themselves between the beginning of it and the close of it, as to the profitableness of that business to the Pennsylvania Railroad Company.—A. There was a very material difference, sir. In the outset, after the first month or two, the Standard Oil Company and the other lines, for some reason best known to themselves, did not reduce the rates materially. We received good rates for the first two or three months, but after that each month was lower than the other, to the best of my recollection, and it was getting to be down to a point where it was no longer possible to carry. It was very evident if the contest continued it would get down to as low as the competitive rates on any other traffic, and probably below paying rates. That was what alarmed us. It was not so much the rates we were getting; it was what we saw in the future, although the rates that we were getting at the latter part of the contest were very low indeed.

Q. Have there been instances of the result of such continued strife within your knowledge as engaged in the business of transportation?—A. Yes, sir; I could give you an instance to-day, for example.

Q. What?—A. To-day we are carrying grain from Chicago to New York for 15 cents, out of which we are paying  $3\frac{1}{4}$  lighters in New York, making  $11\frac{1}{4}$  cents for transportation, including car service. If you take off the 30 per cent., as these gentlemen did yesterday for car service, it leaves something less than 2 mills per ton per mile that we are getting.

Q. What is the cause of that rate, in your judgment?—A. Simply caused by competition with the other roads.

Q. Is that a paying rate?—A. I don't think it is a very paying rate. I don't think any railroad company could pay expenses on that rate.

Q. What is the condition to-day, as you understand it, of the coal-carrying business between the competing roads?—A. I observe by this morning's paper that the Reading Railroad Company has reduced its rates to 35 per cent. of the actual selling price on board; that is, from the mines, from Port Richmond, and that includes delivery by the Reading Railroad Company of the coal on board ship. The selling price on "T" coal, I believe, is \$2.30, so that 35 per cent. of that, or 80, would be the rate on "T" coal; or, if the selling price would be \$2.25, they got 35 per cent. of \$2.25 for transportation of the coal from the mines, including the lateral charges to Port Richmond and including the cost of delivering that coal on board vessels, which is the result of competition.

Q. What would that afford, in a rough estimate, for transportation over the 90 miles of the Reading Railroad?—A. It is considerably more than 90 miles, I suppose. Their average haul must be 110 or 120, I should say.

Q. What would be the net amount in figures that they would be receiving for that?—A. Assuming the rate to be \$2.25 on board they would receive 35 per cent. of that; they would receive 78 cents per gross ton, 2,240 pounds.

Q. But is that for the entire coal without anything being paid?—A. That is for the transportation of the coal from the mines to Richmond, and includes the cost of putting the coal from the car on board vessels. I may be wrong as to the price being \$2.25, but I believe it is the general impression that the price will be \$2.25 this month.

Q. Now, Mr. Cassatt, while this contest was going on between the Pennsylvania Railroad Company, on behalf of the Empire Transportation Company, and the three other trunk lines on behalf of the Standard Oil Company, state who continued to ship over your lines?—A. The refiners known and spoken of here as the outside refiners, the refiners other than the Standard Oil Company.

Q. On what terms were those shipments made? That is, were they on terms which shared with you the loss of that struggle?—A. I don't think that made any loss to the refiners. The business was done in this way: The oil was bought in the oil regions by the Empire Transportation Company—that is, the crude oil—and was sold in New York to the refiners at whatever price they could get for it; that is, the Empire Transportation Company. I presume the refiners did not pay them more for their oil than they could afford to pay and make a margin; in fact, whatever was left as the difference in the selling price and the buying price was our freight. I believe the refineries, as a whole, made money. In fact, several of them have told me that they did during that struggle make money; how much I do not know, but they certainly didn't make any loss. We stood what loss there was.

Q. And during that time the Empire Transportation Company was buying and

selling oil and settling with you for the differences as the freight?—A. The Empire Transportation Company was buying oil in the region, selling it in New York and settling with us for the difference. I should state that the Empire Transportation Company, through its control of the Union Pipe Line, had been for some time buying oil. All the pipe lines in the region had been in the habit of buying oil in order to get transportation. They bought the oil at the wells and sold it at the mouth of the pipe.

Q. Had the tendency of this buying been to increase or diminish, during the six months it lasted, your rates for carrying oil?—A. At the outset we got very nearly the rates we had been getting before the abrogation of the contract. Each month, I think I am correct in stating, the rates were less than the previous one, and it was drifting very rapidly into a condition of affairs where we probably would have got no rates at all as far as we could judge from experience in other competitive business.

Q. As an executive officer of the Pennsylvania Railroad Company, do you believe that company could have continued that contest without serious injury to its business?—A. I don't think we could. I think in a very short time we would have been carrying oil as low as oil is being carried to competitive points, and as low possibly as we are carrying grain to-day. The peculiarity of all these contests is that they never get any better; they get worse as you go along. Each road is trying to undercut the other constantly, and that results in a settling-down process which cuts the rate down to a very low figure very soon.

Q. You have spoken of three trunk lines which compete with you for this traffic. Have you any knowledge of the rates allowed to the Standard during the continuance of the struggle by those lines?—A. I have not.

Q. Have you any judgment from the character of the business and the market price of oil at the time?—A. I know that they carried it at exceedingly low rates. I am inclined to think they carried at lower rates than we carried.

Q. During that time?—A. Yes, sir. From information that I obtained subsequently.

Q. How, in your judgment, would the rates they carried for compare with the rates that have been given in evidence here as charged the Standard by you?—A. I think the net rates were much lower than any we carried for the Standard subsequently. I think they were much lower.

Q. I wish to understand you correctly. Do you mean to say, in your judgment, from your knowledge of the business, you believe that the railroads that were then competing with you, the New York Central and its affiliated lines, the Erie and its affiliated lines, the Baltimore and Ohio and its affiliated lines, the Lehigh Valley, and the Reading Railroad Companies carried oil for the Standard during that fight at less rates than you have been carrying it for the Standard since the fight?—A. From information which I believe to be reliable, and which I have received since the termination of the contest, I believe they were carrying, during the whole of the time, at rates lower than our own—lower than ours were to our shippers at that time.

Q. And how would those rates compare, in your judgment, with the rates you have since allowed?—A. They were much lower than the rates we have since allowed to the Standard.

Q. As already given in evidence here?—A. Yes, sir.

Q. Was not this contest also injurious to the other trunk lines, and were they not also growing weary of it?—A. It was not so injurious to them as it was to us, for this reason: Before this contest we got 52 per cent.—I have the privilege of correcting this, as it may be 1 per cent. more or less—of the entire trade to the sea-board. The Baltimore and Ohio got 9 per cent. and the remainder was divided equally between the New York Central and Erie; the oil business was, therefore, of nothing like the importance to either one of those roads as it was to us. They could afford to lose their entire net revenue from the oil business without affecting their general net results anything like to as serious an extent as it affected ours. That is always the advantage that a road has of competing for business when it gets into a contest like this when it has a very small trade. It affects them very little, and it affects the road they attack very seriously. For instance, a road might have 10 per cent. of a business of any particular trade and the other road 90; the 10 per cent. which the one road had would be of very little importance to it, and it might lose all its revenue without being seriously affected. The road carrying 90 per cent. might be ruined by the competition. That is the advantage that the other three roads had over us.

Q. That is the point I wish to draw out by the questions as to the importance or non-importance of the oil traffic to your lines, but it answers equally well to have it brought out in this connection. Are each of these trunk lines the lines of other States?—A. They are all corporations of other States, although I believe they also have affiliated lines in this State.

Q. Was there any method of transportation except by rail during any part of the season competing with you?—A. During the summer of 1878?

Q. Previous to that. During the summer of 1877 was there any other route for the carrying of oil?—A. Yes, sir; there was. The oil was carried, and has been for sev-

eral years, in greater or less quantities, down the Ohio River, and thence over the Chesapeake and Ohio Railroad to Richmond. Oil has been shipped, too, in considerable quantities by lake, in some cases direct from Cleveland to European ports by lake through the Welland Canal. The route is always open during the summer. They can always ship oil from Cleveland to Europe, either direct or to Montreal and thence, in larger vessels than can go through the canal, to any port in Europe.

Q. Requiring only transshipment from one vessel to another?—A. Yes, sir.

Q. What about the New York Canal?—A. Oil was transported during the summer of 1878 by that method.

Q. And not before that, to your knowledge?—A. Yes; in previous years it has been carried from Cleveland to Buffalo by water and thence by canal to New York.

Q. In 1877?—A. Prior to 1877. I don't think it was done in 1877. It was not done in 1877, because the Standard Oil Company controlled all the refineries in Cleveland at that time, and under their contract with the different trunk lines, I believe, they were compelled to ship all their oil by rail.

Q. That is what I wanted to get at.—A. That is a route that was always open for transportation.

Q. Then, in addition to the three trunk lines you have mentioned as your competitors, there is a line down the Ohio River and via the Chesapeake and Ohio Railroad to Richmond and thence to Europe?—A. Yes, sir.

Q. There is also a line by the Welland Canal to Montreal and thence to Europe, and there is also a line by lake to Buffalo, and the Erie Canal to New York?—A. Yes, sir.

Q. You have already stated, as I understand it, that you believe during the continuance of this fight the Standard Oil Company, controlling all the refineries of Cleveland, shipped all its refined oil, by virtue of its contract with the other trunk lines by rail?—A. Yes, sir.

Q. Now, this settlement of this fight was made in October, 1877?—A. October 17, 1877.

Q. Did the water communication remain open much longer after that, if you know, for that season?—A. The lakes usually close, I think, about the middle of November.

Q. Do you know whether, as a matter of fact, after the settlement there was any oil shipped except by rail?—A. There was not; no, sir.

Q. During that season?—A. There was not.

Q. By the contract you put in evidence, which speaks for itself, however, there was to be a deduction of 10 per cent. on the oil shipped by the Standard?—A. Yes, sir; that is, not less than 10 per cent.

Q. Now, how long did that arrangement of a deduction of 10 per cent. only continue?—A. Up to the 1st of May, 1878.

Q. What new factors entered into the matter at that time which made any change desirable, if any; what new elements came into the question?—A. So far as we were concerned we followed the lead of the New York Central and Erie railroads in making concessions after the 1st of May. They were convinced by the Standard Oil Company that deductions were necessary in order to keep the trade moving. They made the deductions, we followed.

Q. Do you know on what grounds they were induced to do that? What the representations were, of your own knowledge?—A. Not of my own knowledge, I do not know.

Q. Your agreement was with the Standard that you would give them rates as low as long as they sent their oil over your lines as they received from your competitors?—A. Yes, sir; the understanding was that our rates should be as low as those of our competitors.

Q. I will repeat the question and put it in another form. Was there any obligation whatever on the Standard to pay you higher rates at any time than it could transport its oil for over the other roads?—A. I would like to refer to that letter. The understanding was, of course, that we would make rates in connection with the other trunk lines as low as the other trunk lines made them. The letter specifically provides that the rates shall be fixed by the trunk lines, and that those rates shall be "so fixed as to place them on a parity as to cost of transportation to shippers by competing lines."

Q. When did you first know that a reduction was to be made by the other trunk lines in favor of the Standard? At the 1st of May?—A. No; it was subsequent to the 1st of May. I can't fix the exact date.

Q. Some time during that month probably?—A. Yes, sir; some time during that month, I think. It was first brought to our attention by the Standard Oil Company stating that the New York Central and Erie had assented to this reduction for reasons that they had urged upon them at the time, and we made the same reduction. As I stated before, it has since been understood among the trunk lines that those reductions and changes in rates, whether advances or reductions, shall be made only on consultation in which the four trunk lines shall be represented. At that time that was not strictly adhered to.

Q. You learned that the two had made it, and you assented?—A. Yes, sir; we assented.

Q. And do you know whether the Baltimore and Ohio assented?—A. They assented subsequently also.

Q. Now, as to your conference at Saratoga, of which you have spoken; what was its character, and what were the reason which operated on the representatives of the trunk lines at that time in making the reduction?—A. The cause of the reduction made at Saratoga was that the route for oil by rail to Buffalo and thence by canal had been opened up at rates which we were convinced were much lower than we were then charging the Standard Oil Company, and we made the reduction to meet that rate. That reduction was made on a very careful consideration of the subject by the presidents of the three Northern trunk lines, and after they had been convinced that the reduction was necessary to meet the reduced rates by the canal.

Q. Was that reduction also assented to by the other trunk lines?—A. It was assented to by the Baltimore and Ohio Railroad. It was not represented at the meeting for the reason that Mr. King, who was to represent that company, did not get there in time. The meeting took place in the morning, and he arrived in the afternoon after the meeting had adjourned, but he assented to the reduction in the rates.

Q. Who were the active parties, to the best of your knowledge and belief, in opening the additional competing lines by Buffalo and the canal?—A. I could not name them all. I believe that nearly all of the called outside refiners in New York, thirty, were in the movement, and the Equitable Pipe Line was also.

Q. You can state whether, in your judgment, it was the movement of the outside refiners.—A. Yes, sir; in New York.

Q. Was there any outside refiner in Pennsylvania engaged in it?—A. No, sir; not to my knowledge.

Q. What outside refiner is there that is a customer of your lines in Pennsylvania?—A. Malcolm Lloyd is the only one, I believe, that I now recollect. There are one or more small refineries at or near Pittsburgh, but I don't recall them now. I don't think they shipped to the sea-board at all.

Q. How long did that reduction continue which was made at Saratoga in consequence of the opening up of this competing line?—A. Till the 8th of December of that year, which was about the time of the closing of the canal.

Q. What change took place then?—A. Then we went back to the rates that were in existence prior to July of that year, and we are now charging those rates.

Q. You went back because the competing line, via Buffalo and the canal which the outside refiners had opened and thereby reduced the rates, was closed by the season?—A. Was closed for the time being.

Q. You say those are the rates you are operating under now?—A. Yes, sir.

Q. You have given in evidence a copy of a letter from Mr. O'Day as representing the American Transfer Company; I wish you would state whether or not you then regarded that company as having power to control shipments of oil either over your lines or away from them?—A. The American Transfer Company undoubtedly had it in its power to control shipments, so as to divert them from the line of the Pennsylvania Railroad.

Q. What were your reasons for making the arrangement which Mr. O'Day demanded?—A. We made that because we thought it to the interest of our company to make as favorable an arrangement with the American Transfer Company as we could; at least as favorable as had been made by the other lines.

Q. You made them because you thought it to the interest of your company to make as favorable arrangements with the American Transfer Company as had been made by the other competing lines?—A. Yes, sir.

Q. Why did you think it to the interest of your company to make it as favorable as your competitors were making it?—A. The American Transfer Company had it in its power to divert traffic from our line if we did not.

Q. Do you know of any reason why they should continue to divert oil in their control to your lines at higher prices than they were paying the other competing lines for the same business?—A. I do not.

Q. Mr. Cassatt, I find I omitted to ask you one question in its order. While the Standard Oil Company was extending its business and enlarging its power and control of the oil traffic was there, to your knowledge, any effort made on the part of the Pennsylvania Railroad Company to induce the other trunk lines to combine as against the Standard?—A. There was no effort made to combine as against the Standard, but there were repeated efforts made to induce the other trunk lines to join in some arrangement by which the oil traffic might be secured at paying rates to the four trunk lines, and be divided between those lines in proportions to be agreed upon, and by which equal rates should be charged to all shippers. We proposed various methods to accomplish this object; we suggested, among other things, that after we had agreed upon percentages we might have a joint agent in the oil regions, and issue bills of lading which would give us the right to ship oil over any one of the lines, but that

joint agent should, in making the shipments, divide the business between the four trunk lines on percentages that might be agreed upon. We thought that was a feasible scheme, but the other roads differed with us in that respect; they thought that the Standard Oil Company, with its large control of the refining interests, could seek other outlets and might and probably would cause us to reduce our rates for transportation far below what we ought to get for the business.

Q. What I meant in my question would be better expressed in a changed form. Did the officers representing the Pennsylvania Railroad, to your knowledge, endeavor more than once to secure the co-operation of your competitors in some plan which would enable the railroads to control a division of the oil traffic and to prevent the Standard from controlling it?—A. The Standard does not now and never did control the divisions; they never attempted to; but we have made numerous efforts—and I suppose that is what you mean by the question—to induce the other trunk lines to adopt some means of carrying out the divisions agreed among themselves without assistance or aid of the Standard Oil Company, in which we were not successful.

By Mr. SHIRAS:

Q. You have not located those efforts in any point of time. You mean before the making of the contract?—A. Yes, sir; before the making of the contract; during the continuance of this contract.

By Mr. McVEAGH:

Q. Were or were not those efforts made repeatedly during the continuance of the contracts of which you have already spoken?—A. Yes, sir. I ought to state the reasons given by the other lines, and I did partially, for not adopting our suggestions: They believed it would not be feasible; that the Standard Oil Company would be able to break up any arrangement of that kind we might make.

Q. Have you any knowledge of any power possessed by any one of the trunk lines, or all of them together, to compel the Standard to ship its oil, except by what route it might choose to do so?—A. There was no such power; none of the lines had any such power.

Q. From your knowledge of the business of transportation can you suggest any method by which any such result could be reached?—A. I know of no such method except by agreement with them.

By Mr. SHIRAS:

Q. Excepting by agreement with the Standard?—A. Yes, sir; the question was how we could force the Standard to ship its oil by our lines, and I said we could not except by agreement with them.

By Mr. MACVEAGH:

Q. Had the percentage of the transportation which they controlled increased or diminished from the time you speak of, when it was over one-half, up to the time when the contract was made with them in October, 1877?—A. My recollection is that during that contest we got not much more than 30 per cent. of the entire traffic, and as the other lines carried for the Standard Oil Company only, they must have during that time got 70 per cent. of the refining business; that is, that which goes to the sea-board.

Q. During that contest what was the effect of the competition between the Pennsylvania Railroad and the Empire Line, on the one side, and the other trunk lines and the Standard on the other, upon the market at the wells, as compared with its effect upon the market at the sea-board, if you know?—A. I do not, sir.

Q. How was the allotment that was actually made of the percentage by the arrangement that was made in October, 1877, reached? Who made these percentages, and how were they made?—A. By agreement between the four trunk lines. After several interviews on that subject and failures to agree upon percentages, we finally did agree.

Q. Had these efforts to secure the agreement of the other trunk lines in the appointment of a joint agent, and the other efforts you made in the direction you have indicated, all preceded the making of that arrangement with the Standard?—A. They had; yes, sir.

Q. State whether or not, since that arrangement has been made with the Standard, there has been any voluntary reduction of rates to it by the Pennsylvania Railroad Company, or any reduction not required by the reduction of your competitors for this traffic.—A. There has been no reduction made that we didn't think it was necessary to make, and that was not made by the other lines at the same time or before we did.

Q. In connection with these rebates and allowances, I am not sure that the question I put upon one aspect of this case was sufficiently in detail. In this you have already answered, that so far as your knowledge and belief extends, no officer of the Pennsylvania Railroad Company, or of any other companies which it operates, was directly or indirectly interested in the Standard Oil Company. I wish to ask whether you intend that answer to deny any such interest as a share-holder, or in any shape

or manner whatever, and then I wish you would state whether or not, so far as your knowledge extends, any such officer was ever directly or indirectly interested by any contrivance or arrangement, of any character or description, in any of these rebates, in any allowances, in any drawback, in the receiving of any presents from the Standard Oil Company, or from anybody with whom they were connected, or from anybody whom you might suppose represented them in any shape or form?—A. To the best of my knowledge and belief, no.

Q. Now, Mr. Cassatt, I wish you would state what, in your judgment, would be the consequence to the Pennsylvania Railroad Company of refusing to make the same allowances to the Standard Oil Company which your competitors for the oil traffic make to them.—A. It would simply result in the state of affairs that existed in the spring and summer of 1877, and which was gradually getting worse; it would simply result in this, to the best of my belief, that in a very short time we would be carrying oil at ruinously low rates.

Q. What percentage of the oil to be carried do you suppose you could secure at these rates to-day?—A. To-day we could get a very small part of it. If we should be forced into another contest with the Standard Oil Company the result would be, as I said before, we would get low rates and a very small part of the traffic. We would have to encourage the building up of opposition refineries on the lines of our road, and I believe that in the course of time we would get a share of the tonnage, but necessarily at very low rates, unless by agreement we could put them up.

Q. In your judgment would such a policy be advantageous or injurious to the Pennsylvania Railroad Company?—A. It would be very injurious, in my opinion.

Q. Would it not result at once in diverting all the oil traffic controlled by the Standard Oil Company from your lines?—A. It would, undoubtedly.

Q. And would you not be dependent upon your success in building up competing refineries to get any considerable portion of that traffic?—A. We would.

Q. In building up those refineries would you not have to sustain them against the competition of the Standard in the oil market?—A. We would.

Q. Do you think it would be safe for the Pennsylvania Railroad Company to again enter upon that enterprise, to the best of your judgment, as one of its transporting officers?—A. I think it would be a very injurious thing for us to do in the interests of the stockholders and of the company.

Q. Mr. Cassatt, there are two or three corrections possibly to be made in your direct testimony. I don't know whether there are or not, but I want to call them to your attention. In the first place, my recollection is that you stated the Empire Transportation Company was not, to your knowledge, increasing its capacity in 1877. I wish to ask whether, upon reflection, you do or do not know (and I do not know which is the case) that they were actually, by leases and running arrangements, increasing their capacity in the spring of that year in Pittsburgh and elsewhere and enlarging their interests in the refining business? Have you any knowledge on the subject?—A. In the spring of 1877?

Q. Well, in 1877.—A. In the spring of 1877 they were building this refinery here at Philadelphia; they were enlarging the refinery in New York. As to whether they had any arrangements with the refiners in Pittsburgh or were making leases there I do not know. My impression is that they did have some arrangement of that kind, but I can not speak of it of my own knowledge.

Q. Then you stated in your testimony as if the New York Central Railroad Company received all the oil that it received from the United Pipe Lines. Is that accurate, or did it, as a matter of fact, receive from the Octave and Pennsylvania Transportation Company and other lines from Titusville?—A. I believe it did at that time; yes, sir. I think the Pennsylvania Transportation Company has ceased to do business, but at that time it was in operation and carried oil to the New York Central Railroad. I have no knowledge of the Octave line at all. I believe there is such a line; while it carried oil it no doubt carried oil to the New York Central Railroad, because it runs to connect with that road only, I believe.

Q. Do you remember at the time of the negotiations between the Empire Transportation Company and the Standard Oil Company and the Pennsylvania Railroad Company the position which the Standard took as to the advisability of the Pennsylvania Railroad Company purchasing the Union Pipe Line? Do you remember whether they urged and insisted that the Pennsylvania Railroad Company should purchase the Pipe Line rather than that they should do it?—A. Yes, sir; as I said in my direct testimony, I think the Standard Oil Company did not wish to buy the Union Pipe Line; they wanted the Pennsylvania Railroad Company to buy it; it was necessary, it was explained, that it should be bought in order to close out our contract with the Empire Transportation Company. The question then came up who should buy it; we insisted that the Standard Company should buy it, and they urged us to do it.

Q. What was the extent of that line, have you any idea? Several hundred miles?—A. Three or four hundred miles.

Q. You can state whether they made that purchase of their own accord and from their own wish to do it, or whether against their own wish and upon the instance of the Pennsylvania Railroad Company that they should do it as a part of the arrangement.—A. We insisted that they should do it; that we could not.

Q. And it was against their desire as first expressed?—A. They much preferred that we should buy it.

**Redirect examination:**

Q. Mr. Cassatt, you have stated that this allowance of 22½ cents which you made the American Transfer Company was made because you learned that the same or even greater allowance had been made in favor of that company for some time before by the other trunk lines, and you having stated that the reductions upon the rates had been fixed at the time of making this contract in October, 1877, with the Standard Oil Company. When these reductions were made were they at the same time or subsequent to reductions allowed that company by the other trunk lines; are we to understand that the policy of the Pennsylvania Railroad Company with respect to the allowance to the Transfer Company, and with respect to the allowances to the Standard Oil Company, was dictated and controlled by the other trunk lines?—A. No, sir; I do not know. We have an equal voice with the other trunk lines in fixing these rates, and in the particular instance I speak of the concession was made first by the two Northern trunk lines and we followed; subsequent to that time we had an understanding, which now exists, that no arrangements or rates would be made with the Standard Oil Company for the transportation of oil excepting at a meeting at which the four trunk lines would be represented, in order that their action might be simultaneous and that each line might have a full voice in the matter.

Q. Is that understanding, as it now exists, reduced to writing?—A. No, sir; simply an understanding amongst us that we will not deal separately with the Standard Oil Company. We will meet them always as a body.

Q. State about when that understanding was arrived at.—A. It was made in consequence of these reductions having been made without consultation with us.

Q. Did you regard the fact that these allowances had been made by the other trunk lines without consultation with you for a considerable period as creating an obligation on the part of the Pennsylvania Railroad Company to make these allowances for freight already carried?—A. It was an obligation, not perhaps in the light of an absolute obligation, but we thought it best to make as favorable rates with the Standard Oil Company as the other lines had done.

Q. Was the allowing of those rates or reductions to the Transfer Company and to the Standard Oil Company by these two Northern trunk lines without consulting with your company regarded by your company as a violation of the agreement of October, 1877, between the Standard Oil Company and the other trunk lines?—A. Well, hardly as a violation of the agreement, because the agreement mainly consisted in the division of the tonnage; they did not gain any additional tonnage by that possibly, but we thought it was not a proper way to make those concessions. I should state, however, and I call your attention to the fact, that you speak of our paying these rebates, or this commission rather, to the American Transfer Company on business already carried; the conversation which I had with Mr. O'Day and this letter which I received from him was in the early part of February. This letter that I received from him was dated July 15; he therefore made a request that we should pay this commission in the early part of February. We held the matter in abeyance for some time, and did not agree finally to it until the 15th of May. That was the reason why in this case we paid rebates on business that had been carried two months previously.

Q. Am I to understand you, however, as testifying, Mr. Cassatt, that you regarded the allowance of these rebates, and of this allowance to the American Transfer Company by these Northern routes without consultation with the Pennsylvania Railroad Company as a violation of the understanding between the railroad companies made prior to October 17, 1877?—A. There was no understanding on that subject; I can hardly say, therefore, that I would consider it a violation of the agreement; it was certainly a departure from the general practice in these matters, where we generally consult before making any changes, and when the attention of the other roads was called to this they promptly agreed that hereafter they would not make any changes in the rates for transporting oil except at a meeting at which the four trunk lines would be represented.

Q. That agreement, then, as it now exists, and your own judgment with reference to any changes, grew out of the dissatisfaction of your company with their having made those changes?—A. Without consulting us.

Q. Mr. Cassatt, you have stated that one reason why, in the consultation at Saratoga, in July, 1878, you were driven to putting down the rates was that a new route had been arranged by outside refiners by way of Buffalo and the canal; what was it that drove those outside refiners to the constructing and arranging of that route? Was it not the fact that they could not get the same rates over the trunk lines that

they were offered by them to the Standard Oil Company?—A. I believe that it was; we stated frankly—I did to the outside refiners, and also did Mr. Scott, the president of our company, that unless they would guaranty us the same quantity of oil, guaranteed to ship over our line the same quantity of oil that the Standard Oil Company had guaranteed to ship, we could not make them the same rates; we would make lower net rates to the Standard than they got. I stated to them at the same time, however, that I did not think the concession we would make the Standard would be one that would drive them out of the business; we did not intend them to do so, and in the distribution of cars and the facilities for transportation they would be placed on a strict equality with the Standard Company. They expressed themselves as dissatisfied with that; they said they would never agree to any arrangement by which they did not get the same rates as the Standard, and from that time forward they commenced to arrange in some way to get some other route to the sea-board.

Q. At the same time, did they not, Mr. Cassatt, make the request or demand that they should be permitted to put cars of their own on your road?—A. They did at a subsequent interview with Mr. Scott and myself at the office of the company in Philadelphia. We declined to allow them to put cars of their own on the road, for the reason that we had cars enough to do the business that we had just bought from the Empire Line; we declined to allow them to put cars on, excepting at the legal rates.

Q. By the legal rates you mean chartered rates?—A. I mean we were compelled to carry the cars of certain individuals at certain rates prescribed by law, and we would carry their cars at those rates.

Q. With respect to that portion of the oil traffic which you have described as seeking the sea-board down the Ohio River and by means of the Chesapeake and Ohio Railroad to Richmond, that is a much longer route from the oil country to the sea-board than that presented by the trunk lines, is it not?—A. Yes, sir; it is a long route.

Q. What was it that drove the shippers who sent their oil by that way to use the round-about and long route; was it not their inability to procure the carriage of their oil upon the same terms for which the Standard Company's oil was carried?—A. I don't know what their object was; I suppose their reason for shipping by that route was that they were offered lowered rates; the Chesapeake and Ohio Railroad had no oil business and offered them very low terms to carry the oil.

Q. Lower rates than those they could procure from the trunk lines?—A. Lower rates than we were carrying for.

Q. Do you know what rates they procured by that route?—A. I don't know; we knew at the time; we thought we knew. It is sometimes very difficult to ascertain what rates are.

Q. How far is it from the point where this oil is produced to the port on the Ohio River by which this oil reached the Chesapeake and Ohio Railroad?—A. Huntingdon, I think, is the point where the oil is transhipped from the barges to the cars; how far below Pittsburgh that is I do not know.

Q. It is away below Wheeling, is it not?—A. Below Wheeling; yes, sir.

Q. And below Parkersburgh likewise; below the foot of the Baltimore and Ohio Railroad?—A. Yes, sir.

Q. About 350 miles below Pittsburgh?—A. I really don't know; I should say that is further than it really is; I don't know; the river is very crooked and it may be a long distance.

Q. Who are the shippers that send their oil to the market by that route; I mean of what class are they? Are they other than the Standard?—A. Yes, sir.

Q. You have spoken, Mr. Cassatt, of your opinion of the power of the American Transfer Company to control traffic; had they, to your knowledge, any other source of power in that respect than the possession of the limited pipe lines, which you have spoken of as their property?—A. I don't know of any other.

Q. The influence, then, that you advert to as being possessed by them arises out of their ownership of certain pipe lines?—A. Yes, sir; they could have opened those pipe lines to shipments at very low rates by water and to rival roads, and could have diverted a large quantity of oil from our lines if they had chosen to do so.

Q. What route, by way of water, would their pipe lines have taken the oil?—A. By the Ohio River. If they had had very large inducements they could have got a large quantity of oil carried that way, and which would not only have affected us in the quantity of oil—the carriage of which we would have lost—but would probably have forced us to put our rates down to meet the competition of that route on all our other oil.

Q. You have stated, Mr. Cassatt, I think once or twice—I think I put a question to you about its being, as you suppose, a corporation, but you did not know of what State; have you any information that you can give us with respect to the organization of the American Transfer Company, who its principal officers are, or its leading stockholders?—A. I don't know of my own knowledge anything about it, excepting that Mr. O'Day is the manager, and Mr. Girty, I was told yesterday, is the cashier.

Q. Where was Mr. O'Day's headquarters in connection with that business?—A. At Oil City.

Q. Have you any information, Mr. Cassatt, going to show that the owners and controllers of the American Transfer Company are the same persons who own and control the Standard Oil Company?—A. I have no knowledge on that subject, sir, at all. I never saw a list of stockholders.

Q. Do you know, from transacting business or otherwise, as such things are known, that this Mr. Girty is the treasurer of both the Standard Oil Company and the American Transfer Company?—A. I am not aware of the fact, and indeed I did not know of the fact that he was the treasurer of the American Transfer Company until Mr. Justice so informed me yesterday. The only officer of that company that I ever met to my knowledge was Mr. O'Day.

Q. Mr. Cassatt, you have spoken of the policy that has controlled the action of the Pennsylvania Railroad Company with respect to complying with the demands of the Transfer Company and the Standard Oil Company and the effect of a contest with those companies on the part of the carrying companies, and you have likewise, in reply to Mr. MacVeagh, stated some views with respect to the effect upon the oil traffic. If hostilities should be renewed between your company and those companies touching that matter, I ask you whether, if the Pennsylvania producers were to construct refineries on the line of the Pennsylvania Railroad Company, and bind themselves to ship all their product upon the lines of your road, would you give them as low rates as you give the Standard?—A. If they would guaranty us the same quantity, undoubtedly.

Q. Not otherwise?—A. Not otherwise under that contract that we have now with the Standard Oil Company, unless we change our policy and give notice of the abrogation of that contract.

#### Recross-examination:

Q. Mr. Cassatt, your examination so far has been confined to the relations of the Pennsylvania Railroad Company as a carrier of oil. State whether, to your knowledge, it ever entered into any arrangement of any kind for the control of the oil market.—A. Never, sir.

Q. State whether it ever agreed with the Standard or with any other oil company or railroad company or with anybody else in any way to acquire control of the production or sale of oil in any manner or form.—A. Never had anything to do with that, sir.

Q. State whether or not it did, to the best of your judgment and belief, confine itself to the business of transporting.—A. It did.

Q. And, so far as your knowledge extends, whether the arrangements that were made with the Standard and with other persons, with reference to the transportation of oil, were confined to its relations as a transporter.—A. As a transporter.

Q. Has there been any objection on the part of anybody connected with the Pennsylvania Railroad Company, as you know, to raising rates or to getting better rates from the Standard, if it were possible?—A. Never. We have always endeavored to get the best rates we could.

Q. Is there any objection now upon the part of any officer of that company, to your knowledge, to having open rates—to giving equal rates to everybody—if your competitors were required to do the same?—A. On the contrary, if we could have any arrangement by which we could be assured that rates would be maintained by all our competitors, and not cut by any of them, it would be just what we desire. We are satisfied that with our facilities in this traffic, as well as in any other traffic, at the same rates we can always secure our fair share of the business, and that is what we ask. Nothing would give the management of the Pennsylvania Railroad Company greater pleasure than to have that accomplished by law or otherwise, so it could be enforced.

Q. Equally upon all competitions for this traffic?—A. Yes, sir.

#### Redirect examination:

Q. You say that there would be no objection on the part of the Pennsylvania Railroad Company to have open rates and equal rates to all, if the rival roads maintained the same and did not cut them. What better method do you have now to maintain the equality of the rates as between you and the rival roads than you would have under the circumstances that you speak of, or under any circumstances?

Mr. MACVEAGH. In other words, how do the Pennsylvania Railroad Company's arrangements tend to maintain the arrangements agreed upon?

Mr. SHIRAS. How do you get rates maintained in equality better now under your arrangements with the Standard?

The WITNESS. Simply this, that all incentive to cut the rates—reduce the rates—is removed by the pool, or by the agreed division of the business between the lines; if a line has agreed to a certain percentage of the business it gains nothing to exceed

that percentage, it gains nothing by not reducing the rates in competition with other roads.

Q. Then, I understand that it is with respect to the agreement to share the traffic in extent that the agreement between the railroad companies is effective?—A. Simply, that is it; yes, sir.

Q. But how do you enforce the agreement that the rates are to be the same; what means have you to enforce that particular portion of the agreement as to the equality of the rates, which you would not have under any circumstances?—A. As I endeavored to explain before, the fact that each road has agreed to take a certain percentage of the business, and be satisfied with that; not wishing any more removes all incentive on their part to cut the rates. If there were no division of the business, then each road would try to get as large a share of the traffic as possible, and resort to the general method of cutting rates to get it.

Q. But my question is this, in another form: What if these railroad companies equally abide now by verbal arrangements to divide this traffic in accordance with a certain plan of division, why would they not equally abide by any other arrangement as to the equality of rates?—A. Because in the one case the contract is one that can be enforced; that is, the division of the business can be enforced.

Q. How can you enforce that?—A. Because it can not be departed from without all the other roads knowing it and breaking up the arrangement; if there were no agreement to divide the business and maintain rates any one of the roads might endeavor to obtain by secret rebates or commissions a larger share than the other roads would think it was entitled to, and it is the making of secret rates that is the real question to meet.

Q. Then, the serious difficulty in regulating traffic which is reached by railroads is not the making a just agreement with respect to rates, but in what you call making secret contracts?—A. The difficulty is not in the making of the agreement, but in the maintaining or enforcing of it.

Q. But the difficulty is one that can be departed from by secret arrangements with respect to traffic?—A. Yes, sir; that is it. If all the roads in the United States were compelled by law to publish their tariff, and if it were made a misdemeanor upon the part of any officer, punishable by law, to make any secret concessions from them, and such a law could be enforced, there would be very little difficulty in maintaining rates.

Q. Mr. Cassatt, why could not an agreement be made between these trunk lines as to a division of the traffic without paying the rebates to the Standard and the American Transfer Company; why could it not be made and enforced between them just as well?—A. It could be if they would agree to it. We, as I said before, during the contest with the Standard Oil Company and the other trunk lines, made repeated efforts to get them to agree to some arrangement by which the oil could be divided in quantity, and by which rates could be maintained; we suggested several plans which were entirely feasible, I think. They objected to going into any arrangement for the reason that they thought the power of the Standard was such that they would seek other outlets than the trunk lines.

By Mr. MACVEAGH:

Q. Was not the practical difficulty, as stated by them, this: That the Standard Oil Company, controlling 70 per cent. of the gross traffic, would be more likely to make a route of its own to the sea-board, utilizing such lines by water and land as were necessary, than to submit to the terms imposed by the railroad companies?—A. That was generally the idea, that the Standard Oil Company would have it in its power, through arrangements for the transportation of its oil, to take this business off the trunk lines in a body; and there was a good deal of force in what they said.

By Mr. SHIRAS:

Q. The practical difficulty to which you advert, about the trouble of this matter of cutting rates by agreement with the railroad companies, is an illustration, is it not, showing your arrangement don't meet that difficulty? If these two northern trunk lines, having allowed this matter to the Transfer, and also to the Standard, without your knowledge, and secretly—don't it illustrate the same difficulty as fully as any other questions of cutting rates?—A. Well, I think not; I don't know that they intended it to be a secret arrangement at the time it was made, and they certainly made no secret about it whenever attention was first called to it by the American Transfer Company, and we consulted them about it; they made no secret in regard to it then. I think the simple mistake there was acting without consulting the other two lines, and, as I stated, that has not occurred since.

Q. That you know of?—A. I believe not.

[Copy of ' Pennsylvania Railroad Company Exhibit No. 38, Philadelphia, March 6, 1879, J. B. Sweitzer, master. "]

PHILADELPHIA, October 17, 1877.

DEAR SIR: In consideration of the covenants by your company to be performed as hereinafter mentioned, we will agree as follows:

(1) It having been agreed by the trunk lines that of all the oil shipped by the trunk lines to the cities of New York, Philadelphia, and Baltimore, 63 per cent. shall be considered as the proportion which would naturally go to the city of New York; and it having been further agreed that of this percentage one-third shall be transported over each of the trunk lines having termini in New York, viz, the New York Central, Erie, and Pennsylvania Railroads, we agree, unless the aforesaid division shall be changed by mutual consent of said trunk lines, to ship such quantities of oil over your lines, from time to time, as will, when added to the quantities shipped by parties other than ourselves, give your line one-third of the shipments to New York by the said trunk lines, or 21 per cent. of the whole amount shipped to the three cities above named by the said trunk lines; it being understood that in stating the number of barrels for the purpose of making this division or for carrying out any of the other stipulations herein contained, the barrel of 45 gallons of crude shall be the unit, and that each barrel of the usual size of refined oil shall be counted as equal to one and three-tenths barrels of crude.

(2) It having been agreed, as we are informed, between your company and the Baltimore and Ohio Railroad Company that of the remaining 37 per cent. of the total shipments aforesaid you should be entitled to transport by lines owned and controlled by your company to Philadelphia and Baltimore 26 per cent., and the Baltimore and Ohio Railroad Company to Baltimore by its lines 11 per cent., we agree, until these proportions are changed by mutual consent, to ship such quantities to Philadelphia and Baltimore by lines owned and controlled by your company as will, when added to shipments of parties other than ourselves, give for transportation by your lines to Philadelphia and Baltimore 26 per cent. of the total shipments by the four trunk lines to the three sea-board cities above named.

(3) We further agree that the quantity of oil which we will ourselves ship over your line shall not in any calendar year be less than 2,000,000 barrels, based upon an average production of not less than 30,000 barrels per day. If we should fail to give you the traffic herein named, we will pay to you a sum equal to the profits which you would have realized upon the quantity in deficit; provided, however, that you will at all times furnish us with transportation, as we may reasonably require it.

(4) We will, of the proportion of oil going to Philadelphia, refine as much as is practicable in Philadelphia, as we understand that you desire to see the refining capacity of Philadelphia fully employed, and, if needful, increased. And in shipping by your lines, whether to Philadelphia, Baltimore, or New York, we will endeavor to deliver the oil to you at points from which you will have short hauls, and to the extent that we can we will make the proportion of crude shipped as large as possible, as we understand its transportation to be more profitable to you than that of refined oil.

(5) We ask, in consideration of the above-named guaranty of business upon which it is understood we shall pay such rates as may be fixed from time to time by the four trunk lines (which rates, it is understood, shall be so fixed by the trunk lines as to place us on a parity as to cost of transportation with shippers by competing lines), that you shall furnish us promptly all the transportation we may reasonably require, and that you shall allow to and pay us weekly such commission on our own shipments and the shipments which we may control, as may be agreed to by your company and the other trunk lines from time to time; this commission, it is understood, has for the present been fixed at 10 per cent. upon the rate, and shall not be fixed at a less percentage, except by a mutual agreement of your company and ours; provided that no other shipper of oil by your line shall pay less than the rate fixed for us before such commission is deducted, and no commission shall be allowed any other shipper unless he shall guaranty and furnish you such quantity of oil for shipment as will, after deduction of commission allowed him, realize to you the same amount of profit you realized from our trade; that is, you will not allow any other shipper of oil any part of such commission, unless after such allowance you realize from the total of his business the same total amount of profit you realize from the total of our business, except so far as your company may be compelled to fill certain contracts for transportation made by the Empire Line with refiners and producers, which contracts terminate on or before May 1, 1878, a statement of which shall accompany your reply to this letter; such contracts to be fulfilled. We agree that all the stipulations herein contained shall be carried out by us for the period of five years from the date hereof, unless sooner changed or terminated by mutual consent, provided that you advise us in writing within ten days that your company accept, and will carry out, its part of the arrangement for the like term. In entering into this agreement we desire to put

ourselves on record as expressing our wish and intention of making our business relations with your company such that not only your main lines, but the connecting lines controlled by you, especially the Allegheny Valley Railroad, shall secure the best possible results from the oil traffic consistent with our existing obligations to other transportation interests. We feel that the location of our refineries, all of which can be reached by your lines, should naturally create a close alliance between your company and ours, and that the best results from this important traffic can only be secured to yourselves and ourselves and, we might add, to the entire petroleum interests of the country, by the establishment of friendly and mutually satisfactory arrangements between us.

Yours, truly,

STANDARD OIL COMPANY,  
By WILLIAM ROCKEFELLER,  
*Vice-President.*

THOMAS A. SCOTT,  
*President Pennsylvania Railroad Company.*

OFFICE OF THE PENNSYLVANIA RAILROAD COMPANY,  
*Philadelphia, October 17, 1877.*

MY DEAR SIR: I am in receipt of your letter of this date, reciting the understanding and agreement to exist between the Pennsylvania Railroad Company and your company for a period of five years.

I beg leave to say that the same covers the whole basis of the arrangement, and is satisfactory to this company, the provisions of which will be duly carried out by it.

Very respectfully, yours,

THOMAS A. SCOTT,  
*President.*

WILLIAM ROCKEFELLER, Esq.,  
*Vice-President Standard Oil Company.*

Correct:

JOSEPH LESLEY,  
*Secretary.*

FEBRUARY 14, 1879.

[Copy of exhibit "Pennsylvania Railroad Company, Exhibit No. 45, four pages, Philadelphia, March 21, 1879, J. B. Sweitzer, master."]

OFFICE OF THE AMERICAN TRANSFER COMPANY,  
*Oil City, Pa., February 15, 1878.*

DEAR SIR: Referring to the conversation I had with you in January, I wish to submit the following facts: That our company has at large expense (involving the payment of several hundred thousand dollars) purchased and created certain pipe lines to Pittsburgh, through which we are able not only to protect the Allegheny Valley road in a paying rate of freight for the oil it carries, but also to secure to that company (by agreement with it) its full proportion of the oil traffic going to Pittsburgh.

You are acquainted with the efforts we have put forth in other directions during the last month, in which we have acted in thorough accord with the trunk line interests, and I believe I may say, without egotism, we have to the extent of our ability effectually protected their interests in such action. I here repeat what I once stated to you, and which I asked you to receive and treat as strictly confidential, that we have been for many months receiving from the New York Central and Erie Railroads certain sums of money, in no instance less than 20 cents per barrel on every barrel of crude oil carried by each of those roads.

Co-operating as we are doing with the Standard Oil Company and the trunk lines in every effort to secure for the railroads paying rates of freight on the oil they carry, I am constrained to say to you that, in justice to the interest I represent, we should receive from your company at least 20 cents on each barrel of crude oil you transport.

The fruit of the co-operation referred to has been fully evidenced in the fact that since last fall your company has received 50 to 60 cents per barrel more freight than was obtained by it prior to our co-operation.

In submitting this proposition I feel I should ask you to let this date from the 1st of November, 1877, but I am willing to accept as a compromise (which is to be regarded as strictly a private one between your company and ours) the payment by you of 20 cents per barrel on all crude shipments commencing with February 1, 1878.

I make this proposition with the full expectation that it will be acceptable to your company, but with the understanding on my part that in so doing I am not asking as much of the Pennsylvania road and its connections as I have been and am receiving from the other trunk lines.

You are doubtless aware that during the last two years a large amount of oil has been shipped to Richmond via the Chesapeake and Ohio road, and that since the purchase of the Pittsburgh lines by us not one barrel has been permitted to go in that direction.

During the season of 1877, and so long as the Columbia Conduit Company afforded the Baltimore and Ohio road access to the oil regions, that company, I understood, refused to accept from the other trunk lines (for its proportion of the oil traffic) less than 20 per cent., but after the purchase by us of the Columbia Conduit you succeeded in arranging with the Baltimore and Ohio for about half as much as they previously claimed.

I may add that the Baltimore and Ohio road are wholly dependent upon us for any oil they may carry.

Yours, truly,

DANIEL O'DAY,  
General Manager.

A. J. CASSATT, Esq.,  
Third Vice-President, Philadelphia.

[Copy of Exhibit 46.]

PHILADELPHIA, May 15, 1878.

DEAR SIR: Your favor of February 15 has been received, and directions have been given to allow you from and after February 1, 1878, the commission therein asked for until further notice.

Yours, truly,

A. J. CASSATT,  
Third Vice-President.

DANIEL O'DAY, Esq.,  
General Manager American Transfer Company, Oil City, Pa.

[Copy of exhibit.—Pennsylvania Railroad Company. Exhibit No. 47. Philadelphia, March 21, 1879. J. B. Sweltzer, master.]

PHILADELPHIA, May 15, 1878.

DEAR SIR: I inclose herewith copy of letter from Mr. Daniel O'Day, general manager of the American Transfer Company, which refers to a conversation I had with him in January last, in reference to allowing the American Transfer Company a commission of 20 cents per barrel on all crude oil transported over this company's lines to New York, Philadelphia, and Baltimore.

I agreed to allow this commission from and after February 1, until further notice, after having seen receipted bill showing that the New York Central Railroad allowed them a commission of 35 cents per barrel, and that the Erie Railway allowed them a commission of 20 cents per barrel on Bradford oil and 30 cents per barrel on all other oil, and that they had been doing so continuously since the 17th of October last.

Of this, however, you saw the evidence yourself in the bills which I submitted to you last week. Please, therefore, prepare vouchers in favor of the American Transfer Company, per Daniel O'Day, for this commission of 20 cents on shipments during February, March, and April, and hereafter make settlements with that company monthly.

Yours, truly,

A. J. CASSATT,  
Third Vice-President.

R. W. DOWNING, Esq., Comptroller.

[Copy of Pennsylvania Railroad Company's Exhibit No. 53. Pittsburgh, May 8, 1879. J. B. Sweltzer, master.]

Agreement made the 4th day of November, 1875, between the Empire Transportation Company of the first part, and the Buffalo, New York and Philadelphia Railway Company of the second part:

Whereas the party of the first part is engaged in constructing a pipe line for the transportation of petroleum from the petroleum territory at and near Limestone, in the county of Cattaraugus, in the State of New York, to Olean in said county.

And is also the proprietor of a freight line, and engaged in the carriage and transportation of petroleum, merchandise, and property upon various railroads in the States of New York, Pennsylvania, and elsewhere.

And whereas the party of the second part is a railroad corporation, owning and operating a line of railroad between Buffalo, in the State of New York, and Emporium, in the State of Pennsylvania, where it intersects with the Philadelphia and Erie Railroad.

Now this agreement witnesseth:

First. That the party of the first part, in consideration of the agreements of the party of the second part, hereinafter contained, does hereby agree to go on and complete its pipe line to Olean, and there to construct and, during the continuance of this contract, maintain so many petroleum tanks as shall be required to contain the petroleum which may be transported by such pipe line, and that it will bring to Olean by such pipe line all the petroleum which it may be able to procure from said petroleum district (said district being deemed to include all the territory within a radius of 15 miles, taking Limestone as a center) to be forwarded under this contract by said second party.

Second. That it will construct and maintain its own loading racks and appurtenances thereto for loading cars with oil, and load all cars carrying oil in bulk from its tracks or line of pipe without charge or expense to the party of the second part.

Third. That it will furnish and maintain at its own expense all the cars that may be required in the transportation of such petroleum or its product, and keep the said cars in good order and condition for use.

Fourth. That it will assume all responsibility for any and all loss of petroleum or its products by leakage and all loss or damage to such cars while upon the road of the party of the second part, unless such loss or damage shall have been caused by the gross fault or negligence of the party of the second part.

And also said party of the first part agrees that it will save said second party harmless from all loss, damage, or liability by reason of the matters of or for which said party of the first part assumes responsibility as aforesaid.

No petroleum or product thereof shall be shipped except under a bill of lading, the form of which shall have been approved by said party of the second part.

In consideration of the agreements herein contained on the part of said party of the first part, the party of the second part hereby agrees:

First. That it will haul the cars which shall be required for use in the transportation of such petroleum or its products between Olean and Emporium, and between Olean and Buffalo, and it will furnish all the siding room required in loading the same at Olean.

Second. That it will not, during the continuance of this contract, enter into any agreement with any other party by which it shall agree to charge through rates, that is to say, rates from the wells, for the transportation of petroleum over its said road.

Third. And it further agrees that it will not accept at any point on its roadway any petroleum or product thereof for transportation at any less rates from said point than shall be charged under this contract through from the wells via said pipe line to the point of destination of such petroleum.

Fourth. And said party of the second part further agrees that it will move such cars as promptly as it moves its own freight cars, and will be responsible for any loss or injury to such cars or their contents while in transit over its road, except as hereinbefore provided.

The ordinary wear and tear of said cars shall be deemed to include all disabling of wheels, axles, and journal-boxes which shall take place under fair usage, and the repairs of all or any of such ordinary wear and tear of such cars as may be made by said party of the second part, charging the party of the first part therefor the current prices for making the same, which amount the party of the first part hereby agrees to pay to said party of the second part upon demand.

It is mutually agreed, by and between the said parties, that as a compensation for carriage through its pipe line, and for the storage and loading at Olean of all petroleum or its product, forwarded southerly to any point east of Emporium, or northerly to any point east of Buffalo, said first party shall be entitled to what would be 20 per cent. of the entire through rates on such petroleum, provided it had all been forwarded to New York City, except, however, that such percentage shall yield not less than 10 nor more than 20 cents a barrel.

Upon all petroleum or products forwarded to Buffalo said party of the first part shall be entitled as a compensation for carriage through its pipe line and for storage and loading at Olean to 40 per cent. of the through rates thereon, provided, however, that such percentage shall not yield less than 10 nor more than 20 cents a barrel.

It is further mutually agreed that the rates of transportation of such petroleum or its products shall be fixed from time to time by the parties hereto by mutual agreement; but it is understood that it will not be possible so to fix the rates easterly by Emporium except by the concurrence of the Pennsylvania Railroad Company.

All moneys earned by the transportation of such petroleum or its products shall, in the first instance, be collected and received by said party of the first part. From such moneys said party of the first part shall first retain the amount to which it shall be entitled under the foregoing provisions hereof for transportation by its pipe line and for storage and loading at Olean, and also upon petroleum sent to New York City, the sum of 3 cents for each 100 pounds of the petroleum there delivered for terminal expenses. Of the balance a portion equal to 18 per cent. of what the earnings would have been if all of such petroleum had been carried at through rates to New York (less 27½ per cent. of said 18 per cent.) shall be paid over, as hereinafter provided, by said party of the first part to said party of the second part.

And it is further agreed that said party of the first part shall make such reports of the business done under this contract as the party of the second part may require, and that said party of the second part may verify the same in any manner that it may desire.

Accounts for the business for each month shall be rendered by said party of the second part by the 20th day of the next succeeding month, and the balance due thereunder shall be paid by said party of the first part to said party of the second part within five days thereafter. If, however, the party of the second part shall so elect, said party of the first part shall remit on the fifteenth and last days of each month the estimated amount due for the half month, and the balance, if any, with the month's report, on or before the 25th day of the succeeding month.

Said party of the first part assumes the entire risk and expenses of the collection of freight moneys, and guarantees the prompt payment of the moneys from time to time going to said second party without loss or deduction of any kind.

Nothing herein contained shall be construed to make the parties hereto copartners.

It is also understood that the 3 cents per 100 pounds on petroleum forwarded to New York is to compensate said party of the first part for terminal expenses.

And said party of the first part agrees that if such terminal expenses shall at any time be less than said 3 cents per 100 pounds, the amount to be retained by it as a compensation therefor shall be decreased accordingly.

This contract shall continue in force for three years. It may be sooner terminated by the party of the second part by a written notice of three months to said party of the first part of its desire so to do, and upon payment to it of the value of its said pipe line, if said party of the first part shall desire to dispose thereof.

If the parties hereto can not agree on such value, each party shall choose an arbitrator, and the two arbitrators shall conclusively fix said value, but if they can not agree they may call in a third man, and the decision of the two of the three shall be binding on the parties hereto. Said estimated value shall not exceed the actual cost of said pipe line. Upon payment for said pipe line said party of the first part shall convey the same, including all rights of way, unincumbered, to such party or parties as said second party shall designate.

At the end of three years, if three months' previous notice of the intention to terminate the same shall have been given by either party, this contract shall terminate. If not it shall continue until such notice shall have been given.

In witness whereof the parties hereto have caused the signatures of their respective presidents and the seals of their respective companies to be attached hereto, the day and year first above written.

(Indorsed:) Copy. Agreement. Empire Transportation Company with Buffalo, New York and Philadelphia Railway Company. The copy on our file is unexecuted and bears this indorsement:

"This is a copy of an agreement, the original of which is held by us in escrow.

"BOWEN, ROGERS & LOCKE.

"BUFFALO, February 21, 1876."

Mr. Gowen having concluded reading the testimony, and Mr. Potts having still failed to arrive, a recess was taken until 2.30 o'clock p. m.

#### AFTER RECESS.

#### TESTIMONY OF AUGUSTUS H. TACK.

AUGUSTUS H. TACK, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Philadelphia.

Q. What is your age?—A. I am fifty-four years of age.

Q. Are you now connected with the petroleum trade in any manner?—

A. As a producer.

Q. In what region?—A. In what is called the upper region.

Q. Bradford district?—A. Yes, sir.

Q. Were you at any time in the business of refining petroleum?—A. Yes, sir.

Q. Where?—A. Pittsburgh, Pa.

Q. What was the name of your firm or corporation?—A. The Citizens' Oil Refining Company.

Q. What capacity was it?—A. Its capacity was a thousand barrels a day.

Q. In what year did you commence?—A. We commenced in the year 1869.

Q. And up to what time did you continue refining?—A. Up to November 25 or 26, 1874.

By Mr. McKINNEY:

Q. I understood you to say you commenced in 1879?—A. No, sir; I said 1869.

By Mr. GOWEN:

Q. During those five or six years that you were engaged in business what other individual refineries, or what number rather of individual refineries, were there in existence in that portion of Pennsylvania; how many do you suppose?—A. We figured there were in the neighborhood of fifty or fifty-two.

Q. Of those fifty or fifty-two how many at that time — ?—A. There were a great many small ones around. I do not know whether they were all in Pittsburgh or not.

Q. I mean in western Pennsylvania?—A. Yes, sir.

Q. How many of those fifty-two refineries were controlled by the Standard Oil Company when you commenced business, do you suppose?—A. We did not know anything of the Standard Oil Company, except the Standard Oil Company of Cleveland; their business was in Cleveland.

Q. You knew nothing of the Standard Oil Company having any?—A. I knew very little of them then. It was looked upon that they were not geographically located right. Their crude had to be carried 300 or 400 miles west, and then come back to the sea-board.

Q. Now state whether or not at that time, as subsequently, the majority of oil that was refined went to foreign countries?—A. Yes, sir.

Q. A large majority?—A. Yes, sir; a large majority was export oil.

Q. State whether you do not know that, at the present time now, about two thirds goes to foreign markets?—A. Yes, sir.

Q. Therefore, so far as the geographical position of these refineries in western Pennsylvania is compared with that of the Standard Oil Company, which was at that time in Cleveland, you had a far better position than they had?—A. Yes, sir; we had the Alleghany River, you know, for our crude supply. We were almost as good as if we were at the wells.

Q. You shipped the crude supply down the Alleghany River by barges or bulk-boats?—A. And the Alleghany barges besides.

Q. Do you remember what it cost you per barrel to get a barrel of crude down the river to your refinery at that time?—A. Thirty-five cents.

Q. The Standard Oil Company were then engaged in business at Cleveland, which is how many miles from the oil region?—A. I do not know how many miles it is, but I figured in my mind that it was three or four hundred miles. I think they had from three to four hundred

miles against them in the way of transportation. That is calculated now by double the route, going west and coming back. I ought to know, but I do not. If I did know I have forgotten it.

Q. At all events, as compared with you, they had the disadvantage of having to take the oil farther west and bringing it an equal distance back again to get at a point at which you already were?—A. Yes, sir.

Q. Now, what became of these individual refineries and yourself? First, take yourself. You went on to 1874; then what became of you?—

A. Well, of course in the start everything was *colour de rose*, so much so that we put our works in splendid shape. We manufactured all the products. We even got it down to making wax, and using the very last residuum in the boilers. We got the works in magnificent order and used up everything. We began to feel the squeeze in 1872, began to feel that the cords were drawing tight on us. Our prospects were looking pretty blue. We did not know what was the matter.

Q. What was the result?—A. Of course we were all affected the same way in Pennsylvania, and of course we commenced shifting about and meeting together and forming delegations and going down to Philadelphia to see the Pennsylvania Railroad; meeting after meeting and delegation after delegation. We suspected there was something wrong, and told those men there was something wrong somewhere; that we felt, so far as position was concerned, we had the cheapest barrels, the cheapest labor, and the cheapest coal, and the route from the crude district was altogether in our favor. We had a railroad and a river to bring us our raw material. We had made our investment based on the sea-board routes, and we wanted the Pennsylvania Railroad to protect us. But none of our meetings or delegations ever amounted to anything. They were always repulsed in some way, put off, and we never got any satisfaction. The consequence was that in two or three years there was no margin nor profit. There was generally from \$2.75 to \$3 a barrel lost to us between the crude and refined at the same moment. In order to overcome that we commenced speculating, in the hope that there would be a change some time or other for the better. We did not like the idea of giving up the ship, and we would either buy our raw material before we sold the refined, or else, if it looked like a spurt in the market, we would sell our refined before we bought the crude, in order to catch on to a profit. Sometimes we would make a profit, and sometimes we would have a small loss; but it always resulted in a loss; the average year's business was bad.

Q. What became of you in your enterprise?—A. We went struggling along in that way under a depression of that kind until 1874, and failed.

Q. What became of your works?—A. The beginning of 1875 the works were passed over to the Standard Oil Company under a lease. I went out of the thing entirely. I went into bankruptcy. I think my stock, I had between a third and a half, went into the assignee's sale, and some of the old partners bought it up for a nominal figure, \$3,000 or \$4,000.

Q. How much capital was represented in that investment and plant in your refinery?—A. About \$300,000.

Q. You say up to that time that was what was called a modern refinery, with all the appliances for utilizing all the material?—A. All the material was in perfect order.

Q. That is, from benzine and naphtha to the wax?—A. Yes, sir; we found a market for everything that there could be a market for.

Q. Was there any reason, and if so, what was it, why that enterprise was unsuccessful as compared with the Standard Oil Company?—

A. There was just no other reason, except they had drawbacks from freight, and we had not. We always had to pay the open rate.

Q. You have stated that during these times that you were losing money, at any one given time, the difference between the price of crude and the price of refined would also have involved a loss to one who paid the same amount of freight that you did?—A. All the time.

Q. Now, during these times did the Standard Oil Company fail and go to pieces, or did they gradually increase their ownership in the trade, and if so, to what extent?—A. It increased very largely and was increasing then. It increased so perceptibly and so strong that we at once recognized it as the element. Instead of looking to the railroad I always looked to the Standard Oil Company. I went to see Rockefeller.

Q. Who was he?—A. John Rockefeller, president of the Standard Oil Company. I went on in 1874; I do not know whether after consultation with partners or not. We could not bear the idea of meeting the inevitable which was staring us in the face. I went on to see him, to see if we could make any arrangements with him by which we could run a portion of our works.

Q. State what occurred?—A. It was a very brief interview.

Q. What was the result?—A. He said there was no hope for us at all. He remarked this—I cannot give the exact quotation—"There is no hope for us," and probably he said, "There is no hope for any of us;" but he says "The weakest must go first."

Q. And you went?—A. And we went.

Q. What was the amount of your individual loss in that thing; your own share of capital that was ruined?—A. I lost everything I had, and not only that, but I lost my relations' money; I lost my father's money. Towards the end I took Government bonds from him, and I am paying interest on it to-day, \$15,000 of his money.

Q. Now, do you know of any reason why you should have been treated in that manner and forced into bankruptcy and ruin, while other people who had no greater claim than you upon the Government or upon common carriers became rich; do you know of any reason for that?—A. I do not.

Q. Did you ever attempt to seek redress for yourself?—A. In what way do you mean?

Q. In any way?—A. We tried to correct it by having those delegations go down to the railroad company. Further than that we did nothing.

Q. When did you discover the fact that these rebates were being paid or had been paid?—A. We never discovered it as a fact until the testimony was taken in 1879.

Q. That is what I meant?—A. We always suspected it, and alleged that that was the case; but we never knew it of our personal knowledge, and never would really have known it of our personal knowledge. At least we did not know it up to that time, until the testimony came out in that investigation.

Q. You knew, did you not, that it was the duty of common carriers to treat all alike?—A. Yes, sir; that is, we knew it was their duty if they would do it. I don't know as I was very well posted about the laws on the subject. I supposed that was their duty. I could not imagine anything else, and I could not see any other reason why they should not.

Q. What do you think would be the effect upon the community and upon the stability of Government, if it was known and accepted as a fact, that the common carriers of this country had the sole right to de-

termine who should make money in any particular business, and who should lose it?—A. I think the nation would become a nation of tramps, excepting a few favored men.

Q. Do you think that republican institutions would be worth preserving if the transportation companies of the country by a series of dishonest rebates had a right to make 2 or 3 per cent. of the community rich, and the other 97 or 98 per cent. bankrupts?—A. I do not think they would be. I think I would want to migrate or emigrate, whatever you call it.

Q. Right away?—A. Yes, sir. You asked me if we had any redress awhile ago. I felt that I should like it many a time; but I was too poor. I was going around to make a living and had no time to do any fighting.

Q. Did it never strike you that a combination between one manufacturer and a common carrier for the purpose of destroying the business of a rival manufacturer was a conspiracy?—A. Yes, sir; I think so, according to what I know about conspiracy.

Q. You never attempted then to recover damages for this injury done to you?—A. I never did. I was told by Mr. Shores, of Pittsburgh, that I ought to keep the case alive; but I was too much depressed and too much disheartened.

Q. He was your counsel?—A. No, sir; he was not my counsel.

Q. I mean he was a member of the bar?—A. Yes, sir; he said we ought to commence suit and keep it alive against the Pennsylvania Railroad; but we did not at that time, and the time went by. I say I was depressed at the time, and after time went along I got into producing and other business. I had no time to fight. We had to get around and shaped up so as to make ends meet.

Q. If from 1869 you had received from the railroad companies the same rates that the Standard Oil Companies received, and as low as anybody else received, what do you think would have been your position now as compared with what it was when you were turned into bankruptcy?—

A. I am satisfied we would have been very rich men, because the matter of over or under production would not have affected us. The consumption was widening; every twenty-four hours it was broadening, and we always had a market if we could get a manufacturer's margin. We did ship a thousand barrels a day from our sidings. If we could have got 10 cents a barrel on it it would have been an immense thing; it would have been fully 12 per cent. on our capital.

Q. If there had only been a margin of profit of 10 cents between the cost of crude petroleum?—A. Of course it would have been lower than we were getting at the start, but of course we would have been satisfied with it, because it would have been a safe, solid business.

Q. What amount of rebate or discrimination do you think was necessary in order to turn the trade away from you individual refiners and give it all to the Standard Oil Company? What, in your judgment, is the lowest amounts that would have done that?—A. I think even that amount would have done it entirely.

Q. Even 10 cents?—A. Yes, sir; because on our works we made \$100 a day, \$3,000 a month, \$36,000 a year, which would have told in time.

Q. Do you think 20 cents would have done it?—A. No question about it. At those flush days we did not think it was a big thing, but it would have done it. Since then we have had to figure closer.

Q. If there had been a discrimination of over 20 cents, whereby the favored refiner could have made 15 cents, and the man discriminated

against would have lost 5 cents in refining, that difference alone in a short time would have turned the business over to the favored man?—

A. The interest alone would have eaten him up. The investment of his plant would have killed him in time.

Q. You heard the testimony of Mr. Campbell here this morning?—

A. No, sir; I did not get here until late. I had an invitation to call on the President and I went to see him.

Q. It was proved when Mr. Campbell was on the stand that the rebates given the Standard Oil Company on crude oil were at one time 49 and 51 cents per barrel; on refined were 65½ cents per barrel. I now ask you as a refiner and as a business man?—A. As an ex-refiner. (Laughter.)

Q. Well, as an ex-refiner—whether you know of any reason why, if the object of these rebates or allowances were to consolidate the trade in one hand only, so high a rebate as that was allowed. Can you account for any reason?—A. No, sir.

Q. Do you not think that, as affecting the treasury of the railroad company, if they wanted to get all the business in one hand, and could do it for 20 cents a barrel, it was great folly to pay 49 and 60 and 65 cents for it?—A. Of course, you ask me now about what I think?

Q. Yes.—A. I will tell you about what I think. I think it has probably made that rate not only to enrich the parties that it was given to, but also to enrich the men in the railroad—the controlling power. That is what I think.

Q. Have you any knowledge of it?—A. No, sir. You asked me what I thought. I could not prove it, but I think the men became rich in that way, by controlling the business, or fixing men so that they could become private partners in the trade. The reason I thought, in my mind, there was a select crowd, was because they could deal better with smaller crowd without risk to themselves than they could with a mob.

Q. Now, if the Pennsylvania Railroad and other railroad companies had treated all the refiners alike and all the producers alike, and made a fair, open, and honest rate to all, so that every one had his fair show, do not you think the companies could to-day, by keeping all that oil business upon the lines of their railroad and deriving the enormous profit from it, make it pay?—A. No question about it at all; not the slightest question. The business has been one of increasing magnitude right along, both in regard to its consumption and its production.

Q. Did it make any difference to you, or would it have made any difference to any refiner practically, what, within a reasonable amount, the actual rate was to tide-water, provided everybody was treated alike?—A. None whatever. We never complained about the rates of freight. We paid that for a long time in the beginning of our career without having any feeling about it. It was in 1872 that we commenced to feel there was something up.

Q. The only questions as to whether a rate was too high were two, were they not, viz: First, because it might be higher than somebody else was paying—A. Repeat that again, please.

Q. I say there were only two questions which entered into the consideration as to whether the rate on crude oil to tide-water was too high, viz: First, it was higher than somebody else was paying, and therefore unjust; and second, it might be too high to enable the American people to compete against Europe?—A. Yes, sir. If we were all upon the same basis and all in the same position, no matter what the rate was, so that the foreign power or anything outside of this country might

not be able to compete with us, it made no difference so we could get the price.

Q. Shipments of petroleum have reached nearly thirty millions of barrels a year, have they not?—A. Yes, sir.

Q. Would it have made any difference to the refiners or producers if they had paid \$1 a barrel on every barrel shipped, provided everybody was treated alike?—A. None whatever. I do not think that, even with the enormous supply of Russia, at that rate to-day Russia could begin to compete with us.

Q. That was just the question I was about to ask you; whether a rate of as high as \$1 a barrel would not still have enabled the American refiner to compete with the world?—A. Yes, sir; no question about that.

Q. That would have made \$30,000,000 a year payable to the railroad company, which you gentlemen who produce the oil were perfectly willing to pay if everybody was treated right?—A. Yes, sir; that is all we want.

Q. State whether or not the greatest amount of this oil business has been taken from the railroad.—A. Yes, sir; taken by another system.

Q. By pipe lines?—A. By pipe lines.

Q. State whether or not, in your judgment, if all refiners had been treated alike and if no one interest had secured the bulk of the trade by unfair and unjust discrimination, there would have been any effort or reason upon the part of the trade to take the business from the railroads.—A. None whatever. They would not have had the capital to build the pipe lines; they got that off the railroad by rebates.

Q. Do you believe the railroad companies would have lost this enormous business, that would have amounted to \$30,000,000 a year, except by their own action in throwing the trade into one person's hand?—A. Will you please repeat that question?

Q. Do you believe the railroad companies would have lost this enormous business, that would have amounted to \$30,000,000 a year, if they had not, by their own action in giving unjust rebates, thrown the trade into one person's hand?—A. I do not think they would—certainly, up to this present time anyhow. The oil might possibly have been transported by pipe cheaper, but it would have required an enormous amount of capital at that time, and nerve on the part of the people to have risked that, because then it was not known whether the oil could be put through successfully. It was a question whether a long-distance line would be safe, and certainly the railroads would have had the business; and I firmly believe the railroads would have had the business, and could have continued up to this present time, if we had all been on the same basis.

Q. Now, to take this up and bring it down to two or three points, I will ask you first whether, in your judgment, the allowance of these rebates and deductions given to the Standard Oil Company has not resulted in the following, viz, first, in breaking up all the individual refiners who did not coalesce with the Standard Oil Company?—A. Yes, sir; there are probably two exceptions; there is one little refinery that did not break up; there were some men whose capital did not give out, and they bought them out; they bought them out and took their works. There was Lloyd, in Philadelphia, whose works, like Reichart's, were so small that he could safely close them up without embarrassing his condition financially. I consider that their smallness saved them.

Q. Those are, you think, about the only two exceptions?—A. That I know of. That same condition of things existed all the way up in Titusville the same way; they all went under.

Q. Mr. Cassatt testified, according to the testimony that was read before the committee to-day, that the Pennsylvania road also allowed Mr. Malcomb Lloyd a rebate?—A. Yes, sir.

Q. And Lloyd testified before us that he got a rebate?—A. He didn't get right in at that time. He got in there in the early part of it. They could not keep the rates up all the time, and when the rates were low he would run his oil. They never could make any arrangement with him. I know myself from conversation with him that there were efforts of that kind made. He finally came under some kind of a contract arrangement by which he was allowed a certain rebate.

Q. To pursue this first head of the subject of destruction to individual refiners, you indicated that, with the exception of the two you named, it practically destroyed all those who did not in some manner connect themselves with the Standard?—A. Yes, sir; you might say it destroyed the whole business. They are so small as not to be worth talking about.

Q. Can you give us any estimate or get at any estimate of the amount of capital that was destroyed or rendered unproductive by this discrimination of the railroad companies?—A. I had it figured up at that time and stated before the Board of Trade in Philadelphia that I thought it was fully \$17,000,000.

Q. Seventeen millions of dollars' worth?—A. Lying between Saint Clair's bridge and Pittsburgh, and the Sharpsburgh bridge, 7 miles above.

Q. That money was honestly the property of those who owned it, was it not?—A. Yes, sir; I believe as honestly as the property of any man that ever lived, because the Pittsburgh refiners, when the United States Government was collecting 10 cents on a gallon for home consumption, paid every dollar of it manfully, while I am sure other refiners did not. Every man went up and paid his \$4 a barrel on all he sold for home trade.

Q. During the war?—A. Yes, sir; as long as that revenue law existed.

Q. In one region of Pennsylvania alone, and in and around Pittsburgh and its vicinity, the result under the first head of the effect of these rebates was to destroy \$17,000,000 worth of property?—A. Now, I do not know how I got those figures, but I know I stated them once before the Board of Trade meeting at Philadelphia. We were trying to get an independent pipe line through; but I will say it would have been over \$30,000 for each refiner, if I am right about that number, and I think I am. I got my estimate from an item that was used in another case at that time. I know the figures were taken from that case. O'Brien used it in a Commonwealth case, in which he said in the neighborhood of Pittsburgh there were thirty-two refineries, and I think they were all there. I think \$17,000,000 were destroyed—annihilated.

Q. The second result, then, of this system of rebates was to throw the business into one hand?—A. Yes, sir; that is what it did, anyhow.

Q. What amount of money do you think, from the year 1869 to the present year, 1887—which would be about nineteen years inclusive—has been made directly and indirectly by the Standard Oil Company and their affiliated interests as the results of these rebates, which were admitted by Mr. Cassatt and spoken of by Mr. Campbell this morning?—A. I have not the slightest doubt in my mind that they made fully \$250,000,000. There is no question about that. Their stock shows to-day \$150,000,000, and I know from their enormous investment of

outside enterprises \$100,000,000 would not be too much for that, also including their living expenses. They pay very liberally. They pay big salaries to everybody. They do not skin themselves either, in regard to living. I think they live in great style.

Q. That amount of \$250,000,000 has been accumulated in practically one interest only, as the result of illegal railroad discrimination, has it not?—A. That is the way I look at it. There is no question about that in my mind.

Q. Do you think the sentence in the Declaration of Independence that all men are created equal, is lived up to where such a condition of society is acquiesced in by governmental powers?—A. I have often thought of that declaration since I have had this practical experience, and I thought it was "a little off" as far as its practically applying to us is concerned.

Q. What do you think of the clause in the constitution which prohibits a man's property being taken away from him, except by the law of the land, if it can be done by unjust discrimination? Did it not destroy your property?—A. Yes, sir.

Q. Made you a poor man?—A. We were wiped out entirely. I did not have 25 cents in my pocket. I had to borrow \$25 to go to Pittsburgh to settle my bankruptcy affairs.

Q. Now, I will come to the third and last result of this discrimination. Has it not resulted in taking the oil business away from the railroads?—A. Yes, sir.

Q. So that they themselves have lost a valuable traffic?—A. They got to be the bosses of the railroads.

Q. The Standard Oil Company?—A. Yes, sir; since they got in power; they got in in 1877 or 1878, and became the power and laid the lines, and that made them the bosses.

By Mr. SMITH:

Q. Do you believe that the State of Pennsylvania could convey the oil as well as the Standard Oil Trust?—A. I have not the slightest question about it.

Q. Could the oil be carried as cheap by the State as by the Trust?—A. Every bit of it. The reason I answer this question this way is, because we were discussing that question this morning. We were figuring among ourselves—the few producers that are here—that if the State of Pennsylvania would take charge of this pipe line we would agree to pay the debt of the State of Pennsylvania off of the pipeage. That is to say, if we were all put on an equal basis. That is all we would ask. We would pay the debt of Pennsylvania from the oil production.

Q. Then you believe that if the State of Pennsylvania owned those lines you would be dealt with fairly?—A. If they owned the lines?

Q. Yes.—A. I believe if there was law enough in the State to force them to do it, and they didn't get into any political cliques or any rings, it would be all right.

Q. Do you believe that a system of pipe lines owned by the State of Pennsylvania would be more demoralizing to the oil producers and refiners in their business than the present system owned by the Standard Oil Trust?—A. It would be equally so if they had any favors. There would be no difference in the demoralization if some parties were favored as against others.

Q. Do you believe there can be any such thing in public?—A. I know there is.

Where?—A. Right here in this very case now.

Q. That is a private undertaking?—A. I don't know exactly what you mean. If you take the State and put a sufficient guard around it so that we would be all treated alike, we would be satisfied to enter into a contract to pay the State debt.

Q. If the State owned the pipe lines or railroad lines at the time you were in the refining of oil, would you have gone into bankruptcy?—A. Not if we had been all on the same basis.

Q. Would you not be on the same basis where the public is concerned that way, or owns it?—A. I think we would.

Q. Are you not on the same basis where a canal is owned by the State?—A. You are talking about pipe lines, and at that time the only pipe lines in the district were local pipe lines.

Q. I said also railroad lines.—A. If you meant transportation to the sea-board we would have been on an equal basis, and there would have been a prosperous business for all those men, because it was a fine, splendid business, and men could have easily adjusted themselves at any time to any excess of production or demand if we had been all on the same basis. But we had to stand in day after day and meet the market with from 25 cents to \$1 a barrel loss at any moment in the day, while the other parties were just filling all the European orders.

Q. Canals no doubt are means of transportation, are they not?—A. Yes, sir.

Q. The State of New York has made the Erie Canal free, has it not?—A. So I understand.

Q. Suppose the State of Pennsylvania would make the oil-pipe lines or the railroads free on the same basis, so that any company could run its trains on them, but the road-bed would be free and be rented to, say the oil producers, and they must share like and like, would it not be better than the system now?—A. There is no question about that. I do not care who does it, if they are all alike. If you make the highway just the same for one as another we do not care anything about who does the business.

Q. Was the crude and refined oil carried in bulk or in barrels over the Pennsylvania Railroad?—A. The crude was carried in bulk and the refined in barrels at that time. Since that time they have got to carrying refined in tanks also, except for export.

Q. On the average, about how many barrels to a car?—A. At that time I think about 60, that is to say, of refined oil in barrels, and in crude at that time it was about 80. They have increased all of those things since.

Q. What is the charge per barrel now in crude, say from the oil regions to Philadelphia?—A. I don't know as I know what it is now. I know from Pittsburgh to Philadelphia it is 45 cents on refined. It would be lower on crude.

Q. Do you believe a barrel of oil in the crude state could be conveyed for less than 40 cents from Pittsburgh to Philadelphia and still leave a good margin to the transportation company?—A. I think 40 cents is a very low rate. I think, according to what we used to pay, \$1.65 and \$1.75 for the same thing on a barrel, it would strike me, from the old bills I used to pay, that that would be very cheap. That is, it would strike me as being very low.

Q. If flour can be conveyed from Minneapolis to New York for about 60 cents a barrel, do you not think a barrel of crude oil in tanks could be conveyed for less money than 40 cents?—A. Yes, sir. We got so used to the high price we paid that it is very hard for us to conceive of

anything of that kind as being dear. It looks so awful cheap to me; there may be an immense profit in it, too. From what we paid, \$1.75, it looks awful cheap to me.

Mr. GOWEN. That is, at the rate of 8 mills a ton.

Mr. SMITH. When you get car rates at 60,000 pounds capacity you can put in 60,000 pounds of flour or wool, or iron, or oil.

Mr. GOWEN. Yes; but the rate per ton is what gauges the ability to transport. Eight mills a ton a mile is a very good rate for low-classed freight.

By Mr. GOWEN:

Q. Do you not think if the State of Pennsylvania had compelled her own common public servants, the common carriers, to perform their duty as common carriers you would have gotten along very well?—A. We would have had no trouble. I went up when the Parker district opened up and sunk some wells, and was furnishing the refinery with my own crude as far as I could. We would use up 1,200 or 1,300 barrels a day. I suppose I could furnish 1,200 or 1,300 barrels of oil a day from my own wells.

Q. When you found that you were losing money and suspected that something was wrong, if you had the power to go into any court and get a writ of mandamus instantly issued to compel the Pennsylvania Railroad to move your oil at the same rate they were moving it for the Standard, would not that have given you the relief you wanted?—A. I believe it would. At that time I consulted attorneys in regard to this business and they could not see any way by which I could get immediate remedy.

Q. You wanted immediate remedy?—A. Yes, sir.

Q. So that your business would not be broken up during the long time occupied by lawsuits?—A. Yes, sir; it was nip-and-tuck every day in regard to finances. We felt that we would not have to fight. We were constantly hoping that there would be a change in the Pennsylvania Railroad direction. We were constantly hoping that Mr. Roberts would be president of the Pennsylvania Railroad, and we were hanging on the hope that that change would take place. That is what made us put in all our own private fortunes and back up all the company's debts with our indorsement, and besides that we borrowed all our relations' money we could.

Mr. SMITH. Uncles and aunts?

The WITNESS. Yes, sir.

By Mr. SMITH:

Q. Is there as much labor now employed in the oil districts as there was at the time when you were well fixed in the oil refining business?—

A. I would say, without knowing accurately, that the business has been on the increase all the time; that there are probably more people employed, more people interested, because it has been broadening and broadening every year, and the consumption is widening. There are more people employed, but at very much less rates. There is not much in it. It is like the labor everywhere else; it is pretty small. That is in consequence of our low prices.

Q. But the gentlemen in charge of the Standard Oil Trust are well compensated?—A. We figure that that is where it all runs to.

## TESTIMONY OF WILLIAM W. HARKNESS.

WILLIAM W. HARKNESS, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Philadelphia.

Q. How long have you resided there?—A. All my life.

Q. What is your age?—A. Fifty-nine.

Q. State whether or not you have been in the oil-refining business?—

A. I was in the oil-refining business in about 1870, I think, with my younger brother. He was the active man, and business was carried on in his name. I was his backer and the financial member of the concern.

Q. Where was the refinery?—A. On the west side of the Schuylkill River, in Philadelphia.

Q. What was its capacity?—A. Now, about the details of the refinery I do not know much. What I testify to will be as matter of memory. I was not actively engaged in the executive part of the business.

Q. You looked after the finances?—A. Yes, sir. I was away a great deal. I was a producer in West Virginia.

Q. Were you also a producer of oil?—A. Yes, sir; in West Virginia, twenty years ago. You asked about the capacity. As far as I can recollect it was 500 barrels of refined oil a day.

Q. How much capital was represented in your works, and plant, and property upon which it was situated?—A. I think when we were compelled to succumb, as near as I can recollect, we had about \$130,000 represented.

Q. You say you were compelled to succumb. State when that occurred?—A. I was the originator of the enterprise, believing that there was no better place than Philadelphia to refine oil, particularly for export. It was the shortest distance between the point of production and the point of export, and we could use the side product in Philadelphia. We could get our labor and coal cheaper there, I considered, than in Pittsburgh, and, as Mr. Tack has testified, certainly better than in Cleveland, where you have to take your oil from Cleveland over to the point of export. I thought Philadelphia was a good place to refine oil. I believed we could learn the business. We did not know anything about the business.

We commenced then, as near as I can now recollect, about 1870, and notwithstanding the difficulty that Mr. Tack has alluded to, we made money up to probably 1874. We managed our business very close and did not speculate in oil. We bought and we sold and we paid a great deal of attention to the statistical part of our business so as to save waste, and we did a nice business. But we found in some years that probably five months out of a year we could not sell our oil unless it would be at a positive loss, and then we stopped. Then when we could sell our oil we found a difficulty about getting cars. That is what Mr. Campbell testified to this morning when he spoke about the Empire Transportation Company, and there being no rebates while they were in existence. Sometimes we would have to sell our oil at a loss, and we would have to stop; other times we could not get the cars, and other times it was dangerous to sell oil ahead. We could have no reliance on oil coming to us. My brother would complain of it, but I believed that the time would come when that would be equalized, and I had no idea of the iniquity that was going on; I could not conceive it. I went

on in good faith until about 1874, and then the trouble commenced. We could not get our oil and were compelled to sell at a loss. Then Warden, Frew & Co., who afterwards appeared for the Standard Company—William G. Warden was friendly with my brother; they lived near each other, and their families were intimate. He formed some kind of running arrangement where they supplied the crude, and they seemed to get along a little better.

Q. That is a branch of the Standard?—A. That was absolutely the Standard. Mr. Warden was one of the founders of the Standard. We did not know it at the time. After a while the business got complicated, and I got tired and handed it over to my brother; I backed out. That was about 1875. I was dissatisfied and wanted to do an independent business, or else I wanted to give it up. In 1876—I recollect that very well, because it was the year of the Centennial Exposition—he said——

Q. Who said?—A. My brother. We were at the Centennial Exposition. I was sitting in front of the great Corliss engine, admiring it, and he told me there was a good opportunity to get out; that this concern——

Q. What concern?—A. Warden, Frew & Co.; he said they were prepared to buy us out, and I asked him whether he considered that as the best thing to do; whether we had not better hold on and fight it through, for I believed that these difficulties would not continue; that we would get our oil. I knew he was a competent refiner, and I wanted to continue business, but he said he thought he had better make this arrangement, and I consented, and we sold out; we got our investment back.

Q. Prior to the time at which you sold out could you make any money without reliance upon the Standard Oil Company?—A. We did not know anything about the Standard Oil Company. You mean up to the time this squeezing process commenced?

Q. I mean up to the time it commenced; could you make any money in your business?—A. No, sir.

Q. Did you in 1879 have any knowledge of the investigation that was going on about which Mr. Campbell has testified?—A. In 1879?

Q. The Attorney-General's proceedings against the railroad companies and the examination before General Switzer.—A. It was in 1877, was it not?

Q. In 1878.—A. That had transpired.

Q. Were you present at that examination?—A. Yes, sir; most of the time I was present.

Q. You discovered then that these rebates had been given?—A. Yes, sir; we suspected them before.

Q. Had you any knowledge of it before?—A. No, sir; no actual knowledge.

Q. Have you any doubt about this fact—that if you had a rate to Philadelphia identical with the Standard rates, and as low as anybody else, that from your position in Philadelphia on tide-water you could have transacted a successful business?—A. Certainly.

Q. You think you could have?—A. Certainly.

Q. That is to say, you have no doubt of the fact?—A. I have no doubt that we could have transacted a successful business.

Q. Do you know of any reason why you should have been prevented by an illegal discrimination from exercising your right as an American citizen to make money out of a legitimate business?—A. I know of no reason.

Q. Do you think at that time if you had had a speedy and effective remedy, such as a writ of mandamus, to compel common carriers to transport for you as low as anybody else, you could have gone on with your business successfully?—A. Certainly I could have gone on.

Q. State whether since you sold out your interest in your original refinery you at any time purchased other property with a view of going into the business again, when you hoped a change would take place in the transportation business so that you could be put on equal footing with others?—A. Yes, sir; I believed that change would take place. I believed then, as I believe now, that there was no better point in the country for buying oil than the point we selected.

Q. Did you select other property?—A. Yes, sir; we selected a hundred acres, with probably a thousand feet on the Schuylkill River, in Philadelphia, a little further south than the one we had experimented on, and we knew exactly what we needed better than we did when we first went there.

Q. State whether you had any plans or sketches made of a refinery, and, if so, to what extent you proposed to erect one.—A. When I was compelled to succumb, as I said, I thought it was only temporarily; that the time would come when I could go into the business I was devoted to. We systematized all our accounts and knew where the weak points were. I was in love with the business. I selected a site near three railroads and the river. I took a run across the water. I was tired and discouraged, and used up in 1878, and was gone three or four months. I came back refreshed and ready for work, and had the plans and specifications and estimates made for a refinery that would handle 10,000 barrels of oil a day, right on this hundred acres of land. I believed the time had arrived when the Pennsylvania Railroad would see their true interest as common carriers and the interest of their stockholders and the business interest of the city of Philadelphia, and I took those plans, specifications and estimates—took the estimates themselves, and I called on Mr. Roberts.

Q. Who was he?—A. President of the Pennsylvania Railroad Company. I had consulted one or two other gentlemen, whose advice was worth having, whether it would be worth my while to go to see President Roberts. I saw Col. Joseph D. Potts, the gentleman we are waiting on now, and I believe he had the best interests of the Pennsylvania Railroad at heart, because he had expressed himself to me——

Mr. GOWEN. Mr. Harkness, all I want is an answer to my question as to what you did when you went to see the officers of the Pennsylvania Railroad. Tell us what occurred between yourself and Mr. Roberts.

The WITNESS. I went there and laid the plans before him and told him I wanted to build a refinery of 10,000 barrels capacity a day. I was almost on my knees begging him to allow me to do that. He said, what is it you want? I said, "I simply called to be put upon an equality with everybody else, all the shippers, and especially the Standard Oil Company." I said, "I want you to agree with me that you will give me transportation of crude oil as low as you give it to the Standard Oil Company or anybody else for ten years, and then I will give you a written assurance that I will do this refining of 10,000 barrels of oil a day for ten years." I asked him if that was not an honest position for us to be in; I, as a manufacturer, and he, the president of a railroad; what we are now extending to Claus Spreckels in Philadelphia, asking him to come there and build his refinery. Mr. Roberts said there was a great deal of force in what I said, but he could not go into any written assurance. This interstate commerce matter was being agi-

tated here in Washington by the oil people. I said I believed the time had come when that agitation would become a law.

Q. Just tell us whether Mr. Roberts agreed or did not agree that you could transport oil over his road at the same rate with the Standard Oil Company.—A. He said he would not go into any such agreement, and I saw Mr. Cassatt. He said, in his frank way, "that is not practicable, and you know the reason why."

Q. You called on the railroad officers to know whether they would give you the same rate as the Standard Oil Company, and they declined to do it?—A. Yes, sir.

Q. They would not agree to make a contract to give you the same rate that they gave the Standard Oil Company?—A. No, sir.

Q. Without that you were not safe in building?—A. No, sir.

Q. If they had given you that contract and assurance, would you have gone on and given them that business?—A. Most undoubtedly.

By Mr. SMITH:

Q. About how much money would you have spent there?—A. About \$500,000, and probably a couple of hundred thousand dollars more. I have not that in my memory now, but I have it written down. My recollection is that the capital necessary to handle the business of that concern would have been about \$500,000.

Q. About how much labor would you have employed?—A. I can not tell now.

(At this point, 4 o'clock p. m., the committee adjourned until to-morrow at 12 o'clock m.)

WASHINGTON, D. C., *April 26, 1888.*

The committee met pursuant to adjournment at 12 m.

Present: The chairman, and Messrs. Breckinridge, Bynum, McKinney, Grimes, Bunnell, Crouse, Smith, and Buchanan.

After a brief executive session the committee took a recess until 2 o'clock p. m.

AFTER RECESS.

### TESTIMONY OF JOHN SCHWARTZ.

JOHN SCHWARTZ, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. In Titusville, Pa.

Q. What business are you engaged in?—A. Refining oil.

Q. How long have you been engaged in that business?—A. Since July, 1882.

Q. Will you kindly state whether recently, and, if so, when, you presented a claim to the Pennsylvania Railroad Company to allow you a rebate on your oil in consequence of rebates having been given to other people?—A. Yes, sir; I did in August, 1886.

Q. You made the claim upon them that they had been giving rebates to others which you had not received, did you not?—A. My claim was made for an overcharge, under the understanding that they had been giving other manufacturers in the same line of business a less rate.

Q. What became of your claim when you made it to them? Did they pay it?—A. Yes, sir.

Q. On how many barrels?—A. I can not give the exact number of barrels, but the total amount was seventeen hundred and sixty-six dollars and some cents.

Q. At what rate per barrel?—A. Thirteen cents a barrel.

Q. This claim that you made was up to what period of time—it extended over the shipments of what years?—A. It extended from the time I began running the works until January, 1, 1885; that is, over the years 1882, 1883, and 1884.

By Mr. CROUSE:

Q. But you were not paid until 1886?—A. No, sir.

By Mr. GOWEN:

Q. You did not make your claim until 1886?—A. No, sir.

By Mr. CROUSE:

Q. And you made it because you heard that, during those years in which you had been shipping, rebates were given to other parties?—A. Yes, sir.

Witness dismissed.

#### TESTIMONY OF FRANK L. WOODS.

FRANK L. WOODS, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. Titusville, Pa.

Q. What business are you engaged in?—A. Refining oil.

Q. How long have you been engaged in that business?—A. Since the fall of 1882.

Q. State whether you have recently, and, if so, when, made any demand upon the Pennsylvania Railroad that they should give you an allowance or rebate on your past shipments in consequence of what you had heard others had received; and, if so, what it was, and what happened in consequence.—A. In the fall of 1886 I learned that they had paid rebates to other shippers amounting to 13 cents a barrel on all shipments over the Pennsylvania Railroad, and I made out a claim for the number of barrels I had shipped at 13 cents a barrel, forwarded it to them, and requested to be re-imbursed, and they did re-imburse me.

Q. They paid you?—A. Yes, sir.

Q. They did not require any suit, or anything of that kind?—A. No, sir.

Q. Over what period of time did the shipments extend for which they paid you this rebate?—A. From 1883 to the 1st of January, 1885.

Q. Why did not you make the demand until 1886?—A. We did not have any evidence, and the parties who recovered the rebates first had simply included that period, and we thought it best not to apply for anything we had no assurance of.

Q. State whether or not before making this claim you had had information that other parties had recovered against the Pennsylvania Railroad Company similar allowances on account of the rebates which had been allowed to others.—A. Yes, sir; we did.

Q. What was the nature of that information you had received?—A. Nothing, only assurances that such was the case, and for me to make application and I would get my money.

Q. You found that was true?—A. Yes, sir.

Q. This rate was 13 cents?—A. Yes, sir.

Witness dismissed.

**TESTIMONY OF LEWIS EMERY, Jr.**

LEWIS EMERY, jr., sworn and examined.

By Mr. GOWEN:

Q. Mr. Emery, where do you reside?—A. In Bradford, Pa.

Q. That is in what is known as the Bradford oil region, is it not?—A. Yes, sir; Northern Field.

Q. You are in the senate of Pennsylvania, are you not?—A. I am, sir.

Q. You have been engaged in the oil business in various parts of it, have you not, for many years?—A. Yes, sir; commencing with 1865.

Q. Were you in 1865 a producer or a refiner?—A. I was a producer.

Q. In what region in 1865?—A. In Venango County, known as the Oil Creek Region.

Q. That is what is known as the Lower Field?—A. The Middle Field.

Q. As distinguished from Bradford and the Lower Field?—A. Yes, sir; at that time there was but one field.

Q. Did you become a refiner of oil at any time, and if so, when?—A. I became a refiner in 1867.

Q. Where were your works located?—A. At Pioneer, Venango County, Pa.

Q. At that time, 1867, when you commenced refining oil, what proportion, if any, of the production in Pennsylvania was controlled by the Standard Oil Company as a producer?—A. Nine-tenths of it or more.

Q. By the Standard?—A. I take that back. I thought you stated by independent producers.

Q. Did the Standard have any production at that time?—A. There was no Standard Oil Company then in the sense that we have it now.

Q. Well, when did you first hear of the Standard Oil Company as a factor in the oil trade?—A. In 1872, under the name of the South Improvement Company.

Q. I will come to that afterwards. Prior to 1872, when this Standard interest was known as the South Improvement Company, have you any knowledge of any interest whatever in the oil business possessed by the Standard Oil Company prior to that?—A. Not as the Standard Oil Company is to-day.

Q. But as it was any time?—A. There was an organization in the State of Ohio known as the Standard Oil Company, located at Cleveland, of which Rockefeller, Andrews, and Payne were members.

Q. What did they have in the early years?—A. No refinery in the oil country, to my knowledge.

Q. What did they have in Cleveland?—A. They had works there with a capital of \$100,000.

Q. Had they, to your knowledge, any interest in the production of oil?—A. None, whatever, to my knowledge. I do not know that they have now, either.

Q. What capital had you invested in your works when you commenced in 1867, as a refiner in Venango County?—A. My capital was very small at that time, as we were beginners in the business—we had about \$5,000 to \$7,000 invested in the works.

Q. Did you increase that; did your works grow to be larger?—A. Later on we did; under another name.

Q. What name?—A. The Octave Oil Company in 1870. In 1869 we commenced the construction of the Octave works in Titusville, Pa.

Q. To what extent did they grow, so long as they remained inde-

pendent and under your management ?—A. Our works had a capacity of about 800 barrels of crude per day.

Q. Now, then, you have stated that your first knowledge of the introduction of the Standard as it is known to-day in the trade was in 1872, when the South Improvement Company came into existence ?—A. Yes, sir.

Q. Now tell us what you know of the South Improvement Company; what was it, and what position did it take in the trade ?—A. It was organized under a charter that was issued for another purpose by the legislature of Pennsylvania; but it seemed to answer the purpose of what was then known as the South Improvement Company, which was virtually the Standard Oil Company.

The CHAIRMAN. Let me suggest to you that what we want here is a statement of facts, and as far as possible keep to a relation of the facts as they exist rather than conclusions which have grown up in your mind since. For instance, you say "which was virtually the Standard Oil Company." That is something we would rather find out by knowing the facts than from a statement of your opinion.

The WITNESS. The fact is as I have stated. I read the charter, and I know it was not intended for the purpose for which it was used.

The CHAIRMAN. No; you said "the South Improvement Company, which was virtually the Standard Oil Company." What we want to get at is a statement of the facts as they arose instead of conclusions which you may have formed.

The WITNESS. I did know it, because the South Improvement Company only lasted from January, 1872, to March, 1872.

By Mr. GOWEN:

Q. Now, how do you know that ?—A. Because after that time the South Improvement Company's charter was annulled by the legislature of Pennsylvania.

Q. And you had knowledge of that fact ?—A. Yes, sir; I did.

Q. Did you know that the people composing the South Improvement Company were the same as now control the Standard Oil Company? Did you know that as a matter of fact ?—A. The plan was not so fully developed then as at present, but the same people are still connected with the Standard Oil Company as were then connected with the South Improvement Company.

Q. Was Mr. Rockefeller one of them ?—A. He was.

Q. Did you know the rest ?—A. Andrews, Flint, Flagler, and Amasa Stone.

Q. Bostwick ?—A. Not at that time, to my recollection.

Q. And these gentlemen whose names you have given are men who are now prominently connected with the Standard Oil Company ?—A. Yes, sir.

Q. You say the contract only lasted from January 8, 1872, to March 25, 1872, of the same year ?—A. I did not say "contract." I said "charter."

Q. State whether the repeal of that charter was in consequence of the protest which had come up from the oil regions ?

The CHAIRMAN (to Mr. Gowen). Will you kindly prove whether this was a special charter and a special repeal ?

By Mr. GOWEN:

Q. This was a special charter and specially repealed, was it not ?

The CHAIRMAN. When was that granted ?

The WITNESS. That is hard to tell.

Q. When was the act passed?—A. Somewhere along in 1865. It was enacted as part of what is known as the omnibus legislation of that time. These charters were procured and then sold to any one who wished a charter under the laws of Pennsylvania.

Q. You mean this was a charter procured by people for sale to anybody who wanted a charter, and that it lay in abeyance for some years?

The CHAIRMAN. Let me get at the facts of this matter. Do I understand this was a special charter—an act incorporating a single company to be known as the South Improvement Company?

The WITNESS. Yes, sir.

Q. And that act was repealed?—A. Yes, sir.

By Mr. GOWEN :

Q. But this act was passed several years before it was used to apply to the oil trade?—A. Yes, sir.

Mr. GOWEN. At that time there was no constitutional provision which prohibited special legislation by the legislature of Pennsylvania.

The CHAIRMAN. These things are doubtless very familiar to you gentlemen who live in Pennsylvania, but they are not to me, and I like to understand them as I go along.

By Mr. GOWEN :

Q. Turning from the facts existing in 1872 down to 1879, when the investigation took place into oil matters under the bill in equity which had been filed by the attorney-general of Pennsylvania in the name of the Commonwealth against the Pennsylvania and other railroad companies, I want you to tell us what was the condition of the oil trade between those two periods, viz, from 1872 to 1879, and especially with reference to the rates that were enjoyed by the Standard Oil Company, and to the portion of the trade which they secured?—A. In 1872 there existed in the oil country in the neighborhood of two hundred and fifty refiners, all competitors. There existed at that time also thirteen independent pipe lines, all competitors.

Q. Just here, in speaking of those pipe lines, were they not all local lines leading from the wells to the railroads?—A. And some of them to the refineries.

Q. No one of them led to tide-water or to the ocean at that time?—A. No, sir.

Q. Well, go on.—A. Under the contract which was entered into between the Pennsylvania Railroad and the South Improvement Company by which a certain rate of freight was established, which was to be enjoyed by all who were in the business, that was the open rate, but the South Improvement Company, as it was then called, afterwards the Standard Oil Company, was to have certain rebates, ranging from 40 cents to \$1.06 per barrel. The 40 cents rebate was allowed upon western shipments to Cleveland, for instance, and a rebate of \$1.06 was allowed on all eastern shipments to Boston, New York, Philadelphia, and Baltimore.

Q. That was on crude oil?—A. Yes, sir; on crude oil.

The CHAIRMAN. And stated at so much per barrel?

The WITNESS. Yes, sir; per barrel. The drawbacks on refined ranged from 50 cents to \$1.32 per barrel.

The CHAIRMAN. Is this the contract between the railroad company and the South Improvement Company?

The WITNESS. He asked me the rates of freight. I did not go into the contract. I merely answered his question.

The CHAIRMAN. I wanted to comprehend it, that is all.

**The WITNESS.** I mean no offense. I want to answer everything. We were refining oil at that time in Titusville. We had invested about \$85,000 in works known as the Octave Oil Works, a company chartered under the laws of Pennsylvania. An opportunity was given us to become a member then of that company—the South Improvement Company—which we refused in toto to have anything to do with. I may say, sir, that up to this present date I have refused to have anything to do with it. The result was that owing to this large drawback, which was given by this contract between the South Improvement Company and the Pennsylvania Railroad Company, we were driven out of the business.

**Q.** In what manner?—**A.** From the fact that we could not refine oil and sell it at the prices that the Standard Oil Company—the South Improvement Company—had placed that commodity at.

**Q.** Owing to the rebates?—**A.** Yes, sir; due to the rebates.

**Q.** Do you know of any other reason?—**A.** No, sir.

**Q.** State whether or not your knowledge of your business was not equal to theirs.—**A.** It was, sir. We had the very best. There were men in our employ at that time who are in their employ at the present time.

**Q.** Did you sell out to them at that time?—**A.** Yes, sir.

**The CHAIRMAN.** What time?

**The WITNESS.** In 1873. We received \$45,000 for works which cost us \$85,000.

**Q.** Did that refinery under their control continue thereafter?—**A.** Yes, sir; it continues to-day.

**Q.** And has it been successful?—**A.** Yes, sir.

**By Mr. WILSON:**

**Q.** Did you know what hurt you at the time?—**A.** We knew that rebates were being given at that time, because we went to the Alleghany Railroad at Pittsburgh and made our complaint, and we received the information then and there that a contract had been made by which the South Improvement Company had a grant for shipping all the oil over that line of road; the exclusive right, as it were.

**The CHAIRMAN.** Did not I understand you to say that this South Improvement Company was in existence as a factor in the oil trade only from January to March of the same year?

**The WITNESS.** Yes, sir.

**The CHAIRMAN.** And that was in 1872?

**The WITNESS.** Yes, sir.

**By Mr. GOWEN:**

**Q.** State whether, after the repeal of the charter of the South Improvement Company, in March, 1872, the same system of business that had been inaugurated by the contract with that company was continued to the Standard Oil Company?—**A.** It was, under a reduced rate of freight.

**Q.** Under a reduced rate of freight?—**A.** Yes, sir.

**Q.** At what period of time did you ascertain that the railroads, notwithstanding the repeal of the charter to the South Improvement Company, continued to make rebates to the Standard?—**A.** From the fact of the falling off of the business——

**Q.** No; but at what period of time did you discover as a fact that they had been giving drawbacks?—**A.** In 1873.

**Q.** How did you discover it; from actual knowledge, or because your

business was unproductive?—A. No, from actual knowledge; because of what we learned at Pittsburgh.

Q. But in 1879 did not you then, through the testimony of Mr. Cassatt and others, discover that these rates were being paid?—A. Previous to that time, in 1877, at the time of the delivery of these documents to the executive of Pennsylvania, we discovered it.

Q. But the testimony was not taken until after that?—A. No, sir.

Q. What I am coming at is whether you had real, actual legal knowledge of those facts before the facts were brought out by the testimony in this suit which Mr. Campbell has testified about.—A. I did not.

Q. Therefore you only presumed that this rebate was given because your business fell off and theirs was successful?—A. Yes, sir.

Q. What proportion of the business in those years did the Standard Oil Company acquire?—A. They wiped out the whole of the independent element.

Q. Ultimately, or were there some left?—A. I do not think there existed to exceed five independent refiners in the country at that time.

Q. Now state whether or not you have made a statement that will show the names of some or all, as the case may be, of the independent refiners, and where they were located, who were forced out of business in consequence of this favoritism to the Standard Oil Company. Is that a correct statement [handing paper to witness]?

The WITNESS (after examining paper). Yes, sir.

Mr. GOWEN. Mr. Chairman, I should like to offer this in evidence.

The CHAIRMAN. Very well; identify it first by the witness.

By Mr. GOWEN:

Q. Is that paper correct?—A. Yes, sir; to the best of my knowledge and belief.

Q. Was it prepared under your own direction?—A. It was, sir; and is correct of my own knowledge.

The following is the paper referred to:

### EXHIBIT A.

*Partial list of petroleum refineries in Pennsylvania bankrupted, squeezed out, bought up, leased, or dismantled by the great oil monopoly of Ohio and New York, known as the Standard Oil Company.*

Name of refiner.	Location of refinery.	County.	Weekly crude capacity.	
W. King & Co .....	Philadelphia....	.....	1,500	Bought by Standard.
W. L. Elkins.....	do .....	.....	2,000	Leased to Standard.
J. L. Stewart.....	Gibson's Point..	.....	1,500	Bought by Standard.
N. W. Hawkins.....	do .....	.....	2,000	Run by Standard ...
Stewart, Matthews & Pennington.	Point Breeze....	.....	1,500	Bought by Standard.
Calson & Culin .....	Philadelphia....	.....	1,000	Do.
Greenwich .....	do .....	.....	1,500	Dismantled by Standard.
National.....	do .....	.....	300	Bought by Standard.
Narristown.....	do .....	.....	500	Do.
Atlantic .....	do .....	.....	12,000	Originally owned by Warden, Frew & Co., alias Standard.
Union Oil Works.....	Erie .....	.....	1,050	Squeezed out, 1876.
J. V. Boyer.....	do .....	.....	105	Squeezed out, 1888.
D. Kennedy & Co.....	do .....	.....	700	Squeezed out, 1887.
Downing & Douglass.....	do .....	.....	210	Squeezed out, 1888.
United States Oil Company.....	do .....	.....	420	Squeezed out, 1872.
Witter & Co .....	do .....	.....	525	Squeezed out, 1888.
Cleveland & Co.....	do .....	.....	3,500	Squeezed out, 1872.
Ely & Co.....	do .....	.....	1,400	Squeezed out, 1878.

*Partial list of petroleum refineries in Pennsylvania bankrupted, etc.—Continued.*

Name of refiner.	Location of refinery.	County.	Weekly crude capacity.	
Louis Wertz.....	Erie.....	.....	105	Squeezed out, 1864.
J. W. Hammond.....	do.....	.....	210	Squeezed out, 1867.
J. G. Farwell.....	do.....	.....	210	Do.
Boyce & Tennant.....	do.....	.....	875	Squeezed out, 1866.
Morning Star Oil Works.....	do.....	.....	210	Do.
Everett & Blissell.....	do.....	.....	210	Do.
— Bannister.....	do.....	.....	35	Squeezed out, 1865.
Perry Oil Company.....	do.....	.....	219	Squeezed out, 1872.
D. S. Wright & Co.....	do.....	.....	280	Squeezed out, 1865.
D. S. Clarke.....	do.....	.....	700	Squeezed out, 1872.
V. M. Thompson.....	do.....	.....	3,500	Squeezed out, 1866.
Thayer Brothers.....	do.....	.....	1,050	Squeezed out, 1872.
W. J. Watkins.....	do.....	.....	175	Squeezed out, 1776.
Scott & Co.....	Titusville.....	Crawford.....	1,500	Dismantled in 1876.
Decker & Co.....	do.....	do.....	1,200	Do.
M. N. Allen.....	do.....	do.....	1,200	Do.
Donahue & Co.....	do.....	do.....	1,000	Dismantled in 1877.
John Johnson & Co.....	Miller Farm.....	Venango.....	1,500	Do.
Dudley & Co.....	do.....	do.....	1,500	Do.
Rogers & Co.....	do.....	do.....	800	Dismantled.
De Ze Vella & Co.....	Pioneer.....	do.....	1,000	Do.
B. J. Straight.....	Bull Run.....	do.....	700	Do.
U. C. Welton.....	do.....	do.....	800	Do.
William Docharty.....	Pioneer.....	do.....	250	Do.
Herman Connell & Co.....	Petroleum Centre.	do.....	1,600	Dismantled in 1877.
Sansfield & Co.....	do.....	do.....	1,000	Dismantled.
Patterson Bros.....	do.....	do.....	1,500	Do.
Standard Oil Company.....	Story Farm.....	do.....	2,000	Do.
Levi Kerr.....	Tarr Farm.....	do.....	1,000	Dismantled in 1878.
John Wallace.....	Rynd Farm.....	do.....	800	Dismantled in 1877.
Doe & Co.....	do.....	do.....	800	Do.
Laughlin & Co.....	Rouseville.....	do.....	800	Do.
Wamsutta Oil Company.....	McClintockville.....	do.....	1,000	Dismantled in 1875.
— Cassatt.....	Clapp Farm.....	do.....	1,000	Dismantled.
Ryder & Co.....	McClintockville.....	do.....	175	Do.
Crossier & Co.....	Reno.....	do.....	175	Do.
W. H. D. Chapin.....	Corry.....	Erie.....	175	Do.
John Johnson.....	Union City.....	do.....	1,000	Do.
Rochester Oil Company.....	Oleopolis.....	Venango.....	1,000	Do.
H. L. Holden.....	Williamsport.....	do.....	1,800	Bought by Standard.
Solar Oil Company.....	do.....	Lycoming.....	12,000	Do.
Porter, Moreland & Co.....	Titusville.....	Crawford.....	6,000	Do.
Octave Oil Company.....	do.....	do.....	3,000	Do.
Pickering & Chambers.....	do.....	do.....	1,750	Do.
Teague Bros.....	do.....	do.....	500	Do.
Easterly & Davis.....	do.....	do.....	2,500	Do.
William Teague.....	do.....	do.....	750	Do.
Bennett, Warner & Co.....	do.....	do.....	3,500	Do.
Hinkley & Barnsdall.....	do.....	do.....	1,500	Do.
Imperial.....	Oil City.....	Venango.....	21,000	Do.
Galena.....	Franklin.....	do.....	700	Do.
Eclipse.....	do.....	do.....	1,400	Do.
Keystone.....	do.....	do.....	?	Dismantled.
Lyons.....	do.....	do.....	?	Do.
Debbs & Co.....	do.....	do.....	?	Do.
Steele & Co.....	do.....	do.....	?	Bought and shut down.
Funk & Co.....	do.....	do.....	?	Dismantled.

In Pittsbunrgh there were fifty-eight refineries in 1877. Thirty refineries have been crushed out and dismantled. No record left. The remaining twenty-eight have been bought up or leased by the great monopoly. They are as follows :

Style of works.	Firm name.	Weekly crude capacity.	No. of stills.
	1878.		
American.....	Holdship & Irwin.....	6,828	3
Aladdin.....	Aladdin Oil Company.....	4,017	3
Brilliant.....	Lockhart & Frew.....	13,078	9
Bly's.....	David Bly & Co.....	2,490	4
Cosmos.....	R. S. Waring.....	7,394	6
Citizens'.....	Citizens' Oil Works.....	6,072	9
Central.....	Central Refining Company.....	21,867	14
Crystal.....	Livingston Brothers.....	3,624	3
Eagle.....	William P. Logan & Co.....	2,444	4
Federal.....	King & Goodman.....	2,456	5
Fairview.....	D. Hostetter.....	2,136	3
Iron City.....	John Speer & Co.....	1,600	3
Keystone.....	P. Weisenberger & Co.....	1,018	3
Lions.....	J. C. Kirkpatrick & Co.....	564	2
Lilly.....	Brooks, Ballentine & Co.....	2,072	6
Liberty.....	J. A. McKee & Son.....	5,496	7
Model.....	Model Refining Company.....	3,233	2
Muller's.....	A. D. Miller.....	5,238	4
National.....	Standard Oil Company.....	5,538	6
Nonpareil.....	Lockhart & Frew.....	1,318	3
Penn.....	H. S. A. Stewart.....	1,854	3
Peerless.....	Central Refining Company.....	3,758	3
Petrolite.....	Warmser, Myers & Co.....	1,703	2
Radiant.....	J. D. Stockdale.....	1,906	3
Riverside.....	Elkins & Flack.....	1,809	5
Star.....	E. J. Waring.....	3,718	5
Standard.....	Standard Oil Company.....	7,250	5
Vesta.....	R. J. Waring.....	9,058	8

Twelve of these are shut down and sixteen only are fitted for business ; capacity per week, 105,251 barrels.

There are but three independent refineries in or near Pittsburgh to-day ; they are:

	Barrels.
The Empire, Relghart & Co.....	5,100
Bear Creek Refining Company.....	3,900
Waverly.....	3,120

Total independent capacity per week..... 12,120

The total refining capacity of Pittsburgh is 117,371 barrels per week, and the total amount of refined produced in 1880 in Pittsburgh was but 12,560 barrels a week.

PENNSYLVANIA'S INDUSTRY DRIVEN TO NEW YORK.

As an offset to the refineries bought up, leased, crushed out, dismantled, and the like, the following list of refineries in New York City and vicinity is appended, to show how the refining business has been driven from Pennsylvania into New York. In 1863 the total exports of petroleum and its products from the United States amounted to 28,250,721 gallons. Of this amount, there was shipped eastward from Pittsburgh 26,970,280 gallons, being 97 <sup>47</sup>/<sub>100</sub> per cent. In 1878 Pittsburgh's percentage had fallen to .16 <sup>44</sup>/<sub>100</sub> per cent. In 1874 the entire refining capacity of the city of New York amounted to 54,000 barrels per week. In 1881 it has increased to the following (258,100 barrels), all of which, with one exception, are owned or controlled by the Standard Oil monopoly :

Name of works.	Weekly crude capacity.	Name of works.	Weekly crude capacity.
Kings County .....	28,000	Greenpoint .....	2,100
Long Island .....	28,000	Washington .....	2,450
Charles Platt .....	21,000	Locust Hill .....	2,100
Bergen Point .....	17,500	Somers's .....	1,050
Wallabout .....	14,000	Harron .....	700
Peerless .....	8,400	Rau's .....	700
Empire .....	7,000	Meyer's .....	700
Oleophene .....	7,000	American .....	700
Brooklyn .....	7,000	Atlantic .....	1,400
Franklin .....	5,600	Bayonne .....	60,000
Vesta .....	5,600	Newtown Creek .....	10,000
Queens County .....	5,600		
Lombard, Ayres & Co. ....	18,000	Total .....	258,100
Wickes's .....	3,500		

	Barrels.
In Philadelphia the total weekly capacity of the Standard refineries is .....	77,000
Of the independent refineries .....	31,200
In the oil region the total weekly capacity of the Standard refineries is .....	48,900
Of the independent refineries (one only left) .....	1,800

## RECAPITULATION OF WEEKLY CRUDE CAPACITY OF PENNSYLVANIA.

	Standard.	Independent.	Total.
Philadelphia .....	77,000	31,200	108,200
Pittsburgh .....	105,251	12,120	117,371
Other points .....	48,900	1,800	50,700
Grand total .....	231,151	45,120	276,271

Since 1868 refineries with capacity equal to all that exist at present in Pennsylvania have been crushed out and dismantled by the Standard, and refineries of more than equal capacity have been built up by that company in Cleveland and New York.

The refining capacity of Cleveland, which has been exclusively controlled by the Standard, and which business should have been retained in Pittsburgh, is 150,000 barrels per week.

## GAIN AND LOSS OF REFINING BUSINESS.

In Pittsburgh the business done in 1863 was 97.5 per cent. In 1880 it was only 5.5 per cent. In Philadelphia the business done in 1868 was 42.36 per cent. of the export business in petroleum. In 1880 Philadelphia did only 16.8 per cent. of the export petroleum business. In 1870 the total production was 5,240,555 barrels, of which Philadelphia handled 1,101,636 for export. In 1880 the total production was 25,960,260 barrels, an increase of 500 per cent., and Philadelphia handled 1,085,918 for export—actually 15,718 barrels less than in 1870.

Pennsylvania formerly refined 97.4 per cent. of all the oil produced. She now refines 14.4 per cent. If she had retained the business, as she might have done, she would have saved in 1880 \$14,627,279, all of which would have been paid out for work done by our own citizens, and materials furnished by our own industries.

Q. State whether or not these suits of the Attorney-General against the Pennsylvania and other railroad companies in 1879 did not lead to an agreement on the part of the Pennsylvania and other railroads that they would treat everybody alike.—A. Yes, sir.

Q. State whether or not you, and if you know it, others, were invited at that time by the Pennsylvania Railroad Company to engage again in the business of refining oil and to erect refineries?—A. Yes, sir.

Q. You were?—A. Yes, sir.

Q. Have you personal knowledge of the fact that others were also invited?—A. Yes, sir; I might say so. A general invitation was given

to all who wish to engage in the business along the lines of the Pennsylvania Railroad at equal rates of freight.

Q. State whether you know of your own knowledge whether any inducement in the way of lower rates of freight for the transportation of material, etc., were offered to individuals to induce them to locate refineries along the line of the road?—A. The Pennsylvania Railroad gave us every facility.

Q. To what extent?—A. Hauling our materials; making no charges for switching—from the Reading Railroad for instance—in fact did everything they could for us.

Q. State whether you accepted their invitation and engaged again in the business of refining?—A. I did.

Q. Where?—A. In Philadelphia; I commenced the construction of a refinery there in June, 1880.

Q. Did you complete it?—A. I did, sir.

Q. At what period was your refinery ready for business?—A. In 1881.

Q. What was the capacity of your refinery?—A. A thousand barrels of crude per day.

Q. What amount of capital was represented by your plant?—A. Two hundred and fifty thousand dollars.

Q. And including the capital necessary to do business what do you suppose it represented?—A. About \$325,000.

Q. State what your experience was as a refiner in this new enterprise located in Philadelphia.—A. Well, it did not prove to be a profitable investment.

Q. Give us the reasons, and give us the facts as to things that occurred, or in the first place, I will ask you from whom, and in what manner did you receive your oil at that time?—A. I received it from the United Pipe Lines into the cars of the Pennsylvania Railroad, or what is known as the Green Line.

Q. That is to say, the United Pipe Lines was a local line serving as the means of transport from the wells to the railroad?—A. Yes, sir.

Q. The oil was then loaded into tank cars and transferred to your refinery by the Pennsylvania Railroad?—A. Yes, sir.

Q. Who controlled those pipe lines known as the United Pipe Lines?—A. They belonged to the system of the Standard Oil Company.

Q. Had you any control whatever over the question of drawing your supply of oil from those lines; that is to say with reference to what character of oil it should be. Had you any control of that yourself?—A. No, sir.

Q. You had to depend entirely on them?—A. I bought the certificates in the market, and the oil was delivered to me upon the certificates.

Q. Now state what kind of oil was furnished to you during the first few years of your experience as a refiner in Philadelphia?—A. I attribute our failure to make money in great part to the quality of the oil furnished to us.

Q. What was the quality of that oil?—A. It was oil that had been in the tanks for a number of years. It was unavailable for our purposes and would not bear a gravity of more than  $39\frac{1}{2}$  to 42, while the fresh oil produced in the field from which we derived our supply had a gravity of from 43 to 47.

Q. State whether or not oil which has been accumulated for a long time and suffered to remain in the tanks, whether the sediment does not

accumulate to such an extent that when drawn off it is not as valuable as fresh oil which is more volatile?—A. That is a fact.

Q. Please tell us as a refiner what difference in market value per barrel for crude oil would exist between such refuse oil drawn off from the old deposits and fresh good oil?—A. Taking into consideration the premium that the Standard Oil Company pays upon fresh oil—comparing that with the quality of oil delivered to us—there was fully 20 cents a barrel difference.

Q. In value?—A. Yes, sir.

A. State whether or not 20 cents a barrel at that time was not a sufficient amount in the oil business to turn the scale for or against a man?—A. Most assuredly.

Q. State whether or not during all this time you were receiving this poor oil you were not a producer of good oil—fresh oil?—A. Yes, sir; to more than the capacity of my own refinery.

Q. Explain to this committee why this was and what the process was whereby you were prevented from getting your own fresh oil, or oil equally as good, and compelled to take this inferior oil at a difference to you of 20 cents a barrel?—A. They saw fit to give it to me, and I could not help myself.

Q. Why was that? Was it not because you had to deliver your fresh oil to them—because you had no other outlet?—A. Certainly.

Q. You had no other avenue of transportation by which you would get your own oil to your works except by delivering it to them, where it went into the tank with other oil?—A. Yes, sir.

Q. So that they could draw on their own refineries for good and fresh oil and send the residuum and sediment to their rivals?—A. That is what I believe they did.

Q. But you know they had the power to do that?—A. Yes, sir.

Q. And you believe that they did it from the result of your own business?—A. Yes, sir.

Q. State whether there were any tests made to apply to this oil for the purpose of determining just what its value was as compared with good oil?—A. We made tests for nearly three years.

Q. And the result of those tests was this fact of which you have spoken?—A. Yes, sir.

Q. State whether, in consequence of this condition of affairs, you made any attempt to get your own oil to your own refinery?—A. I did, sir.

Q. In what manner?—A. I constructed a pipe line from my own wells to the Rochester and Pittsburgh Railroad which runs in connection with the Philadelphia and Erie Railroad, one of the allies of the Pennsylvania Railroad.

Q. One of the Pennsylvania system, leased to the Pennsylvania Railroad, is it not?—A. Yes, sir.

Q. How many miles of pipe line did you construct to get your own oil?—A. With all the connections, about 25 miles.

Q. Twenty-five miles in all?—A. With all the connections, yes, sir.

Q. After having done that and placed yourself in such a condition that your own works in Philadelphia were connected by a system of transportation through your own pipe lines, and the railroads directly with your own producing wells, state what your experience was in depending upon the railroads for bringing that oil to your refinery?—A. I applied to an officer of the Green Line, Mr W. J. Brundred—

Q. State whether that Green Line was a line running over the Pennsylvania Railroad?—A. Yes, sir; it was owned by the Pennsylvania

Railroad. I applied to him for cars, or I may correct my statement there. I first went to the Rochester and Pittsburgh Railroad to know if they would haul our cars, providing they and ourselves could arrange to get the Green Line cars. Mr. Merchant visited the city of Philadelphia.

Q. Who was he?—A. He was the general manager of the Rochester and Pittsburgh Railroad. He gave me the answer that they would do our business, and that they would get the Green Line cars from the Pennsylvania Railroad. Upon that I constructed this pipe line to my own wells, built what is termed a loading rack for delivery into the cars, and commenced our shipments in the regular way. There was no interruption for thirty days. Finally, the Rochester and Pittsburgh Railroad refused to deliver us any more cars.

Q. Did they give any reason for that refusal?—A. I ascertained, or rather I went to Mr. Merchant and he stated that their people in New York had been visited, and that there was a question whether they could do this business, and keep harmony and keep a certain coal trade, etc., intimating that they might be obliged to throw it up. The result was that I employed an attorney and we served notice upon the manager of the Rochester and Pittsburgh Railroad, Mr. Merchant, that we must have these cars. Before we served this notice, however, we had corresponded with Mr. Brundred—

Q. Manager of the Green Line?—A. Yes, sir; manager of the Green Line; and asked him to deliver the cars to the Rochester and Pittsburgh Railroad. He said, "I have offered to deliver the cars to the Rochester and Pittsburgh, and I can deliver them a hundred cars a day if necessary;" but, he added, they refused to take them. After we had given Mr. Merchant legal notice that we would commence proceeding against their road if they did not give us these cars, the order was given that all cars should be brought in that were delivered by the Pennsylvania Railroad. For a time everything went smoothly; then all at once there were no cars to be delivered to us, and we asked Mr. Brundred why. He said an extraordinary demand had been made for cars and they did not have them. We went to the Pennsylvania Railroad office in Philadelphia and saw Mr. Wilson, the general freight agent of the Pennsylvania Railroad. He said to us, that a requisition had been made by the Standard Oil Company for all the cars they had. I asked Mr. Wilson why there was such a dearth of cars. Well, he said, the cars had been sent to Colorado, Louisiana, and all parts of the country, and they had not returned. I immediately dispatched two men out upon the lines of the Pennsylvania Railroad and I ascertained that out of a possible number of 1,126 cars which belonged to the Green Line, there were only 280 cars within the State line. Then I dispatched men into New York State, and I found that in Buffalo alone there were 300 cars all belonging to the Union Tank Line.

The CHAIRMAN. Is that the same as the Green Line?

The WITNESS. No, sir; the Union Tank Line is the property of the Standard Oil Company. I asked the Pennsylvania people why the cars should so suddenly disappear when they had come to us in 1879, and induced us to build this refinery and agreed that we should have always every facility in the way of transportation. Mr. Wilson said, "I know nothing about it; but we must furnish cars when they are called for, and we have given all our cars to other people." The result was we got no cars and our works were shut down, our pipeline was still, our oil was filling up in our tanks, and we were compelled to turn our oil over to the Standard Oil Company; and finally, in order that my property

might not go to waste entirely, I was compelled to sell it, and the Standard Oil Company purchased it.

Q. When?—A. In the latter part of November, 1887.

Q. State whether you found it possible to conduct your business at all under the system that you were subjected to as a refiner?—A. No, sir; I could not at a profit.

Q. What length of time were you idle from time to time in consequence of the want of cars?—A. During this fight after I built my pipe line three or four months, we were idle more than half the time. Occasionally we would get ten cars. We would get a promise of twenty and get five; we would get a promise of fifty and only receive two or three. We were deviled to death.

Q. After those two or three months how did it go?—A. We got none at all; we could not get any.

Q. How long did your refinery remain idle for want of cars before you sold out?—A. We were compelled to go back to the oil they had been furnishing us—this unmerchantable oil. We had made contracts and were compelled to go back and take that oil to fill them, and when those contracts were filled we stopped.

Q. And sold out your works?—A. Yes, sir.

Q. How long were you idle before you sold out?—A. We kept running up to the time we sold. We had to run to fill our contracts. I want to say right here to the chairman that in constructing this pipe line to run my own oil it gave me a profit of \$200 a day. The cost of handling this oil from the wells did not exceed  $1\frac{1}{2}$  cents per barrel, and could I have had those cars and been able to transport my own oil it would not have mattered to me whether I made a profit on the refining or not, I would have still been ahead.

Q. That was due to the fact that by your own pipe line you could remove the oil at  $1\frac{1}{2}$  cents per barrel, while in the Standard lines you had to pay 20 cents?—A. Yes, sir.

Q. And for what you paid 20 cents you could do yourself for a cent and a-half?—A. Yes, sir. And I will explain that that was partly from the fact that our works were located on a side hill, and we had only to turn the stop cock and let the oil flow.

Q. You had no pumping?—A. No, sir.

Q. Is there pumping done elsewhere throughout the oil region?—A. There is no pumping directly. There is some suction.

Q. In the local lines?—A. Yes, sir. There are suction-pumps which deliver it into the large tanks and then from there it is forced through the large pipes to New York, Philadelphia, Baltimore, etc.

Q. In connection with the change of business due to the absorption of the traffic by the Standard Oil Company, to the destruction of other interests engaged in opposition to them, I want now to call your attention to the geographical changes that took place in the movement of this oil, due to the fact that their refineries were located at other places in the country than those of their competitors. Now originally their competitors were principally located in Pennsylvania, were they not?—A. The independent refineries were nearly all located in Philadelphia.

Q. Have you made any calculations to show with reference to Pennsylvania, to what extent, with respect to value, and in what proportion this change of the locality of the refining has taken place from the year 1868 to 1878 (handing paper to witness). State whether you prepared that paper?—A. I did, sir; from the statement of the Treasury Department compiled by Mr. Nimmo, chief of the Bureau of Statistics.

Q. Do you believe those figures to be accurate?—A. Absolutely accurate.

The statement referred to was introduced in evidence, and is as follows:

*Statement showing exports of petroleum and its products during the fiscal years (ending June 30) 1868 to 1878, arranged to exhibit the growth of the industry and Philadelphia's decline.*

[Compiled from the records of the Treasury Department of the United States, kindly furnished by Hon. Joseph Nimmo, jr., Chief of the Bureau of Statistics, by Lewis Emery, jr.]

VALUE.

Fiscal year ending June 30—	Total exports.	Philadelphia.	Other ports.	Philadelphia's per cent.	Other ports, per cent.	Philadel- phia's loss.
1868.....	\$21,810,676	\$8,855,263	\$12,955,413	40.60	59.40	.....
1869.....	31,127,433	11,071,269	20,056,164	35.56	64.44	\$1,566,468+
1870.....	32,668,960	11,662,120	21,006,840	35.39	64.61	1,601,477+
1871.....	38,894,810	12,782,915	26,111,895	32.86	67.14	3,008,377+

Total.....	2,137,813,978	614,386,895	1,523,427,083	28.74	71.26	291,191,106+

\* In this year (1877) the Empire Transportation Company sold its line to the Pennsylvania Railroad, which immediately mortgaged the rolling stock to the Standard Oil Company of Ohio and New York.

In 1868, 42.36 per cent. of the whole amount of petroleum exported went to sea from Philadelphia.

In 1878 Philadelphia's percentage had fallen to 14.10 per cent.

During these eleven years (1868 to 1878) the exports from all the other ports increased more than 600 per cent. Philadelphia's exports increased less than 50 per cent.

Had she maintained her percentage her total exports would have amounted to \$47,468.99 more than they were. In 1877 her loss was \$13,342,997+, and in 1878 her loss amounted to \$12,652,020+.

This loss must annually increase with the growth of the business.

The CHAIRMAN. Can you state in connection with this where this amount of oil, which seems to have been diverted from Philadelphia, has gone to?

The WITNESS. Yes, sir; to New York and Baltimore.

Q. So that Philadelphia lost and New York gained by this transaction?—A. Yes, sir.

By Mr. GOWEN :

Q. State what the proportion of oil in 1868 was—what was Philadelphia's proportion of foreign shipment?—A. 40.60 per cent.

Q. And all other ports?—A. 59.40 per cent.

Q. In 1878 what was Philadelphia's proportion?—A. 13.43 per cent.

Q. And of other ports?—A. 86.56 per cent.

Q. State whether or not the principal refineries of the Standard Oil Company are not located in and around New York.—A. Yes, sir.

Q. They have still some in Cleveland?—A. Yes, sir.

Q. And in Buffalo?—A. Yes, sir. Just here I would state that in 1863 Pennsylvania did 97.5 per cent. of all the oil business; and in 1880 she only did 5.5 per cent. of the business.

Q. That is of the refining?—A. Yes, sir.

Q. So that in 1863 she did 97.5 per cent. of the refining business, and in 1880 only 5.5 per cent.?—A. Yes, sir.

Q. What proportion of this oil is produced in Pennsylvania?—A. Do you mean at the present time?

Q. Yes; leaving the Ohio Lima fields out of the question.—A. Calling the total production 65,000 barrels, about 55,000 to 58,000 are produced in Pennsylvania.

Q. What is that?—A. The production of crude oil.

Q. In barrels per day?—A. Yes, sir.

Q. That is, 55,000 barrels per day are produced in Pennsylvania out of a total production in the whole country of how many?—A. About 65,000 barrels.

Q. That is about 85 to 90 per cent., is it not?—A. Yes, sir.

Q. In that do you include the recent production of oil from the Lima field?—A. No, sir.

Q. That oil is not extensively refined?—A. No, sir; not for illuminating purposes.

Q. It is not now entering into competition for illuminating purposes with Pennsylvania oil?—A. No, sir.

Q. That is due to the fact that the Lima oil of Ohio contains some chemical combination with sulphur and other things which makes it impossible at present to refine it successfully, is it not?—A. So I understand.

Q. Mr. Emery, I want to call your attention to a recent publication of the Standard Oil Company by their counsel, Mr. Dodd. Have you seen it?—A. Yes, sir; and read it.

Q. Were you present, or did you take any interest in the examination of the witnesses in the year 1879, in the suit of the Commonwealth of Pennsylvania upon the relation of the Attorney-General against the Pennsylvania Railroad and other shippers?—A. Yes, sir.

Q. You were one of the committee, as I understand, who were instrumental in applying to the governor and instituting those suits, were you not?—A. Yes, sir; I presented our appeal to the executive of Pennsylvania.

Q. You were also the authority, were you not, for the statement which is referred to in Mr. Dodd's book that it was proved during that examination that in a period of, I think, seventeen months—

The WITNESS (interrupting). Seventeen and one-half months.

Q. (Continuing.) The four railroad companies had paid to the Standard Oil Company \$10,000,000 as rebates on the oil carried by them, were you not?—A. Yes, sir.

Q. Look at that paper [handing paper to witness] and state whether you made an analysis—an examination of the testimony given by Mr.

Cassatt, the Standard Oil Company people, and other railroad officers in that suit, in order to ascertain what the total amount of money paid over as discrimination during that period of seventeen and one-half months was.—A. I did.

Q. This paper is the result of that examination?—A. Yes, sir.

Q. Was it prepared by you?—A. Yes, sir.

Q. Do you believe it to be accurate?—A. I do.

The statement referred to was offered in evidence, and is as follows:

#### ANTI-DISCRIMINATION—WHAT IT MEANS.

Freight on refined from Cleveland, Pittsburgh, Titusville, etc., including crude from mouth of pipe to refinery .....	\$1.90
Freight on crude from pipe to refinery, paid as rebate.....	.45½
Nominal rates to all shippers of refined .....	1.44½
Private rebate allowed to Standard Oil Company .....	\$0.64½
Paid to Pittsburgh, Titusville and Buffalo Railroad .....	.10
Terminal charges at Communipaw (New York Harbor) .....	.10
Lighterage at New York Harbor.....	.06
	<u>.90½</u>
Net price received by Erie, Baltimore and Ohio, New York Central, and Pennsylvania Railroads for carrying refined.....	.54
Freight on crude from Oil Creek and Allegheny River districts .....	1.40
Rebate to Standard as per contract October 17, 1877, 10 per cent .....	\$0.14
Second rebate to Standard .....	.15
Rebate to American Transfer Company .....	.22½
Terminal charges at Communipaw (New York Harbor) .....	.10
Lighterage at New York Harbor.....	.06
	<u>.67½</u>
Net price received by Erie, Baltimore and Ohio, New York Central, and Pennsylvania Railroads for carrying crude oil.....	.72½
Freight on crude from Bradford district .....	1.15
Rebate to Standard as per contract, October 17, 1877 (10 per cent.)....	\$0.11½
Second rebate to Standard .....	.15
Private rebate to American Transfer Company .....	.22½
Terminal charges at Communipaw (New York Harbor).....	.10
Lighterage at New York Harbor.....	.06
	<u>.65</u>
Net price received by Erie, Baltimore and Ohio, New York Central, and Pennsylvania Railroads for carrying crude.....	.50

The following table exhibits the total shipment from the oil regions from October 17, 1877, to March 31, 1879, the allotment of each of the four trunk lines of railroad, the amount of rebate or drawbacks paid by each and by all the railways, as per contract between them and the Standard Oil Company. The figures of shipments are taken from Stowell's Petroleum Reporter, published by S. H. Stowell, esq., of Pittsburgh, which publication is recognized as authority by the various branches of the trade, and the rebates average 55 cents per barrel to cover the crude shipped from the lower and the Bradford petroleum districts, Pennsylvania, and the refined shipped from the western refineries.

#### SHIPMENTS.

	Barrels
October 17 to 31, 1877, estimated.....	634,485
November, 1877.....	1,205,645
December, 1877.....	600,019
Total shipments from October 17 (when contract was signed) until close of year 1877 .....	2,440,139
Total shipments in 1878.....	13,676,000
Total shipments in first quarter, 1879 .....	2,440,136
Total shipments October 17, 1877, to March 31, 1879 .....	<u>18,556,277</u>
Total rebates during that time, at 55 cents (average) per barrel.	<u>\$10,155,218</u>

Of which there was paid to Standard by Baltimore and Ohio Railroad 11 per cent., as per contract, October 17, 1877 .....	\$1, 116, 633. 98
Paid by New York Central and Hudson River Railroad 21 per cent., as per contract, October 17, 1877 .....	2, 131, 755. 78
Paid by Erie Railway 21 per cent., as per contract, October 17, 1877..	2, 131, 755. 78
Paid by Pennsylvania Railroad 47 per cent. (as per contract October 17, 1877—17½ months).....	4, 771, 072. 46
Total rebates October 17, 1877, to March 31, 1879.....	10, 151, 218. 00

LEWIS EMERY, JR.

Q. Mr. Cassatt testifies that on crude oil the rebate from the lower field was, I think, 51 cents, and from the upper field 49 cents; that was in the case of the Pennsylvania Railroad. How much, according to your examination of that testimony, do you ascertain in the average rate of rebate was that was paid by these railroad companies?—A. Fifty-five cents.

Q. That is but a few cents more than the amount paid by the Pennsylvania—49 and 51?—A. Yes, sir. This was paid by all these four trunk lines.

Q. To the Standard?—A. Yes, sir: to the Standard Oil Company.

Q. Now state what amount of money in seventeen and one-half months that average rebate of 55 cents amounted to?—A. \$10,151,218.

Q. From what source did you derive the information as to the number of barrels that had been shipped by the Standard Oil Company within those seventeen and one-half months?—A. From S. H. Stowell's Petroleum Report, which is an authority.

Q. Where is that report issued?—A. At Pittsburgh, Pa., at that time.

Q. State whether Stowell's statistics are accepted as an authority by the oil trade.—A. Yes, sir; they were at that time. I wish to explain, as some question has arisen in reference to my statements, that I refer in general to what has appeared in testimony.

Q. Just put on record the pages of the printed testimony in those cases from which you derived this information, and give opposite the page the name of the witness who testified to the fact which will be found on that page.—A. I would like this done, because some question has arisen in regard to the truth of the report. Page 363—

The CHAIRMAN. What is this?

Mr. GOWAN. It is from the appendix testimony in the case of the Commonwealth of Pennsylvania upon the relation of the attorney-general against the Pennsylvania Railroad Company in the supreme court of Pennsylvania of the western district.

The CHAIRMAN. Is this the same book as you read from yesterday?

Mr. GOWEN. This was the appendix to the paper book; whereas mine was the report of the master himself.

Mr. CROUSE (referring to the paper offered in evidence by the witness, entitled "anti-discrimination"). Do you propose to offer both sides of this paper in evidence?

Mr. GOWEN. No; he only offered one side.

The WITNESS. I may state that this other side is a part of some remarks I made on this question, and I did not intend to submit them as evidence.

Mr. GOWEN. Now go on with reference to the testimony before the master appointed by the supreme court of Pennsylvania.

The WITNESS. I refer to the following pages:

Page 363, trade reports, J. D. Archbold's testimony.

Page 510, also Archbold.

Page 512, also Archbold.

Page 661; A. J. Cassatt.

That refers principally to this statement that has been put in evidence.

By Mr. GOWEN:

Q. Now, Mr. Emery, have you any doubt in your own mind that with your refinery located at Philadelphia—

The WITNESS. Wait one moment, if you please; I am not through yet.

Page 734, contract between the Standard Oil Company and the Pennsylvania Railroad concerning all shipments of oil.

Page 737, copy of statement of Pennsylvania Railroad of shipments, etc.

Page 689, rebate to American Transfer Company on oil carried by the Pennsylvania Railroad, whether shipped by the company or by other people.

Page 732, letter of Daniel O'Day.

Page 733—

The CHAIRMAN. Before we pass from this statement (referring to Exhibit C) I do not think I exactly understand it. Can you take a copy of that paper in your hand, Mr. Emery, please?

[The witness took up a copy of the paper.]

The CHAIRMAN. The first item you put in is "freight on refined from Cleveland, Pittsburgh, Titusville, etc., including crude from mouth of pipe to refinery, \$1.90."

The WITNESS. Yes, sir.

The CHAIRMAN. Now, that starts out by giving a figure as freight on refined and then seems to include crude. Will you explain how you make up that item?—A. That 45½?

The CHAIRMAN. Take the first item—\$1.90.

The WITNESS. That is the open rate.

The CHAIRMAN. On a barrel of crude oil from the well to tide-water?

The WITNESS. Yes, sir.

Q. Then the next item is "freight on crude, from pipe to refinery, paid as rebate 45½ cents."—A. It is the same as shipping what we term in transit.

The CHAIRMAN. You are using technical language now.

The WITNESS. It was a reduction of 45½ cents allowed on the transportation of the crude oil from the wells to the refinery as a drawback.

The CHAIRMAN. Crude oil from the wells to the refineries. The refineries were on the sea-board, were they not?

The WITNESS. Not at this time; they were all in the country.

The CHAIRMAN. You mean these rates were given at the time as referring to the oil region?

The WITNESS. They were all in the oil country.

The CHAIRMAN. Then the oil that was transported by the railroad at that time from the lower region was refined oil?

The WITNESS. Principally; yes, sir.

By Mr. GOWEN:

Q. Mr. Cassatt said that to the public on refined oil the rate was \$1.90, less 45½ cents. When they charged \$1.90 to a man they allowed a rebate of 45½ cents in order to cover to him what was assumed to be the cost of bringing crude oil to his refinery?—A. Yes, sir.

By the CHAIRMAN:

Q. That made the open rate, then, \$1.44½?—A. Yes, sir.

Q. And on that there was a private rebate of  $64\frac{1}{2}$  cents?—A. Yes, sir.

Q. And that is the item which you spoke of as being included in the calculation out of which you estimated the total rebates of ten million odd?—A. I do not take into consideration, however, Mr. Chairman, the terminal charges at Communipaw, or the lighterage in New York Harbor. Those are legitimate charges.

Q. Now, was that rebate—I am not familiar with Mr. Cassatt's testimony, as you gentlemen of course are—allowed on crude or refined?—A. On shipments of refined. To all shippers of refined oil.

Q. Now, there is a private rebate allowed to the Standard of  $64\frac{1}{2}$  cents; was that on crude or refined?—A. Refined. Below here there is another system of rebate on crude. There were two rates, two sets of drawbacks, one on the crude and one on the refined.

Mr. GOWEN. Mr. Cassatt testified that the public paid \$1.90, less  $45\frac{1}{2}$  cents, making \$1.44 $\frac{1}{2}$ , while the Standard rate was 80 cents. Now the difference between 80 cents and \$1.44 $\frac{1}{2}$  is  $64\frac{1}{2}$  cents, which, therefore, was the rebate to the Standard Oil Company on refined oil. And these other sums below of 14, 15,  $22\frac{1}{2}$ ,  $11\frac{1}{2}$ , 15, and  $22\frac{1}{2}$  are the rebates on crude oil about which Mr. Cassatt testified.

The CHAIRMAN. What is the American Transfer Company? Is it a pipe line?

The WITNESS. It was a company organized under the laws of the State of New York.

Q. What was its business?—A. It operated a pipe line.

By Mr. GOWEN:

Q. Had you any doubt in your own mind that if you had had at your refinery in Philadelphia the same rates as the Standard and the same good oil, your refinery would have been successful?—A. It would certainly have been successful; I could have made \$75,000 a year.

By Mr. CROUSE:

Q. I want to ask one question. In making up these tables why did you include the terminal charges and the lighterage charges at New York Harbor? That is to say, if the railroad companies had to pay those two charges they paid them alike on all oil which they carried without reference to any rebates; and why are they brought in there?—A. If you will go to work and take the average of my calculation, you will find that 55 cents does not include those charges.

Mr. GOWEN. Those sums are not calculated in the 55 cents.

Mr. CROUSE. If your object was to show what the railroad was charging I do not see what bearing it would have whether the railroad company had to divide up its freights between a lighterage company and harbor charges, and other lines over which it transported. I do not see why those charges are there, and my question is, why were they put there?

The WITNESS. I took the testimony—the whole of it—and put it into the statement just as it appeared in this book. That is all; and you will find that when I make the average of the drawbacks by deducting those lighterage charges, you will find, taking the three items, the average is 55 per cent. of the real drawback charges. I put the other charges on there because they were in the evidence and I did not wish to cut anything out.

Q. Then they have no significance whatever?—A. No, sir.

Mr. GOWEN. They show the net sum, according to Mr. Cassatt's tes-

timony, which was prorated between the different railroads which carried the oil?—A. Yes, sir; because in dividing this up the lighterage may have gone to the Pennsylvania, or the wharves may have belonged to them. You see this is divided up, 11 per cent. to the Baltimore and Ohio. It did not have any terminal facilities, probably—21 per cent. to the New York Central and Hudson River Railroad.

By Mr. GOWEN:

Q. That was a division of trade, not a division of prorate, was it not?—A. I understand; but it was their interest in the whole amount that they had and paid back. The only object in putting those terminal charges in this evidence was that the Baltimore and Ohio and other roads who had no terminal facilities had to pay whatever the percentage was back to the Pennsylvania or whoever it may have been.

Q. Did not this oil come to New York over four or five different railroads?—A. Four.

Q. The principal one being the Pennsylvania Railroad; I mean the oil which went over the Pennsylvania Railroad?—A. To New York?

Q. To New York. It went on the Pennsylvania to Harrisburg; then on the Reading 90 miles to Allentown; thence to Easton and 75 miles over the Jersey Central to New York?—A. Yes, sir; but I do not understand that at that time the shipments were in that direction. You will remember that the oil region originally was less than 400 miles from Philadelphia, while to New York the distance was 521 miles.

Q. Yes; but all the oil which went to New York went over those four roads?—A. Yes, sir.

Q. Now, then, in prorating among those four railroads to show what amount each should get per mile, were not all these drawbacks and terminal charges taken out first, according to Mr. Cassatt's testimony?—A. They may have been; yes, sir.

Q. State whether or not the upper part of this statement, which includes the lighterage and terminal charges in New York, does not show, according to the accounts rendered in that testimony, the total amount that was paid out before you reached the net amount that was prorated among the different railroads which united in carrying it?—A. I so understood.

Q. Do any of those terminal charges enter into, or are they included in any manner in your average rate of 55 cents?—A. No, sir.

Q. And the sum of \$10,000,000 in these seventeen months is exclusively made up of rebates paid to the Standard Oil Company, and does not include the terminal or lighterage charges, which amounted to 16 cents and upwards?—A. No, sir; it does not.

Mr. BUCHANAN. I was not present during all your testimony, and I do not know whether you have testified or not as to whether any rebates are now allowed to the Standard Oil Company by the Pennsylvania Railroad Company, to your knowledge?

The WITNESS. I believe there are; that is all I can say. I have a suit against the Pennsylvania Railroad for \$300,000, which I am prosecuting for rebates, and which I expect to win.

Q. And in that suit you allege that these rebates were given when?—A. Right along; all the while.

Q. But in that suit I presume you have filed a written complaint. In that complaint do you remember what times are alleged when these rates are given?—A. From the commencement of our business in 1881 up to the bringing of our suit, which was in November, 1887.

Q. I asked whether you had any knowledge of your own, any per-

sonal knowledge—I will put it that way—of any rebates given at the present time by the Pennsylvania Railroad?—A. Not at the present time; I have personal knowledge of their paying rebates up to 1885. It was so proved in our case.

Q. That suit was entered in what court?—A. In the McKean County court.

Q. That was a State court of Pennsylvania?—A. Yes, sir.

Q. What is the name of your attorney?—A. Senator J. W. Lee, who is present in this room, Mr. Sherman, and Mr. Mortimer F. Elliott, who is a good Democrat.

Q. What, if any, consulting counsel have you?—A. We have none.

Q. Is testimony being taken in that suit?—A. Yes, sir.

Q. At the present time?—A. We begin in Philadelphia May —, first. We have been taking testimony there since.

Mr. CROUSE [referring to Exhibit C]. In reference to this 55 cents average, just explain it to us; for instance, the rebate, as stated to-day, in one instance is  $51\frac{1}{2}$  cents, and in the other instance, perhaps,  $74\frac{1}{2}$  cents; and in making up your estimate down below, just explain how you got at the average?—A. By the addition of the rebates together we got the general average.

Q. But the rebates themselves on refined in the first table differ from those in the other table?—A. The amounts I got from the testimony.

Q. Cast your eye on the paper, please. There is a rebate of  $64\frac{1}{2}$  cents and a rebate, if you call it a rebate, of 10 cents; that would be  $74\frac{1}{2}$  cents on that calculation. Drop to the next one and you find rebates of 14, 15, and  $22\frac{1}{2}$  cents, which, added together, make a rebate of  $51\frac{1}{2}$  cents, if I am not mistaken. In one case it is  $64\frac{1}{2}$  cents and in the other  $51\frac{1}{2}$  cents. My question is, How did you get at the average of 55 cents?—A. By adding those three together.

Q. What three?—A. The  $90\frac{1}{2}$  cents rebate and the  $67\frac{1}{2}$  cents and the 65 cents, and after deducting the lighterage and terminal charges I think the average is 55 cents. I think that is the way I obtained the average of the drawbacks.

Q. That is to say, you added the  $64\frac{1}{2}$  cents, and leaving out the excluded matter—A.  $64\frac{1}{2}$  and 10.

Q. There is a question whether that 10 belongs there or not?—A. You are right, I do not think it does belong there.

Q. Taking the  $64\frac{1}{2}$  and the  $51\frac{1}{2}$  in the other instance—

Mr. GOWEN. You added the three together and divided by three?

The WITNESS. I think that is the way I obtained the general average.

Mr. CROUSE. That would not be correct. If nine-tenths of the oil was shipped at the first rate the average would be more than 55. The calculation would not be correct unless the amounts were alike.

Mr. GOWEN. You have here one drawback of  $74\frac{1}{2}$  cents, another drawback of  $51\frac{1}{2}$ , another drawback of 79 cents; now, if you add those three together and divide by 3 it produces 55, and that can only be correct upon the assumption that there was exactly the same amount shipped at each rate.

The WITNESS. That is true.

Mr. CROUSE. It would be necessary that the same amount should have been shipped at the  $64\frac{1}{2}$  cent rebate, at the  $51\frac{1}{2}$  cent rebate, etc.

The WITNESS. Yes, sir; but the probabilities are that the shipments on the last two were greater than on the other two.

Mr. CROUSE. Well, that would be against your calculation.

The WITNESS. No; it would be in our favor.

Mr. CROUSE. But if there was more at one rate than at another, your calculation would not be correct?

The WITNESS. The amounts shipped at each rate can be ascertained exactly.

Mr. CROUSE. This statement being submitted as evidence, it ought to be somewhat accurate in itself.

Mr. GOWEN. If you can give the exact number of barrels of refined which were shipped and the exact shipments of crude from Bradford and the lower region, you can then find out exactly what the percentage would be, could you not?

The WITNESS. Yes, sir.

Mr. BUCHANAN. Is the committee to understand that the statement you produced is not the result of accurate computation, but is made up of assumption?

The WITNESS. No, sir; I consider it as accurate and true.

Mr. BUCHANAN. From what source was it prepared?

The WITNESS. From this book [laying his hand on the report of the testimony taken before the master appointed by the supreme court of Pennsylvania].

Mr. BUCHANAN. And compiled correctly and accurately from that testimony?

The WITNESS. Yes, sir.

Mr. BUCHANAN. You have spoken of the payment of rebates; by whom were they paid and to whom?

The WITNESS. By the several railroads to the Standard Oil Trust.

Mr. BUCHANAN. Does it appear from that testimony also to be the case?

The WITNESS. The testimony shows it; yes, sir; and shows who received the rebates.

Mr. BUCHANAN. Have you any knowledge outside of that testimony as to the payments of these rebates?

The WITNESS. No, sir.

By Mr. BRECKINRIDGE:

Q. In one of your statements you speak of a number of your refiners who have been squeezed out; a number as having been wrecked, and of a number as having been bought up by the Standard Oil Company. What is meant by being squeezed out, as distinguished from the other expressions?—A. Take my own example. I claim I was squeezed out. I refused to have any relations or associations with this combination and the payment of these extreme drawbacks; and at the low price of refined oil I was unable to compete with them, because the drawback alone made a sufficient profit for them.

Q. As I understand it, then, those who were squeezed out sold out or were wrecked?—A. Yes, sir; those who were squeezed out sold out.

Q. So that you might have used the expression—were compelled to sell out?—A. Yes, sir.

Q. What inducement was there for the railroad company to give rebates and special favors to one of their shippers instead of to all?—A. Well, now, I could go into a great history. I do not know that I would want to sit here as a witness and say that I knew that men had made \$5,000,000 and \$6,000,000 a year or even \$500,000 a year and name the individuals. If I were to go into a history of this thing I could give you my opinion.

Q. If a railroad is doing a legitimate public carrying business and doing its duty by its stockholders, it is rather difficult for an outsider

to see how they can have any favoritism among people who give them freight.—A. I assert that the Pennsylvania Railroad has never done a fair business in the transportation of oil; and I state here as a man who can prove it——

Q. Have you reason to believe that officials of that road were interested in the business of the Standard Oil Company?—A. I believe they were interested in the profits derived from these rebates.

Q. Of course an explanation is perfectly logical upon the ground of bribery and collusion?—A. They were sued for conspiracy, and if they had had their just deserts would have been all in the State prison.

Q. Which conspiracy, of course, would not only have been a wrong against the public, but against their own stockholders.—A. I think there is a gentleman here [pointing to Mr. Gowen] who can tell you something about——

Mr. GOWEN. But I am counsel, and I do not want to go on the witness stand in a case in which I am a lawyer.

The WITNESS. I could express myself just as emphatically as anybody else and as truthfully as anybody else. I believe the money has been distributed amongst a gang of people in Pennsylvania, who have made their millions of dollars, and the industries have been reduced to ruin and the people connected with it bankrupted.

By Mr. BRECKINRIDGE:

Q. That would involve a betrayal on the part of the official both of the holders of the securities of the railroad and of the interest of the shipping public?—A. Yes, sir.

Q. I did not know but there might be some special reasons in connection with the oil trade in Pennsylvania that might make it to the interest of a railroad as a public carrier to discriminate in favor of some special shipper. I could see no such reasons myself, hence I ask the question?—A. I think that is quite right, sir. They have done it. I think a small discrimination anybody might live under. I, as an individual, taking care of my own interest, doing my own work, could stand reasonable discrimination. I commenced in the business before the Standard Oil Company did, although I am a young man yet—I commenced a long while before they did, but the result is that many of them who were my associates—there are men connected with it to-day who have been my personal partners. They may have been smarter than I, but they are extremely wealthy, and I am not a pauper by any means.

Q. You speak of a reasonable discrimination?—A. I believe wealth has been derived not from legitimate returns of the business, but from discriminations and drawbacks given by the railroads.

Q. And divided among them as individuals?—A. Yes, sir.

Q. You speak of reasonable discrimination. Do you mean small in amount or just in principle?—A. I do not think any discrimination is just.

Q. I understand you to mean then that you could live under a moderate hardship and not under a very great hardship?—A. We could have done so; there is no doubt about that.

Mr. GOWEN. The line of examination that you have taken up, Mr. Breckinridge, was taken up yesterday during your absence with another witness; and I will now ask Mr. Emery another question in connection with that.

By Mr. GOWEN:

Q. Has not the oil traffic of Pennsylvania reached a magnitude that has amounted to 30,000,000 barrels a year? Please refresh your recol-

lection by these tables [handing tables to witness] and state whether it has not reached at one time as much as 35,000,000 barrels?—A. Yes, sir; in 1882, and upwards.

Q. What were the highest shipments?—A. 26,627,000.

Q. State whether the shipments within the last few years have been increasing and production decreasing?—A. Yes, sir.

Q. So that the stock of oil that is on hand is greatly diminishing in consequence of the shipments now being larger in proportion to the production than they used to be?—A. Yes, sir.

Q. State whether, in your opinion, as an oil producer and refiner, and from your long knowledge of the business, you do not believe that if it was the object of the railroad company to consolidate this business into any one hand they could have done it by a much less rebate than an average of 55 cents a barrel?—A. Yes, sir; they could.

Q. Do not you think that 25 cents a barrel would have been a discrimination against which it would have been almost impossible for anybody to compete who did not get it?—A. I could not overcome 25 cents myself, and I believe I know my business.

Q. Do you think anybody could?—A. No; I do not think they could.

Q. Do not you think that 25 cents, even if the object of the railroad companies had been to throw the business into one hand and thereby securing for themselves, do not you think that that amount would have been sufficient for the purpose?—A. Certainly.

Q. Can you conceive of any reason why, if that amount was sufficient, a drawback of as high as 55 cents was allowed?—A. No, sir; I can not.

Q. You can not account for it?—A. No, sir.

Q. Would it not follow that the unnecessary amount of drawback was a gross injury to the share-holders of the company whose treasury was depleted by it?—A. It certainly was, as I have stated over and over again.

Q. State now over what length of time, from your own knowledge, you believe this system of unjust drawbacks has extended.—A. From 1872 to the present time. I believe it is going on still.

Q. And within that time probably two or three hundreds of millions of barrels have been produced?—A. Fully that.

Q. That is, sixteen years at an average of 25,000,000 a year?—A. Yes, sir.

Q. Have you any doubt in your mind that, taking the Standard Oil Company and their affiliated interests in contradistinction to the independent refiners or shippers who were to receive no rebate, that within this time there has been paid to the Standard Oil Company at least \$100,000,000 in rebate?—A. I do believe it; yes, sir.

Q. Can you conceive any valid business reason why that amount of money should have been taken out of the treasuries of railroad companies and given to a combination of individuals?—A. There is none; no reason.

Q. Do you believe that if the policy of these railroad companies had been to treat everybody alike it would have been possible for all this business to have accumulated in one hand?—A. No, sir.

Q. State whether or not the result of its accumulation in one hand has not been to make that one party so powerful that they can and have practically taken the business altogether away from the railroads?—A. They have, sir; nearly so.

Q. By the construction of pipe lines?—A. Yes, sir.

Q. Can you state further whether, if all the people had been treated alike, there would have been any difficulty on the part of refiners and

producers on the mere question of rate as to what it was, provided everybody had been treated alike?—A. I do not get your question.

Q. Would you not have agreed, and would not the trade have agreed, to pay as high as \$1 a barrel if all had been treated alike?—A. Yes, sir; or even \$5.

Q. That would have prevented competition with the European market?—A. Yes, sir; I was only referring to the domestic trade.

Q. Do you believe that a rate of as high as \$1 per barrel would have interfered with the foreign competition in oil?—A. No, sir; not up to three or four years ago. Of course the Russian field has come in as a competitor and is——

Q. That is within the last four years?—A. Yes, sir; in 1880 I was there and the business was comparatively small. It has grown since that time.

Q. Do you not think that if everybody had been treated alike and this oil trade treated exactly as other trades in the country were treated, that to-day the railroad companies carrying the oil would be in receipt of at least fifteen or twenty millions more than they are now getting?—A. That is true.

Q. Therefore the policy they have pursued in giving these large drawbacks has not only injured the individual refiners who did not participate in it but the railroads themselves, has it not?—A. Yes, sir; they have lost the business. That was the object of the Pennsylvania Railroad in giving me advantages in 1879.

Q. It was stated here the other day by the counsel for the Pennsylvania Railroad that I was in this case as counsel, for the purpose of finding out facts to aid me in a case against the railroad company in which I was employed. Have I ever been, or am I now, connected with you as your counsel?—A. No, sir.

Q. Have you ever spoken to me on this subject?—A. I have not.

Q. How often have I seen you in the last five years?—A. Very few times.

Q. Once or twice?—A. Not more, I think.

Q. On either of those occasions was any reference made between us to any suit you had against the Pennsylvania Railroad?—A. No, sir; I never had a suit against them until a year ago.

By Mr. CROUSE:

Q. Some one asked you not long ago about these rebates, over what period they extended, and I understood you to say they continued up to and including 1885?—A. They have paid rebates up to that time.

Q. I did understand you correctly, then, that they paid rebates going back over a number of years up to and including 1885?—A. Yes, sir. I do not say this rebate (referring to Exhibit C).

Q. But a rebate?—A. Yes, sir.

Q. In this last part of the examination, which grew rather animated, you carried it up to the present time?—A. I said I believed it extended to the present time.

Q. That is what I want to know about.—A. We have commenced suit against the railroad and claim that they have paid rebates up to 1885; and I expect to prove that they have paid rebates up to the time of the suit, November, 1887.

Q. I am trying to cover this latter period because it opens up a new field of inquiry.—A. I do not want to give my hand away just here.

Mr. GOWEN. You mean you do not want to expose your case?

The WITNESS. No, sir; because it might be taken advantage of. It

is very easy to get men away when they are wanted to go on the witness stand.

By Mr. GOWEN:

Q. You have strong reasons for believing what is going on at the present time, but whatever reasons you have you do not care to disclose?—A. That is it. I went out of business in the latter part of November, and I believe when I went out of business rebates were being paid. I expect to prove it and I believe I can prove it. I would answer your question direct—it would give me pleasure to do so; but as I said before, I do not want to give my hand away now. When this suit is over I will be glad to tell you all I know.

By Mr. BUCHANAN:

Q. Mr. Emery, I think you stated, in response to questions by Mr. Crouse, that you had proved in this case that rebates were paid up to January, 1885?—A. Yes, sir.

Q. Paid to whom?—A. They were paid to Mr. Brundred, of Oil City, Mr. Whitridge, of Titusville, Mr. Wood, of Titusville, and Mr. Schwartz, of Titusville, and two or three other people that I know of.

By Mr. GOWEN:

Q. State whether or not those rebates you have spoken of as being paid to Mr. Brundred, Mr. Whitridge, Mr. Wood, and Mr. Schwartz were not paid to them in consequence of a demand made by them upon the Pennsylvania Railroad that they were entitled to them because the Pennsylvania Railroad had given rebates to others?—A. Yes, sir; that is all they had to do, make their demand.

Q. They were not paid to them in the current course of their business?—A. No, sir.

Q. But in consequence of a demand made by them upon the Pennsylvania Railroad that they were entitled to receive them, because they discovered that the Pennsylvania Railroad had been paying these rebates to others?—A. They made no bones about it; they made their demand and received their money.

By Mr. BUCHANAN:

Q. Did you make a similar demand?—A. Yes, sir.

Q. Was it paid?—A. No.

Q. Hence the suit?—A. Yes.

By the CHAIRMAN:

Q. I understand you to say that, in reference to the claims you make and the facts you expect to prove subsequent to 1885, you desire not to be interrogated, because you wish to reserve that information to be used in a suit pending in Pennsylvania?—A. Yes, sir.

Mr. BRECKINRIDGE. Mr. Chairman, so far as our purposes are concerned, it makes very little difference whether these transactions occurred in 1885 or 1887. The question is one of policy and the possibility of a common policy ever obtaining in interstate commerce, and these devices are all comparatively modern. Having established it once it is, just for our purposes, as if we had established it one hundred times. I therefore do not consider it pertinent at all to our line of inquiry to determine how recently this policy has obtained. I will ask one or two more questions.

By Mr. BRECKINRIDGE:

Q. Had the Standard Oil Company, when this system of consolida-

tion and combination and of favoritism began, any marked natural advantages over their competitors in the oil trade?—A. No, sir.

Q. Had they any marked advantages in the beginning in the way of capital?—A. None whatever. I might say right there that the production at the time of the inception of this Standard Oil Company was about 16,000 barrels a day, and under this system of drawbacks they became possessors of an income of about \$1 a barrel per day, which would give them an income equal to the amount of production.

Q. Do you know how the stock or securities of these railroads who have been parties in this combination are held; whether they are held principally by the individuals who are the officials of the railroads, or whether they are distributed broadly among the public?—A. You mean the stocks of the railroads?

Q. Yes, sir.—A. They are held by the general public, I suppose.

Q. These gentlemen, then, in going into this collusion and dividing this secret fund, if they were robbing anybody were not robbing themselves, but were robbing the general stockholders?—A. That is right, sir.

By Mr. GOWEN:

Q. The stock of the Pennsylvania Railroad to-day is about one hundred million, is it not?—A. I understand so; I have not read their report recently.

Q. How much of that hundred millions is owned, do you believe, by officers of the company?

Mr. BUCHANAN. Mr. Chairman, Mr. Breckinridge spoke of the potentialities of the case which have been developed, and unless we stop there we will not get through. There are a number of trusts to be investigated to succeed this.

Mr. BRECKINRIDGE. This, Mr. Chairman, I will submit, is rather an interesting phase, and its pertinency will, perhaps, be brought out by this question which I shall ask Mr. Emery.

The CHAIRMAN. I think we shall have to dispose of the objection first.

Mr. BUCHANAN. I did not object to this particular question, but to the line of inquiry.

The CHAIRMAN. The objection, as it strikes me, is to some other portion of this examination. I do not see where we are going to end if we are going to deal in general suppositions. I think we had better confine the witness to facts he knows in regard to these matters.

Mr. BRECKINRIDGE. I will submit, Mr. Chairman, that matters of this kind would not be pertinent to our line of inquiry unless injury to citizens occurred upon transactions tending to consolidation and favoritism, and based upon transactions which were in the nature of interstate commerce. I understand that it is not disputed that this oil—indeed the statement indicates it—which has been handled, and upon which rebates are said to have been paid, is oil which was hauled from one State largely to another State, and the whole evidence and line of inquiry is in the nature of proof of favoritism. It is relating to the formative period of a great pool and trust based directly upon discrimination, upon transactions that are strictly national and not State in their character. So far as protracting the line of inquiry is concerned, I have reached about the end of my questions at this point.

Mr. GOWEN. I do think, gentlemen, upon the subject of public policy, this is as important a question as can come before any committee of Congress. It is interstate commerce; not only that, but it is foreign commerce. Eight hundred and ninety-five millions of dollars' worth of

oil have been exported from this country since the commencement of the oil trade. Two-thirds of the oil produced in this country goes to foreign countries. Now, what is the condition of affairs we are looking at, and which I, as your counsel, have been endeavoring to prove? It is this, that a few officers of a great railroad company that at one time had 49 per cent. allotted to it as its share of the business as against 21 per cent. to the New York Central, 21 per cent. to the Erie Railway, and 11 per cent. to the Baltimore & Ohio—that the officers of that railroad company, as was proved in that document referred to yesterday, by simply writing a letter to one gentleman, making a contract, have paid drawbacks which, according to the testimony, and which I believe to be a moderate estimate, have amounted to \$100,000,000.

Now, no man can show a single business reason why such a drawback should have been made. It is alleged, and I must do these railroad companies the justice to say that the Pennsylvania Railroad takes the position that when a rival railroad in New York establishes the rate at which oil must be carried, that they must carry it at that rate or lose all the business. That is true. But if they must carry it at that rate, there is no reason whatever why they should not carry it at that rate for everybody. And where they have offered an argument that it is necessary to carry it at that rate because the New York Central carries it at that rate, they have only carried it at that rate for one person, who when he commenced business did not own one-tenth of 1 per cent. of this business, and has kept carrying it at that rate for him while they charged the higher rate for everybody else, during a period of ten or fifteen years, during which he gets from them a rebate of over 85 per cent., rebates which have amounted in the whole country to hundreds of millions of dollars, it then becomes, as a matter of public policy, highly important to examine and see why that was done; not only to legislate in such manner as will prevent a recurrence of it for the future, but, if it is possible, to do something to give redress for the past to those who are injured.

Now, I think Mr. Breckinridge's question struck at the very vital part of all these examinations. It is known that the Pennsylvania Railroad Company is the largest company in the United States. It certainly is here in evidence that millions and millions of dollars have been taken away from the Treasury by an unnecessary rebate, the result of which has been to build up great fortunes in the hands of a few possessors and to make the many, who are equally responsible and equally worthy, poor.

Now, Congress, irrespective of all questions of interstate commerce, irrespective of all questions of State rights—Congress can give to the courts of the United States, in almost every case that arises out of interstate commerce, a jurisdiction, or rather can authorize them to apply a new remedy in consequence of a jurisdiction which they now have by reason of the fact that the plaintiff or the defendant live in different States.

Mr. BRECKINRIDGE. Exactly.

Mr. GOWEN. And when you come to deal with this great question of public policy as between the managers of the railroad and the stockholders who are scattered all over the United States and Europe, Congress can give to any stockholder of a corporation, who has entrance into a United States court in consequence of his citizenship, a remedy for the past which will be just as efficacious as the remedy which I hope will result in the future as the result of this investigation. Congress could to-day give to the courts of the United States what they do not

now possess and never have had, except in one or two isolated cases arising out of statute—Congress can give to the district and circuit courts of the United States original jurisdiction in writs of mandamus, which, if they were authorized to issue, would effectually prevent the future recurrence of any unjust discrimination, by compelling them under the penalties of that writ to move freight for one person at the same rate as they move it for another.

And especially with reference to the past in a case of this kind, where the discrimination shown to exist has been a discrimination only in favor of one person, so that in the absence of statute there is grave doubt of whether the people who did not have this discrimination have any remedy whatever sounding in damages, Congress can give to every non-resident holder of the stock of a railroad company in this country or to every holder of stock in a railroad company who resides in a different State from that in which the parent corporation is located, and who in consequence of residence and citizenship has an entrance into the United States courts—Congress can give to such injured stockholder the right to come before that court and ask for the appointment of some judicial officer, whom we may call a receiver, not to take possession of the company at all, or to interfere with its business, but a receiver of the stolen moneys that have been taken out of its treasury by these unjust discriminations; and on the complaint of such stockholder the courts can appoint such receiver and direct that receiver to bring suit for the recovery of those moneys and divide them among the people who have been injured by this misapplication.

Therefore, there are two distinct remedies, one for the past and one for the future, which are not limited by the question of interstate commerce or interstate rates, but over which by virtue of citizenship the courts of the United States have jurisdiction, and all they want is a remedy. Congress can give that remedy; and when it is given depend upon it it will be the most efficacious one that ever was given for an evil of this magnitude in the world.

Mr. BUCHANAN. It will be observed, Mr. Chairman, that the objection, if it can be called an objection, was made rather in the way of a suggestion—was not to limit inquiry as to the fact of rebates having been allowed and paid. The question that was put was asked as to the witness's opinion—not knowledge, but opinion—as to the distribution of the capital stock of the Pennsylvania Railroad, as to whether its officers owned any considerable portion or not, in his judgment, and without laying any foundation for the inquiry by showing that the witness had any opportunity whatever of becoming possessed of any special information on this subject.

The CHAIRMAN. If there is not any objection upon the part of any members of the committee, I do not understand that the counsel for the committee insists upon taking the supposition of this witness upon that subject and the question may be considered as withdrawn.

Mr. BRECKINRIDGE. All I ask—

The CHAIRMAN. The question objected to was asked by Mr. Gowen.

Mr. BRECKINRIDGE. I thought the objection referred to a question I asked. Let the stenographer turn back and read—

The CHAIRMAN. I have already had the question read to me and it was a question put by Mr. Gowen.

Mr. BRECKINRIDGE. Very well, sir. There is one other question that I will ask Mr. Emery that is suggested to me by a remark made by Mr. Gowen. The railroad company, I understand, alleged that other railroads were competing for this oil trade, and that they—the Penn-

sylvania system of railroads—had to carry that oil at a reduced rate or else lose the trade. Now, the question occurs as to whether or not this oil field was reached with equal facilities for purposes of transportation by the two lines of railroads. What other line of railroad could underbid the Pennsylvania line of railroad in carrying the Standard Company's oil?

The WITNESS. There was no road, so far as distance was concerned.

Q. It was really the only road that reached that field?—A. From the field to Philadelphia is less than 400 miles, and on this system of the Pennsylvania road was produced all of the oil in the oil region.

Q. What other railroad reached any other oil field?—A. There was no other oil field.

Mr. GOWEN. Except a little one in New York?

The WITNESS. Not at that time; that is since 1875.

By Mr. BRECKINRIDGE:

Q. Therefore I do not see that there was any ground from your knowledge of the facts for the railroad discriminating in favor of this particular concern upon the score of competition of other railroads in this business?—A. I will explain that if you will allow me.

Q. Go on.—A. The other railroads did participate in the carrying of this oil, but the contract that was made with the Standard Oil Company or the South Improvement Company was exclusively with the Pennsylvania Railroad. They agreed to transport all the oil over the Pennsylvania system.

Q. To give that system all the oil?—A. All of it.

Q. And the railroad to take it all?—A. Yes, sir.

Q. At a given figure?—A. Yes, sir; all of it. Then the other railroads came in and participated in the contract afterwards.

By Mr. GOWEN:

Q. Was it not at that time and has it not been since agreed to by all these railroads who had the power to compete for this oil, that the business was to be divided among them in a fixed proportion?—A. Certainly.

Q. Therefore if the business was to be divided amongst them or pooled, as they called it, so that each got his fixed proportion, what advantage would it have been to any one of these roads to reduce the rate of transportation when by so doing it could only have received its fixed proportion—would there have been any?—A. No, sir.

By Mr. BRECKINRIDGE:

Q. Did you refer to the entire oil business?—A. Yes, sir.

Q. So that I am to understand that they divided the whole oil-carrying trade, but rebated to only one concern?—A. Yes, sir; on all the oil I shipped the rebate was paid to that company.

Q. Do you mean to say that a rebate was paid on your oil?—A. Yes, sir.

Q. And not to you?—A. No, sir.

Q. Why did they pay that on your oil?—A. That was part of the contract.

The CHAIRMAN. Those things are all matters of written contract, Mr. Breckinridge.

Mr. GOWEN. That contract provided that this rebate was to be given to the Standard Oil Company not only upon what they shipped but upon every barrel of oil that was shipped by anybody.

Mr. BRECKINRIDGE. I will observe, Mr. Chairman, in conclusion, as

there is some little dispute about inquiries of this character, that so far as the suits and grievances of individuals are concerned I can see that they have but very little to do with this investigation. It is neither to stimulate nor to injure our line of inquiry to bring out that certain gentlemen have got suits. That is not to bring out anything that is at all relevant to the necessity that lies upon us of developing whatever of public policy there is in that or in other suits or even cases that have been brought to trial. But if this committee is to cover broadly and well the question of combinations and pools upon the basis of interests of citizens in different States—interstate and foreign commerce—it needs to go into the matter of contracts, transportation, taxation, and almost every conceivable question that may enter into the commerce between them, provided it goes across State lines or across the foreign border.

Witness excused.

The committee then went into executive session, after which it adjourned until Friday, April 27, at 11 o'clock a. m.

APRIL 27, 1888.

Committee met at 11 o'clock a. m. Present: The chairman, Mr. Smith, Mr. Buchanan, Mr. Grimes, Mr. Breckinridge, Mr. Crouse, and Mr. Bunnell.

### TESTIMONY OF JOSEPH D. POTTS.

JOSEPH D. POTTS, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. In Philadelphia.

Q. What is your age?—A. Fifty-eight years.

Q. What is your business?—A. My profession is that of civil engineer, and I have been engaged for a long while in transportation.

Q. Over what length of period have you been engaged in the transportation business or connected with it?—A. Since 1855.

Q. Will you kindly mention the various branches of transportation in which you have been engaged during that time?—A. I was at one time superintendent of the western division of the Pennsylvania road. I became general manager of the Philadelphia and Erie road after it was leased by them. I then became president of the Empire Transportation Company, which was a transportation line furnishing its own cars and running over a great many miles of railroad, some 30,000 miles. I also became president of the Erie and Western Transportation Company, which was and is a large owner of steamers on the lakes; and I have been a director ever since it began of the International Navigation Company, the owner of the Red Star Line and the Inman and International Line of ocean steamers.

Q. Then you have been engaged in almost all departments of inland and transcontinental transportation?—A. Yes, sir.

Q. And with reference to navigation both upon the ocean and upon the lakes?—Yes, sir.

Q. You were president, you say, of the Empire Transportation Company. Will you kindly inform the committee what that line was and what its functions were?—A. It was a corporation which purchased and owned cars and made contracts with various lines of railroad which together constituted a large through route with ramifications over which it ran

sylvania system of railroads—had to carry that oil at a reduced rate or else lose the trade. Now, the question occurs as to whether or not this oil field was reached with equal facilities for purposes of transportation by the two lines of railroads. What other line of railroad could underbid the Pennsylvania line of railroad in carrying the Standard Company's oil?

The WITNESS. There was no road, so far as distance was concerned.

Q. It was really the only road that reached that field?—A. From the field to Philadelphia is less than 400 miles, and on this system of the Pennsylvania road was produced all of the oil in the oil region.

Q. What other railroad reached any other oil field?—A. There was no other oil field.

Mr. GOWEN. Except a little one in New York?

The WITNESS. Not at that time; that is since 1875.

By Mr. BRECKINRIDGE:

Q. Therefore I do not see that there was any ground from your knowledge of the facts for the railroad discriminating in favor of this particular concern upon the score of competition of other railroads in this business?—A. I will explain that if you will allow me.

Q. Go on.—A. The other railroads did participate in the carrying of this oil, but the contract that was made with the Standard Oil Company or the South Improvement Company was exclusively with the Pennsylvania Railroad. They agreed to transport all the oil over the Pennsylvania system.

Q. To give that system all the oil?—A. All of it.

Q. And the railroad to take it all?—A. Yes, sir.

Q. At a given figure?—A. Yes, sir; all of it. Then the other railroads came in and participated in the contract afterwards.

By Mr. GOWEN:

Q. Was it not at that time and has it not been since agreed to by all these railroads who had the power to compete for this oil, that the business was to be divided among them in a fixed proportion?—A. Certainly.

Q. Therefore if the business was to be divided amongst them or pooled, as they called it, so that each got his fixed proportion, what advantage would it have been to any one of these roads to reduce the rate of transportation when by so doing it could only have received its fixed proportion—would there have been any?—A. No, sir.

By Mr. BRECKINRIDGE:

Q. Did you refer to the entire oil business?—A. Yes, sir.

Q. So that I am to understand that they divided the whole oil-carrying trade, but rebated to only one concern?—A. Yes, sir; on all the oil I shipped the rebate was paid to that company.

Q. Do you mean to say that a rebate was paid on your oil?—A. Yes, sir.

Q. And not to you?—A. No, sir.

Q. Why did they pay that on your oil?—A. That was part of the contract.

The CHAIRMAN. Those things are all matters of written contract, Mr. Breckinridge.

Mr. GOWEN. That contract provided that this rebate was to be given to the Standard Oil Company not only upon what they shipped but upon every barrel of oil that was shipped by anybody.

Mr. BRECKINRIDGE. I will observe, Mr. Chairman, in conclusion, as

there is some little dispute about inquiries of this character, that so far as the suits and grievances of individuals are concerned I can see that they have but very little to do with this investigation. It is neither to stimulate nor to injure our line of inquiry to bring out that certain gentlemen have got suits. That is not to bring out anything that is at all relevant to the necessity that lies upon us of developing whatever of public policy there is in that or in other suits or even cases that have been brought to trial. But if this committee is to cover broadly and well the question of combinations and pools upon the basis of interests of citizens in different States—interstate and foreign commerce—it needs to go into the matter of contracts, transportation, taxation, and almost every conceivable question that may enter into the commerce between them, provided it goes across State lines or across the foreign border.

Witness excused.

The committee then went into executive session, after which it adjourned until Friday, April 27, at 11 o'clock a. m.

Committee met at 11 o'clock a. m. Present: The chairman, Mr. Smith, Mr. Buchanan, Mr. Grimes, Mr. Breckinridge, Mr. Crouse, and Mr. Bunnell.

#### TESTIMONY OF JOSEPH D. POTTS.

JOSEPH D. POTTS, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. In Philadelphia.

Q. What is your age?—A. Fifty-eight years.

Q. What is your business?—A. My profession is that of civil engineer, and I have been engaged for a long while in transportation.

Q. Over what length of period have you been engaged in the transportation business or connected with it?—A. Since 1855.

Q. Will you kindly mention the various branches of transportation in which you have been engaged during that time?—A. I was at one time superintendent of the western division of the Pennsylvania road. I became general manager of the Philadelphia and Erie road after it was leased by them. I then became president of the Empire Transportation Company, which was a transportation line furnishing its own cars and running over a great many miles of railroad, some 30,000 miles. I also became president of the Erie and Western Transportation Company, which was and is a large owner of steamers on the lakes; and I have been a director ever since it began of the International Navigation Company, the owner of the Red Star Line and the Inman and International Line of ocean steamers.

Q. Then you have been engaged in almost all departments of inland and transcontinental transportation?—A. Yes, sir.

Q. And with reference to navigation both upon the ocean and upon the lakes?—Yes, sir.

Q. You were president, you say, of the Empire Transportation Company. Will you kindly inform the committee what that line was and what its functions were?—A. It was a corporation which purchased and owned cars and made contracts with various lines of railroad which together constituted a large through route with ramifications over which it ran

the cars and over which it carried business which it solicited from those who controlled it—shippers of goods.

Q. Those cars were transported or moved, were they not, by the motive power belonging to the various railroads over which your line of cars were transported?—A. Yes, sir.

Q. State whether or not your company received either a fixed percentage or a fixed sum of the gross rate of transportation due to your ownership of cars, selecting a business and furnishing terminal facilities, and whether the railroad company received its fixed proportion or fixed rate of the joint price due to their furnishing road-bed and motive power?—A. The contracts that we had differed some in detail and in methods of compensating us, but the fundamental ideas of all of our contracts was the same, that we should be paid a car service such as was usual and current for the use of our cars, keeping our cars in repair at our own expense; that we should be paid a commission for soliciting business at all the large commercial centers, which commission was supposed as nearly as it could be reached, to represent about what it would cost the railroads under those circumstances to do the same service, and we were also allowed a terminal charge where we furnished terminal facilities, which we did at the leading commercial centers, such as New York. At that place we furnished our own piers which were rented, built the warehouses, and did the handling of the goods, loading and unloading. For those services we were allowed what the railroad estimated it would cost them to do the work and furnish those facilities. Sometimes it was in the nature of an arbitrary allowance per ton, but more usually, particularly toward the close, of a percentage upon the rate.

Q. State whether during any period of the existence of the Empire Transportation Company as a transporting line upon the Pennsylvania Railroad and affiliated lines, it furnished the cars for the transportation of crude petroleum to the sea-board?—A. It furnished a very few in the early part of our connection with it. The manner of exporting crude petroleum changed. Instead of being barreled and shipped in cars as ordinary freight was, cars that held the petroleum in bulk were provided. It never furnished any of those; we furnished the bulk cars.

Q. You mean by "it" the railroad?—A. Yes, sir; none of the railroad companies furnished bulk cars. We absorbed the whole business.

Q. I presume practically after the trade had properly started all the crude oil went in bulk in tank cars from the oil well to the sea-board?—A. Yes, sir.

Q. And when that was the system of transportation your company was the only company that furnished cars for that service to the Pennsylvania Railroad Company?—A. Yes, sir.

Q. At that time you were the exclusive avenue of transportation from the wells to tide-water?—A. Over the Pennsylvania Road and its connections.

Q. Over what period of time did such control by you of the transportation extend?—A. It ended in October, 1877. I could not give you the precise date when crude oil ceased to be transported in barrel and was wholly transported in bulk, but I should think perhaps in about 1870. We began to transport oil in 1865, and it was a gradual transition process of barrel and bulk.

Q. Your absolute control over it ceased in 1877?—A. Yes, sir.

Q. How long immediately preceding that period had you the absolute control; had it been two or three years?—A. Oh, yes; I should think six or seven years.

Q. Now, did you during that time transport oil that was refined by the Standard Oil Company, as well as for others?—A. We transported oil for anybody that offered it to us, and frequently had some of theirs to transport.

Q. State whether or not at that time you treated all persons alike who came within the same category as to charges?—A. The charges were always fixed by the railroad company. We never fixed any. In the distribution of cars we always sought to treat everybody as nearly equitable as we could.

Q. Out of the share of the gross charge for moving petroleum which came finally into the treasury of your company, as representing the service that you did as a common carrier, did you treat the trade alike?—A. Absolutely.

Q. Do you know whether there was any complaint of favoritism on the part of your line by the producers of oil?—A. I do not think any serious complaint. Occasionally when there was a very great demand for cars, and everybody did not get what they wanted, naturally each one thought he was discriminated against, and the only way we found by which it could be done equitably was to take the general business of each party, and load the cars in proportion to what the general business had been, and not in proportion to the condition of demand.

Q. State whether, during that period and by virtue of your position as president of this transportation company, you made efforts, and if so, to what extent, to secure a large clientage among the producers of oil to furnish transportation to the lines of the Pennsylvania Railroad.—

A. We always worked with reference to getting the largest number of shipments we could, believing that to be the best safeguard to our trade.

Q. There was a gentleman named Campbell, who has been examined before this committee, and whose testimony taken on another occasion has also been read, testified that you, or some gentleman acting for you, had prepared a paper for the producers to sign pledging their tonnage to your lines; do you remember that?—A. Yes, sir.

Q. Now, why did your control over this trade cease in 1877, and how did it cease?—A. We sold out our entire equipment and plant.

Q. To whom?—A. Our contract with the Pennsylvania Road gave to them the option, at any time they saw proper, upon reasonable notice, of buying our entire plant; they exercised that option.

Q. They availed themselves of that option?—A. Yes, sir.

Q. Was that at your request or desire?—A. No, sir.

Q. At whose request or desire?—A. It was the Pennsylvania Railroad through their officials.

Q. Do you know why they did it?—A. No; I do not, except that they expressed that wish.

Q. Do you not know that it was at the suggestion or by the connivance of the Standard Oil Company?—A. No; I do not know that.

Q. Did you not, while you were engaged as the Empire Line in transporting oil, become also refiners of oil and secure refining facilities for the purpose of utilizing the oil you transported?—A. Not for that purpose.

Q. For what purpose?—A. For trade purposes, for the purpose of securing ourselves against the loss of transportation. We reached the conclusion that there were three great divisions in the petroleum business—the production, the carriage of it, and the preparation of it for market. If any one party controlled absolutely any one of those

three divisions, they practically would have a very fair show of controlling the others. We were particularly solicitous about the transportation, and we were a little afraid that the refiners might combine in a single institution, and some of them expressed a strong desire to associate themselves permanently with us. We therefore suggested to the Pennsylvania Road that we should do what we did not wish to do—associate ourselves. That is, our business was transportation and not anything else; but in order that we might reserve a nucleus of our refining capacity to our lines, we suggested we should become interested in one or more refineries, and we became interested in two, one in Philadelphia and one in New York. It was incidental merely to our transportation.

Q. To what extent did your refining capacity reach up to the period at which your contract with the Pennsylvania Railroad was terminated?—A. The extreme limit was 4,000 barrels a day only.

Q. In 1878 the capacity of the oil region had reached some 15,000,000 of barrels of oil, had it not?—A. Of refining capacity?

Q. No, sir; capacity of production.—A. I could not tell you without referring to statistics. I do not carry them in my mind. I think when we sold out in 1877, the production was in the neighborhood of 30,000 barrels a day. If you have the statistics they will be much more reliable than my recollection.

Q. What became of your refineries when you sold out your transportation line?—A. We sold out everything to the Pennsylvania Road. They had the same stipulation about our refineries.

Q. Do you mean that you sold your refineries to the Pennsylvania Road?—A. We conveyed them to whomsoever they directed.

Q. To whom did they direct you to convey them?—A. I do not recollect to what particular corporation, but it was the corporation designated by the Standard Oil Company.

Q. That is, you conveyed them to the interest controlled by the Standard Oil Company?—A. Yes, sir.

Q. Who paid you for that?—A. The Standard Oil Company.

Q. What was the amount of that purchase?—A. I can not tell you. I think they paid us for everything they bought, something over \$3,000,000.

Q. The money to pay for the refineries was provided by the Standard Oil Company and paid to your company?—A. It was paid to us; but I don't know who provided it.

Q. It was paid by them through their instrument?—A. Yes, sir.

Q. When you sold the cars what did you receive for them?—A. Car trusts for all of them.

Q. State whether it was not agreed at that time, or immediately afterwards brought into the agreement, that the Standard Oil Company was to provide the money to purchase some of these car-trust certificates?—A. The oil-car trusts.

Q. How much did they amount to?—A. I think \$900,000; but it was included in the other sum.

Q. The Standard Company therefore provided the money to buy from you the car-trust certificates that represented your ownership in the oil-tank cars which you had parted to the Pennsylvania Company?—A. Yes, sir.

Q. The Standard Oil Company also became the owners, or a company designated by them, of your refining plants?—A. Yes, sir.

Q. And the other cars, the cars directed to general merchandise, into whose custody did they go?—A. The Pennsylvania Railroad,

Q. State whether or not the oil-tank cars which you owned and transferred at that time have not since been designated by name and run upon the Pennsylvania Railroad line?—A. They retained the same name that we gave to most of them.

Q. What was that?—A. The Green Line.

Q. That is what is now known as the Green Line of oil-tank cars on the Pennsylvania Railroad, of which I think Mr. Brundred is the manager?—A. He was and I think still is.

Q. Can you state the amount of consideration you received from the merchandise and general freight cars?—A. Something over \$1,600,000.

Q. Nine hundred thousand dollars for the oil; that would be \$2,500,000. Therefore the difference between the two and a half millions and the gross sum you received would represent the purchase of the refining plant?—A. And the other. We had a large pipe plant; that was owned by another company.

Q. This business that you were engaged in up to that time was a profitable and lucrative business to your company?—A. Sometimes; the average was very profitable.

Q. Had you any desire to get out of it?—A. No, sir.

Q. Do you not know then, as a fact, that the Pennsylvania Railroad exercised their option of terminating your contract at the suggestion of the Standard Oil Company, or by their request, or by the request of some companies or individuals affiliated to them?—A. No, sir; I do not know that.

Q. Have you any reason founded in a fact that you know to suppose that?—A. That was the theory which we held, and I think it was probably the true one; but I do not know it personally.

Q. I will call your attention to this subject. Do you not know, and did you not also at that time, through railroad officials or other sources, that the Standard Oil Company complained of the impropriety of a transporting line, upon which they were dependent for their supply of oil, being also engaged at the same time in competition with them in refining?—A. Yes, sir; that was the point that was made.

Q. For what period prior to the time at which you parted with your interest had that complaint, or the existence of that complaint, been known to you?—A. I do not know. We did not go into the refining business until the spring of 1876, so that it could not have been very long. We sold out in 1877.

Q. Now, have you any knowledge, or are you able to testify any answer whatever, founded upon facts within your knowledge, to this question: Do you know whether, during the period that you were engaged as the Empire Line in the transportation of what was practically the entire amount of crude oil that went from the oil wells to tide-water, the Pennsylvania Railroad Company, out of their proportion of the through charge which they received, paid any rebates to the Standard Oil Company?—A. No, I can not tell; but I do not think it at all likely. I think we would have known if they had done anything of the sort. I think if there were any concessions made by those roads it was made through our agency by their instruction.

Q. For how long before you parted with your property had you known of any complaint by, or desire on the part of, the Standard Oil Company, or any of its officers or affiliated interests, to exclude you from the transportation of this business on the Pennsylvania Railroad?—A. I think they desired to exclude us from the refining business from the moment they found we had embarked in it. I do not know that they ever expressed the desire to exclude us from the transportation business. I never heard it.

Q. After your company gave up this transportation of oil in bulk did you retain any interest whatever in any branch of the oil trade?—A. Nothing of myself.

Q. I mean your company.—A. The company was dissolved and passed out of existence in 1878, but it had one or two affiliated companies. For instance, the Lake Line I spoke of. We did more or less transporting on our freight boats of oil on the lake. There was a terminal yard at New York, which we still retain. It was a separate corporation. I do not recall anything else.

Q. But you were not in any manner, or had any interest in the transportation of oil over the lines of the Pennsylvania Railroad?—A. No, sir.

Q. Do you remember the year 1879, the beginning of 1880, or rather can you recall the examination of Mr. Cassatt, the third vice-president of the Pennsylvania Railroad, as a witness before General Sweitzer, a master appointed by the supreme court of Pennsylvania, in the case of the Commonwealth against the Pennsylvania Railroad?—A. I was not present at any one of them, but I read the report of them in the papers, and subsequently I read the pamphlet.

Q. Did you read Mr. Cassatt's testimony?—A. Yes, sir.

Q. Portions relating to it have been read here before this committee?—A. Yes, sir. It has been very many years since I read it.

Q. Had you any knowledge of the fact of the existence of the rebates that he then testified to, until you heard it resulting from that examination?—A. I think the rebates that he testified to all took place after we sold out. No, sir; I had no personal knowledge of it.

Q. I only want to know whether, as a witness, you can give us any additional facts upon that subject?—A. I have no knowledge of it at all. It was entirely outside of anything I had anything to do with.

Q. From your general knowledge of the transporting trade and your particular knowledge of the oil trade derived from your contact with it, I would like to ask you whether, in your judgment, as a railroad expert, it was either a wise or necessary policy on the part of any railroad to concentrate the transportation of oil in one hand?—A. I should think it unwise. You ask it as a question of railroad policy.

Q. As a matter of railroad policy, can you give this committee any reasons for that; why do you think it unwise?—A. In the first place, it concentrates great power in the hands of one party over the trade of the road. They can remove it at pleasure. In the second place, I think a large number of parties engaged in the same trade are very apt to divide themselves into two different classes as to the way of viewing markets; one class will be hopeful and the other the reverse. The result will be that there will be always one or the other class engaged in shipping some of the traffic. If it is all concentrated in one hand, the views of that particular party as to the market may cause it at one time to stop shipments altogether, and at another time to concentrate a large and difficult volume of shipments to manage. I think a diffusion of trade secures a much more regular and perhaps a larger total to the carrier.

Q. Does it not also secure a more permanent hold upon it by the railroad?—A. Yes, sir.

Q. Now, Mr. Cassatt has testified that the rebates on crude oil given to the Standard Company were, respectively, 49 cents from the Bradford region, and 51½ cents from the lower region. From your knowledge of the oil trade, if it had been the desire of a railroad company simply to concentrate this business into one hand like that of the Standard Oil

Company, was it necessary to give such large rebates as that. I mean if their object had been to concentrate it?—A. It would depend very much upon the state of the trade at the time. I do not recall what the profits of the refiners were at that time. At the present time, I think it would undoubtedly turn all the trade into the hands of one party.

Q. Would not one-half of that turn it?—A. Yes, sir.

Q. Can you therefore, as a railroad expert, see any reason why, even admitting that the object was to turn it into one hand and that object was commendable, such large rebates should be allowed?—A. The ground for allowing a rebate for the purpose of concentrating business into the hands of one party, has, I think, usually been the assurance to a series of carriers who united together for the purpose—the assurance to those carriers of a reasonably good rate, and of a division among them in agreed proportions of the total business. That, I think, is the ground which has almost invariably been put forward for that sort of an arrangement—in all classes of trade, I do not refer particularly to the oil trade. It was in the live-stock trade, and it has been in other branches.

Q. But was there any other reason than that, and I shall come to that directly, why, in your judgment, so large a drawback should have been given?—A. I do not know of any other.

Q. It would have been manifestly better for the treasury of the company, would it not, to have given a less one?—A. It would not have got the trade.

Q. Now, with reference to dealings with other companies and of the necessity of giving low rates, in consequence of the combination or competition of other companies, is there any reason for a reduction of rates whatever, arising from the fact of competition, when the other companies have already agreed among themselves to divide the total business among them in fixed proportions?—A. There are two points which are usually urged for that, one of them which has been just stated. The other is that the rebate given is not in the sense so much of an allowance to the shipper as an actual reduction of tariff made necessary to meet market competition or any other form of competition. Those are the two reasons which are usually given, and it is necessary in order to weigh their force to know all the circumstances of each particular case. They may be bogus reasons or may be genuine.

Q. But where the reason is advanced that it may be necessary to meet the market price of the commodity and enable the business to be conducted, is it not essential that all people should have the same rate?—A. I think so, with the one exception that there ought to be a distinction between the shipper of a very trifling quantity and the shipper of a large quantity.

Q. To what extent would you admit that as a railroad expert? Would you admit it beyond a car load?—A. I would not. There are other parties who take a different view.

Q. If it could have been urged that it was necessary for four railroad companies to unite and turn all the business into the hands of one person, so that that one person might thereafter divide it among them in a fixed proportion, why could not they have divided it among themselves in that fixed proportion without that intervention?—A. I suppose there is nothing to prevent it except the weakness of human nature.

Q. Might it not also be called by a harsher term?—A. Yes, sir.

Q. Do you concede that any advantage resulting from the ability of one man in whom the railroad companies placed their traffic, which he did not have before, to divide that traffic among them in a fixed pro-

portion is at all equal, or overcomes rather the disadvantage resulting to the railroads from the ability of that man when he has got the control of the trade to take it away from them altogether?—A. I do not think so. On that point it is proper to say that a great many very experienced railroad gentlemen hold entirely different views.

Q. Perhaps they are not equal in integrity with yourself?—A. I should not like to say that.

Q. Do you believe that if managers of the four trunk lines had the ability and showed the disposition to sit down and make a contract by which they divided this traffic among themselves in a fixed proportion, that such companies had any necessity for introducing a factor like the Standard Oil Company in order that after they had transferred the trade to them it might give it back to them in the same proportion which they themselves had the power to divide it before?—A. They had frequently attempted to divide it themselves, and some party among them had always had a fancy that the agreed division worked him an injustice, and undertook to remedy that injustice in a way that offended the others, and the pool always broke up. This was their device to overcome that difficulty. I do not think well of the device.

Q. Do you think it was necessary for those four railroads to have this Standard Oil Company injected between them and their traffic as an insurance company or agency to guaranty to each other their faith to each other?—A. Apparently they never did maintain faith with each other until that was done. But I do not admit there was an absolute necessity.

Q. Now take another instance—take the grain trade of this country; is not that grain traffic and has it not been divided among the companies in fixed proportions so far as the trade going to tide-water is concerned?—A. There was an attempt made by what was known for a long time as the trunk line pool to accomplish a division of all the east bound traffic to the sea-board and to interior competitive points, and it did work reasonably well so far as securing a division, and so far as securing a maintenance of rates were concerned. There was always a great deal of friction, always more or less disturbance among them, because some of the lines had a wicked partner that would cut rates privately.

Q. Now what amount in your judgment per bushel of grain raised in this country and shipped for foreign use abroad, would it be necessary for the railroads to give to a factor or middle man in order to concentrate in him the entire grain traffic of the country?—A. A very slight item to the bushel.

Q. Probably one-quarter or a half cent would, would it not?—A. Yes, sir; half a cent would, assuming that the man was a skillful merchant and had plenty of capital.

Q. The effect, therefore, of the allowance to the factor or middle man who raises no grain, of giving to him a preferential rate of half a cent a bushel, would concentrate in his hands all the grain traffic of the country for foreign export, would it not?—A. It would have that tendency. It would depend upon his ability and capital to handle it.

Q. Would not that result in making him practically the only buyer of grain in this country for foreign export?—A. It would have that tendency. I do not think any one man is big enough to do that sort of thing.

Q. Do you think the Government would stand such a thing, or ought to?—A. I do not think they ought to.

Q. Is there any difference except in the character of the commodity

and the extent of area over which the business is transacted between the grain trade of the country and the petroleum trade?—A. I should think not, so far as transportation rates are concerned.

Q. As a railroad expert you have testified that you do not recognize the propriety of making any difference to a wholesale dealer that extends beyond the man who sends a full car load as compared with a man who sends less than a car load?—A. That is the feeling that I have upon the subject, and it rests upon this, if you care to have the basis.

Q. I should desire it.—A. That the distinction between wholesale and retail rates arises from the fact that a wholesale business will bring to the party who deals in it a larger total profit in a given time, because of the large volume handled, even though the profit per unit is much less than it is in the retail case. Therefore the whole question seems to me to resolve itself into determining what policy will bring the largest volume in the most regular manner to the carrier; and it is my opinion, and it is only an opinion based upon such experience as I have had, that in the long run that would be achieved by making the unit which would secure the wholesale rate the car load.

Q. And not extending it beyond?—A. And not extending it beyond. In other words, I think a hundred shippers of a car load a day would be sure to give to a carrier a more regular volume of business, and I think probably a larger total volume of business in a year's time than one shipper of a hundred barrels a day. That is the basis.

Q. Even admitting, for the sake of argument, that the wholesale dealer or owner to an extent beyond a car load could have a preference when you come to deal with the natural or manufactured products of this country, do you think it is wise to refuse to give that preferential rate to the man who actually produces the manufactured products or commodities and give it to a mere middle man who has no control over the trade whatever except that which he is able to secure by means of a preferential rate?—A. I should give it to every shipper.

Q. Who attended to the business?—A. That is all.

By Mr. SMITH:

Q. You are interested in the Red Star Line?—A. Yes, sir.

Q. Under what flag does that line sail?—A. Belgium.

Q. Is American capital invested in that line?—A. Yes; about 90 per cent.

Q. I also understand that you are interested in the Inman Line?—A. Only through the International, which is the owner of one-half of the stock.

Q. Where is that one-half of the stock owned?—A. Chiefly in the United States.

Q. Under what flag does that line sail?—A. English flag.

By Mr. BUCHANAN:

Q. You spoke about four trunk lines. Will you name them, please?—

A. The four trunk lines that were engaged in oil transporting?

Q. Yes.—A. The New York Central, the Erie, the Pennsylvania with its Philadelphia and Erie branch, and the Baltimore and Ohio and their respective connections to the sea-board. The Philadelphia and Erie had as connection the Catawissa Railroad, the Lehigh Valley Railroad, the New Jersey Central Railroad, and the Pennsylvania on its New York line had the Reading Railroad—the Philadelphia and Reading Railroad, the Lehigh Valley, and the New Jersey Central. Those constituted the four trunk lines.

## TESTIMONY OF DANIEL O'DAY.

DANIEL O'DAY, sworn and examined.

By Mr. GOWEN :

Q. Where do you reside ?—A. Buffalo.

Q. What is your business ?—A. I am an employé of the National Transit Company.

Q. In what capacity ?—A. General manager.

Q. Of the National Transit Company ?—A. Yes, sir.

Q. That is the company owning the pipe lines, is it not, in the Standard Oil Company system ?—A. Yes, sir.

Q. How long have you been connected with that business in that capacity ?—A. With the National Transit Company since its organization.

Q. When was that ?—A. I think about ten years ago.

Q. Prior to that time in what business were you engaged ?—A. I was superintendent of the line known as the American Transfer Company—oil-pipe line.

Q. For what length of time ?—A. I think four years ; perhaps four years ; three or four years.

Q. And prior to that four years were you engaged in any manner in or about the oil-trade business ?—A. Yes, sir.

Q. In what capacity ?—A. I was in the employ of the Empire Line.

Q. When did you first enter into the service of what is called the Standard Oil Company, or any institution connected with it ?—A. I was in the service of J. A. Bostwick & Co. before I knew there was any connection between the Standard Oil Company and that company.

Q. For what length of time, and in what capacity ?—A. As an employé of Mr. J. A. Bostwick & Co., who were buyers and shippers of refined oil.

Q. Did you while with them attend to transportation questions ?—A. To a moderate extent ; yes, sir.

Q. J. A. Bostwick & Co. have since become connected, or probably were then connected, with the Standard Oil Company ?—A. Yes, sir.

Q. What was the American Transit Company ?—A. The American Transit Company was a pipe line organized for the purpose of gathering crude oil at the wells and delivering it to cars.

Q. Where was it situate, and what was its length up to, we will say, the year 1878 or 1879 ?—A. It was chiefly located in Clarion County, Pa. I should think there were from 70 to 80 miles of pipe in its main line and branches.

Q. Had it any other business or capital invested than in the pipe plant at that time ?—A. I do not know as to that.

Q. You knew of none ?—A. I do not know as to that.

Q. What was the length of its main line of pipe ?—A. About 10 or 12 miles.

Q. What size was that ?—A. The first main line was of 2-inch pipe, and the second main line was about 30 miles in length and of 3-inch, as I recollect.

Q. When was the second main line of 30 miles added ?—A. I think within two years after the origin of the company ; within about two years.

Q. That would have been prior to the year 1878. would it not ?—A. I think it would, sir.

Q. I would like you to be certain if you can on that point?—A. I think it would.

Q. The remaining lines of pipe were local lines of 2½ inches or less?—A. Two inches and larger.

Q. Can you give us now up to 1878 the total length of all? Do you think it would have been over 80 miles, main line and branches?—A. I think perhaps between 80 and 100 miles; of course it is from recollection.

Q. What was the cost, or was then the cost, of laying 3-inch pipe per foot or per mile?—A. As I recollect, the cost of 3-inch pipe at that time was about 60 cents a foot; between 50 and 60 cents.

Q. Was it so high as that at that time?—A. Yes, sir; I think it was.

Q. That would be about \$3,000 a mile?—A. Yes, sir; I think so.

Q. What was the cost of laying, \$800 a mile?—A. I should think between \$500 and \$800.

Q. Eight hundred dollars would be an ample sum?—A. I hardly think so with everything connected with it, right of way and things of that kind.

Q. Four thousand dollars would cover everything, would it not?—A. I think it would.

Q. One hundred miles would represent \$400,000?—A. Yes, sir.

Q. What was the capital of the American Transfer Company?—A. I do not remember, sir.

Q. Was it over \$400,000?—A. I have no recollection about it at all. That was a feature of the business that did not come before me.

Q. Who was its president?—A. J. A. Bostwick.

Q. Is he here to day?—A. I do not know; I have not seen him.

Q. Who was its secretary?—A. I think it was C. W. Jones.

Q. Where is he now?—A. He is in New York.

Q. In what capacity?—A. He is one of the cashiers in the office of the Standard Oil Company.

Q. Who was the treasurer?—A. I do not remember, sir.

Q. Did you not come in contact with him when you drew your salary?—A. With the treasurer?

Q. Yes.—A. No, sir. I was in a position to pay my own salary. I had an office which had a cashier.

Q. I will mention the name so as to refresh your recollection; was Mr. Girty the treasurer?—A. No, sir; I think not.

Q. Mr. Bostwick and Mr. Jones would know it, would they not?—A. Mr. Bostwick would. I spoke of Mr. Jones as secretary; that is my recollection.

Q. You say you do not now know who was the treasurer?—A. I do not remember who the treasurer was; no, sir.

Q. Do you remember a transaction between you, as representing the American Transfer Company, and Mr. Cassatt, the third vice-president of the Pennsylvania Railroad Company, the evidence of which consists in letters exchanged between you and him, which letters were produced in Philadelphia on the occasion of the examination of witnesses before General Switzer, in the case of the Commonwealth *vs.* the Pennsylvania Railroad Company?—A. I remember such a letter.

Q. Under the contract or arrangement evidenced by those letters the American Transfer Company received 22½ cents a barrel on the oil?—A. I believe they did, sir. If you will permit me I would like to state that my active connection with the company was in its operation. My active special duties were to get business for the lines and to convey

It. I make that statement as an apology perhaps for stating that I do not remember many things which you think I ought to remember.

Q. But in this particular instance you were the officer whose letter requesting this drawback led to the receipt of the drawback?—A. Yes, sir.

Q. Therefore, you were authorized at that time to act in that capacity, as well as to manage the movement of oil?—A. Yes, sir.

Q. Did you at that time or prior thereto receive a similar drawback or larger one from any other trunk line?—A. No, sir; not that I remember. I had an arrangement by which oil was conveyed to Oil City. It would be loaded on broad-gauge cars, and for which largely the 3-inch line was laid.

Q. This contract authorized your company to receive 22½ cents a barrel on all the crude oil that was shipped?—A. I do not remember. I do not remember whether it covered all the oil that was shipped, or oil that was conveyed to the company by the American Transfer Company or through its agency.

Q. Do you not know as a fact that it was paid on all oil, no matter by whom shipped?—A. I do not.

Q. Did you attend in any manner to the receipt of the money that arose from such drawbacks?—A. Yes, sir.

Q. How was the money paid, and to whom?—A. The money was paid in checks to my order, and I subsequently made an arrangement to have it go through one of the clerks of the company.

Q. Why was not that money sent to the treasurer of the company directly?—A. I do not know.

Q. It amounted to a very considerable sum, did it not, in the course of a year?—A. I do not think it did.

Q. Have you not the books or records showing the amounts of drawbacks that you received?—A. No, sir; I have not.

Q. Where are they?—A. I do not know.

Q. What did you do with them?—A. I never had them.

Q. When you received this money did you not enter it in some book?—A. I did not; I passed it to a cashier.

Q. Who was he?—A. W. T. Branch.

Q. Where is he now?—A. I do not know.

Q. Is he not in your service or connected with the Standard Oil Company in any way?—A. Not that I know of.

Q. You say you afterwards made arrangements to have this money paid to a clerk. Who was that clerk?—A. The clerk who transacted the business and who took care of it was Mr. Branch.

Q. The same gentleman you just spoke of?—A. Yes, sir.

Q. When did you last see or hear from him?—A. Seven or eight years ago.

Q. Where was he then?—A. Bradford, Pa.

Q. Did you not claim to Mr. Cassatt, or to the officers of the Pennsylvania Railroad Company, the right to receive this drawback by reason of the fact that you were receiving an equal if not a greater one from other companies?—A. I may have made such claim.

Q. If you made such a claim was it not true?—A. Yes, sir; I think it would be true.

Q. Can you now recollect what the New York, Lake Erie or Western, or what is now known as the Erie, paid you?—A. The arrangement had with the New York, Lake Erie and Western Railroad through my company was that as they were a broad gauge road and unable to reach the traffic in what was known as the lower country, that my company

should lay a pipe line to Oil City and bring the oil to them, as they could not go to where it was, for which we received the cost of doing the work, as I recollect it.

Q. And what else?—A. That was all.

Q. Did you do business for cost in those days?—A. We tried to get all we could.

Q. Did you not get a fixed rate per barrel from the Erie?—A. I had nothing to do with the rate other than to deliver the barrels on the cars.

Q. Do you know what drawback, if any, was paid by the Erie Company?—A. I do not.

Q. Would Mr. Bostwick know about it?—A. He would be more likely to know it than I.

Q. What arrangement had you with the New York Central?—A. None.

Q. Did you get any drawbacks from them?—A. No, sir.

Q. Now, this oil that entered into your pipes was received by you from the wells, was it not?—A. Yes, sir.

Q. What charge did you make to the owner of the oil for passing it through your pipes?—A. The nominal charge at that time was 25 cents a barrel.

The CHAIRMAN. What was that exact service? I do not care for anything more than to know where he took it from, where he took it to, and how and to what he delivered it.

Q. Describe how the local pipe connects with the wells and turns it over to some other avenue—railroad or otherwise?—A. A well is struck in some country and application is made to the pipe line to connect with the wells, which is done through a wooden tank. The tank is measured, a table made for it, and pipe laid to it and connected into it. When the tank is full, if the owner of the oil desires it to be run, as it is called, a gauger goes to measure the oil in the tank. That measurement is taken by the gauger, an employé of the pipe-line company, and by a representative of the owner, or the owner himself.

Q. Up to this time the oil in this tank has been the oil belonging to the producer?—A. Yes, sir. It is then drawn from the tank either by pump or, perhaps, may run partially by gravitation, and it is pumped into the general system of lines into tanks.

Q. Through that pipe?—A. Through those pipes.

By the CHAIRMAN:

Q. What did you deliver it to?—A. Cars.

Q. Then this charge of 25 cents made to the owner was for taking his oil from the wells to the cars?—A. Yes, sir.

Q. And then the 22½ cents that you received from the railroad was taken from the total charge for taking the oil to the sea-board by the railroad; is that it?—A. Now, if you will just allow me, I say that the charge of 25 cents was a nominal charge.

Q. No matter about the nominal character of it; for this purpose it is not important what it is. You got a charge from the producer for taking the oil to the railroad; he paid you something for that service?—A. Yes, sir.

Q. Then you got from the railroad?—A. If you will permit me, the buyer of the oil paid the charge; the producer did not pay the charge.

Q. You got it for that service from somebody?—A. Yes, sir.

Q. That was 25 cents?—A. Yes, sir; the nominal rate.

Q. Then you got 22½ cents for the oil delivered to the railroad out of the freight charge for transporting by rail to the sea-board; is that it?—A. As I recollect it we got 22½ cents.

The CHAIRMAN. The amount is not important. I only wanted to know that the two things were distinct.

By Mr. GOWEN:

Q. That 22½ cents was paid to you by the railroad company.

The CHAIRMAN. Out of the total freight charge?

Mr. GOWEN (to the witness). At any rate, it was paid to you?

The WITNESS. Yes, sir.

Q. They had nothing to do with the total charge to the railroad. You did not enter into that?—A. No, sir.

Q. After you delivered the oil from the tanks of your line to the railroad company your control over it ceased?—A. After it was delivered on the cars; yes, sir.

Q. You had nothing to do with collecting any freight on account of the transportation of that oil beyond your terminus by the railroad company?—A. No, sir.

Q. State whether at that time the practice prevailed, which I believe it does now, of charging in addition to the charge for transporting this oil from the well to the railroad, a charge for keeping it stored in tanks, belonging to your company, if there was a necessity for storing it in tanks?—A. Yes, sir.

Q. What did it amount to at that time?—A. It varied; it was comparatively large.

Q. I mean how much was it?—A. The nominal rate was 2½ cents per barrel per month.

Q. That was the storage charge?—A. Yes, sir.

Q. Now, then, those storage charges and the transportation charge from the well to the railroad were paid to you by the purchaser of the oil when he took it away from you?—A. Yes, sir.

Q. And until so taken away you retained a lien upon that oil for that charge?—A. We held the oil for the charges.

Q. Neither the owner nor the man who purchased it from him could get it from you without paying those charges, or agreeing with you how they should be paid?—A. If oil was left in that way and delivered to the line for storage purposes; but there was but little of that done.

Q. It moved from that time gradually?—A. These charges were as a rule, the great bulk of them, lost in the effort to get the business.

Q. At that time?—A. Yes, sir.

Q. Now, can you tell us who owned the stock of the American Transfer Company?—A. J. A. Bostwick, so far as I knew, sir.

Q. The whole of it?—A. I think Mr. A. J. Pouch had an interest.

Q. Who is he?—A. He at that time was an employé of J. A. Bostwick & Co.

Q. You say you entered the service of the National Transit Company about ten years ago?—A. I think it is about that time since the company was organized; I was in the service at that time.

Q. Has that company been in existence so long as that?—A. It may not be that long. It may be nine or ten years ago.

Q. Prior to this advent into business, under what name was the local pipe line of the oil region conducted?—A. There were two important pipe lines—the United Pipe Lines.

Q. And what was the other one?—A. I will state perhaps there were about ten, but the United and the Union were the larger ones.

Q. The United was the one that was controlled in the interest of the Standard Oil Company?—A. The United Pipe Line, as I understood it, belonged to individuals—J. J. Vandergrift and others.

Q. Give me their names?—A. George B. Foreman; H. L. Taylor, I think, was an interested party.

Q. Well, the United Pipe Line Company has been absorbed and is controlled now by the National Transit Company?—A. Yes, sir; the United Pipe Line Division is a part of the National Transit Company.

Q. And the National Transit Company is one of the companies affiliated with the Standard Oil Trust?—A. Yes, sir.

Q. Certificates of the Standard Oil Trust represent ownership in the National Transit Company?—A. That is as I understand it.

Q. At what period did the National Transit Company open its pipes and pipe line through to tide-water?—A. I think we completed the line in 1881, or 1882.

Q. To where?—A. To New York.

Q. Have you a line to Philadelphia?—A. Yes, sir.

Q. When was that completed?—A. About the same time; nearly the same time.

Q. Have you a line to any other place; a line to Buffalo?—A. Yes, sir.

Q. When was that completed?—A. About six or seven years ago.

Q. In 1882?—A. I think about that time, yes, sir.

Q. Have you a line to Cleveland?—A. We have.

Q. When was that completed?—A. About 1879, I think—it was the first line—or 1880.

Q. Are those all the main lines you have in the oil region—New York, Buffalo, and Cleveland?—A. In Pittsburgh we have a line.

Q. When was that completed?—A. About 1879 or 1880, I think.

Q. How many lines are laid to New York; how many main lines of pipe?—A. About two and a half.

Q. How do you describe half a line?—A. Half a line is described in the form of a loop.

Q. Over the same portions of the district?—A. Yes, sir.

Q. Tell me whether you have two continuous lines of pipe leading to New York?—A. Yes, sir.

Q. Of what diameter?—A. Six inch.

Q. And certain loop lines where there may be impediments or otherwise?—A. Yes, sir.

Q. Is that a 6 inch line?—A. Yes, sir.

Q. Is that line to enable you to stop off the other line?—A. It is made to equalize the pressure.

Q. Where the gravity to be overcome is greater, and the pressure to be resisted is greater, you have more lines?—A. Yes, sir.

Q. So as to enable the same amount of oil to pass at a reduced speed?—A. Yes, sir.

Q. It passes at a greater speed where there is less diameter?—A. Yes, sir; the object is to equalize the flow between the stations.

Q. How many inches is the line to Philadelphia?—A. Six inches.

Q. How many pipes?—A. One and a half.

Q. To Buffalo?—A. Four-inch pipe.

Q. How many lines?—A. One.

Q. To Cleveland?—A. Five-inch line.

Q. How many pipes?—A. I think a little over one and a half.

Q. To Pittsburgh?—A. Four-inch line.

Q. One pipe?—A. One pipe.

Q. Is that Pittsburgh line not the old Conduit Line?—A. No, sir; I think the old Conduit Line is all taken out, removed and gone.

Q. This is a new line?—A. Yes, sir.

Q. What do you consider the capacity of all these lines united when put to their fair, ordinary rate of speed or delivery?—A. Sixty thousand barrels a day.

Q. The total capacity?—A. About that; between 50,000 and 60,000.

Q. Could that capacity be increased by increasing the pumping stations or allowing additional loops?—A. Yes, sir.

Q. To what extent could it be safely increased?—A. Starting in to put in new machinery and additional machinery, you could increase it to almost any extent if you put in pumps enough and water-power.

Q. Could you increase it to 100,000 barrels a day?—A. Yes, sir; it could be done.

Q. Without risk or danger?—A. It would simply be a duplication.

Q. You would have to lay more through lines to do it, would you not?—A. Yes, sir; you would have to increase the through lines.

Q. Without increasing the through lines, and by merely adding additional pumping capacity, so as to accelerate the flow, to what capacity could all these lines be increased?—A. They could be increased to a very large capacity by putting in a sufficient number of stations.

Q. To what extent? You are an expert on that subject and know more about it than anybody else.—A. The stations are about 30 miles apart. Of course if they were 15 miles apart they would do much more business.

Q. Would they double the business?—A. No, sir.

Q. Fifty per cent. more?—A. They might do that.

Q. Then by duplicating the stations wherever pumping stations are necessary, the capacity of this system could be increased to about 90,000 barrels a day, could it not?—A. If stations enough were put in I think you could.

Q. In other words, it could be increased to equal the total present shipment of crude oil to the points to which these pipes lead?—A. The system could be enlarged sufficiently great to do that.

Q. To take the whole of the business?—A. I think it could; yes, sir.

Q. Do you remember the period at which what is called the Tidewater Pipe Line first opened its line for business to connect the oil region from the Catawissa road near Williamsport?—A. I do remember the time.

Q. Can you tell what year that was?—A. No, sir; I can not. I think it was about 1880.

Q. That line, when opened at that time, was a rival line to this that you were interested in, was it not?—A. Yes, sir.

Q. And afforded a means of getting oil from the oil region over that pipe to the Reading road, by the Reading, Central New Jersey, and Lehigh Valley roads to Philadelphia and New York, respectively?—A. Yes, sir; so I understand.

Q. In competition with the interests which you then represented?—A. Yes, sir.

Q. Do you remember that on or about that time a conference was held at Saratoga between members of your organization, of which you I believe was present, and members of the trunk lines as to the question of rebates on oil that were to be charged over the trunk lines to the Standard Oil Company, in order to meet this new competition that was thus developed?—A. I do not remember of being at any such meeting.

Q. Were you informed, or did you know, that any such meeting had taken place?—A. I do not remember of knowing or being informed of it.

Q. Had you at that time anything to do with the question of rates to tide-water?—A. No, sir.

Q. Nothing whatever?—A. No, sir.

Q. Did it never come within your cognizance?—A. No, sir.

Q. Did you never hear of such a meeting as I have described?—A. I may have heard of it, and may have heard of such meetings, but I do not recall that particular meeting.

Q. I am only calling your attention to this fact in order to direct your mind to the question I now ask you, viz: To what rate was the transportation on crude oil reduced upon the tank lines to the Standard Oil Company at or shortly or some time after the advent into business of the Tide-water Pipe Line?—A. I do not know.

Q. Had you nothing to do with the subject at that time?—A. Nothing that I remember of.

Q. You were, I believe, at that time actively engaged in securing the rights of way and securing the construction of your own pipe-line?—A. Yes, sir.

Q. Your object was to open as speedily as possible, by means of pipe-lines, an avenue to the sea-board which could compete with the new rival that would appear; you were anxious to complete the lines as quickly as possible?—A. Yes, sir; after they begun them.

Q. I asked you, and I am going to take your answer, whether you have any knowledge whatever upon the subject of the rates at which either crude or refined oil have been transported to tide-water over the lines of the trunk lines or any of them since the opening of the rival line of the Tide-water Pipe Company?—A. I have not, sir.

Q. Do you know what they are?—A. I do not know what they are. It is not in my department.

Q. Do you know whether any rebates on account of such a traffic were received within that time?—A. I do not.

Q. I am confining you now to tide-water.—A. Since the completion of the Tide-water Line?

Q. Yes.—A. I do not.

Q. Have you not within the last three years had control of or taken interest in the question of rates on refined oil?—A. No, sir.

Q. To tide-water?—A. No, sir.

Q. Have you not had charge of or taken interest in the question of rates on refined oil in the West or South in connection with the interests affiliated with the Standard Oil Company?—A. No, sir.

Q. Never?—A. I have no connection with it. It is not in my line of business.

Q. Have you ever taken any part in it?—A. I do not remember of taking any part in it.

Q. Do you remember the Cleveland and Marietta Railroad Company?—A. I do.

Q. You remember Mr. Pease was receiver?—A. I met him once; yes, sir.

Q. Did you not have a conference with him upon the subject of making a rate over his railroad for crude oil?—A. Yes, sir; but not for refined oil.

Q. When was that?—A. I think it was in 1882 or 1883.

Q. Where did you desire that oil to be transported; from what point to what point?—A. The arrangement that you speak of was not made with Mr. Pease. An arrangement was made with the managers of the Wheeling and Lake Erie Railroad, I think, who at that time controlled the Marietta Railroad, which was continued after Mr. Pease, the re-

ceiver, was appointed. The arrangement consisted in making a through traffic with the railroad company of which the Maxburg line was a part. We made a connection from Marietta to a point south, the total arrangement of charge being divided between the railroad and the pipe line.

Q. What rate did you get over that railroad for the transportation of oil?—A. To where?

Q. For the distance it passed over the railroad.—A. A good deal of oil was transported from Marietta to Cleveland. The bulk of it was transferred south to Marietta and Parkersburgh.

Q. At what rate?—A. I think the through pipage rate and rail rate was 35 cents, as I recollect it.

Q. What part of that did the railroad company get?—A. I have forgotten what the divisions were. My recollection is it was 20 and 15 cents.

Q. Was it not 10 cents?—A. I can not say, sir; I can not be positive.

Q. I will read the following to you to aid your recollection. It is an extract of a letter to Mr. Rappello, general counsel of the receiver, and signed by P. Pease. He states that—

Mr. O'Day, manager of the Standard Oil Company, met the general freight agent of the Wheeling and Lake Erie Railroad and our Mr. Terry at Toledo about February 12, and made an agreement (verbal) to carry their oil at 10 cents per barrel. But Mr. O'Day compelled Mr. Terry to make a 35-cent rate on all other oil going to Marietta, and that we should make the rebate of 25 cents per barrel on all oil shipped by other parties, and that the rebate should be paid over to them (the Standard Oil Company), thus giving us 10 cents per barrel for all oil shipped to Marietta, and the rebate of 25 cents per barrel going to the Standard Oil Company, making that company, say, \$25 per day clear money on Mr. George Rice's oil alone.

State whether that is a true statement.—A. It is not a true statement.

Q. In what respect?—A. In the respect, first, of the divisions. It may be true regarding that. But I am not sure of that; I do not recall it well enough to know. It is not a true statement that we compelled the road in any sense to do anything of the kind.

Q. Were you not under your agreement to have your oil transported from Marietta over the railroad at 10 cents a barrel?—A. We had an arrangement by which the through rate from the wells, which included the pipeage charge, was to be a certain figure, and was to be divided between the railroads and ourselves.

Q. What share did the railroad get?—A. My recollection, which is rather hearsay, was 20 cents pipeage rate, and the railroad 15 cents.

Q. And not 10 cents?—A. I do not want to be positive of that.

By the CHAIRMAN:

Q. Does that rate which you give include your local pipage too?—A. Yes, sir.

By Mr. GOWEN:

Q. Where did this oil strike the railroad?—A. At a place known as Maxburg.

Q. Went from there to Marietta, Ohio?—A. Yes, sir.

Q. Now, I ask you if the rate which the railroad received out of the joint rate was not only 10 cents a barrel?—A. My recollection is, as I said before, 15 cents; I won't be positive of that.

Q. Would you assert your recollection against a judicial determination of this question by the court?—A. I certainly should not.

Q. Now, did you not make it as a part of that arrangement that this railroad company, or its receiver or manager, should charge a certain

Mr. George Rice, who was a competitor with you, a higher rate on his oil?—A. No, sir.

Q. You did not?—A. We did not.

Q. Were you not to receive, and did you not receive, from this railroad, or its business, a payment to your company on account of the oil they transported for Mr. George Rice?—A. Yes, sir; the railroad company agreed that the rates should cover all oil transported.

Q. What rate?—A. The fixed rate as between the railroad and the pipe line.

Q. That is to say that when the through rate of 35 cents was charged on the oil which passed through your pipe line and their railroad together, and out of which you received 20 or 25 cents, as your recollection may be, they were to charge the same rate to Mr. George Rice, whose oil passed only over their railroad, and not through your pipe line?—A. There was nothing special about George Rice; it covered the oil.

Q. But did that other oil which was in competition with you pass through your pipe line?—A. No, sir.

Q. Did not they therefore, on that oil which only passed over their railroad and not through your pipe line, pay to you the same allowance or rebate that they did on your oil which did pass?—A. They did, but we returned it through the advice of our counsel, Mr. Dodd.

Q. How long did you keep it?—A. A very short time.

Q. It was a hot time for Mr. Rice?—A. I don't think it was; he was a hot man.

Q. The result of that arrangement, if it had been carried out—assuming your recollection to be correct—you would have paid 15 cents to the railroad for your oil, and Mr. Rice would have paid 35 cents, would he not?—A. No, sir; he had the privilege of doing what he did, which he afterwards did do.

Q. He was not using your pipe line?—A. No, sir; we tried to get him to make an arrangement with us to use our pipe line, but he would not do it; he wanted a better rebate than anybody else.

Q. He had his own means of bringing this oil to the railroad; he did not require your pipe for that service?—A. He required the pipe to get his oil to Marietta, and subsequently laid a pipe to Marietta.

Q. Was not this the fact, as Judge Baxter has found, in this case, that Mr. Rice, who at that time only used the railroad, paid 35 cents for the transportation of a barrel of oil? Was not that true?—A. I took it to be true.

Q. Now, out of that sum how much did you get from the railroad out of what they had received from Mr. Rice?—A. We did not get any; that is, we did not retain any. The railroad company agreed to account to us for the oil that went over its lines, and they did make an accounting to my recollection of about \$200 or \$250, or something like that, on oil other than that which passed through our lines. Our counsel, Mr. Dodd, advised me that we could not do that business, and we refunded the money.

Q. Was that refunded before the investigation of the case took place in court?—A. I do not know; I do not remember.

Mr. BUCHANAN. Before this examination proceeds any further, I wish to say that the use of the terms "in court" and "Judge Baxter" indicates to me that there has been litigation upon this subject between Mr. Rice and some company. I would like to know before the examination goes any further whether there has been such litigation between Mr. Rice and any company represented by or that would be bound by

the statements of the witness now upon the stand; and second, whether, if such litigation has been had, it is concluded and the matter disposed of in the courts, or is in any way still pending. I ask this question solely for information, because I do not know anything about the matter.

Mr. GOWEN. No, sir; the proceedings are entirely completed. It was not a suit between Mr. Rice and anybody. It was a proceeding against the receiver of this road to dismiss him from his receivership. That has been terminated. It has been dismissed, the case is ended, and reported in the Federal Reporter.

Mr. SMITH. Who rendered that decision?

Mr. GOWEN. Judge Baxter; he removed him.

Mr. SMITH. Was he judge of the United States court?

Mr. GOWEN. He was judge of the circuit court for the southern district of Ohio.

Mr. SMITH. A United States court?

Mr. GOWEN. Yes, sir.

The CHAIRMAN. I understand, in answer to Mr. Buchanan, the information is furnished that there was a proceeding pending to remove a receiver. That proceeding resulted in the finding by the court removing him, and that litigation is closed.

Mr. GOWEN. That branch of the litigation is closed.

Mr. BUCHANAN. That answers my inquiry. But there has been another remark made that leads me to ask if there is any other branch of the case remaining unclosed.

Mr. GOWEN. Only this: The jurisdiction that the United States court was enabled to take over this case arose from the fact that a receiver had been appointed in a proceeding in that court to foreclose the mortgage, and therefore as the receiver was an officer of that court, the court took jurisdiction of this question. Whether the proceeding to foreclose the mortgage is ended or not, I do not know.

Mr. BUCHANAN. That answers my question.

Mr. GOWEN. There is no other suit pending about it that I know of.

By Mr. GOWEN:

Q. Where did this oil that was transported over this railroad to Marietta originate?—A. In the country in and about Maxburg.

Q. Ohio?—A. Yes, sir.

Q. There is a small oil-field near the Maxburg field in southeastern Ohio?—A. Yes, sir.

Q. How far is that field from the Ohio River?—A. Perhaps 15 or 20 miles; somewhere along there.

Q. The largest town near to it on the Ohio is Marietta?—A. Yes, sir; south.

By Mr. SMITH:

Q. You stated that the charges on oil were lost in trying to get the business, if my memory serves me right?—A. Very largely.

Q. How were they lost?—A. In competition in buying the oil, bidding for the oil.

Q. Bidding for the oil?—A. Yes, sir.

Q. Did you have to purchase of somebody?—A. We had to purchase oil.

Q. Have you a line to Baltimore?—A. Yes, sir.

Q. How did you secure the right of way?—A. By a negotiation with the parties owning the property.

Q. Did you ever meet anybody who refused to sell?—A. Yes, sir; we have at different times.

Q. What proceedings did you take then?—A. In the State of Pennsylvania the proceedings are under the law, but we did not have to make any use of our legal privileges in the State.

Q. When was that law passed or enacted?—A. I do not remember.

Q. Was it in 1883?—A. No, sir; I think it was prior to that time.

Q. It was in 1883. I have the volume but I forgot to bring it along this morning. You made use of that right?—A. I do not recall making use of that right except in two or three local cases. We had a right of way to obtain over a large amount of territory controlled by Mr. Gowen at the time, which he very cleverly sold us.

Q. You found it necessary to appeal to the legislature of Pennsylvania to pass an act giving you the right of condemnation, the same as railroad companies?—A. I do not know who made the application for it.

Q. Would it not have grown out of that?—A. No; there was a great deal of agitation through the country for a long time for such an act.

Q. Where did the agitation come from or arise?—A. The people at large wanted the right to lay pipes.

Q. The people at large?—A. In the oil regions, yes, sir.

Q. Did they lay it?—A. They wanted the privilege of laying it.

Q. Was not it a company, a corporation?—A. The people might be formed into a corporation, many of them.

Q. How many pipe lines are there outside of the Standard Oil Company's line now in operation from the oil district to the sea-board not controlled or owned by the Standard Oil Trust?—A. One.

Q. What is its length?—A. I should think about 300 or 320 miles.

Q. What is the name of the company or corporation that owns it?—A. Tide-water Pipe Line.

Q. Is that running in opposition to the Standard Oil Trust?—A. I have always understood it is competing for business.

Q. Competing for business?—A. Yes, sir.

Q. Where does the competition come in?—A. On the price of oil. The rates are the same; nominal rates.

Q. Has there ever been an understanding between the two corporations?—A. I have heard it stated that there is; but of my knowledge I do not know.

By Mr. GOWEN:

Q. Is the National Transit Company organized under or has it acquired the right to use the eminent domain of the commonwealth to lay its pipes?—A. We have never exercised it.

Q. Are you organized under that general pipe law?—A. Really I do not know that. That is a feature of the business I do not know.

Q. Are you one of the corporations that has been organized under the general pipe-line laws. That, I think, is what Mr. Smith wanted to know?—A. I do not know whether the National Transit Company is a corporation under the general law or not, or whether under a special law.

Q. You have mentioned here that in my State you laid your pipe line through some land I controlled. State whether or not if I had not given you that consent you could have gotten around that land by making a loop?—A. Yes, sir.

Q. Was it not mountain land?—A. Yes, sir.

Q. And worthless for anything that could be injured by the location of a pipe line?—A. Yes, sir.

Q. What did I tell you?—A. That we could have the right of way if we paid for it.

Q. Have you paid for it?—A. Yes, sir.

Q. Did I not say that I would not take advantage of your company by compelling you to go around the land?—A. Yes, sir.

Q. Was not the land the property of a corporation of which I was only an officer?—A. I presume it was.

Q. Did you not pay to that corporation the fair value of the right you got to lay your pipe?—A. Yes, sir.

Q. The Tide-water Pipe Line Company is an organization feeding its own refineries, is it not?—A. I do not know whether it feeds any other refineries than its own.

Q. Do you not know that it feeds its own refineries in New York and Philadelphia, and one that is affiliated to it, Lombard, Ayers & Co.?—A. That is my understanding.

Q. Do you not know that the Tide-water Pipe Line was a private enterprise to supply those refineries, and is not located under any general law and is not a common carrier.—A. I do not know it.

Q. Do you not also know the fact that your corporation has acquired a minority interest in the stock of that company by purchase?—A. I understand that they are stockholders.

Mr. CHOATE. Mr. Chairman, will you allow the witness to explain the facts with reference to that Ohio business?

The CHAIRMAN. The witness is at liberty to make any explanation he wishes.

The WITNESS. I would be very glad to explain to the gentleman just how that arrangement came about. When the Maxburg oil-field was opened and promised to be quite a large field we went down there with the intention of laying a pipe line to Marietta or to Parkersburgh. We were solicited by the railroad company that instead of laying a line and paralleling their own road, to make a connection with them and to divide the traffic in some agreed form, which we acceded to. The railroad company in their desire to bring about that arrangement agreed to account to us for all of the oil that went over their line, whether through pipe or not, and they did so account until we were advised by our counsel that it was illegal, and we discontinued it. The arrangement was simply a connection between the pipe line and the railroad, as it might be between two railroads, to divide the traffic.

By the CHAIRMAN:

Q. How long a time did that arrangement continue?—A. I think it continued for six or eight months.

Q. That was the arrangement by which you had to account for all oil furnished you?—A. I do not remember how long that continued. It amounted to a couple of hundred dollars, or something like that.

Q. Was there a re-accounting by which you know the amount?—A. Yes, sir.

Q. How much was the amount paid to your company under that contract for oil that did not pass through your pipe lines?—A. My recollection is that it was the first and only accounting there was, and it amounted to something in the neighborhood of \$200.

By Mr. GOWEN:

Q. But you have stated that that was similar to a railroad arrangement for a division of business. When one railroad carries traffic over its line and gives it to another railroad, and the whole is carried at a through rate, each company takes out of the through rate its proportion according to a pro-rate of mileage and the distance over which it is transported?—A. Very often terminal facilities are included, of course.

Q. But in your case you had a pipe line which delivered oil to a railroad, and there was to be a through rate of oil covering the transportation in your pipe and the transportation of the railroad as well?—A. Yes, sir.

Q. And you secured or obtained an arrangement under which that same rate was charged to other people, or one other person, who only transported over the railroad and did not transport through pipe at all, did you not?—A. We were offered such an arrangement by the railroad company and we accepted it.

Q. The result of it was that a person in competition with you who did not use your pipe paid as much for having his traffic moved over the railroad as you paid for the pipe and railroad together, was it not?—A. I do not know, sir.

Q. Was not that the result, that you exacted the same rate?—A. We did not exact it; we were offered the rate.

Q. And you accepted it?—A. Yes, sir.

Q. Now, you received your share of the money for the joint rate of that which passed over the pipe and railroad?—A. We received whatever the railroad company gave us.

Q. And you were to receive exactly the same amount out of what somebody else paid, although that person did not use your pipe line and you furnished no service through your pipe line to him?—A. That is what the railroad company offered us. We accepted it and returned it afterwards.

By Mr. BUCHANAN:

Q. And under the operation of that agreement you got about \$200?—A. As I remember it.

Q. And then discontinued the agreement?—A. Yes, sir.

Q. Am I correct in understanding you to have said a little while ago that had you not had this arrangement offered you you would have paralleled their road with your pipe line?—A. Yes, sir; that was my intention.

By the CHAIRMAN:

Q. Was there any other payment made to the pipe line for oil transported by it for the local pipeage, the gathering of it from the wells in this instance?—A. No, sir; that covered the through rate.

Q. The 35 cents covered the local pipeage rate, all the storage rate, etc.?—A. Yes, sir.

By Mr. GOWEN:

Q. Were there any individual oil producers in that Maxburg region who sent their oil through your pipe?—A. I think the bulk of the oil was sold at the wells, as it usually is.

Q. It was bought in your own interest?—A. It was bought by buyers of oil.

Q. Were there any other refineries not connected with the Standard Oil Company who used that pipe line?—A. Yes, sir.

Q. Did you make any charge to them for passing it over your pipe?—A. Yes, sir.

Q. Everybody paid the same charge?—A. Yes, sir.

Q. When you made this agreement, was it with Mr. Pease?—A. No, sir.

Q. Mr. Terry?—A. Mr. Woodford, I think.

Q. State whether you subsequently laid a pipe line along the Cleveland and Marietta Railroad.—A. We laid a pipe line to Marietta.

Q. Along the railroad?—A. Partially.

Q. Using the bed of the railroad?—A. Partially.

Q. And therefore took traffic through your pipe line which otherwise could have gone over the railroad?—A. Yes, sir.

Q. And the railroad lost the transportation on that oil in consequence of the location of your pipe line?—A. That changed the business from the cars to the pipe line.

Q. And you used the avenues of the railroad over the pipe to accomplish that object?—A. Partially. We may have done so. I think in a little way we laid a direct line, while the railroad was indirect.

Q. What arrangement had you with the railroad company to allow you to occupy this right of way for this purpose?—A. No arrangement.

Q. Did you pay them anything for it?—A. I think we did.

Q. A fixed rate, or a sum for every barrel?—A. We paid them whatever we got in the right of way; no fixed sum.

Q. What do you mean by right of way?—A. Whatever land we got we paid for, as we did for other people's land.

Q. Did you find the railroad willing to let you make use of their facilities and eminent domain for the purpose of locating a line which was to take business from the railroad?—A. No, sir; they tore up our pipe.

Q. How did you get it down again?—A. We owned the land.

Q. You mean you bought the fee simple of the land over which the railroad company had a mere easement?—A. Yes, sir.

Q. And you enforced your right to locate this pipe by reason of the fact that it did not destroy the easement that the railroad had?—A. Yes, sir.

Q. You asserted that principle?—A. Yes, sir.

Q. Do you remember in the year 1880 you had pipe connection at Brady's Bend, Pa., on the Alleghany River, for loading oil into barges?—A. Yes, sir; I think we did about that time.

Q. Do you remember whether Mr. George Rice, or probably others, were getting oil at that time through pipe lines and transferring it through barges to Pittsburgh?—A. I think prior to that time there was more or less oil transported by barge.

Q. By people who were engaged as independent refiners in opposition to yourselves?—A. I do not recall it.

Q. State whether you did not order that pipe line taken up.—A. We did not until we ceased to have business for it.

Q. Do you mean to say there were not people who were willing to receive oil in barges by that pipe line at the time you took it up?—A. Shipments of oil by barges were so irregular and dependent upon the state of water in the river and the danger to our tanks from ice or whatever cause leading down to the river that we were induced as a matter of safety to the custody of the oil to take up the pipes, but we did not take them up until the business was large enough to warrant us in taking them up.

Q. What was the size of the pipe through which George Rice got oil?—A. I do not know that he got any oil.

Q. Well, whoever got it; 2-inch pipe?—A. Four or 5; may-be 6-inch pipe.

Q. Surely it was not a 6-inch pipe?—A. I don't know.

Q. Did you ever know a 6-inch pipe laid for that kind of business?—A. Certainly.

Q. Where?—A. Nearly all of the pipe laid for the delivery of oil is that.

Q. But not at that time?—A. The oil delivered to the wells was in iron tanks.

Q. Was not the original through-pipe line to Pittsburgh, the conduit line, only 4 inches?—A. Yes, sir.

Q. Did you not have at one time correspondence with Mr. George Rice upon this very subject?—A. I might have had; I do not recall it.

Q. Don't you know that he protested against your taking up this pipe because it interfered with his getting oil and using the cheap transportation by the river, and compelled him to use the dearer one, the railroad, to compel him to get his oil to where he wanted to?—A. I do not know.

Q. Your lack of knowledge upon that subject would be overcome by the production of any correspondence to that effect?—A. It would have a large influence.

Q. Anything over your own hand would?—A. Yes, sir.

Q. Will you agree that it be offered in evidence without calling you back?—A. I would like to see any such thing, if you will permit me.

Q. I would like to ask, so that I may prove whether this statement of the Union Tank Line car capacity is not known and recognized as accurate and agreed to by the trade [handing witness a paper].—A. I presume it is accurate. It is out of my jurisdiction; I do not know about it.

Q. How do you mean it is out of your jurisdiction?—A. It is not in my department.

Q. You have had a very extensive knowledge of the oil trade. Don't you know that this joint tank line circular giving the numbers and capacity of tank-line cars is used and accepted by the trade as correct?—A. I do not; I do not know anything about it. The only capacity of tank cars I know anything about is the capacity of the cars as a check between the reception and delivery of oil over our pipe lines.

Q. In order to ascertain that do you gauge each car, or do you not refer to some printed statement of its capacity? Is not the printed official statement of the capacity of tank cars accepted by the people who use them, and thereby are they not relieved of the necessity themselves of gauging each car in order to ascertain what it contains when it is loaded?—A. That is generally the case.

Q. Don't you believe that this is such a statement?—A. I don't know.

Q. Look at it.—A. It is the capacity of oil-tank cars.

Q. Would you accept it if it was offered to you?—A. I should like to know where it came from and all about it.

Q. Do you make that inquiry when you accept your own?—A. We know when we load tank cars whether they are Union, Green Line, or private cars. We usually know what the capacity is. If we do not we measure the cars.

Q. How do you know? What means of ascertaining that fact have you?—A. There are well-known gaugers who make a business of it. I think they are appointed by the courts.

Q. Do you mean to say you have those gaugers come and gauge the Union and Green Line cars when you load oil into them?—A. We have a table.

Q. From where do you get it?—A. From the Green Line if they are Green Line cars.

Q. And if they are Union Tank Line cars you get it from the Union Line?—A. Yes, sir.

Q. And you accept them as accurate?—A. Yes, sir.

Q. And do you send out an inquiry when such a printed statement is sent to you, whether it is accurate or not?—A. If we have any reason to question the accuracy of the gaugers of cars we gauge them ourselves.

The CHAIRMAN. Are you inquiring as to the capacity of this witness to identify that particular paper?

Mr. GOWEN. Yes, sir.

The CHAIRMAN. He does not seem to be able to.

The WITNESS. I would not be able to identify that.

Mr. BUCHANAN. He said so twice.

By Mr. SMITH:

Q. Are you at this time laying an 8-inch pipe on the right of way of the Chicago and Atlantic Railway from the oil fields at Lima to Chicago?—A. I understand such a line is being laid.

Q. Are the locomotives and cars now engaged in distributing the pipe along that line?—A. I understand so.

Q. What agreement or arrangement have you made with that railway company for the right of way on their property?—A. I have made no arrangement.

Q. I mean your company or corporation?—A. I do not understand any arrangement has been made. I never made any personally. I presume some arrangement has been made, but not by me.

Q. Do you think that a railroad company would permit any corporation or company to lay a pipe line of that nature and kind and for that use along and over its grounds to compete with its own traffic for, so to speak, nothing?—A. Yes, sir.

Q. Don't you think there must be an understanding between this pipe line and railroad company as to this traffic business?—A. I believe the railroad company has begun to see that it is to its advantage to have that pipe line there.

Q. How?—A. In the freight it will bring to them.

Q. Bring freight and not use their cars?—A. The pipe itself is a very large item of freight.

Q. When once put down is there any more freight to be handled by the company?—A. Yes, sir; undoubtedly.

Q. Does the Chicago and Atlantic Railway line extend beyond Chicago westward?—A. Not that I know of.

Q. Then how can this be of benefit to that railway company?—A. To have a pipe alongside.

Q. Which naturally takes away the traffic from the company.—A. In the first place, it gives the railroad company a large item of profit in the transportation of the pipe, its material, and construction.

Q. After that material, pipe, and construction and all the labor connected therewith is completed, what benefit has the railway company thereafter?—A. The benefit of transporting coal or any freight that is incident to the construction of the line.

Q. What has coal got to do with pipe?—A. In the operation of the pipe coal is a very large item.

Q. How so?—A. In the manufacture of steam.

Q. Is your company engaged in piping natural gas?—A. There are a number of local companies organized in the laying of natural gas.

Q. Is your company?—A. In which our company is interested.

Q. Are you engaged in manufacturing these gas pipes?—A. No, sir; I am not.

Q. I mean your company?—A. No, sir.

Q. Are you supplying natural and other gas to cities?—A. We are supplying natural gas.

Q. Are you supplying Buffalo?—A. Partially.

Q. Is your company interested in the gas plant of Chicago?—A. Not that I know of.

By Mr. BUCHANAN :

Q. I would like to know a little more about this pipe along the railroad bed. It is intended, I suppose, to use that pipe for the transportation of oil to Chicago, is it not?—A. I presume so.

Q. And pending the construction of that line, how is that oil transported?—A. In cars.

Q. Then when the line is finished and the oil goes through the pipe, it will not be transported over the track in the cars; is not that so?—A. It is so.

Q. Will not the railroad company thereby lose the freight on that oil?—A. They certainly will on any oil that goes into the pipe.

Q. Will not the loss of the oil now transported over the railroad be greater than the gain accruing to the railroad from the transportation of the pipe during the construction of the line, and of the coal needed to maintain the car at the station subsequent to the construction of the line?—A. I can not say as to that. There are a number of competing roads. It would be impossible for me to give a correct idea of that.

Q. Have you an idea of the present amount of shipments of oil over that road?—A. I have not.

Q. Is it considerable?—A. I really do not know what it is.

Q. You believe there is a market in Chicago for your oil, else you would not lay your pipe?—A. That is the belief.

Q. If that market exists, what prevents this railroad from supplying it?—A. The reason I should take it, without being entirely familiar, and I am not entirely familiar with the so-called Chicago line, but I take it that the reason was that the Ohio oil could not be used as fuel paying the railroad charges, and in order to enable it to be used as fuel those charges should be materially reduced, which could only be done by pipe line.

Q. Am I then to understand that the transportation by pipe is done at a much less cost than transportation by car?—A. It is done at something of a less cost; how much less I can not say.

Q. From your experience can not you give us about the ratio?—A. No, sir; I can not very well. It is a question I have never given much consideration to.

Q. You have spoken about piping natural gas in supplying cities. What cities to your knowledge, or within the range of your information, are so supplied by your company?—A. Our company is interested in companies that are supplying Buffalo and Jamestown, N. Y., Corry, Pa., Meadville, Oil City, Warren, and Youngstown, Ohio, Toledo, and some other smaller towns in Ohio.

Q. What logical or business relation does that branch of industry have to the carrying of oil from the wells to the sea-port or other places of consumption?—A. The original prompting to convey natural gas was for the purpose of being able to use surplus and otherwise useless pipes that had become unnecessary for the conveying of oil, and might be made available for conveying natural gas. That, I think, was the original motive.

Q. I think you spoke of your company as being the National Transit Company?—A. Yes, sir.

Q. Do you know whether that has become connected with other companies in the formation of any trust or combination?—A. I do not.

Q. Do you know whether its capital stock has been transferred in trust to the Standard Trust or Standard Oil Company, or would you be in

a position to have knowledge on that subject?—A. No, sir; I would not be in a position to have knowledge of that.

By Mr. GOWEN:

Q. What is the length of this Lima Pipe Line to Chicago?—A. About 200 miles, I think.

Q. Is it a 6-inch pipe?—A. Eight-inch.

Q. What is the weight of an 8-inch pipe per mile?—A. About 30 pounds to the foot.

By Mr. BUCHANAN:

Q. Empty or full?—A. Empty.

By Mr. GOWEN:

Q. Thirty pounds to the foot?—A. Yes, sir.

Q. How many tons per mile is that? It weighs 30 pounds to the foot. It is 90 pounds to the yard. That would be about 70 tons to the mile, would it not?—A. I have not figured it; I think about that.

Q. Seventy tons to the mile, and it is about 200 miles long?—A. Yes, sir; about.

Q. Therefore the entire business that the railroad company would get by transporting that pipe would be about 14,000 tons?—A. I think they are the figures.

Q. What will be the capacity of that pipe? How much oil can you run through it?—A. It depends some on the stations.

Q. Do you think you will run 10,000 barrels a day?—A. Yes, sir; about that.

Q. Ten thousand barrels a day will be 1,400 tons a day, will it not—seven barrels to a ton?—A. About that.

Q. The annual tonnage of that pipe line will be 420,000 tons to a year?—A. Yes, sir.

Q. Now, do you think it is to the advantage of a railroad to give up 420,000 tons a year in order to secure the transportation of this 14,000 tons of pipe?—A. I think it is in that case.

Q. Do you mean that it is an advantage for a railroad to give up a business of 420,000 tons a year in order to—

Mr. BUCHANAN. Excuse me. I think the committee ought to draw the conclusions.

By Mr. BRECKINRIDGE:

Q. What pipe lines are there in the country now engaged in transporting oil?—A. Do you mean the names of the pipe lines?

Q. I mean principally those from points in the interior to the sea-board, and what I suppose you would call trunk lines. I do not mean subdivisions under a company, but one company may embrace a number of lines.—A. There are two conveying oil to the sea-board—the National Transit Company and the Tide-water Pipe Line. There are a number of interior lines delivering oil from the wells to the railroad; quite a number of them; I should think six or eight, perhaps.

Q. Those are partially local lines?—A. Yes, sir.

Q. At what points on the railroads or what part of the country do these local lines deliver their oil?—A. There are local lines in Ohio or Pennsylvania.

Q. In speaking of these principal lines that go to the sea-board, that embrace also, I believe, lines that go to the lakes, Chicago, and Buffalo, do the railroads carry any considerable amount of oil to these local lines now?—A. They do; considerable oil.

Q. They carry a good deal of oil then from the interior to the sea-board?—A. I believe there is quite a large amount shipped from the interior to the sea-board in cars.

Q. Do you know how the charges made by the railroads compare with the charges made by the pipe lines?—A. I do not know about the charges; I am not familiar with them.

Q. You spoke of there being two lines which embrace all the pipes from the interior to the great centers of refining oil and distributing refined oil, such as the lake ports and sea-ports. What are the names of those two companies?—A. That are supplying those refineries with crude oil?

Q. Yes.—A. The National Transit Company and Tide-water Pipe Line, with the addition that there are other lines supplying the interior towns, such as Pittsburgh.

Q. Are they wholly disconnected from the National Transit Company—I believe that is the name of it?—A. So far as I know they are.

Q. And the Tide-water Company?—A. So far as I know.

Q. Am I to understand from that that neither of these two principal lines that you speak of have any control whatever in the line, for instance, that runs to Pittsburgh?—A. They have not, that I know of.

Q. You have yourself a line that runs to Pittsburgh?—A. We have, and there is an additional line, a competing line.

Q. Do you have much difficulty in regulating your charges with that line, or do they compete with you pretty sharply?—A. They compete with us pretty sharply.

Q. Your rates are not uniformly the same with that particular line?—A. Yes, sir; they are uniform.

Q. Then there is not much competition where there is uniformity of rates?—A. Our rates are uniform to our patrons. I don't know whether theirs are.

Q. I am speaking of your rates as compared with your competitor's rates. What other lines lead from the source of supply to the markets besides the sea-board line, the National Transit Line, and this one competitor to Pittsburgh?—A. There are a large number of small lines leading to the railroads.

Q. That is not the point. I am speaking of lines that lead from the source of supply to the great markets. I am speaking of the railroads that lead from the great source of supply to the market.—A. Those are through lines, the sea-board lines.

Q. I speak of lines other than those three that you have just enumerated.—A. There are no others that I know of.

Q. Therefore the placing of crude oil into the markets is under the control of three powers; one is the National Pipe Line or Transit Line, the other the sea-board line—I may say, four—the other the single competitor to Pittsburgh, and the fourth, the railroads.—A. The railroads; those are the avenues.

Q. This National Transit Line is, I believe, a part of what is understood as the Standard Oil Company, is it not?—A. It has connection with it; it is affiliated with it.

Q. They amount substantially to the same thing. It is harmonious capital that runs both concerns?—A. So I understand.

Q. Pretty much the same stockholders, but a division of labor and a division of organization?—A. Yes, sir.

Q. So that the National Transit Line or the people who own that line are very largely engaged in refining oil, are they not?—A. Yes, sir.

Q. There exists then a certain partnership between them in the re-

fining business and the transportation business?—A. The interest in both would be their interest, of course.

Q. It would be harmonized?—A. Yes, sir.

Q. And the other refiners in the markets other than Pittsburgh have no other means of getting crude oil except over the sea-board line of pipes, or your line of pipes or the railroad?—A. Those are the avenues.

Q. And you can not state how much oil, comparatively speaking, compared to what is carried through your pipes, is carried now on railroads that substantially parallel your line of pipe. Do railroads continue to hold considerable traffic in oil when you parallel them?—A. Yes, sir; considerable traffic.

Q. You don't know what is the ratio between them?—A. I can not tell accurately, but I should think that on shipments of 10,000 barrels a day it might be in the ratio of 50 and 20; something like that.

By Mr. GOWEN:

Q. Fifty to the pipe and twenty to the railroad?—A. Fifty to the pipe lines and twenty to the railroads.

By Mr. BRECKINRIDGE:

Q. What is the capacity of your pipe leading to New York?—A. About 25,000 barrels a day; 24,000 or 25,000 barrels.

Q. What is the expense per barrel of pumping that oil through?—A. I do not know, sir.

Q. You have charge of the business, I believe?—A. I have charge of the operations of the line. I have not charge of the accounts, and do not enter into them.

Q. What charge do you make to shippers of oil through your pipe from the main source of supply, which source please name, to the New York market?—A. I can not say what the rate is; I do not know.

Q. What I want to get at is——?—A. The question of rates is out of my province.

Q. What I want to get at is, the relative ability of a railroad as compared with a pipe line to transport oil. If you have any information on that subject I would be glad to have you state it. The relative ability as between a railroad company and, for instance, your pipe line from your main source of supply to New York to transport oil as measured by cost per barrel?—A. It would depend upon a number of circumstances. Pipe lines can only be used for that purpose alone. A railroad could be used for many purposes other than transporting oil. The quantity of oil that the markets would demand would make a very material difference.

Q. What is the tonnage of a tank-car of oil?—A. The average capacity of a tank-car, I believe, is about 100 barrels, perhaps 300 pounds to the barrel.

Q. That would be 30,000 pounds, or 15 tons?—A. About that.

Q. Have they any means of getting freight for their tank-cars when they return west, having carried oil to New York?—A. They are of very little use other than for the transportation of crude oil.

Q. They could use it to carry back refined oil, could they not?—A. They could, by cleaning the car.

Q. Is the process of cleaning the pipe a difficult or expensive one?—A. Not very expensive; perhaps a couple of dollars a tank.

Q. So that with reasonable divergence from the point where they could get their load to proceed east, so as to enable them to transport the oil, they could carry back refined oil?—A. If there was a demand for it.

Q. So that the carrying of oil with a railroad would seem to be about on the same basis as carrying other bulky freight, would it not?—A. Carrying of refined oil?

Q. Both refined and crude?—A. I am not familiar enough with the business to be able to give an intelligent idea on that point; I should think not.

I should like to state, Mr. Gowen, on that point, that it might appear a very great absurdity that a railroad company should lose a very large tonnage to gain such a small tonnage. In the first place, there are several railroads, perhaps half a dozen of them, and whatever tonnage there was would necessarily be divided between them. In the second place, the right of way is obtained and often outside of the railroad, and it is of decided advantage to a railroad to have a pipe line along side of it because of the traffic it brings to it.

By Mr. BUCHANAN:

Q. Do you mean to say that not being able to stop the construction of the line, they had better have it close by?—A. Yes, sir: I do.

By Mr. GOWEN:

Q. That oil at present is not used commercially for refining, is it, with success?—A. No, sir; not that I know of.

Q. What is the difficulty with it?—A. I have heard it stated that good refined oil can not be made of it.

Q. On account of the sulphur or other deleterious substance?—A. That is as I understand it.

The CHAIRMAN. The committee will now take a recess for half an hour.

#### AFTER RECESS.

#### TESTIMONY OF HENRY M. FLAGLER.

HENRY M. FLAGLER, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. New York City.

Q. What is your age?—A. Fifty-eight.

Q. What is your business?—A. I am engaged in a number of business enterprises. I suppose for the uses of this committee my answer would be secretary of the Standard Oil Trust.

Q. When was the Standard Oil Trust formed?—A. I think in the early part of 1882.

Q. Prior to the formation of the trust, in what manner, if any, were you connected with the oil trade?—A. I was secretary of the Standard Oil Company of Ohio.

Q. Did you remain in that position until the formation of the Standard Oil Trust?—A. Yes, sir.

Q. Does the Standard Oil Company of Ohio still exist as an independent corporation?—A. Yes, sir.

Q. Do you still occupy the position of secretary?—A. No, sir.

Q. Who is the secretary now?—A. I am not able to answer that. I do not know.

Q. Where is the office of that company?—A. In Cleveland, Ohio.

Q. Had you any individual interest in the oil trade other than your connection with these companies?—A. No, sir.

Q. Were you a stockholder of the Standard Oil Company of Ohio as well as an officer?—A. Yes, sir.

Q. From what time; when did you first become such?—A. From its organization.

Q. In what year was that?—A. I think early in 1870.

Q. Were you not connected in any manner with the oil trade or with associations or corporations interested in or connected with the oil trade prior to the formation of the Standard Oil Company of Ohio?—

A. I was a member of the firm of Rockafeller, Andrews & Flagler.

Q. Where was it located?—A. Cleveland, Ohio.

Q. What was their business?—A. Refining oil.

Q. That was a private partnership, was it not?—A. Yes, sir.

Q. Did it engage directly in the business of refining?—A. Yes, sir.

Q. Did that firm erect refining works or did they buy them from some one else?—A. They bought works from two firms, one of which I believe was Rockafeller & Co., and the other Rockafeller & Andrews. They succeeded those two firms.

Q. Were you interested in either before you became a member of the new firm?—A. I was not.

Q. Were you in business with them or connected with them in any way?—A. I was not.

Q. When your own firm came into existence or after it had gone into business what was the extent of its refining capacity?—A. As well as I can recollect 600 barrels a day of crude oil.

Q. Your firm practically, therefore, formed the Standard Oil Company of Ohio, and turned its works over to that company?—A. Yes, sir.

Q. And accepted stock in that company in consideration of its theretofore private ownership in the firm?—A. Yes, sir.

Q. What was the capital of the Standard Oil Company of Ohio?—A. One million dollars.

Q. How much of that was paid in?—A. One million dollars.

Q. In cash, or were the works taken at a certain valuation?—A. The capital was paid in cash and the works were paid for in cash.

Q. What price was paid for the works at that time; can you tell me?—A. I can not.

Q. What was the capacity of the works at that time—at the time of the formation of the Standard Oil Company?—A. I should say about 1,500 barrels a day.

Q. Where were you then receiving crude oil from?—A. Pennsylvania.

Q. From which field?—A. From what is now known as the lower district. Oil City, I think, was the principal shipping point.

Q. How did you then receive it?—A. By the Atlantic and Great Western Railroad, as it was then known.

Q. How did you ship your refined oil to the sea-board, if you shipped any to the sea-board?—A. By the Atlantic and Great Western and the Erie, and by the Lake Shore and New York Central, the four companies forming two lines.

Q. I think you stated the Standard Oil Company was formed in 1870?—A. I think it was early in 1870.

Q. At the time of its formation was the Standard Oil Company of Ohio interested in or did it own any other refining works than that of its own company of Cleveland?—A. No, sir.

Q. Was it at that time interested in the production of oil?—A. No, sir.

Q. It was simply a manufacturer or refiner?—A. Yes, sir.

Q. You purchased oil from those who produced it, refined it at your works, and sold it as refined oil?—A. Yes, sir.

Q. Did you at that time have connected with your works facilities for utilizing what might be called by-products of petroleum—for taking off naphtha and benzine?—A. Yes, sir.

Q. After those volatile substances were taken off and the refined oil taken off what remaining by-products did you make or how did you utilize the residuum?—A. It is difficult for me to tell the time at which those by-products one by one came into practical use and value, but as near as I remember the whole residuum was known as tar in those days and was used as fuel.

Q. When was that?—A. About the year 1870.

Q. Now, coming from the year 1870 down, when did the Standard Oil Company of Ohio first increase its business beyond that of which you have just spoken, namely, as a refiner of oil in Cleveland?—A. As near as I can recollect in 1873.

Q. In what manner was that extension made?—A. By negotiations with other refiners at Cleveland and the consolidation or purchase of those refineries from the former owners, and a consolidation with the refineries formerly owned by the Standard Oil Company.

Q. Still under the name of the Standard Oil Company of Ohio?—A. Yes, sir.

Q. Did you, up to the time of which you now speak, acquire any other corporate rights or powers to enable you to increase your business other than the charter from the State of Ohio?—A. No, sir.

Q. Do you remember what was called the South Improvement Company?—A. Yes, sir.

Q. We have had in evidence here some facts relating to it. Who composed that company?—A. I can not recall the names of all the gentlemen who were supposed to be interested in it.

Q. Tell us, to the best of your knowledge?—A. The South Improvement Company was a matter brought to Mr. Rockefeller's and my attention perhaps six months before it was known publicly. Perhaps I shall ramble if I undertake to tell you all about it.

Q. Precisely what I want to know is the names of all whom you knew to be connected with it?—A. William G. Warden, Charles Lockhart, William P. Logan, John Logan, J. D. Rockefeller, William Rockefeller, O. H. Payne, and myself are the only names I recall.

Q. Was Mr. Bostwick connected with it?—A. I do not remember whether Mr. Bostwick was or not.

Q. Was Mr. Archbold?—A. No, sir.

Q. Mr. Brewster?—A. No, sir.

Q. Now, from the year 1872 to 1873, if you will kindly in your own way, and with some regard to the chronology of events, tell us how and in what manner the Standard Oil Company enlarged its business or affiliated to other industries and other businesses and who they were, until you come down to the period of the formation of what is now known as the Standard Oil Trust?—A. Before answering that question allow me to say a word more in regard to the South Improvement Company.

Q. Certainly.—A. It is only this, that neither of the Messrs. Rockefeller, Colonel Payne, or myself, or any one connected with the Standard Oil Company, ever had any confidence in or regard for the scheme known as the South Improvement Company. We did not believe in it, but the view presented by other gentlemen was pressed upon us to such an extent that we acquiesced in it to the extent of subscribing our names

to a certain amount of the stock, which was never paid for. The company never did a dollar's worth of business and never had any existence other than its corporative existence, which it obtained through its charter. Through its president it negotiated certain railroad contracts, which, as I remember now, were signed by the company and by the officers of the railroad. Those contracts were held in escrow a few weeks and were destroyed or canceled by mutual consent.

Q. Who presented these views to you gentlemen? Who was the person that had charge of this South Improvement Company's scheme?—A. I think Mr. Warden and the Messrs. Logan were the great leaders in the South Improvement Company policy,

Q. Do you mean William G. Warden?—A. Yes, sir; of the present firm of Warden, Frew & Co.

Q. And of the late firm of Warden, Lockhart & Co.?—A. There never was a firm of Warden, Lockhart & Co.; only Warden, Frew & Co.

Q. And that is one of the firms in the interest of which Standard certificates have been issued, is it not?—A. That firm at a later date sold to the Standard.

Q. But it is the same Mr. Warden who was a member of the firm of Warden, Frew & Co., whose works were acquired?—A. Yes, sir; by the Standard Oil Company, some years subsequent to the time when the South Improvement Company was supposed to have an existence.

Q. Now, the South Improvement Company's charter had been obtained many years before that, had it not, for another purpose?—A. I knew nothing of that.

Q. You knew the fact, did you not, that the charter was repealed by an act of the legislature of Pennsylvania?—A. If I ever knew it I have forgotten it.

Q. I would like to know whether these contracts that were negotiated between the South Improvement Company and the Pennsylvania Railroad Company had been negotiated and were in existence before you gentlemen who now constitute the Standard Oil Company joined it?—A. I am unable to answer that question. I can not recollect.

Q. Can you tell us what the capital of the South Improvement Company was?—A. No, sir.

Q. Can you remember what each of you subscribed?—A. No, sir.

Q. Was it millions or hundreds of thousands—I mean the total capital?—A. I should say thousands; it was not anything like a million of dollars. As I say, it never had any use for money, for it never was in existence, anything more than the formation of these contracts.

Q. From that date up to the time of the formation of the Standard Oil Trust I wish you would kindly let us know how this business, which the public generally calls the Standard Oil Company, how it acquired additional property, at least with reference to the time and the names of the companies, and by whom it was acquired?—A. I am unable to give you the names of the companies. I recall only in a general way this fact that, taking them one by one, negotiations were entered into from time to time between some of us, representing the Standard Oil Company, with its capital of a million of dollars, and other refiners, competitors of ours. These negotiations resulted in an agreement, or rather a valuation of these different properties, a valuation which should determine the sum at which they should be sold to the Standard Oil Company. The consideration agreed to be given those persons for these refineries was Standard Oil stock at par or a check.

Q. That is, the Standard Oil Company of Ohio?—A. Yes, sir. I know that in some cases some of the parties took money in preference to tak-

ing stock, feeling, I presume, that they would rather embark in other business. The capital stock of the Standard Oil Company was increased a million and a half of dollars. A large percentage of that increase was used in payment for the purchase of these refineries of which I have spoken. As I remember now, less than \$100,000, but approximating \$100,000, was the sum left of the million and a half of increase, which was not required for the payment for these properties. That difference, deficit if you call it such, was subscribed for and paid into the treasury of the company in cash at par.

Q. Well, now, what other companies than the Standard Oil Company of Ohio, did you and Mr. Rockafeller and your associates become interested in, in the oil trade, or in the refining or transportation of oil, before the formation of the Standard Trust?—A. I was going to add. The increase of capital of which I have just spoken occurred in the year 1873. The original Standard Oil Company was organized in the early part of 1870. The increased capacity and the acquisition of the Cleveland refineries was, as I remember it, in 1873. It remained at that until 1875 or 1876, according to the best of my recollection. Then was consummated a negotiation which had been pending for some two years, perhaps, with certain parties in Pittsburgh, Philadelphia, and New York, by which a value was agreed upon, and their refinery property was purchased and the capital of the company was increased a still further sum of a million, and they were paid for these properties, and money which they contributed, in the stock of the Standard Oil Company of Ohio.

Q. Making three millions and a half?—A. Making three millions and a half; yes, sir.

Q. What other companies?—A. It is impossible for me now to say.

Q. I do not mean what other companies were bought, but what other companies, which were in existence at the time of the formation of this Standard Trust, did you gentlemen become interested in?—A. Many of these companies were purchased for cash long before the creation of the Standard Oil Trust.

Q. Yes, but more than those which you have now mentioned.—A. I have not given you the names of any of them.

Q. I do not mean the names of any companies bought up and acquired by the Standard Oil Company of Ohio, but the names of other companies which you gentlemen became interested in which remained as independent companies up to the formation of the Standard Trust?—A. It would be impossible for me to give you that.

Q. For instance, United Pipe Lines—you gentlemen became interested in that, did you not?—A. Yes, sir.

Q. These were the lines which collected the oil in the oil region and delivered it to the railroads; is not that so?—A. Yes, sir; that was the largest pipe line, as I remember, in existence at the time we purchased an interest in it.

Q. It was a corporation, was it not?—A. I think not. At the time, if I remember, it was a copartnership.

Q. Known by the name of United Pipe Line?—A. Yes, sir.

Q. Were you interested in that?—A. Only by reason of my interest in the Standard Oil Company.

Q. The Standard Oil Company acquired an interest in it?—A. Yes, sir.

Q. The majority interest?—A. No; only a third.

Q. Who owned the other two-thirds?—A. Vandegriff and Vaughn and—well, I can not recall the names. The purchase by the Standard interest was of one-third of the United Pipe Line.

Q. Have you any statement of the number of companies, associations, or partnerships that were taken into the Standard Oil Trust when it was formed, or in respect of stock in which the Standard Oil Trust certificates were issued?—A. I have not.

Q. Can you tell me who they were?—A. No, sir.

Mr. GOWEN (to Mr. Dodd). They are in this book, are they not?

Mr. DODD. Yes, sir.

Mr. CHOATE. You will show the witness the printed book.

Mr. GOWEN. Certainly.

Mr. DODD. There is the trust agreement in the book, and they are all mentioned in it.

By Mr. GOWEN:

Q. Mr. Flagler, will you please look at this, so that you may verify it under oath [printed book shown to witness entitled "Report of Investigation Relative to Trusts, for the Senate of New York, in the year 1885," pages 455 and 456]?—A. (Examining book.) There are ten names here that I have no knowledge of or recollection of, and if they had been placed before me as being competitive concerns, I should have been as likely to think they were such as that they were part of the ownership of the trust.

Q. But the rest of the names you remember?—A. The rest I can identify.

Q. State if these lists are not a part of what was your Standard Oil agreement.—A. Yes, sir; that I admit.

Q. This may be considered, then, as a proper copy of your Standard Oil Trust agreement?—A. According to my best knowledge and belief.

Q. Have you any doubt, or do you agree, that all the companies, firms, individuals, or associations named in the trust agreement, as those in respect of which stock was issued by the Standard Oil Trust, were correct?—A. I have no reason to doubt it, except my ignorance of these particular names.

Q. How many of these various associations or corporations and trusts were you yourself personally interested in, either as stockholder, partner, or otherwise, up to the formation of the trust?—A. Interested in by a virtue of what?

Q. Owning stock in them, owning an interest in them—stock in them if they were corporations, or interest in them if they were firms.—A. I have no recollection that I ever had any stock certificates except in the Standard Oil Company of Ohio.

Q. Were you not interested in any of the others?—A. I was going to add that the ownership of the stock of these various other companies, which I suppose are stated correctly here—the ownership of those stocks was in the hands of a few certain trustees. The names here given are Vilas, Keith, and Chester.

Q. Those three gentlemen as trustees held stock certificates or other evidences of ownership in a number of other companies?—A. Yes, sir; in, I suppose, all these companies.

Q. And you were interested in those?—A. Yes, sir; by virtue of an agreement made between those trustees and the stockholders of the other companies.

Q. Was the trust which those three gentlemen had evidenced by any instrument in writing?—A. Yes, sir.

Q. Can you tell by looking over that list in what other corporations, associations, or firms those three gentlemen, as trustees, were holders of stock?—A. No; I can not.

Q. You think it would embrace nearly the whole of them, do you not?—A. Yes, sir; I think so.

Q. Can you tell, up to the time of the formation of the Standard Oil Trust agreement, the extent in dollars of capital that was represented by the trusts that these three gentlemen held?—A. No, sir.

Q. Can you get at it in this way: Can you tell what amount of Standard Oil Trust certificates was issued in respect to ownership of stock which these three gentlemen held as trustees?—A. No, sir; I can not.

Q. You can give it roughly—in round numbers, can you not?—A. I have no recollection whatever of the relative values of the properties held by these trustees, comparing it with the property and assets of the Standard Oil Company of Ohio.

Q. But comparing it with the amount of certificates which were issued under the Standard Oil Trust agreement, how much money did it represent?—A. For the whole?

Q. For the whole held by these three gentlemen?—A. That I am unable to answer.

Q. What amount of certificates of the Standard Oil Trust were issued at or shortly after the formation of the trust?—A. About \$70,000,000—just \$70,000,000.

Q. Can you give any idea what proportion of that \$70,000,000 was issued in respect of the certificates of stock or other evidences of interest which these three gentlemen as trustees held?—A. I can not.

Q. Did it amount to \$50,000,000?—A. I can not answer.

Q. Who could tell us that?—A. I have no idea who could.

Q. You are the secretary of the Standard Oil Trust?—A. Yes, sir.

Q. Did not you keep in your office a record showing these facts?—A. Yes, sir.

Q. That record still exists, does it not?—A. Yes, sir.

Q. And that record would show the destination and receiver of every trust certificate of the Standard that was issued out of this \$70,000,000, would it not?—A. Yes, sir.

Q. Did you have these trust certificates kept, like stock certificates of a corporation, with a stub requiring a receipt from the person who received it?—A. Yes, sir.

Q. Is that book in the possession of your department or of the treasurer's department?—A. That I am unable to say; but I should say on general principles that it is in my department. It is a book that is in charge of a man who attends to that sort of work.

Q. You do not give your personal attention to these details?—A. I do not.

Q. What clerk or other subordinate officer relieves you from that work?—A. A man by the name of W. H. Beardsley.

Q. He would know.—A. He might.

Q. I ask you frankly, have you any objection to the production of that book and the information it contains?—A. Not the least.

Q. Rather than annoy you to produce the book, would you agree to send us a copy of the list?—A. Of the persons to whom shares of Standard Oil Trust were issued?

Q. And with respect to what kind of property and in what name they were issued?—A. That knowledge would not exist in the book which is in my hands. I have charge of nothing but books which relate to the corporation. The commercial books I have never had anything to do with.

Q. Who has those books?—A. Some of our departments; I do not know who does have them.

Q. You can furnish, then, a statement of the persons to whom the certificates of interest in the Standard Oil Trust were issued?—A. Yes, sir.

Mr. CHOATE. You include corporations under the name persons?

Mr. GOWEN. Yes.

The WITNESS. In other words, as I understand, it is a list of the names comprising the sum total of the \$70,000,000.

Mr. GOWEN. Yes.

The WITNESS. That is a very easy matter.

Q. Has the capital of the trust been increased since its formation?—A. Yes, sir.

Q. What is it now?—A. About \$90,000,000.

Q. Have the extra \$20,000,000 been issued for subsequently acquired property?—A. In part.

Q. What is the present market value, can you tell us, of those certificates?—A. About \$160 a share.

Q. What was the par value?—A. One hundred.

Q. Therefore a stock of \$90,000,000 would be worth between \$144,000,000 and \$160,000,000?—A. Yes, sir.

Q. One hundred and forty-four millions of dollars would represent the present capital judged by the market value of the property that is held in the trust?—A. At \$160 a share; yes, sir.

Q. When that trust acquired stock in other corporations, was that stock retained in the control of the company to represent the ownership of the other corporations, or were the other corporations wound up and the property transferred in block to the Standard Oil Trust?

The WITNESS. Will you kindly repeat that?

Q. When the Standard Oil Trust acquired by purchase property represented by stock of other corporations, was that stock so purchased held as a distinct asset as stock in the treasury of the trust, or was the company whose property was represented by such stock turned bodily over and the stock canceled and the property became the property of the Standard Oil Trust?—A. All stock was held as the stock of the company owning the property.

Q. In other words, the Standard Oil Trust did not become the owner or manager of any property or business, but simply the custodian of the stock or other evidences of ownership in such property?—A. That is correct.

Q. And in all cases the other corporations remain intact as independent corporations?—A. I presume that they do. Some companies may have gone into liquidation and sold their properties to other companies, but I have no knowledge of any such case.

Q. And as between the company and the Standard Oil Trust, in no case did the Standard Oil Trust become the owner or manager of property as such, other than such as was represented by stock or bonds, or other evidences of ownership?—A. It did not.

Q. It is not a business corporation then?—A. It is not doing business in that sense.

Q. Is the Standard Oil Trust not the owner of any real estate as a trust?—A. No, sir.

By the CHAIRMAN:

Q. Who is the owner of the building occupied by the Standard Oil Trust in New York?—A. The Standard Oil Company of New York.

By Mr. GOWEN:

Q. The management, therefore, of all these other companies in which the Standard Oil Trust is entitled to the management by reason of owning a majority of the stock, is controlled through that ownership and exercised at the elections of those companies by voting upon the stock?—

A. The management of these several companies is through individuals elected to their positions as boards of directors, such boards being elected by a vote of the stock which the company——

Q. Which the trust owns?—A. In part; there are many cases where individuals own stock, the trust not owning the whole. Of course the stock owned by the trust is voted upon.

Q. Who votes that?—A. That varies according to circumstances. Proxies are issued to individuals to vote that stock.

Q. Who signs the proxies? Does it require the whole number of trustees?—A. No, sir; a committee of three of the trustees has been created by all the trustees authorizing that committee of three to either attend in person or issue proxies authorizing other persons to.

Q. Did you know, Mr. Flagler, anything about the American Transfer Company?—A. Very little.

Q. Were you ever interested in it as an individual?—A. Not according to the best of my recollection.

Q. Was the Standard Oil Company of Ohio interested in it as a stockholder or by other ownership?—A. My recollection is that the American Transfer Company was not a corporation but was a name given to a piping business originated and owned by J. A. Bostwick & Co., and that it came into the Standard Oil Company.

Q. Of Ohio?—A. Of Ohio; and that Mr. Bostwick's interest was purchased by the Standard Oil Company of Ohio.

Q. Can you tell us what year?—A. My recollection is that it was in 1873, or possibly not until 1876.

Q. Do you remember the period at which the Tide-Water Pipe Line Company opened its line from the principal oil field to the lines of the Reading Railroad near Williamsburgh?—A. No; I merely recollect the fact but not the time nor the date.

Q. At that time what share, to the extent of the proportion of the whole, had been secured by the Standard Oil Company of Ohio and the various other oil companies and associations of the entire oil trade; that is, the various other associations who now are in the Standard Oil Trust?—A. It would be impossible for me to answer the question.

Q. Better than I could or anybody else?—A. I expect you know more about it than I do.

Q. What proportion of the oil trade, so far as concerns the refining of oil or shipment of crude oil, if any such is done, is controlled now by the Standard Oil Trust for the companies in that trust?—A. That I can not state either.

Q. Have you never looked into that question?—A. Never.

Q. Who is the statistician of your association who knows those things?—A. That I do not know.

Q. Do you not know that it amounts fully to 85 per cent. of the whole?—A. I do not.

Q. What do you think it is?—A. I have not any thought. I would simply say this, that for perhaps eight years I have given absolutely no attention to the details of our business, and I know probably less about all these matters than almost any man connected with the trust.

Q. Who do you think among your associates has that information; because I do not want to annoy you unnecessarily. I want to get at

that fact as speedily and quickly as I can, and if you can tell us who possesses the information I will not trouble you further about it?—A. Well, I have never read his testimony, but I should say that Mr. J. D. Rockafeller, having been called a number of times, has probably informed himself of all these matters, and he probably knows.

Q. He is here, is he not?—A. He is not here.

Q. He is to be here, is he not?—A. I do not know; he is not at all well just now.

Mr. GOWEN (to Mr. Dodd). Will he be here?

Mr. DODD. If he is able to come when you want him, Mr. Gowen, he will try to get here.

Q. Now, Mr. Flagler, I want to call your attention to a meeting or a conference which took place at Saratoga between officers or agents of the trunk lines and gentlemen connected with your interest at or about the time of the opening of the Tide-Water Pipe Line as a competitor of your lines or of your business. Do you recall such a conference?—A. I have no recollection of it.

Q. Do you not remember meeting at Saratoga—you and Mr. Bostwick, I think, and Mr. Brewster—with gentlemen connected with the New York Central, the Erie road, the Pennsylvania, and the Baltimore and Ohio?—A. I do not.

Q. Who had charge of your interests, or those represented by you, on the question of securing rates with the railroads for the transportation of oil? Who had charge of that transportation question?—A. The different gentlemen who administered the different departments of the business.

Q. Well, who had charge of that transportation department—the question of rebates?—A. No one man.

Q. Name any?—Mr. Archbold, and Colonel Thompson.

Q. Who is Colonel Thompson?—A. He is connected with the Standard Oil Company of Ohio. He is one of its officers, I think.

Q. But who had charge of the rates on east-bound crude oil upon the trunk line. Who had charge of that question?—A. No one man.

Q. Well, who had charge of any part of it?—A. Well, that would be impossible for me to answer.

Q. You surely——A. We had not our business under departments as such except perhaps, for instance, in thinking of Colonel Thompson and Mr. Archbold, I recalled the fact that those gentlemen gave their personal attention to the question of the distribution of oil, and according to the best of my recollection, Mr. Archbold was more especially intrusted with the making of rates from time to time on shipments by different railroads.

Q. I do not want to annoy you unnecessarily and I will not trouble you any further about that if you say you have no recollection whatever in regard to it?—A. I have no recollection whatever of any such meeting. I am confident that I was not present at any such meeting.

Q. Have you any knowledge of the fact that a discussion was taking place between those in your interest and the trunk line as to what treatment should be accorded to the Tide-Water Pipe Line when it entered the field as a competitor?—A. I do not recall any such discussion.

Q. Had you any control of or charge of any questions of that kind?—A. I had to do with such questions; yes, sir.

Q. Do you know that after the introduction of the Tide-Water Pipe Line as competitor in the movement of oil and the refining of oil, the rates upon the trunk lines were very considerably reduced?—A. I do not now recall the fact. I should say that in a general way they were re-

duced; but to what extent, from what figure, and to what figure, I have no recollection.

Q. Have you no knowledge of the minimum to which that reduction was carried?—A. I have no recollection of it.

Q. Do you not know that it was reduced as low as 10 or 15 cents from the oil field?—A. I do not.

Q. Have you any means of refreshing your recollection upon that point?—A. None that I think of.

Q. At that time who controlled, or in what name was the refining interest which now belongs to the Standard Oil Company which is located in the State of New York? Who were the parties who controlled that?

The WITNESS. Can you give me the year?

Mr. GOWEN. About 1880 or 1881 or 1882.

The WITNESS. Mr. William Rockefeller was at that time, and for some years before, the representative of what is called the Standard Oil interest in New York, and in a general way I should assume that he would be more particularly charged with it?

Q. What refining interest, or what refineries, rather, to confine it to the actual establishments—what refineries in or around the harbor of New York did the Standard people or their allies then control? If you can give any other of your gentlemen who can give me this information easier I will not trouble you further but take him, because all I want is to get at the facts.—A. (Looking at book.) Well, here is Charles Pratt & Co. You are speaking now of the year 1882?

Q. Yes, and for a year or two prior?—A. I am limiting my recollection now to the creation of the trust. If you will allow me, I will limit it to 1882.

The Sone & Flemming Manufacturing Company; the Bush & Denlow Manufacturing Company; the Devoe Manufacturing Company; The Empire (turning to Mr. Archbold). Is not that correct?

Mr. ARCHBOLD. Yes; the Empire, but not the Devoe.

Mr. GOWEN. Oh, well, if you are not familiar with them I will not pursue the matter further with you.

Q. You are acquainted, are you not, with what is called the Cotton Seed Oil Trust?—A. I am acquainted with a few gentlemen interested in it, but not with the trust itself.

Q. Are you interested in it?—A. I am, unfortunately.

Q. In what capacity?—A. As a shareholder.

Q. As an officer?—A. No, sir.

Q. Who are the officers of the Cotton Seed Oil Trust?—A. That I can not tell you; or, to make it more plain, I am unable to tell you. But I can tell you the name of the president.

Q. Who is he?—A. He is a namesake of mine, J. H. Flagler.

Q. Is he a relative of yours?—A. If he is, it is so far removed that we could never trace the connection.

Q. Are there any other trustees of the Standard Oil Trust interested in this Cotton Seed Oil Trust?—A. I do not know of any person who is even a shareholder of the Standard Oil Trust who is also a shareholder in the Cotton Seed Oil Trust, except myself.

Q. Are there any business relations between any of the companies interested in the Standard Oil Trust and the Cotton Seed Oil Trust?—A. Not to my knowledge.

Q. Do you know who are the directors or officers of the American Cotton Seed Oil Trust?—A. As I have already said, I only know the name of the president.

Q. Where is Mr. J. H. Flagler's residence?—A. In New York City.

Q. Does this trust do business in New York under the name of the Cotton Seed Oil Trust?—A. That I do not know.

Q. Very well, I will not ask you farther about that, then. I want to get at now the ownership of tank cars for the transportation of petroleum. Does the Standard Oil Company of Ohio or any of your companies that you know of own tank cars?—A. Yes.

Q. Which?—A. I can not tell you which.

Q. Who among you gentlemen has charge of that subject and could give that information better than you, if there is any one?—A. Any one can answer better than I can—Mr. Archbold for one, I should say.

Q. In your connection with this business have you had anything to do with the practical working of refining as a refiner? Do you understand that?—A. I do not.

Q. Has your department been that of finance and accounts?—A. No.

Q. When you were a younger man and went into this business?—A. For a number of years I used to spend about half of each day at the refinery when I lived in Cleveland; but I have not been inside of a refinery for ten years, probably.

Q. What department of your company, or of any of your companies, has charge of the local distribution of petroleum in the United States? Is there not a separate department for that?—A. I do not know; if there is, I do not know it, nor do I know who has charge of it.

Q. Who among you gentlemen would be likely to know that fact?—A. Mr. Archbold, I think, knows a great deal more than I do about it.

Q. Do you not know that the territory of the United States is divided into districts for the purpose of distributing and marketing refined oil?—A. I do not.

Q. And that those districts are numbered and designated in some way?—A. I do not.

Q. How and in what manner do these various refining companies and interests that are affiliated to the Standard Oil Trusts—how do they unite with each other upon the subject of marketing refined oil in the United States?—A. I am unable to answer the question.

Q. Is there not to your knowledge a department of distribution?—A. There is not.

Q. There is not?—A. Not to my knowledge.

By Mr. SMITH:

Q. Mr. Flagler, is the Standard Oil Trust interested in railroads?—A. No, sir.

Q. Are you?—A. Yes, sir.

Q. In how many?—A. You mean as stockholder?

Q. Stockholder or officer.—A. Two.

Q. As an officer?—A. Well, that question I should have to ask you to explain. I believe it is now considered that a man who is merely a director is not an officer. If Mr. Gowen will analyze the term officer I will answer the question categorically. I am a director in two and an officer in one.

Q. What are the names of those companies?—A. The Chicago, Rock Island, and Pacific Railway I am a director in. I am also a director in and president of the Jacksonville, Saint Augustine and Halifax River Railroad. Excuse me; I was wrong in saying *two* railroads. I should have said *three*, for I am a director also in the Tampa, Jacksonville and Key West Railroad.

Q. That is all?—A. That is all.

Q. The Standard Oil Trust is the proprietor of one of the pipe lines to the sea-board, is it not?—A. It is the owner of the stock, or a portion of the stock, of a company which owns pipe lines to the sea-board.

Q. Does this Standard Oil Company pay any taxes?—A. Which Standard Oil Company?

Q. Or the Standard Oil Trust?—A. The Standard Oil Trust does not pay a dollar. The company which owns the property pays the taxes.

Q. On real and personal?—A. I can not tell you. It depends upon the laws of the State. I have never had to do with the taxes of any of the corporations.

Q. If I understood your testimony right you stated that your stock was considerably above 100 per cent., did you not?—A. Yes, sir.

Q. If it is within your province, what were the dividends on that stock for 1887?—A. For 1887?

Q. Yes; the last fiscal year.—A. Ten per cent.

Mr. GOWEN. That is, upon the trust certificates you mean?

The WITNESS. Yes.

By Mr. SMITH:

Q. That includes the amounts above par also?—A. No, sir.

Q. Only on the par value?—A. You can not pay dividends in any other way that I know of.

Q. Why do you keep them up to one hundred and sixty or whatever the statement was?—A. I do not do it.

Q. You do not do it?—A. I do not do it.

Q. How do they get there?—A. It would be difficult to answer the question.

Mr. CHOATE. Mr. Smith does not probably understand that these stocks are freely bought and sold. They are stocks that can be bought and sold in the market by anybody who has money to invest.

Q. Do you believe that a 10 per cent. dividend would, as the phrase goes, bull those bonds to that amount?—A. Oh, yes; that gives over 6 per cent. on the amount invested, and when money is loaning at the low rates prevailing at present that is not a bad investment for a man to put his money in.

By Mr. GOWEN:

Q. The dividends declared on the certificates of the Standard Oil Trust must, of course, always be limited by the amount you receive in dividends from the other companies whose stock you hold?—A. Certainly.

Q. Have you declared as dividends in the Standard Oil Trust the full amount of money that you have received as income from the various securities you hold?—A. Not quite.

Q. How much undivided capital has been accumulated in the trust in addition to that which has been distributed as dividends?—A. I am unable to answer the question in dollars and cents. I only know this, that since the creation of the trust the dividends from the time it was created to the payment of the last dividend have been a little less than 7 per cent. on the par value of the certificates, or about 7 per cent., I should say.

Q. Dividends that have been declared?—A. Yes, sir; and the earnings have been a little less than or about 13 per cent.

Q. Is the difference between the average of 7 per cent. declared and the average of 13 per cent. that has been received retained in the treasury?—A. Yes, sir.

Q. In addition to the dividends in cash, have any stock dividends been declared?—A. Yes, sir.

Q. Were those stock dividends declared to represent the surplus of cash that was divided or were they declared upon any account?—A. The surplus earnings, and to a limited extent, as I remember, the increased values of certain property.

Q. In other words, as a merchant would do, you take an inventory of the value of your property every year, do you not?—A. Yes; twice a year.

Q. And claim and exercise the right of considering the increase in that as a profit?—A. Perhaps that is correct; that is one way of stating it, at least.

Q. I do not say there is anything wrong in it. I do not mean to infer that.—A. No; there is nothing wrong in it.

Q. This average of 7 per cent. was a cash dividend was it?—A. Yes, sir.

Q. What average of stock dividends were declared in addition to the cash dividends?—A. May I ask some one to refresh my memory?

Mr. GOWEN. Certainly.

The WITNESS (after consulting Mr. Archbold). Twenty per cent. in the entire period.

Q. What is that entire period?—A. A little over six years, making an average of about 3 per cent. annually. The cash and stock dividends together amount to about an average of 10 per cent.

Q. And you have in addition to that a surplus of undivided dividends in the treasury not altogether represented by the stock dividends?—A. Yes, sir.

Q. Now, Mr. Flagler, this Standard Oil Trust is simply a trust to hold certain personal property represented by stock or bonds or other certificates, as you have explained, and it owns the control of a vast number of other corporations and associations, firms, etc., who are engaged actively in the business of manufacturing and refining oil, does it not?—A. They are not all corporations.

Q. Do you have a department or committee in your trust that exercises a supervision over and requires a return annually or otherwise from these various companies in order to see how much they are making and how their business is being conducted?—A. Yes, sir.

Q. Who is at the head of that?—A. The trustees comprise the department.

Q. The whole of the trustees?—A. Yes, sir.

Q. Their names are given in that agreement, are they not?—A. I do not know; I suppose so.

Q. Can you tell us who the trustees of the Standard Oil Trust now are?—A. (After consulting Mr. Archbold) J. D. Rockefeller, William Rockefeller, J. D. Archbold, Benjamin Brewster, Henry H. Rodgers, Charles Pratt, W. H. Tilford, O. B. Jennings, and H. M. Flagler.

Q. Now, the supervision over the work of each of these departments in respect to receiving these returns is exercised by these nine gentlemen as a body of trustees, is it?—A. Well, it is a supervision which is merely advisory. No power as such is ever used. I think perhaps your word supervision covers it and is the broader and better word to use.

Q. Do you not compel annually, or semi-annually, or even monthly statements to be sent to the head office showing the result of the workings of these various corporations?—A. Yes, sir.

Q. Do you require an annual balance-sheet from each of these companies showing the result of their year's business?—A. I can not say; I presume so.

Q. You know as a business man that such things are usually required in similar cases?—A. What I mean is that I do not think those balance sheets come to the trustees; I think they go to the commercial department.

Q. The question of earning capacity of this combination of capital can not be measured by what dividends the Standard Oil Trust declares, can it?—A. If there is added to it that which is not declared, yes.

Q. No; that would only be an estimate of what the Standard Oil Trust received, would it not?—A. Please state that again.

Q. I mean the result of the profit of each one of these industrial establishments; take Pratt & Co. or the Astral Oil Company, for instance?—A. Take them all.

Q. That is not gauged by the amount of money you received from them, because they may have made much more money than they declared as a dividend?—A. It is not the custom, I think, for them to retain in their treasuries anything above their working capital.

Q. But will not their balance sheets show in each case what each one of them has made?—A. Certainly.

Q. May not some of them have had some indebtedness?—A. I do not know of any such case.

Q. Are not many of them engaged in extensive alterations and additions to their works to meet the constantly-increasing requirements of their trade?—A. Oh, yes.

Q. Well, if they are not in debt that money must necessarily be supplied by their earnings, must it not?—A. Yes, sir.

Q. Is it not therefore possible that many of these corporations who declare to you as their stockholder a 10 per cent. dividend may have made 30 or 40 per cent. in the course of the year?—A. It is the declaration of their earnings that makes the basis of the net earnings of the Standard Oil Trust.

Q. No.—A. Yes.

Q. It is the declaration of their dividends?—A. No, sir; it is not. For, instance, a company may make, if you please, \$100,000. There is no question about its having been made. It may pay into the trust \$70,000, reserving \$30,000.

Q. For other purposes?—A. For any use that is necessary. Now, that \$100,000 is the amount made by that company, and it is because of the necessity of increased growth of these stock companies and their greater demand for the use of money that makes it impracticable for the Standard Oil Trust to divide in cash to its stockholders the entire earnings of all these companies.

Q. But we will take a company, for instance, like the National Transit Company. Your Standard Trust interest in that is represented by stock of that company; is it not?—A. Yes, sir.

Q. Now, suppose that company has made in the course of a year half a million of dollars and has declared only \$250,000 cash dividends. You, as a stockholder, receive your proportion of that \$250,000, do you not?—A. Yes, sir.

Q. But you do not receive any proportion of that which they have not declared as a dividend?—A. I thought that I had made myself understood. When I say that the net earnings of all the companies, firms, and associations owned by the Standard Oil Trust have averaged 13 per cent. for the period of its existence, I mean just that.

Q. But you mean more than that?—A. I mean just that; that that is the entire sum total of the earnings of all these companies without any reference to the dividends they may have paid over.

Q. But how can you as a trust divide money which you have not received?—A. I did not say that we had received that. We divided 7 and retained a margin of 3 per cent.

Q. But you have not received that?—A. We have not divided it either.

Q. But you have not received it?—A. I am not able to answer that, whether we have received it or not. I understood your two questions to be, first: What have been the aggregate net earnings of corporations whose stock is owned in whole or in part by the Standard Oil Trust; that is to say, what the earnings of the several corporations have been? Now, I answer that by saying that they have been about 13 per cent. per annum on the par value of all the shares issued by the Standard Oil Trust.

Now, the other question was: What average dividends in money have been paid by the Standard Oil Trust? I answer that simply by saying about 7 per cent., as I remember—a little less than 7 per cent., which leaves a difference of 6 per cent.

Q. And of that 6 per cent. a little over 3 per cent. has been declared in stock dividends?—A. Yes, sir.

Q. And those stock dividends, as stock is selling at 160, are worth a great deal more than the nominal amount would be?—A. Of course, they are worth more than the actual money would be.

By Mr. BUCHANAN:

Q. There has been some confusion in the facts before the committee, arising, perhaps, from the circumstance that witnesses have not been accurate in the use of terms. Will you give me the exact corporate name of this trust?—A. The Standard Oil Trust.

Q. Is there a corporation known as the Standard Trust?—A. No, sir.

Q. It is the Standard Oil Trust?—A. There is no corporation; the Standard Oil Trust is not a corporation.

Q. It is not a corporation?—A. No, sir.

Q. From whence does it derive its being and by what law does it exist?—A. By virtue of a contract entered into by and between the individuals who created the Standard Oil Trust.

Q. And by individuals you mean corporations as well as individuals?—A. Yes, sir.

Q. And included in that list are some corporations known as Standard Oil Companies?—A. The individuals include those who comprise the entire stockholders of the several corporations, and the names of the corporations also appear, as I remember it.

Q. I beg your pardon, but I am not so much now after the position of this aggregate of persons or corporations as I am to get distinctly in my mind the information as to the names Standard Trust, Standard Oil Trust, and Standard Oil Company or Companies?—A. There is no Standard Trust.

Q. That you have already stated. You stated that it was called the Standard Oil Trust. Is there a company organized under the laws of the State of New York and another under the laws of Ohio, and so on?—A. Yes, sir.

Q. Separate and distinct corporations?—A. Entirely so.

Q. And parties to this agreement?—A. I do not remember whether they are parties to the agreement. Those persons who were stockholders of these several companies are parties to the agreement, and it is possible the names of the companies themselves are affixed.

Q. But these corporations, either through their stockholders or in their corporate capacity, are parties to the agreement?—A. Yes, sir.

Q. Is there any other corporation which, either of itself or through its stockholders, is a party to this agreement, which is known as the Standard Oil Company?—A. There is the Standard Oil Company of Ohio, there is the Standard Oil Company of Kentucky, and I think of Illinois or Winconsin or one of the Western States.

Mr. ARCHBOLD. Minnesota.—A. There is a Standard Oil Company organized under the laws of New York, under the laws of New Jersey, under the laws of Ohio, under the laws of Pennsylvania, and under the laws of Minnesota, Iowa, and Kentucky. It seems to be a favorite name.

Q. Yes; it has become quite a standard appellation. [Laughter.] And they all, either in their corporate capacity or by their stockholders, are united in this combination or trust known as the Standard Oil Trust?—A. Yes, sir.

Q. Now, Mr. Flagler, it has been stated that this trust includes within its membership the stockholders of companies formed in different towns and cities of the United States for the purpose of supplying the inhabitants of those cities with manufactured gas. Is there any foundation for that statement?—A. Not to my knowledge; no, sir.

Q. It has also been stated that there is affiliated with this trust or included within its combination a number of corporations engaged in the running of horse-car lines in the different cities.—A. That is also untrue.

Q. The Cotton-Seed Oil Trust is affiliated with this trust, or rather is included in this combination?—A. In no sense whatever; there is absolutely nothing of the kind.

Q. Where does that Cotton-Seed Oil Trust have its existence; by the laws of what State and under what circumstances?—A. That I do not know.

Q. But you are connected with it?—A. I am the unfortunate owner of considerable of its stock.

Q. Do you know whether it is a corporation or not?—A. I understand that that trust is similar, as nearly as it might be made without being a counterpart of the Standard Oil Trust, and was formed under an agreement quite similar to ours, and owns the stock of various corporations engaged in the manufacture of cotton-seed oil. I have never seen a copy of the Cotton-Seed Oil Trust agreement, however.

Q. You used the expression "unfortunately" in connection with your ownership of those shares. Why do you use that term?—A. Because I held the stock when I ought to have sold it, and have got it yet.

Q. Having the light of your past experience to illumine your understanding that reason is apparent to you, and yet we, being deprived of that light, do not exactly understand the reason yet.—A. I mean to say by that I could once have sold the stock at a handsome advance over the sum it cost me, and I did not do it and have it yet.

Q. Has it gone below par?—A. It never was at par.

Q. Have you received any dividend?—A. One.

Q. During what period of time or what length of time?—A. I think I have owned it about five years.

Q. And the dividend was how much?—A. One per cent.

By Mr. SMITH:

Q. I have discovered something here that is very striking. What makes you so positive, Mr. Flagler, in denying that the trust is not engaged in the management of horse railroads, etc., and yet you are not so clear in matters relating to the Standard Oil Trust, of which you are

secretary?—A. If you will explain to me the matters I am not clear about I will try to explain the others to you.

Q. In the testimony that you gave to Mr. Gowen you had a great many hitching posts along the line. Your memory seemed to be out of gear. But when this question was asked by Mr. Buchanan you stated positively at once, denying any such thing. Now, where does that memory come from so quickly? That is what I want to know. That is all I have to ask you?—A. Now, perhaps I could illustrate that in a way in which you could understand it. I was, in my younger days, a clerk in a country store; and while I could not remember anything like all the things we had, I knew at once when an article was asked for that we were out of that it was not in the store.

Q. But you were so well posted on this question and answered it so positively, but I will let that go by?—A. I would like to have the question ventilated, because if the member of the committee is disposed to cast any reflection upon my statement I will show there is good reason for what I said. And I will take pains to repeat that I find in that book (referring to book containing copy of trust agreement) the names of firms that I have no recollection or knowledge of. For instance, here is the name Payne, Abbot & Co. Now, I have no recollection of having ever heard of Payne, Abbot & Co. It is, probably, some little concern of some \$4,000 or \$5,000 capital of which I know nothing, because I have had no connection with the crude trade at all. I am not willing to testify to the correctness of a statement produced here as an exhibit of names of firms without positive knowledge on the subject. When I am asked if this trust engaged or owned the shares of any company engaged in running horse railroads, I answer the question emphatically no, because that is something I do know about.

By Mr. GOWEN:

Q. May not the difficulty arise from the fact that some of the individual members of these various corporations are engaged in running horse railroads?—A. It has become a very popular thing for some persons at least to try to gain influence in the community by representing that the Standard Oil Company, as it is commonly termed, is behind them. I have heard a good deal of that sort of thing as coming from Chicago. I repeat emphatically that the Standard Oil Company in no sense as a trust have \$1 in any such scheme. It is confined by the terms of the agreement and can not engage in any business not directly connected with the oil business. The trust agreement, which I understand is set forth in that book, limits the powers of each of these corporations and the business in which they may engage. I know, or have seen in the newspapers, that certain gentlemen who were trying to get control of the horse railroads of Chicago, represented that they had the Standard Oil Company behind them. That is absolutely false, and there has been a great many such things said, and it gives me pleasure to be able to state in this public manner that all such statements are absolutely and unqualifiedly false.

Q. In that agreement of the Standard Oil Trust, by which they have bound themselves to do a certain business, is the business of natural gas also included?—A. No, sir; I think not.

Q. The piping of natural gas?—A. I think not.

Q. Are any of the branches of the Standard Oil Trust engaged in that business?—A. Not that I know of. And if the members of the committee are willing I wish to ask the privilege of making a statement, which I will endeavor to make very brief.

By Mr. BUCHANAN :

Q. One question first, if you please. Is the National Transit Company one of the members of the combination?—A. Of the Standard Oil Trust; yes, sir.

Q. Was it not stated here to-day by a gentleman of that company that they had engaged in piping for natural gas?—A. That is the point I wanted to correct.

Q. And may it not be the fact that some of these corporations included in this combination may be engaged in pursuits of which you are not advised?—A. I do not think it would be possible.

Q. My question is, whether these subordinate corporations, as you may call them, are engaged as such in any occupation, such as piping natural gas or in supplying manufactured gas to cities without your being aware of the fact?—A. I say I do not think they could be.

Mr. GOWEN. Mr. O'Day testified to that, did he not?

Mr. BUCHANAN. I think he did.

The CHAIRMAN. Mr. Flagler, you may now make any statement you desire to the committee.

The WITNESS. I wish to make a statement in reference to the question asked Mr. O'Day in regard to the right of way granted by the Chicago and Atlantic Railroad Company for the laying of pipe lines to Chicago. I want to explain that, because I know it very much better than Mr. O'Day. That right of way was obtained from four and a half to six years ago; at a time, years before any oil was discovered in Ohio. The Chicago and Atlantic Railroad was not a carrier of oil at all. They had no facilities in Chicago for receiving it. The only way they could transport it from Cleveland was by taking it away round by Leavittsburgh, and so on, by the Baltimore and Ohio to whatever was then the terminus of the Chicago and Atlantic. In other words their geographical position was such that they never were and never have been, until a very recent period, carriers of oil. They sacrificed nothing in giving this right of way.

At that time Mr. H. J. Jewett was the president of the Chicago and Atlantic, and also president of the Erie, and I have forgotten whether of the New York, Pennsylvania and Ohio or not. I think not; but at any rate, years before that a pipe line had been laid between the oil regions of Pennsylvania and Cleveland, and some portions of the distance between the oil region and Cleveland the pipe line had been laid upon lands, the right of way over which was given by what was then the Atlantic and Great Western road, under a verbal permission. At the time I speak of a contract was entered into confirming the pipe line in its possession of that right of way, and a request was made—because it was thought then that possibly the day would come when we would want to build a refinery at Chicago in order to deliver oil to consumers in the far West at a minimum price—the request was made that the Chicago and Atlantic and the New York, Pennsylvania and Ohio should grant the right of way to lay a pipe line along its railroad lines from the intersecting point on its line to Chicago. That was granted, and the condition that was agreed to as a consideration of it was that when that pipe line should be built that then and thereafter the Standard Oil Company, of Cleveland, should give one-third of all the oil it shipped to the West and Southwest to the Chicago and Atlantic, which before that was doing no oil business, the Chicago and Atlantic agreeing to furnish equal facilities with the Lake Shore, which had had a monopoly, if you choose to admit an offensive word, substantially of all the business West.

Now, the Lima oil has been discovered within the past two years. At a very large expense the Standard Oil Company has demonstrated its uselessness as an illuminant. No method, to my knowledge has yet been discovered that can make that oil worth anything at all, except for fuel. It was there, however, and being produced in large quantities. The National Transit Company went into that field and built tanks and local pipe lines from the different wells, but a great percentage, perhaps 90 per cent., of the entire production of the Lima oil is to-day lying on the top of the ground in iron tanks. The problem came as to what to do with it. An iron concern in Chicago, in which I, as an individual, am interested, agreed that they should make a test of that oil as fuel against the Indiana coal. The Chicago and Atlantic Railroad undertook to haul that oil at a low rate of freight in order to see whether it could be delivered in Chicago at a price which would enable it as fuel to compete with coal. It has just about held its own as against Indiana coal. To introduce that oil as a fuel and thus find a market for it, and thus enable manufacturers in the West to find a fuel cheaper than coal, required a cheaper mode of transportation than was possible in tank cars. Then it was we conceived the idea of using this privilege, acquired years before, of laying this pipe line.

Now, the question was asked this morning, would a railroad company give up this large traffic, which was figured up to be a great many thousand barrels a year? The railroads practically gave up nothing. The contract under which this right of way was secured was made several years before. It is very clear to my mind that a pipe line running along the Chicago and Atlantic road from Lima to Chicago and thus being able to supply fuel which will be cheaper than coal by being transported through pipe lines, will tend to build up local manufacturing interests along the line of the road. And in discussing this question with the gentlemen representing the Erie Railroad interest and also with the president of the Chicago and Atlantic, I took that position very properly. There was no occasion to argue the question. It was a legal contract and the National Transit Company had a right to go on and lay pipes. I said to the president of the Chicago and Atlantic Railroad, "You are now doing but a small business in the way of carrying oil and at a rate of freight which hardly pays you for hauling, but still so high that we can not compete with coal in Chicago, a rate at which we can not put oil into Chicago, and make any great market for it." I said to them that the effect of running this pipe line would be that within a few months in every town where manufacturing could be done they would start manufactories, and it would do more for their road than anything else. I only speak of this to explain what seems so strange to you as to why it should give up a valuable traffic and get nothing in return.

By Mr. SMITH:

Q. What did you say the conditions of your contract were between your pipe line and the railroad? Would you give the railroad a certain amount of oil to be shipped over their lines?—A. All refined oil in barrels or tanks.

Q. But I understand that the Lima oil was not susceptible of being refined?—A. That refined oil does not come from Lima at all. The Lima oil can not be refined successfully.

Q. How does the refined oil from Cleveland get to the Atlantic and Pacific? Is not the Lake Shore the nearest and straightest line to Chicago?—A. The difference is not much. Any way it would not come by the Chicago and Atlantic direct from Cleveland by way of the

Cleveland and Columbus to—I have forgotten the exact point—or to Leavittsburgh by the New York, Pennsylvania and Ohio and from Leavittsburgh from some other point still farther west where the intersecting point of the Chicago and Atlantic is, and the probability is that the New York, Pennsylvania and Ohio, if they succeed in obtaining possession of the Chicago and Atlantic, as I understand they hope to do, would rather have the entire haul kept on their leased lines even though the distance is greater.

Q. But the understanding is that you will give them a certain per cent. of the oil for the use of the right of way for your pipe lines.—A. It is more than an understanding; it is an agreement.

Q. Who owns the oil field around about Lima?—A. I do not know; I know who does not own it—we do not.

Q. You are building a pipe line from there to Chicago?—A. Exactly; but we do not own the production, I mean.

Q. Have those people, the producers, any other way of getting it from that district except by that line—the Chicago and Atlantic?—A. Yes; they can ship by the Baltimore and Ohio. They are not tied up there at all.

Q. Won't you be able to ship oil cheaper by the pipe line than by any of the railroads?—A. We think so.

Q. So you expect by that means to get control of that whole oil product to go through your lines?—A. I do not think that is a correct inference at all. It is much fairer to say that we expect, by the instrumentality of this pipe line, to deliver oil to the consumer at the lowest possible figure.

Q. And that same factor will bring the oil to your pipe line?—A. Is there any crime in that?

Q. There is no crime at all; I only want to get you down on record.

By Mr. GOWEN:

Q. That distance is about 200 miles, is it not?—A. I should accept Mr. O'Day's statement; I think that is what he said.

Q. The railroads could haul this oil at 16 cents a barrel and make something out of it?—A. I think the rate has been about 18 cents.

By the CHAIRMAN:

Q. Is there a difference in price, do you know, between the Lima oil and the Pennsylvania oil?—A. An enormous difference. The Lima oil sells at about 15 cents a barrel, and you can not pay even a cheap railroad freight upon it and make anything out of it.

Mr. GOWEN. I offer in evidence now, with the contract of the Standard Oil people, the original trust agreement.

The agreement is as follows:

This agreement, made and entered upon this second day of January, A. D. 1882, by and between all the persons who shall now or may hereafter execute the same as parties thereto.

Witnesseth:—I. It is intended that the parties to this agreement shall embrace three classes, to wit:

1st. All the stockholders and members of the following corporations and limited partnerships, to wit:

Acme Oil Company, New York.

Acme Oil Company, Pennsylvania.

Atlantic Refining Company of Philadelphia.

Bush & Co. (limited).

Camden Consolidated Oil Company.

Elizabethport Acid Works.

Imperial Refining Company (limited).

Charles Pratt & Co.

Paine, Abbett & Co.

Standard Oil Company, Ohio.

Standard Oil Company, Pittsburgh.

Smith's Ferry Oil Transportation Company.

Solar Oil Company (limited).

Sone & Fleming Manufacturing Company (limited).

Also, all the stockholders and members of such other corporations and limited partnerships as may hereafter join in this agreement, at the request of the trustees herein provided for.

2d. The following individuals, to wit:

W. C. Andrews, John D. Archbold, Lide K. Arter, J. A. Bostwick, Benjamin Brewster, D. Bushnell, Thomas C. Bushnell, J. N. Camden, Henry L. Davis, H. M. Flagler, Mrs. H. M. Flagler, John Huntington, H. A. Hutchins, Charles F. G. Heye, A. B. Jennings, Charles Lockhart, A. M. McGregor, William H. Macy, William H. Macy, jr., estate of Josiah Macy, William H. Macy, jr., executor; O. H. Payne, A. J. Pouch, John D. Rockefeller, William Rockefeller, Henry H. Rogers, W. P. Thompson, J. J. Vandergrift, William T. Wardwell, W. G. Warden, Joseph L. Warden, Warden, Frew & Co., Louise C. Wheaton, H. M. Hanna, and George W. Chapin, D. M. Harkness, D. M. Harkness, trustee; S. V. Harkness, O. H. Payne, trustee; Charles Pratt, Horace A. Pratt, C. M. Pratt, Julia H. York, George H. Vilas, M. R. Keith, trustees; George F. Chester.

Also, all such individuals as may hereafter join in the agreement at the request of the trustees herein provided for.

3d. A portion of the stockholders and members of the following corporations and limited partnerships, to wit:

American Lubricating Oil Company.

Baltimore United Oil Company.

Beacon Oil Company.

Bush & Denslow Manufacturing Company.

Central Refining Company of Pittsburgh.

Cheesebrough Manufacturing Company.

Chess Carley Company.

Consolidated Tank Line Company.

Inland Oil Company.

Keystone Refining Company.

Maverick Oil Company.

National Transit Company.

Portland Kerosene Oil Company.

Producers' Consolidated Land and Petroleum Company.

Signal Oil Works (limited).

Thompson & Bedford Company (limited).

Devoe Manufacturing Company.

Eclipse Lubricating Oil Company (limited).

Empire Refining Company (limited).

Franklin Pipe Company (limited).

Galena Oil Works (limited).

Galena Farm Oil Company (limited).

Germania Mining Company.

Vacuum Oil Company.

H. C. Van Tine & Company (limited).

Waters-Pierce Oil Company.

Also, stockholders and members (not being all thereof) of other corporations and limited partnerships who may hereafter join in this agreement at the request of the trustees herein provided for.

II. The parties hereto do covenant and agree to and with each other, each in consideration of the mutual covenants and agreements of the others, as follows:

1st. As soon as practicable a corporation shall be formed in each of the following States, under the laws thereof, to wit: Ohio, New York, Pennsylvania, New Jersey; provided, however, that instead of organizing a new corporation, any existing charter and organization may be used for the purpose when it can advantageously be done.

2d. The purposes and powers of said corporations shall be to mine for, produce, manufacture, refine, and deal in petroleum and all its products, and all the materials used in such businesses, and transact other business collateral thereto. But other purposes and powers shall be embraced in the several charters such as shall seem expedient to the parties procuring the charter, or, if necessary to comply with the law, the powers aforesaid may be restricted and reduced.

3d. At any time hereafter, when it may seem advisable to the trustees herein provided for, similar corporations may be formed in other States and Territories.

4th. Each of said corporations shall be known as the Standard Oil Company of (and here shall follow the name of the State or Territory by virtue of the laws of which said corporation is organized).

5th. The capital stock of each of said corporations shall be fixed at such an amount as may seem necessary and advisable to the parties organizing the same, in view of the purpose to be accomplished.

6th. The shares of stock of each of said corporations shall be issued only for money, property, or assets equal at a fair valuation to the par value of the stock delivered therefor.

7th. All of the property, real and personal, assets and business of each and all of the corporations and limited partnerships mentioned or embraced in class first, shall be transferred to and vested in the said several Standard Oil companies. All of the property, assets, and business in or of each particular State shall be transferred to and vested in the Standard Oil Company of that particular State, and in order to accomplish such purpose, the directors and managers of each and all of the several corporations and limited partnerships mentioned in class first are hereby authorized and directed by the stockholders and members thereof (all of them being parties to this agreement) to sell, assign, transfer, convey, and make over, for the consideration hereinafter mentioned, to the Standard Oil Company or companies of the proper State or States, as soon as said corporations are organized and ready to receive the same, all the property, real and personal, assets and business of said corporations and limited partnerships. Correct schedules of such property, assets, and business shall accompany each transfer.

8th. The individuals embraced in class second of this agreement do, each for himself, agree for the consideration hereinafter mentioned to sell, assign, transfer, convey, and set over all the property, real and personal, assets and business mentioned and embraced in schedules accompanying such sale and transfer to the Standard Oil Company or companies of the proper State or States, as soon as the said corporations are organized and ready to receive the same.

9th. The parties embraced in class third of this agreement do covenant and agree to assign and transfer all of the stock held by them in the corporations or limited partnerships herein named, to the trustees herein provided for, for the consideration and upon the terms hereinafter set forth. It is understood and agreed that the said trustees and their successors may hereafter take the assignment of stocks in the same or similar companies upon the terms herein provided, and that whenever and as often as all the stocks of any corporations or limited partnerships are vested in said trustees, the proper steps may then be taken to have all the moneys, property, real and personal, of such corporation or partnership assigned and conveyed to the Standard Oil Company, of the proper State, on the terms and in the mode herein set forth, in which event the trustees shall receive stocks of the Standard Oil companies, equal to the value of the money, property, and business assigned, to be held in place of the stocks of the company or companies assigning such property.

10th. The consideration for the transfer and conveyance of the money, property, and business aforesaid to each or any of the Standard Oil companies shall be stock of the respective Standard Oil Company to which said transfer or conveyance is made, equal at par value to the appraised value of the money, property, and business so transferred. Said stock shall be delivered to the trustees hereinafter provided for, and their successors, and no stock of any of said companies shall ever be issued except for money, property, or business, equal, at least, to the par value of the stock so issued, nor shall any stock be issued by any of said companies for any purpose, except to the trustees herein provided for, to be held subject to the trusts hereinafter specified. It is understood, however, that this provision is not intended to restrict the purchase, sale, and exchange of property by said Standard Oil companies as fully as they may be authorized to do by their respective charters; provided only that no stock be issued therefor except to said trustees.

11th. The consideration for any stocks delivered to said trustees, as above provided for, as well as for stocks delivered to said trustees by persons mentioned or included in class third of this agreement, shall be the delivery by said trustees to the persons entitled thereto, of trust certificates hereinafter provided for, equal at par value to the par value of the stocks of the said several Standard Oil companies so received by said trustees and equal to the appraised value of the stocks of other companies or partnerships delivered to said trustees.

The said appraised value shall be determined in a manner agreed upon by the parties in interest and said trustees.

It is understood and agreed, however, that the said trustees may, with any trust funds in their hands, in addition to the mode above provided, purchase the bonds and stocks of other companies engaged in business similar or collateral to the business of said Standard Oil companies on such terms and in such mode as they may deem advisable, and shall hold the same for the benefit of the owners of said trust certificates, and may sell, assign, transfer, and pledge such bonds and stocks whenever they may deem it advantageous to said trust so to do.

III. The trusts upon which said stocks shall be held, and the number, powers and duties of said trustees shall be as follows:

1st. The number of trustees shall be nine.

2d. J. D. Rockefeller, O. H. Payne, and William Rockefeller are hereby appointed trustees, to hold their office until the first Wednesday of April, A. D. 1885.

3d. J. A. Bostwick, H. M. Flagler, and W. G. Warden are hereby appointed trustees, to hold their office until the first Wednesday of April, A. D. 1884.

4th. Charles Pratt, Benjamin Brewster, and John Archbold are hereby appointed trustees, to hold their office until the first Wednesday of April, A. D. 1883.

5th. Elections for trustees to succeed those herein appointed shall be held annually, at which election a sufficient number of trustees shall be elected to fill all vacancies occurring either from expiration of the term of the office of trustee or from any other cause. All trustees shall be elected to hold their office for three years, except those elected to fill a vacancy arising from any cause except expiration of term, who shall be elected for the balance of the term of the trustee whose place they are elected to fill. Every trustee shall hold his office until his successor is elected.

6th. Trustees shall be elected by ballot by the owners of trust certificates or their proxies. At all meetings the owners of trust certificates, who may be registered as such on the books of the trustees, may vote in person or by proxy, and shall have one vote for each and every share of trust certificates standing in their names, but no such owner shall be entitled to vote upon any share which has not stood in his name thirty days prior to the day appointed for the election. The transfer books may be closed for thirty days immediately preceding the annual election. A majority of the shares represented at such election shall elect.

7th. The annual meeting of the owners of said trust certificates for the election of trustees, and for other business, shall be held at the office of the trustees, in the city of New York, on the first Wednesday of April of each year, unless the place of meeting be changed by the trustees, and said meeting may be adjourned from day to day until its business is completed. Special meetings of the owners of said trust certificates may be called by a majority of the trustees, at such times and places as they may appoint. It shall also be the duty of the trustees to call a special meeting of holders of trust certificates whenever requested to do so by a petition signed by the holders of ten per cent. in value of such certificates. The business of such special meetings shall be confined to the object specified in the notice given therefor. Notice of the time and place of all meetings of the owners of trust certificates shall be given by personal notice so far as possible, and by public notice in one of the principal newspapers of each State in which a Standard Oil Company exists, at least ten days before such meeting. At any meeting, a majority in value of the holders of trust certificates represented consenting thereto, by-laws may be made, amended, and repealed relative to the mode of the election of trustees, and other business of the holders of trust certificates; provided, however, that said by-laws shall be in conformity with this agreement. By-laws may also be made, amended, and repealed at any meeting, by and with the consent of a majority in value of the holders of trust certificates, which alter this agreement relative to the number, powers, and duties of the trustees, and to other matters tending to the more efficient accomplishment of the objects for which the trust is created; provided only, that the essential intents and purposes of this agreement be not thereby changed.

8th. Whenever a vacancy occurs in the board of trustees, more than sixty days prior to the annual meeting for the election of trustees, it shall be the duty of the remaining trustees to call a meeting of the owners of Standard Oil Trust certificates for the purpose of electing a trustee or trustees to fill the vacancy or vacancies. If any vacancy occurs in the board of trustees, from any cause, within sixty days of the date of the annual meeting for the election of trustees, the vacancy may be filled by a majority of the remaining trustees, or, at their option, may remain vacant until the annual election.

9th. If for any reason at any time a trustee or trustees shall be appointed by any court to fill any vacancy or vacancies in said board of trustees, the trustee or trustees so appointed shall hold his or their respective office or offices only until a successor or successors shall be elected in the manner above provided for.

10th. Whenever any change shall occur in the board of trustees, the legal title to the stock and other property held in trust shall pass to and vest in the successors of said trustees without any formal transfer thereof. But if at any such time formal transfer shall be deemed necessary or advisable, it shall be the duty of the board of trustees to obtain the same, and it shall be the duty of any retiring trustee, or the administrator or executor of any deceased trustee, to make said transfer.

11th. The trustees shall prepare certificates which shall show the interest of each beneficiary in said trust and deliver them to the persons properly entitled thereto. They shall be divided into shares of the par value of \$100 each, and shall be known as the Standard Oil Trust certificates, and shall be issued subject to all the terms and conditions of this agreement. The trustees shall have power to agree upon and direct the form and contents of said certificates and the mode in which they shall be signed, attested, and transferred. The certificates shall contain an express stipulation that the holders thereof shall be bound by the terms of this agreement and by the by-laws herein provided for.

12th. No certificates shall be issued except for stocks and bonds held in trust as herein provided for, and the par value of certificates issued by said trustees shall be

equal to the par value of the stocks of said Standard Oil Company and the appraised value of other bonds and stocks held in trust. The various bonds, stocks, and moneys held under said trust shall be held for all parties in interest jointly, and the trust certificates so issued shall be the evidence of the interest held by the several parties in this trust. No duplicate certificates shall be issued by the trustees, except upon surrender of the original certificate or certificates for cancellation, or upon satisfactory proof of the loss thereof, and in the latter case they shall require a sufficient bond of indemnity.

13th. The stocks of the various Standard Oil companies, held in trust by said trustees, shall not be sold, assigned, or transferred by said trustees, or by the beneficiaries, or by both combined, so long as this trust endures. The stocks and bonds of other corporations held by said trustees may be by them exchanged or sold and the proceeds thereof distributed pro rata to the holders of trust certificates, or said proceeds may be held and re-invested by said trustees for the purposes and uses of the trust: Provided, however, that said trustees may, from time to time, assign such shares of stock of said Standard Oil Company as may be necessary to qualify any person or persons chosen or to be chosen as directors and officers of any of said Standard Oil companies.

14th. It shall be the duty of said trustees to receive and safely to keep all interest and dividends declared and paid upon any of the said bonds, stocks, and moneys held by them in trust, and to distribute all moneys received from such sources or from sales of trust property or otherwise by declaring and paying dividends upon the Standard Trust certificates as funds accumulate which in their judgment are not needed for the use and expenses of said trust. The trustees shall, however, keep separate accounts of receipts from interest and dividends, and of receipts from sales or transfers of trust property, and in making any distribution of trust funds, in which moneys derived from sales or transfers shall be included, shall render the holders of trust certificates a statement showing what amount of the fund distributed has been derived from such sales or transfers. The said trustees may be also authorized and empowered by a vote of a majority in value of holders of trust certificates, whenever stocks or bonds have accumulated in their hands from money purchases thereof, or the stocks or bonds held by them have increased in value, or stock dividends shall have been declared by any of the companies whose stocks are held by said trustees, or whenever, from any such cause, it is deemed advisable so to do, to increase the amount of trust certificates to the extent of such increase or accumulation of values and to divide the same among the persons then owning trust certificates pro rata.

15th. It shall be the duty of said trustees to exercise general supervision over the affairs of said several Standard Oil companies, and, as far as practicable, over the other companies or partnerships, any portion of whose stock is held in said trust. It shall be their duty, as stockholders of said companies, to elect as directors and officers thereof, faithful and competent men. They may elect themselves to such positions when they see fit so to do, and shall endeavor to have the affairs of all of said companies managed and directed in the manner they may deem most conducive to the best interests of the holders of said trust certificates.

16th. All the powers of the trustees may be exercised by a majority of their number. They may appoint from their own number an executive and other committees. A majority of each committee shall exercise all the powers which the trustees may confer upon such committee.

17th. The trustees may employ and pay all such agents and attorneys as they deem necessary in the management of said trust.

18th. Each trustee shall be entitled to a salary for his services not exceeding \$25,000 per annum, except the president of the board, who may be voted a salary not exceeding \$30,000 per annum, which salaries shall be fixed by said board of trustees. All salaries and expenses connected with or growing out of the trust shall be paid by the trustees from the trust fund.

19th. The board of trustees shall have its principal office in the city of New York, unless changed by a vote of the trustees, at which office, or in some place of safe deposit in said city, the bonds and stocks shall be kept. The trustees shall have power to adopt rules and regulations pertaining to the meetings of the board, the election of officers and the management of the trust.

20th. The trustees shall render at each annual meeting a statement of the affairs of the trust. If a termination of the trust be agreed upon, as hereinafter provided, or within a reasonable time prior to its termination by lapse of time, the trustees shall furnish to the holders of trust certificates a true and perfect inventory and appraisal of all stocks and other property held in trust, and a statement of the financial affairs of the various companies whose stocks are held in trust.

21st. This trust shall continue during the lives of the survivors and survivor of the trustees in this agreement named, and for twenty-one years thereafter: Provided, however, that if, at any time after the expiration of ten years, two-thirds of all the holders in value, or if, after the expiration of one year, ninety per cent. of all the

holders in value of trust certificates, shall, at a meeting of holders of trust certificates called for that purpose, vote to terminate this trust at some time to be by them then and there fixed, the said trust shall terminate at the date so fixed. If the holders of trust certificates shall vote to terminate the trust as aforesaid, they may, at the same meeting, or at a subsequent meeting called for that purpose, decide by a vote of two-thirds in value of their number, the mode in which the affairs of the trust shall be wound up, and whether the trust property shall be distributed, or whether it shall be sold, and the values thereof distributed; or whether part, and if so, what part shall be divided and what part shall be sold, and whether such sales shall be public or private.

The trustees, who shall continue to hold their offices for that purpose, shall make the distribution in the mode directed; or, if no mode be agreed upon by two-thirds in value, as aforesaid, the trustees shall make distribution of the trust property according to law. But said distribution, however made, and whether it be of property or values, or of both, shall be just and equitable, and such as to insure to each owner of a trust certificate his due proportion of the trust property, or the value thereof.

22d. If the trust shall be terminated by expiration of the time for which it is created, the distribution of the trust property shall be directed and made in the mode above provided.

23d. This agreement, together with the registry of certificates, books of accounts, and other books and papers connected with the business of said trust, shall be safely kept at the principal office of said trustees.

Whereas in and by an agreement dated January 2, 1882, and known as the Standard trust agreement, the parties thereto did mutually covenant and agree *inter alia* as follows, to wit: That corporations to be known as Standard Oil companies of various States should be formed, and that all of the property, real and personal, assets, and business of each and all of the corporations and limited partnerships mentioned or embraced in Class I of said agreement should be transferred to and vested in the said several Standard Oil companies; that all of the property, assets, and business in or of each particular State, should be transferred to and vested in the Standard Oil Company of that particular State, and the directors and managers of each and all of the several corporations and associations mentioned in Class I were authorized and directed to sell, assign, transfer, and convey, and make over to the Standard Oil Company or companies of the proper State or States, as soon as said corporations were or

ganized and ready to receive the same, all the property, real and personal assets, and business of said corporations or associations; and

Whereas it is not deemed expedient that all of the companies and associations mentioned should transfer their property to the said Standard Oil companies at the present time, and in case of some companies and associations it may never be deemed expedient that the said transfers should be made and said companies and associations go out of existence; and

Whereas it is deemed advisable that a discretionary power should be vested in the trustees as to when such transfer or transfers should take place, if at all. Now, it is hereby mutually agreed between the parties to the said trust agreement, and as supplementary thereto, that the trustees named in the said agreement and their successors shall have the power and authority to decide what companies shall convey their said property as in said agreement contemplated, and when the said sales and transfers shall take place, if at all; and until said trustees shall so decide, each of said companies shall remain in existence and retain its property and business, and the trustees shall hold the stocks thereof in trust as in said agreement provided. In the exercise of said discretion, the trustees shall act by a majority of their number as provided in said trust agreement. All portions of said trust agreement relating to this subject shall be considered so changed as to be in harmony with this supplemental agreement.

In witness whereof the said parties have subscribed this agreement, this 4th day of January, 1882.

The WITNESS. I am advised that I have made a serious mistake in my testimony which I now desire to correct. The Standard Oil Trust owns the stock in whole or in part—I am unable to say which—of one or more companies engaged in the movement of natural gas.

By Mr. GOWEN :

Q. Can you give the names of those companies?—A. I can not.

Q. Who can?—A. I presume Mr. Brewster or Mr. Archbold.

Witness excused.

STANDARD OIL TRUST,  
26 Broadway, New York, May 14, 1883.

DEAR SIR: I desire to comply with the request made of me, when testifying before your committee, that I should furnish the committee with a statement of the persons to whom the certificates of interest in the Standard Oil Trust were issued.

The persons to whom the certificates were issued were those whose names are attached to the trust agreement, a copy of which is in evidence, with the exception only of Keith, Vilas, and Chester, trustees. It is therefore unnecessary to repeat the list, as it is already in evidence. Keith, Vilas, and Chester were trustees for parties

who signed the agreement and for no other persons. As the agreement dissolved that trust no certificates were issued to Keith, Vilas, or Chester, but were issued to the persons for whom they had been trustees, all of whom were parties to said agreement. Among other names to the agreement to whom stock was issued will be found O. H. Payne, trustee; D. M. Harkness, trustee; and H. M. Flagler, trustee. O. H. Payne was trustee for Warden, Frew & Co., D. M. Harkness was trustee for W. L. Harkness, and H. M. Flagler was trustee for Harry H. Flagler. The property for which the certificates were issued was the stock of the various companies named in the trust agreement.

Truly yours,

H. M. FLAGLER.

Mr. HENRY BACON,

*Chairman of Committee on Manufactures.*

### TESTIMONY OF J. D. ARCHBOLD.

J. D. ARCHBOLD, sworn and examined.

By Mr. GOWEN:

Q. Where do you reside?—A. New York City.

Q. What is your age?—A. Thirty-nine.

Q. What is your business?—A. I am in the petroleum business.

Q. In what capacity?—A. I am the president of the Acme Oil Company.

Q. That is one of the companies that is in the Standard Trust?—A. Yes, sir.

Q. Are you connected with any other corporations, associations, or partnerships in the Standard Trust?—A. Yes, sir.

Q. Give us their names.—A. There are two Acme Oil Companies.

Q. Both called the Acme Oil Company?—A. They are different corporations, one of New York and the other of Pennsylvania; I am also president of the Atlas Refining Company of New York, and am director in several different companies. Shall I name them?

Q. Yes; give the names of all the different companies in which you are connected, either as manager, officer, or stockholder?—A. In addition to those I have named, the Bush & Denslow Manufacturing Company, the Empire Refining Company, limited, and the Standard Oil Company of New York.

Q. Any others?—A. I am a director in the National Transit Company.

Q. Any others?—A. I do not recall any others.

Q. When did you first become connected in any manner with the oil trade?—A. In 1864.

Q. You were a young man at that time?—A. Yes, sir; I was about sixteen years old.

Q. In what capacity; what were you then?—A. I was a clerk in an oil-house in the oil region.

Q. A purchasing house?—A. No; a trading house.

Q. Engaged in buying and selling?—A. Yes, sir.

Q. When did you first become connected with the refining business?—A. In 1869.

Q. Where?—A. Titusville, under the name of Porter, Moreland & Co.

Q. A private firm?—A. Yes, sir.

Q. Were you a member of the firm?—A. I was.

Q. Are you a holder of Standard Oil Trust certificates?—A. I am.

Q. To what extent?—A. I prefer, as that is a private matter and not pertinent to the inquiry, to not state.

Q. I think we ought to have this. What is your objection?—A. Well, as it is a purely personal question as to my own property, I do not see what special interest it could be to this committee or to the public.

Q. Do you decline to answer?—A. Well, I prefer not to answer.

Q. Do you decline to answer?—A. Well, I decline to answer; yes, sir.

Q. You do?—A. Yes, sir.

The CHAIRMAN. The question as to whether the committee will require the witness to answer or not must be determined in executive session when there are more members present. At present the matter may remain just as it is.

Q. Are you or were you interested in any way in the stock, bonds, or other certificates of interest which were held by the three trustees, Mr. J. F. Chester, Malcom Keith, and Mr. Vilas?—A. I was interested in the stock of the Acme Oil Company.

Q. Did they hold that?—A. Yes, sir.

Q. Your interest in that was held by them as trustee?—A. Yes, sir.

Q. When the Standard Oil Trust was formed and the paper signed by Messrs. Chester, Keith, and Vilas as trustees representing the amounts of stocks and securities which they held, were certificates of the Standard Oil Trust issued to them directly, or were they issued to the people in whose behalf they held the property which was turned over to the Standard Oil Trust?—A. Well, whether they were first issued to the committee or turned over to the officials of the company direct I can not say.

Q. When I ask you what interest, if any, you had in Standard Oil Trust certificates I, of course, meant to include any which up to the period of distribution had been held by these trustees. You so understood?—A. Yes, sir.

Q. But whatever that may have been it is now in your possession?—A. Yes, sir; it is in my own possession.

Q. When you engaged in business as a youth you could not have been more than fourteen?—A. Well, at the time I first went into the oil business I was in my sixteenth year. I became a partner in a trading house some two years afterwards.

Q. When did you first join or become connected with or interested in any corporation, firm, or association which is now affiliated with the Standard Oil Trust?—A. In 1875.

Q. What amount of capital did you then have?—A. I could not answer.

Q. Do you mean you could not or would not?—A. I can not answer from memory and I do not think I would if I could.

Q. Mr. Archbold, do you know the American Transfer Company, or did you?—A. I know of it.

Q. Were you ever interested in it?—A. I never was.

Q. In any manner?—A. No, sir.

Q. You never held any direct or indirect interest in it?—A. No, sir.

Q. Were you ever a stockholder of the Standard Oil Company of Ohio?—A. I was.

Q. At what time did you become such?—A. In 1875—no; perhaps it was 1876.

Q. Did you become a stockholder in the Standard Oil Company of Ohio prior to the time at which that company acquired possession of the American Transfer Company?—A. I do not know from my own memory when they did acquire the American Transfer Company.

Q. Did you become a stockholder of the Standard Oil Company of Ohio by reason of having transferred to them any property for which you took their certificates; or did you purchase their shares?—A. I sold the shares of the Acme Oil Company finally.

Q. It was in that manner?—A. Yes; and by purchase to a further extent.

Q. The Acme Oil Company was never bodily transferred to the Standard Oil Company of Ohio, was it?—A. No, sir.

Q. Their interest is simply represented by stock, is it not?—A. Yes, sir.

Q. Do you remember the period at which the Tidewater Company, Limited, entered into competition with yourself as a mover of oil?—A. I do.

Q. You remember the fact, do you not?—A. I do.

Q. Were you present in Saratoga at a conference between gentlemen in your interest and gentlemen in the interest of the trunk lines on the subject of rates over the trunk lines in consequence of the opening of this new line?—A. I was not.

Q. Do you know who attended that conference?—A. I never heard of it until I heard you speak of it to-day.

Q. Mr. Flagler testified that you had some knowledge on the question of transportation?—A. I have some such knowledge.

Q. Had you at that time?—A. Undoubtedly.

Q. As representing your refining interests?—A. Yes, sir.

Q. To what net price, less rebates, if any, did the rate for moving petroleum on the trunk lines fall; what is the lowest you can remember?—A. I could not state from memory the figures reached at any period. It was at all times a question of the very best contract which could be made in the transportation of oil.

Q. You mean you made the best contracts you could?—A. I did, sir.

Q. You got the very best terms you could out of the railroads?—A. Yes, sir.

Q. No matter what other people got?—A. I was not attending to business for other people.

Q. But you were at all times willing to do the best you could for yourself?—A. To make the best arrangement I could for the concern to which I was dealing.

Q. Irrespective of any considerations as to whether the obligations of the railroads as common carriers authorized them to do so or not?—A. That was a matter for them to consider and not me.

Q. You did not intend to keep their consciences?—A. I would have had a hard job, I am afraid.

Q. Do you remember, at the time the Tidewater Company came into existence or shortly after, that the rates on oil fell to 10 or 15 cents a barrel?—A. I have no recollection of any such figures as that. It is possible, but I have no memory of it.

Q. How could you ascertain that; how could you revive your recollection?—A. I do not know, I am sure, how I could.

Q. Can you tell us then, by another way possibly, what the highest rate of drawback per barrel you ever received from any of the trunk lines upon the transportation of crude oil from railway to tidewater was?—A. I can not.

Q. You frequently made contracts with the railroads upon such subjects, did you not?—A. We were constantly making them.

Q. Constantly?—A. Yes, sir.

Q. Were those contracts reduced to writing?—A. Very seldom, if ever. I have no recollection of any written contract.

Q. How were those rebates received by you?—A. Well, the contracts were not often made in a shape involving a rebate payment. They usually fixed a net figure that was paid.

Q. But to go back ten or twelve years; rebates were then in existence,

were they not?—A. The rebate system was in common use among the railroads, no doubt. It was my preference always to agree on a net rate that should be paid.

Q. Either by rebate or without?—A. A net fixed rate, that should be paid without any question of rebating.

Q. Did you familiarize yourself with the rates, open to the public at the same time?—A. I had knowledge always of the nominal rates; everybody had; but there was a long period during which everybody who shipped oil knew that the rates on the public schedules were only nominal, and that it was a question of special contract always.

Q. Always?—A. Always.

Q. In which whoever could by any means at all get the lowest rate got it if he could?—A. Undoubtedly.

Q. It was simply a question of commerce and business to have the stuff moved as low as possible irrespective of what other people paid?—A. That was the system which prevailed in all important matters of traffic on the railroads. The oil traffic was no exception. We never suggested any such thing. We were parties to it per force.

Q. You used one railroad against the other constantly, did you not, by way of getting the lowest rate?—A. We undoubtedly, as I have already stated, tried to make the very best arrangement we could at all times.

Q. If you will permit us to understand that making the best arrangements included arguments of persuasion as well as intimidation, I will ask you no further questions about it.—A. We certainly made shipments on the roads which gave us the best terms.

Q. And would trade your business from one to another wherever you could?—A. Undoubtedly. We used the water-ways at times, and also used the canals.

Q. In New York?—A. Yes, sir; our object has always been to reduce rates and cheapen the product and increase its consumption by making the lowest price possible to the consumer.

Q. Always looking out for making money for yourselves?—A. We were not always entirely philanthropic.

Q. And that has resulted in an accumulation of an amount of stock in the Standard Oil Trust which, for reasons of your own, you do not wish to make public?—A. I can hardly see what interest it would be to the public to know it.

Q. Do you know the gentlemen in the oil trade who were owners of refineries who ceased to do business by reason of the low rates you obtained, and which they were not equally successful in obtaining?—A. I think the oil trade has developed as great a share of success as any other phase of commercial life; I think it has had its shares of failures from various causes.

Q. What proportion of that trade is now controlled by companies affiliated with the Standard?—A. About 75 per cent.

Q. Is there not more than that?—A. No; I think not more than that.

Q. Can you name refining establishments in this country that are independent of the Standard Oil Trust—associations, firms, or corporations—that are doing as high as 25 per cent. of the business?—A. I can name firms that do, or at least I can furnish names of firms that are capable of doing more than that.

Q. But that are doing it?—A. Just what their record in actual working is I would not state positively from actual knowledge; I should say about 25 per cent.

Q. Do you not keep in some department of your various corporations

a record of the total amount of business done by all of them?—A. Yes, sir; I suppose such a record is kept.

Q. But do you not know that there is such a record?—A. There is no specific demand for such a record.

Q. But is there not such a record?—A. It would be possible to make up such a record.

Q. That statement would show the total number of barrels handled by your concern?—A. We could make up such a statement.

Q. Which would show the actual proportion of the business done?—A. Yes, sir.

Q. How long would it take you to make such a statement?—A. It would depend upon what period you wished to cover.

Q. The past year?—A. It would take a reasonable time.

Q. Will you send us such a statement?—A. I will try to do so if no opposition is made in any quarter.

Q. If you will agree as a witness to send us such a statement I will not trouble you further.—A. I will do my best to do so.

Q. Name, if you can, any refineries outside of your own that will aggregate or have handled in the past year a business equal to 25 per cent. of the whole.—A. I could not name them from memory; but there are in the aggregate perhaps a thousand independent concerns in this country.

Q. But not doing much business?—A. None of us are doing much business just now; it is a dull period. I think they do their share of the business when there is business to do.

Q. Do you know that your aggregate capacity or aggregate product is nearly 85 per cent.?—A. No, sir; it is nearer 75.

Q. Than 85?—A. Yes, sir.

Q. But have not you or your people an interest in some of these independent refineries?—A. No, sir; with one single exception.

Q. You have an interest in the Tide-water Company?—A. Yes, sir; that is the exception I refer to.

Q. But that is the largest of all?—A. Yes, sir.

Q. You have bought up some minority stock?—A. Yes, sir.

Q. And to that extent you share in their prosperity?—A. Yes, sir.

Q. Now, taking your share of their business and adding it to your own, would not that increase your own estimated percentage?—A. That would increase it perhaps 2 or 3 per cent.

Q. Have you any interest in what is called the Cotton-Seed Oil Trust?—A. I have not.

Q. Or in that business?—A. No, sir.

Q. What interests have you gentlemen in the ownership or management or control of tank cars for carrying oil?—A. We own, through the Standard Oil Company of Ohio, a considerable tank-car service.

Q. What is it called?—A. The Union Tank Line.

Q. That is, a car line which, run in the name of the Union Tank Line, is owned by the Standard Oil Company of Ohio?—A. Yes, sir.

Q. Will you look at this paper and see if this is an official railroad paper showing the numbers and capacity of the different oil-tank cars that are in the trade—your own line as well as others?

(Mr. Gowen here handed to the witness a paper entitled "Capacity of oil-tank cars.")

A. It is certainly what purports to be. I have no knowledge of it. I have never seen the paper before.

Q. You know that such papers are issued?—A. I know such are issued; yes, sir.

Q. State whether, as a business man engaged in the oil trade, you do

not know it to be an official statement?—A. I have no knowledge of its being official.

Q. It is signed by the various officers, is it not?—A. It appears to be so.

Q. Is it not signed by somebody representing your line?—A. No, sir; it seems to emanate entirely from a railroad source. There are no signatures of tank-line people attached to it.

Q. State whether or not in transacting the business of shipping oil by tank cars, whether crude or refined, the statement of the railroad companies as to the capacity of those cars are not usually accepted as correct.—A. They are accepted schedules undoubtedly in the hands of the various shippers.

Q. Do you not believe that this is one of them?—A. I have no knowledge of it. It appears to be.

The CHAIRMAN. Is there such a circular issued by your Union Tank Line?

The WITNESS. They issue their own schedules.

The CHAIRMAN. Such a schedule as that?

The WITNESS. Yes, sir.

The CHAIRMAN. But that is not one?

The WITNESS. No, sir.

By Mr. GOWEN:

Q. Where is the headquarters of the Union Trunk Line?—A. It has offices both in Cleveland and New York.

Q. Will you send us one of the statements issued by your own line?—A. I will endeavor to procure it.

Q. You can procure it, can't you?—A. I should think I could.

The CHAIRMAN. I think there should be entire frankness about it. If that is important I think the witness ought to furnish it.

The WITNESS. If the committee deems it important I shall get it for them. I am not connected with any of those companies, but I think I can furnish it.

By Mr. GOWEN:

Q. Will you look at the middle of that page and see the names of these other companies. The Continental Company; have you people any interest in that?—A. No, sir.

Q. Kirk Brothers?—A. Not that I know of.

Q. Schofield?—A. No, sir.

Q. Or any of those small concerns?—A. No, sir.

Q. To whom does the Green Line belong?—A. To the Pennsylvania road.

Q. Have you any charge of, or supervision over, or knowledge of, the question of sale and distribution of refined oil in the United States?—A. I have some knowledge. I have no direct supervision.

Q. Is there not a department upon that subject among your interests and connected with them?—A. There are gentlemen who are especially charged with the domestic trade distribution; yes, sir.

Q. State whether the United States, or the greater portion of the United States, is not divided into districts for the purpose of managing and controlling that business?—A. The business is managed by different corporations in the different sections; yes, sir.

Q. Can you tell us how that is divided?

The WITNESS. Can I tell you the names of the different corporations, do you mean?

Q. Yes, as nearly as you can, and the geographical divisions in that connection.—A. I would not desire to permit the explanation to be un-

derstood as saying that that business is done by these corporations in these various localities to the exclusion of others.

Q. I just want to know how you do?—A. The domestic trade business is done on the Atlantic sea-board by the Maverick Oil Company, of Boston, the Portland Kerosene Oil Company, of Portland, Me., and by half a dozen different concerns in New York; shall I undertake to name them?

Q. As nearly as you can.—A. The Standard Oil Company, of New York; the Empire Refining Company, limited, of New York; the Bush & Denslow Manufacturing Company, limited, of New York; J. F. Gregory, of New York; the Sone and Fleming Manufacturing Company, of New York. That is all I can think of in New York.

Q. What is the territorial extent of what you call the sea-board district?—A. Extending south; do you want me to go on with the list?

Q. I do, if you have not finished.—A. The Baltimore United Oil Company, of Baltimore; the Standard Oil Company, of Kentucky; the Waters-Pearce Oil Company, of Saint Louis; and the Consolidated Tank-Line Company, of Cincinnati; the Standard Oil Company, of Iowa; the P. C. Hanford Oil Company, of Chicago. I believe those are the important divisions.

Q. Now, how far west does the domestic sea-board business extend under that territorial designation?—A. Well, it would extend to what is in the interior from the sea-board reached most advantageously as to cost from the sea-board.

Q. From the sea-board?—A. Yes; as distinguished from a distributing interior point.

Q. We will take it with reference to certain boundaries to the Mississippi River.—A. There the Waters-Pearce Oil Company, of Saint Louis, controls.

Q. And on the south to the Gulf of Mexico?—A. Yes, sir; but I have later covered not only the Atlantic sea-board but the interior companies as well.

Q. I was afraid of that. Just give us what territory is embraced in your designation of Atlantic sea-board. That becomes, as it were, a department or geographical district?—A. Yes, sir; and those districts are divided up geographically on the score of economy and transportation.

Q. How far west does the Atlantic sea-board department extend?—A. I could not undertake to outline any department with which I have not personal contact.

Q. Who has personal supervision or control over that department?—A. I should say Colonel Thompson would be as competent as any one to answer about that.

Q. Where does he live?—A. In New York.

Q. You call that the Atlantic sea-board district, or do you call it a department?—A. Section, if you please.

Q. If you please, I want to know what you call it.—A. We have no designating title for it.

Q. In the South—the Gulf States—what do you designate them?—A. We do not divide the country into designated sections. The business is done by these various corporations covering the sections in the way I have described, in the way it can be most economically done as to transportation.

Q. Who or what companies supply the districts west of the Mississippi River?—A. The Standard Oil Company, of Iowa, and the Consolidated Tank Line Company.

Q. And what companies supply the Gulf States?—A. The Waters-Pearce Oil Company.

Q. Exclusively?—A. Yes.

Q. I mean with reference to your business?—A. Yes.

Q. Do you know the Chess Carley Company?—A. It is now out of existence and has been for some time.

Q. For how long?—A. I should say for a year.

Q. Who acquired that company?—A. The Standard Oil Company, of Kentucky.

Q. By purchase?—A. Yes, sir; by purchasing the remaining individual interest which had been held.

Q. And which is now owned by the Standard Oil Company, of Kentucky?—A. Yes, sir.

Q. Prior to their acquisition of the entire interest and obliteration of the old firm did the Standard Oil Company, of Kentucky, have an interest in the business of Chess Carley Company?—A. The Standard Oil Company, of Kentucky, was formed to succeed to the business. We formerly, through trustee, owned an interest in the business firm of Chess Carley Company.

Q. To what extent?—A. I think one-half.

Q. For how many years?—A. I could not state.

Q. Five or six?—A. Yes, sir.

Q. Or more?—A. I should say that long.

Q. At least?—A. Yes, sir.

Q. Who supplies the Pacific coast?—A. The Standard Oil Company, of Iowa.

Q. Are there any refineries in existence on the Pacific coast?—A. Yes, sir; there are a number of refineries there built for the purpose of refining California oil.

Q. Where is that oil obtained?—In southern California.

Q. How is it brought to market, by railroads or pipe lines?—A. By pipe line to the railroad.

Q. Have you any interest in any of them?—A. No, sir.

Q. That is an independent interest?—A. Yes, sir.

Q. What is the amount of production?—A. Four hundred barrels a day.

Q. It is small?—A. Yes, sir.

Q. What is the production of the Maxburgh oil field in Ohio?—A. The present production I think is 600 or 700 barrels a day.

Q. What is the present production of the Lima field?—A. About 17,000 barrels a day.

Q. Do you supply tankage for that?—A. Yes, sir.

Q. And hold it above ground?—A. Yes, sir.

Q. Are they flowing or pumping wells?—A. Many of them flow, some of them pump.

The committee then, at 5.45 p. m., took a recess until 8 o'clock p. m.

#### EVENING SESSION.

The committee re-assembled at 8 o'clock p. m.

By Mr. GOWEN:

Q. Mr. Archbold, I asked you this afternoon whether you remembered a meeting with officers or agents of the trunk lines upon the question of fixing rates of freight after the Tide-Water Pipe Line Company had started, and I located the place at Saratoga. Do you know of any

meeting of that kind having been held any place else?—A. I was never present at any such meeting, and have no definite knowledge of any such meeting.

Q. Have you any indefinite knowledge?—A. No, sir.

Q. For how many years had you charge of, or were you connected with, the question of arranging freights with the railroads?—A. Ever since my relation with the business.

Q. Whom did you meet on those subjects?—A. Usually the different freight agents of the different roads.

Q. Do you remember any meeting at Niagara Falls upon that subject at any time?—A. I never was present at any meeting at Niagara Falls.

Q. Now, am I to accept your answer made before dinner that you can not now recall any particular rate of freight or drawback which you had, as true?—A. No, sir; I would not undertake to state from memory the record of any rate at any time.

Q. You do not know how it was, then, \$10 or 10 cents a barrel at any one time?—A. That is a very wide range.

Q. Yes; because I think it takes a very wide range to bring you to any knowledge of anything you do not want to answer.—A. I shall not testify to anything I do not know.

Q. Can you remember whether it was \$10 or 10 cents at any time?—A. I have no recollection of either of those rates.

Q. Have you any recollection of any rate whatever that you ever paid in your life?—A. At a given period?

Q. Any period.—A. Yes, sir; I have.

Q. Name us any one.—A. The rate now prevailing from New York to the oil section—the Bradford section—is 45 cents per barrel, and from the lower country 55 cents to New York.

Q. How long has that been the rate?—A. For several years.

Q. How many?—A. I should say four or five years.

Q. Is that the railroad rate?—A. It was.

Q. Is it also your pipe-line rate?—A. It is.

Q. You have the same rate upon your pipe line that they have upon the railroad?—A. Yes, sir.

Q. In addition to that rate upon your pipe line, which is identical with the railroads, you also received upon your local pipeage 20 cents a barrel?—A. Yes, sir.

Q. Then you received from the lower region to New York upon your pipe line 75 cents a barrel, and the railroads received 55 cents?—A. Yes, sir.

Q. And from the upper region you received 65 cents and the railroads 45 cents?—A. Well, the local service is a distinct feature. The service for the so-called through lines is the same, 45 and 50 cents. The 20 cents is distinct. The railroads have no part in that.

Q. You received that?—A. The pipe lines do.

Q. As well as upon what you shipped, because they must rely upon you for getting their oil at the initial point of their railroad. Is not that so?—A. Yes, sir.

Q. Now, do you remember the period at which the Empire Transportation Company was the carrier of oil upon the Pennsylvania lines?—A. Yes, sir.

Q. State whether or not your company or your interests did not object to them as carriers by reason of the fact that they also engaged in refining?—A. We objected to their going into the refining business on the ground that as a common carrier they had no right to do so. They had no right to be competitors with their shippers and manufacturers.

Q. What difference did that make to you?—A. It made this difference, that it was fair to presume that if they were themselves also manufacturers their facilities would be first used by themselves and to our exclusion.

Q. Did you think that was an injury to you?—A. We did.

Q. In what respect?—A. In respect to the general prejudice of our business and its proper conduct.

Q. How would they have interfered with your business?—A. By the use of their facilities for their own refineries to our exclusion.

Q. In other words, you thought that they being interested on both sides of the question, whereas you were only interested on one, they would use their interests as transporters to benefit themselves as refiners to your injury as competitors?—A. Yes, sir.

Q. In consequence of that you united with the Pennsylvania Railroad, or facilitated the Pennsylvania Railroad, in acquiring the possession of their property, did you not?—A. We were a party to the general negotiation in respect to the refining feature of it; yes, sir.

Q. You thought at that time you had as manufacturers a just right to complain of any common carrier upon whom you were dependent for your supply of oil engaging as a refiner in antagonism to yourselves?—A. Yes, sir.

Q. Now the boot is on the other leg, and you are the carrier of 75 per cent. of oil, and yet you are engaged in active competition as a refiner with the people who can only get oil through your line or over the railroad?—A. There is no person in the business but who can get oil aside from our lines.

Q. How?—A. By the railroads.

Q. But at the time the Empire Line was in business as a carrier of oil there were other railroads over which you could have had oil, were there not?—A. The Empire Line employed all the equipment of the Pennsylvania road.

Q. Any of the New York, Erie, and Pennsylvania Central?—A. No, sir.

Q. Any of the Baltimore and Ohio?—A. No, sir.

Q. Any of the Atlantic and Great Western?—A. No, sir. All these lines, besides the Pennsylvania, did not have sufficient equipment to do the business.

Q. Now, at the time you were dependent solely upon the railroads for your transportation, it was important for you to have as low a rate as possible upon your oil, was it not?—A. Yes, sir.

Q. That you considered a fair business operation?—A. Yes, sir.

Q. That was the main point, was it not, in your endeavor in dealing with railroads to get the lowest possible rate?—A. It was.

Q. Now that you are engaged as a transporter of oil yourself by a pipe line, it becomes your interest, does it not, to maintain a high rate upon the railroad?—A. It becomes our interest to maintain a fair rate, a reasonable rate, and there has only been a reasonable rate for many years past.

Q. But you were quite willing, when you could get it, to take a rate which was unreasonable in itself?—A. The method of the pipe line is an improvement for carrying the oil to get the rate on transportation on oil at a normal point, at which they have stood now for some time.

Q. State whether or not your company has not an agreement with the Pennsylvania Company by which you guarantee to that company a fixed proportion of the business of the oil trade?—A. We have such an agreement; yes, sir.

Q. Can you tell us what that proportion is?—A. I can; yes.

Q. What?—A. Twenty-six per cent.

Q. Since that agreement was made the rates of oil upon your pipe line and upon the Pennsylvania Railroad have been identical, have they not?—A. I think they have.

Q. There is now no earthly reason whatever to have any competition between your line and the railroad in consequence of the fact that you have an agreement that divides the business on a pro rata or proportion?—A. I do not see any reason.

Q. In other words, under your contract with the Pennsylvania Railroad which guarantees to them 26 per cent. of the oil, if they should attempt to compete with you and reduce the price, they would not, under your agreement, be entitled to any more than 26 per cent. of the business?—A. No, sir.

Q. Therefore every reduction of price that they would make, so long as they maintained the agreement with you, would be an injury to their treasury by taking that much money out of it?—A. I should think it would.

Q. They have therefore now no longer, assuming the maintenance of the agreement of which you have spoken, any inducement to decrease rates for the purpose of increasing their business?—A. They have not.

Q. Now, that being the case, is it not greatly to your advantage as a transporter of oil through the pipes, that the rates of transportation by railroad and pipe line, assuming that they are to be identical, should not sink to a low point?—A. As I have before stated, I think the rates are at a reasonable point, and a point below which the railroads have no incentive to cut them for an increase of their traffic. I believe the Pennsylvania Railroad Company has, as I am informed, at different times during the past two or three years, taken the ground that the traffic, even on this basis, was not a profitable one to them; one that they did not care to have.

Q. But do you not know that there have been times when the Pennsylvania Railroad, instead of getting 45 and 55 cents respectively for the transportation of crude oil to tide-water, have received as low as 15 cents a barrel?—A. I do not know of any freight as low as that. There may have been short periods of active strife when the rates were reduced below the present figure for a very short period.

Q. What is the lowest rate that you can recall to your recollection as having been paid by you for the transportation of crude to tide water?—A. I have no recollection of a rate much lower than the present at any time.

Q. Have you any recollection of any lower rate?—A. Not for any period.

Q. For a week or a month?—A. I do not recall that.

Q. Don't you know as a fact that when the Tide-water Company opened its line as a competitor to you, that the railroad put the rates down to 15 cents a barrel?—A. I do not.

Q. You think not?—A. I think not.

Q. Now, the system of carrying oil by pipe line is, as Mr. Flagler has testified, with reference to the Lima pipe, a very much cheaper way of moving it, so far as cost is concerned, than a railroad, is it not?—A. Yes, sir.

Q. I do not know whether you know, but I will ask you, whether you do not know that the lowest rate of cost which a company of the size of the Pennsylvania shows as the cost of moving freight, is about four mills a ton a mile. Do you know that?—A. I know very generally, but I am not a student.

Q. You know that fact?—A. Generally.

Q. What is the distance from the lower field to New York over which this rate of 55 cents on the railroad exists?—A. I think about 500 miles.

Q. Four mills a ton a mile on 500 miles would be \$2, would it not?—A. I think it would.

Q. In the trade do you not count roughly seven barrels of crude oil to the ton?—A. I think six we figure.

Q. Six for a gross ton?—A. Seven for a gross ton. I do not think railroads carry freight by the gross ton.

Q. But their estimate per ton per mile is made up on gross tons; most of the railroads do which carry heavy freight; I do not know whether the Pennsylvania does or not. But assuming it to be the gross ton, seven barrels for \$2 would be 28 and a fraction cents per barrel?—A. Yes, sir.

Q. That would be, therefore, the cost under the best circumstances of a railroad company moving oil?—A. That would be the cost of hauling the cars. They would have to haul the cars there and back again the same distance.

Q. That is included in the cost according to all railroads. They simply divide the amount of money they have spent out in maintaining their business by the number of tons they have handled. That amount of money includes the service of pulling the cars back?—A. You know best about that.

Q. Don't you know it?—A. I do not. I do not know what the methods are of figuring the cost.

Q. Assuming 28 and a fraction cents a barrel as the net cost of moving oil 500 miles, what do you assume to be the net cost of moving it by pipe line 500 miles?—A. I am not prepared to answer that question. I do not regard the business as having come to a point to give an intelligent answer to that question.

Q. You have been engaged in that business many years?—A. Yes, sir.

Q. Do you mean to say you have no data by which you can ascertain the cost of moving that by your pipe line?—A. I mean to say, the business is one of undetermined hazard. We have not come to know in the life of the business what the actual cost is.

Q. Don't you make up yearly statements which show the amount of money you have invested in that plant, the pipe line; the amount you have paid out annually for its operation, and the total number of barrels that have passed through it?—A. No doubt we do make up at stated intervals the operating cost. It is easily arrived at. The oil field is constantly changing, and that which is an important factor to-day may in a few weeks from now, if you please, prove to be an abandoned field, and the expense as a whole in attempting any comprehensive system of pipe lines in the handling of this oil is one which is yet undetermined.

Q. But you have had at least six or seven years' experience in that business?—A. Yes, sir.

Q. The fields have not been abandoned within that time, have they?—A. Parts of them have. We have spent in one year several hundred thousands of dollars, and within that year it was an abandoned investment.

Q. What do you estimate the cost per mile of a 6-inch pipe laid under ground?—A. Perhaps \$5,500 or \$6,000.

Q. Is it as much as that at the present price?—A. I don't know what the present price of 6-inch pipe is. I think it is 85 or 90 cents a foot,

besides the laying, rights of way, machinery, tankage, and all the equipment.

Q. Six-inch pipe is not 90 cents a foot at present?—A. I do not think it is far from it.

Q. That would be about \$4,700 a mile?—A. For the bare pipe.

Q. Six or eight hundred dollars will lay it down easily, will it not?—A. I suppose so; but there is your machinery, tankage, equipment, and right of way.

Q. How much did you say?—A. Sixty-five hundred dollars a mile.

Q. Now, then, your pipe line has already lasted seven years?—A. The through trunk pipes have.

Q. And your local lines in the oil region, some have been in existence twenty years?—A. Some parts of them have.

Q. Even if a pipe line were only to last ten years, it would follow, therefore, that 10 per cent. wiped off every year for depreciation would restore your capital, would it not?—A. I should say so.

Q. Don't you think it is very safe to assume ten years as a reasonable life of the business in the pipe line?—A. I should say ten years was a very full figure to fix.

Q. You have already had seven years?—A. Seven years; yes.

Q. And you have stored in the Bradford region now, or had at the end of the last year, a surplus product that was greater than one year's whole product?—A. We are facing to-day a very rapid exhaustion in the Bradford field, an exhaustion that means the rendering of that vast section in connection with that field of a very questionable value.

Q. If 10 per cent. per annum for the last twenty years had been taken off for depreciation it would have destroyed the production of local pipage in the oil region?—A. I do not think so.

Q. Five per cent. in twenty years will return the capital?—A. There has been no capital for twenty years since the production of the Bradford field.

Q. You have had over twenty years in the lower field?—A. Not in the pipe service.

Q. How long in the pipe service?—A. Not in any comprehensive way.

Q. State for how long.—A. Have I?

Q. No. How long has this company been in, the United Pipe Line?—A. I should say since 1873 or 1874.

Q. That is fourteen years already?—A. Yes, sir.

Q. Don't you consider the experience of fourteen years in that and seven years in your pipe line has enabled you to ascertain what sum should be wiped off of your capital account every year for depreciation in order to restore your capital by the time the business was done?—

A. Our early relation to the business was entered into at that time. The field in which it entered is practically exhausted, and that investment is substantially without value to-day. The large investment in that earlier relation to the business has been a constantly changing scene in relation to the pipe line in the oil region.

Q. Six thousand dollars a mile for 500 miles is only \$3,000,000?—A. Yes, sir; that is, for one line.

Q. And each line of that kind, if run to its fair and full capacity, would handle 10,000,000 of barrels a year, would it not?—A. I do not think as much as that.

Q. According to Mr. O'Day's testimony I should think it would do more than that if it were worked to its capacity?—A. It would not.

Q. Do you mean to say through one of your lines to New York you can not put 10,000,000 of barrels a year?—A. No, sir.

Q. How much can you put?—A. I should say with one 6-inch line, 6,000,000 or 7,000,000 of barrels would be a large estimate.

Q. Well, take it at your lowest figure, 6,000,000 of barrels a year. That is on an investment of \$3,000,000. Now, if that only lasted ten years and you threw off 10 per cent of the capital every year, it would be \$300,000. It would only take 5 cents a barrel to restore your capital at the end of ten years, would it not?—A. You are proceeding on a basis that is entirely unsafe and unjustified by the experience of the business. There are other collateral features that enter into the question that are of very great importance, and must be considered with it.

Q. What other collateral questions can there be which have any influence upon a mere arithmetical calculation to find out how many cents a barrel on a given investment will restore your business in ten years?—

A. The equipment necessary to do the business, the tankage, and the machinery involved in it are necessary collateral features.

Q. How can the tankage in the oil region, for which you receive a separate compensation, and which is in no way connected with the through transportation of oil on the main line, affect your estimate of the question when you come to deal with the main line as a transporter? You get 20 cents a barrel for your local pipage?—A. Yes, sir.

Q. And in addition to 20 cents a barrel for local pipage you get a certain sum per month for storage in the tanks?—A. Yes, sir.

Q. Now, leaving out these local tanks and pipe lines, must you not admit that on a business of 6,000,000 barrels of oil a year on a pipe line which cost \$3,000,000 5 cents per barrel will restore your capital at the end of ten years?—A. If you can run the line steadily, and without extending its connection in order to reach supply. That you can not do without bringing into play the best system of tankage and reserved stock. This whole line of machinery is necessary to the transaction of the business.

Q. Now, we will leave the main line and go into the local region and see if there is any risk in the local. I want to find out whether there is any such risk to enter into the calculation of the through lines. Now, you receive 20 cents a barrel for transportation over your local lines?—A. Yes, sir.

Q. What rate do you receive for storage?—A. The present rate is 25 cents a barrel a day; about 8 cents and a fraction per barrel a year.

Q. What do you mean by 25 cents a day?—A. On a thousand barrels of oil a day.

Q. That would be, counting Sundays, about 8 cents a barrel?—A. Yes, sir.

Q. You collect for Sundays?—A. Yes, sir.

Q. Now, then, a 30,000 barrel tank cost you about \$7,500?—A. Yes, sir; now—earlier in the history of the business it cost more.

Q. If you have 30,000 barrels of oil at 8 cents a barrel stored in a tank for a year, your revenue from that is \$2,400?—A. Yes, sir.

Q. On an investment of \$7,500?—A. Less whatever the loss may be in the depreciation of the oil in quantity.

Q. By evaporation?—A. Yes, sir.

Q. There is a percentage allowed for that that is known and fixed; what is it?—A. There is no percentage allowed for that.

Q. When you give a man a certificate for a thousand barrels put into your line, and he has paid storage on it how many barrels do you give him?—A. We give him the same amount.

Q. And he pays on that amount?—A. Yes, sir.

Q. No matter what the depreciation may be you get your full storage payment, do you not?—A. Yes, sir; but we must make good the depreciation.

Q. What is that?—A. It has amounted to a vast sum.

Q. What is it per barrel?—A. I can not state how much it is per barrel. We have made it good at stated intervals on hundreds of thousands of barrels of oil.

Q. Because your business has amounted to hundreds of millions of barrels?—A. Yes, sir.

Q. Can you tell me how much it has been per cent. per annum?—A. I can not answer the question.

Q. What was the capital invested in the United Pipe Lines, leaving out the main lines of pipe?—A. Do you mean capital stock?

Q. No; I mean the actual money.—A. No, sir.

Q. What was the capital stock then?—A. Five millions of dollars.

Q. How many miles of pipe does that represent?—A. That I can not answer.

Q. Don't you know that?—A. No, sir; I do not.

Q. Surely you know that. Don't you know how many miles of local pipe you have?—A. I do not.

Q. Have you 500?—A. I should think very much more than that.

Q. Have you 700?—A. I should think a great deal more than that; several thousands, probably; but I can not answer the question—several thousands of miles.

Q. What is the largest amount per annum that has passed through your united pipe lines; how many millions of barrels?—A. I think about 22,000,000.

Q. Now, one other question. Does this capitalization of \$5,000,000 cover investments in tanks as well as the tanks belonging to the United Pipe Line?—A. The tanks belong to the system proper, but the great body of storage tankage is not owned by the pipe line.

Q. Who owns that?—A. The National Transit Company; and, as you have already been informed, the United Pipe Lines.

Q. I want to know whether this capitalization of \$5,000,000 covered the investment in the tanks as well as in the local pipes?—A. No, sir.

Q. Now, if you take 20,000,000 barrels a year through a system of pipes, the capitalization of which is but \$5,000,000, and receive 20 cents a barrel for that pipe, you are getting 80 per cent. of your capital in one year?—A. Five millions of dollars don't represent the cost or the valuation. That was the limit at which the capital of such a corporation could go under the laws of the State of Pennsylvania. It was found to be utterly inadequate to the business, and we were perforce compelled to find a larger field for it, under a charter which enabled larger capital.

Q. That is the National Transit Company?—A. Yes, sir; and the National Pipe Line as a whole became part of the National Transit Line under its organization. Five millions of dollars was utterly inadequate to the needs of the business.

Q. How much represented the cost of the plant?—A. I say it was all in plant.

Q. Have you any statistics that you can get which will give us the exact cost of the United Pipe Lines up to the time they were turned over to the National Transit Company?—A. No; I have not.

Q. Who has them?—A. I can not say.

Q. Now, to go to another subject. I asked Mr. Flagler whether he would send us a list of the names and amounts, and the names of the

persons and the amounts issued of trust certificates of the Standard Oil Trust.

The CHAIRMAN. Are you quite sure that was the request? I want to be right about it. My recollection is you asked only for the names.

Mr. GOWEN. Did I?

The CHAIRMAN. Yes, sir.

Mr. GOWEN. I intended to ask for the amounts. (To the witness.) are you one of the trustees?

The WITNESS. Yes, sir.

Q. Were you from the beginning?—A. Yes, sir.

Q. Will you give us or get for us a list of the names and amounts held by each of the certificates of trust of the Standard Oil Trust?—

A. I will not.

Q. You will not?—A. No, sir.

Q. Why?—A. Because I will not give it to you.

Q. Why?—A. Because I don't think you have any right to it.

Q. Will you give it to the committee?—A. I shall hear first from the committee as to whether they want it.

Q. And if they do want it?—A. It will be time enough to answer at the time they decide whether they do or not.

Mr. CHOATE. Do you mean the amounts that were issued to the various companies that were brought in, or the individual holders?

Mr. GOWEN. The individuals who received it, including in that the names and amounts of the individuals that were embraced in the trust, the amounts held by the three trustees, Mr. Vilas and the other two gentlemen. (To the witness.) Will you give us that?

The CHAIRMAN. I think we have got to the same point we had before. The witness again expresses his unwillingness to do it, and puts himself in a position where the committee will have to decide.

Mr. GOWEN. I am willing to yield to that.

The CHAIRMAN. He states that it is a personal matter.

Q. Will you give us this information as to what proportion of the ownership of each of the individual corporations, trusts, and associations that were embraced in this Standard Trust is held by the Standard Trust, and what proportion of ownership is held by others? For example, take the Acme Oil Company for one. What is its capital?—

A. Three hundred thousand dollars.

Q. What proportion of that capital is owned by the Standard Trust?—

A. It is all in the Standard Trust.

Q. Then that would not be an illustration. Do you know of any company in which the Standard Trust only has a proportionate interest?—

A. Yes, sir; there are a number of them set forth in the testimony which shows the proportion of each.

Q. A portion of the stockholders and members of the following corporations. Is there contained in that book a list which will show just what proportion of each of those companies the Standard Trust has, and what proportion is outstanding to other people?

Mr. CHOATE. That is in that.

Mr. GOWEN. Can I use that?

Mr. CHOATE. Yes, sir.

Q. In the agreement for the Standard Oil Trust there are three lists of associations or individuals or corporations, one of which says, "all the stockholders and members of the following corporations." Am I to understand by that that all the entire stock is held by the Standard Trust?—A. I believe so.

Q. Do you know it?—A. I have every reason to say so.

Q. The second is "the following individuals to wit, W. C. Andrews, John D. Archbold," and going down with forty or fifty. All their interest went into the Standard Oil Trust, and they received certificates for it?—A. Yes, sir.

Q. The next is "a portion of the stockholders and members of the following corporations and limited partnerships, to wit," beginning with the American Lubricating Oil Company, and running down to the Waters-Pierce Oil Company?—A. Yes, sir.

Q. Then do I understand that in those three lists there is stock outstanding in other people and not owned by the Standard Trust?—A. Changes may have occurred since; but this list is accurate.

Q. You have a pipe line to Buffalo that is laid along the line of the Erie Railroad, have you not?—A. I think it is not laid along the line of the Erie.

Q. Some portions of it are?—A. It may possibly cross the Erie road.

Q. It is not laid on the right of way?—A. No, sir; I think not.

Q. Do you know?—A. I do not think it is.

Q. Have you sufficient knowledge to answer the question?—A. I should say it was not.

Q. Now is your pipe line to New York laid upon the right of way of any railroad?—A. It touches at times the Erie road, and crosses the Erie road.

Q. Over what length?—A. A very fractional part.

Q. Does it not go 50 or 100 miles?—A. No, sir.

Q. How much do you suppose?—A. Not 10 miles altogether.

Q. Did you acquire the right to lay it by contract with the railroad company?—A. By an understanding with them.

Q. Did you pay anything for that to them?—A. No, sir.

Q. Nothing?—A. Nothing.

By Mr. SMITH:

Q. Is the Standard Oil Trust interested in any steamship or ship lines?—A. No, sir.

Q. Did the Standard Oil Trust have a contract with the Clipper Ship Lines, shipping oil around Cape Horn to the Pacific States?—A. No, sir; not that I know of.

Q. You are sure you do not know?—A. No, sir; I do not know. I never heard of it.

Q. Do you transport oil through your pipe as common carriers?—A. Yes, sir.

Q. Do the common carriers in Pennsylvania pay a tax to the State?—A. They do.

Q. On what?—A. On their earnings; on their dividends.

Q. On their gross earnings?—A. No, sir; I think it is on their dividends.

Q. Let us take the Pennsylvania Railway. How do they pay taxes?—A. I do not know; I do not run the Pennsylvania Railroad.

Q. They are common carriers and they pay a tax?—A. I have no doubt they do.

Q. Is it not well known in Pennsylvania that the railroad companies pay almost all the State taxes?—A. I do not know of any such knowledge.

Q. Have you ever been a resident of Pennsylvania?—A. Yes, sir; and I paid my share of the taxes when I was there. [Laughter.]

Q. Do you pay any taxes as other common carriers?—A. We certainly do.

Q. Then you might state to this committee on what you pay taxes.—A. We pay taxes on the dividends of the company.

Q. On the dividends?—A. Yes, sir; and on the property, real and personal, the same as any other corporation under the corporation tax laws of the State.

Q. Does not the Pennsylvania Railroad pay taxes on the amount of tonnage it conveys?—A. I do not know.

Q. Before you entered into that pipe line system—when I say “you” I mean the Standard Oil Trust, or its allies—you conveyed oil in tank cars, did you not?—A. Yes, sir.

Q. Were you the owners of those tank cars?—A. We were, to an extent.

Q. What arrangements had you with the Pennsylvania Railroad Company and its allies to transport those cars over their lines?—A. I do not think we ever run our cars over the Pennsylvania Road.

Q. Your tank cars?—A. Our tank cars.

Q. On what roads did you run them?—A. Over the northern lines.

Q. What were the northern lines?—A. Over the Erie and New York Central.

Q. Were not the oil fields nearer to the Pennsylvania line than they were to the Central and the Erie?—A. No, sir.

Q. Is there a district south of Pittsburgh?—A. Yes, sir.

Q. Is there a district north of Pittsburgh, near Pittsburgh?—A. Yes, sir.

Q. Has the Pennsylvania Railroad Company any lines in that district?—A. Yes, sir.

Q. Did it have at the time when you first entered into that business?—A. Yes, sir; it had lines.

Q. And you did not ship any oil over that line?—A. We did ship oil over their line and used their cars. They always furnished our tank cars.

Q. Did they have tank cars?—A. Yes, sir; they have still.

Mr. GOWEN. The line known as the Green Line was owned by the Empire Transportation Company.

Q. Is the Union Tank Line your line now?—A. Yes, sir.

Mr. SMITH. The reason I asked that question is because all the oil that comes into our city comes through that Union Tank Line.

By Mr. BUCHANAN:

Q. During your testimony you have been speaking of the ownership of certain pipe lines to the sea-coast, and of an arrangement entered into between you and the railway companies for a common rate. What impediment, if any, exists in the way of capital willing to embark in the enterprise of constructing a parallel line to yours?—A. None whatever. It is very much freer than it was when we engaged in the business.

Q. Much freer?—A. Yes, sir.

Q. Freer in what respect?—A. When we were engaged in the business of laying a free line, there was no free pipe line in Pennsylvania as there now is. We had to buy the rights of way by private negotiations all the way through.

Q. Now the right of eminent domain is granted to everybody.—A. Yes, sir.

Q. So that in Pennsylvania, wherever capital is willing, it can lay down its pipe?—A. Yes, sir.

Q. Is it also the same with New York?—A. Yes, sir.

Q. Are you familiar with the law in that respect in New Jersey?—

A. I do not know whether it is in New Jersey or not. I think there is a free pipe line law in New Jersey.

Q. If that be the case, will you explain to this committee why it is that competing lines are not laid?—A. The most logical conclusion regarding the matter is that capital can not figure it out as a safe investment.

Q. But your capital has figured it out as a safe investment, has it not?—A. Well, the question as to whether new capital wants or is disposed to come into the oil business for the percentage of earnings we are willing to accept on the investment, is, I think, a very questionable one, and one that deters responsible parties, or a little capital, from engaging in it.

Q. But if capital constructed that line, what arrangement, if any, would be necessary for it to enter in it in order to obtain the oil to send to the sea-board?—A. No other arrangement than to reach the wells by a local system.

Q. How would they get the supply?—A. By going to the wells the same as we do.

Q. Does not your system of local pipage interlace that whole region?—A. It does; but if anybody can come there with a better service at a lower rate they can get it for the asking.

Q. Is the laying of local pipage also free under the law?—A. Yes, sir; entirely free to all commerce.

Q. What arrangements, if any, have your companies made that would prevent a free market of the products thus brought to market by the new line?—A. None whatever. The marketing of oil is a question of fractions as to finding a buyer. The man that sells it at an eighth of a cent a gallon the cheapest is the man that gets the business.

Q. So far as the exportation of oil is concerned, have you secured control of the methods of the instruments of transportation so as to prevent competition at that end of the line?—A. No, sir; no such control is possible to anybody.

Q. Why is it not possible?—A. Because the buyers of oil are altogether independent commission merchants, who figure to buy from the cheapest seller.

Q. Do you export any oil yourselves?—A. We do not. I say we do not. We had departed from a fixed rule in that respect only in one case. That is in the Turkish markets where the Russians have been most aggressive against us in trying to drive us away from the markets.

Q. And to that point you do ship oil?—A. We have shipped some oil.

Q. By what line of steamers?—A. Usually by sailing vessels. I have no recollection of shipping by steamers.

Q. Sailing vessels owned by yourselves, or chartered for the purpose?—A. Chartered. We own no vessels.

Q. Going into the markets and chartering those which afford the best service for the least money?—A. Yes, sir.

Q. I am asking these questions for information, because I desire to know whether there exists anything in the natural formation of the country in the supply of the oil in the laws of the States which you traverse, or in the business combinations which you have formed that would prevent capital entering into the same field and competing with you, and if there be anything whatever of that sort I desire to know it.—A. There is nothing of the kind. Our hold on this trade and our position in it is, we believe—and we believe we can show to any fair tribunal of inquiry—the result of the application of better methods and of better business principles than have been brought against us, and on that

basis only can we hold it or survive, and the people who come to tell you differently tell you that which is false, and which we can prove false to the utmost particular. They are people who have failed through their lack of ability to succeed, and who would not succeed under any circumstances. They are soreheads and strikers.

Q. Excuse me. I have not been pleased at all by some of the names which they have seen fit to apply, and I am not any more pleased by the counter-charges. I am not asking with reference to the business capacity of those who have failed, and who have ascribed their failure to your combination, but I am asking as to the situation which exists to-day with reference to the possibilities of competition with you.—A. And it is on that score that I am answering, that there is nothing in the conditions in any respect to prevent any one who sees fit from engaging his capital and energy in the business. If I might be allowed one more word, it would be to say that with all possible respect we have submitted to a range of inquiry in relation to this that we thought this committee would not have upheld, if we had appealed to it. But we are desirous of showing everything that enters into the merits of this case, and on that score we have no possible fear of the verdict of this committee with reference to our position as the promoters of this great American industry.

Q. Passing from that without comment, allow me to ask you how you account for the fact that a capital upon which a return is made to the amount spoken of by Mr. Flagler is allowed to remain the practical sole operative in this field?—A. It survives there by virtue of its better service, its superior service, and on no other basis. It has no presumptive right. It exercises no monopoly of franchise. It occupies no field to the exclusion of any other corporation, individual, or firm. It is as free as air. Any man who has ability and capital can engage in the business.

Q. Testimony has been offered with reference to the payment to your trust—I understand you to be one of the trustees—of rebates by the Pennsylvania, and perhaps other railroads. What information have you to give us as to the payment of such rebates?—A. I have to say to you that having hurriedly looked over some of the statements made here I think your committee is deserving of commiseration in having listened to the worst balderdash that was ever put forward.

Q. I am not asking for a speech; I am asking for the specific facts within your information.—A. The specific facts are false.

Mr. GOWEN. You say that under oath.

The WITNESS. Yes, sir.

By Mr. BUCHANAN:

Q. Do you mean to say to this committee that no one of these roads has paid to the Standard Oil Company a rebate upon the oil which they carried?—A. I say for a long period a system prevailed on the railroad by which a rebate was paid; but any such amount as has been foolishly stated here, of \$100,000,000 and \$250,000,000, is absurd in the extreme. A man must be out of his mind to make such a statement.

Q. Having denominated it as being enormously overstated, please indicate what it was.—A. It is utterly impossible for me to make any statement regarding the matter. The question is one covering a wide range, and such a mass of detail as would be difficult indeed to compile. But the whole thing is overstated, and has been always absurdly.

Q. But we have accurate information, as accurate as possible. If you impugn the information which has been already given it would be of

more value to the committee if you would give us the basis upon which you impugn it.—A. I can impugn it very much more concisely, and within a very much safer range than the statements made. I am without positive detail of the compilation of any such line of inquiry as would enable me to make a specific statement.

Q. Can you give the committee any reason for the railroad companies paying you this rebate?—A. The railroad companies exacted of us always the very utmost of price in transportation that it was possible for them to exact.

Q. I am not speaking of their exactions; I am speaking of their returns to you.—A. I am speaking of the freights paid on oil traffic.

Q. Why did they give you these rebates?—A. The system prevailed during a very considerable period, as I have already stated in the earlier examination, of fixing a nominal rate; as, for instance, a statement is made up at which, if you please, the rate was \$1.90. Everybody knows it was only a nominal rate. Every shipper disregarding that schedule went and made a special arrangement for his traffic on the best terms possible. We were no exception to that rule. We never originated it. We were not a party to any railroad company or official in respect to it. We operated under it as every other shipper did.

Q. Do you mean to be understood as saying that in your dealings with these companies they made the best terms it was possible for them to make under the circumstances?—A. They made the best terms with us, and we with them, and we have at no time made an arrangement that excluded them from the privilege of extending the same terms to other shippers. I have no doubt that every shipper could have made, and did make, equally as favorable terms as we did with the railroad companies. I have no doubt of it at all.

Q. We have had conjectures already before the committee from different ones. I am trying to get down to the solid regions of actual fact, and let us remain there if possible. Now, you were paid such a rebate, and you were paid that not only upon the oil which you shipped, but also upon the oil which others shipped.—A. No, sir.

Q. It has been stated here before this committee, broadly, that such was the case. Do you speak advisedly and with consideration when you say it is not correct?—A. I have no knowledge of any such case.

Q. But have you knowledge that such was not the case?—A. I do not believe that any such case of the kind ever occurred in which we were paid any rebates on other people's shipments.

Q. Did not your contract with the railroad companies require them to pay you a rebate on all oil they carried from whomsoever obtained?—A. No, sir.

Q. What benefit to the public, if any, arose from these payments to you of these rebates?—A. There is no manner of doubt but that the rate of freight, under whatever name it was reached, whether by a lessening of the open rates or by a repayment of a part of the rate, always went to the benefit of the public.

Q. In what way?—A. No large manufacturer having the cost of taking his goods to market reduced but that in his anxiety to sell his goods gave that reduction of cost to the buyer.

Q. Did your company, in fact, do so?—A. They did, as a matter of fact, in my judgment, in every case. I think the whole system was a vexation. It was not one that we upheld or profited by, in my judgment, to any degree whatever. The whole rebate system, in whatever way it came about, was simply another name for a reduction of tariffs.

that meant cheaper goods to the consumer. Instead of being a curse to the public at any time, it proved to be a benefit.

Q. Do you mean to say that a continuation of this rebate by the companies would result in a benefit to the public generally?—A. I mean just that. I mean that the payment of a rebate on the oil-trade traffic resulted in cheaper oil to the consumers.

Q. At the expense of whom?—A. If you call it an expense, at the expense of the railroad; if you call the reduction of their rate an expense to them. I have no knowledge of their having carried the oil at a loss, however.

Q. It has been intimated before the committee that some of the officials of these roads making these rebates had an interest in the money thus returned. What knowledge, if any, have you upon that subject?—

A. So far as my knowledge goes, and it has been acquired from many years' experience, I have no possible knowledge of any single case of the kind. The statement is one of the class of mendacious lies that have become current with certain men. There is not a scintilla of foundation for them.

Q. Have you been placed in a position to speak with any degree of confidence as to this?—A. I have. A man who would make such a statement as that ought to be prosecuted for libel.

Q. You speak of a loss by evaporation in the tanks; I do not know that I clearly understood you. The impression that I gathered from what you said was that this loss by evaporation in the tanks fell entirely upon your company?—A. Yes, sir.

Q. Well, is not that the least valuable part of the oil?—A. No, sir.

Q. Are not the first products of distillation the least valuable?—A. No, sir; they are to-day the most valuable.

Q. What is the first product of distillation of petroleum?—A. Naphtha, gasoline.

Q. You were asked with reference to the rate common to yourselves and to the Pennsylvania Railroad Company. I will extend that inquiry a little further, and ask you if it is the case that there are other railroads transporting oil to the sea-board as well as that road, and, if so, whether you have a rate common with them?—A. Yes, sir.

Q. The Lehigh Valley Railroad transports oil by cars to the sea-board, does it not?—A. I believe it does.

Q. And the New York Central as well?—A. I think it does.

Q. Do they obtain their oil from you?—A. No, sir.

Q. Is their rate common with yours?—A. Not to my knowledge.

Q. Is the rate of the Lehigh Valley a common one with yours?—A. Not that I know of.

Q. Is it higher or lower?—A. I do not know what it is.

Q. Do either one of these roads enter into competition with you in the transportation of oil?—A. They do.

Q. What facilities has the Lehigh Valley Railroad for obtaining oil in the oil region other than by your lines of pipe?—A. Their business is, I believe, almost exclusively, if not exclusively, that of carrying refined oil in barrels.

Q. I beg your pardon, but having lived for a number of years in the regions traversed by the extension of the Lehigh Valley Railroad, I have noticed many trains of tank cars upon the road, and it was for that reason I was asking you. How is it in the case of the New York Central? Do you know where they obtain their oil?—A. I think from the Tidewater Pipe Line.

Q. Is that in competition with you?—A. It is.

Q. Is its rate common with yours ?—A. I believe its rates are the same as ours.

Q. Is refined petroleum ever conveyed in tank cars ?—A. Oh, yes.

By Mr. SMITH:

Q. I would like to ask you one or two more questions. Is the Standard Oil Trust incorporated as a whole ?—A. It is not incorporated at all.

Q. In your testimony you stated that the field of conveying oil to the sea-board is open to all who wish to engage in that business, providing they have the necessary capital and ability. Did you have at the start the necessary capital and ability ?—A. I think we must have.

Q. You had the ability, did you ?—A. It would seem so.

Q. And the capital ?—A. It would seem so.

Q. If you, as you have stated, gave every person a chance to convey oil over your line at the same rate as the railroad companies, how is it then that most of the refiners in the great district of Pennsylvania have been forced out of the business ?—A. Well, they have not been.

Q. But I believe we have testimony here that there has been quite a number ruined, forced into bankruptcy, squeezed out, as they call it; there were half a dozen titles to the way of getting out of the business. How is that; you seem to be so benevolent ?—A. The number of refineries in the oil region has doubled since the formation of the Standard Oil Trust.

Q. Who owns them ?—A. Various parties.

Q. Connected with the Standard ?—A. Not in any way.

Q. Do you handle their oil ?—A. No, sir.

Q. Do you pretend to say that you do not handle the oil from the Pennsylvania oil districts ?—A. We do handle oil from Pennsylvania.

Q. Do you handle the majority of that oil ?—A. We do.

Q. Do you own those wells yourselves ?—A. No, sir.

Q. Then you get oil from the producers do you not ?—A. We buy oil from the producers; yes, sir.

Q. You buy it ?—A. Yes, sir.

Q. You are aware that there has been a great many of these producers who have gone out of the business or have been squeezed out ?—A. I am not; I am not aware of it.

Q. Have you not lived or been in the neighborhood of that oil district ?—A. I have.

Q. You certainly ought to know that some of those men have closed up ?—A. Producers?

Q. Refiners ?—A. Some of the primitive little refineries started in the early history of the business have, in the development of the business, gone out and others have taken their places.

Q. We have the testimony here from refiners that they were doing a tip top business until about 1874 ?—A. The Standard Oil Trust was not formed until 1882.

Q. Was there not some institution ahead of that ?—A. The Standard Oil Company did the business earlier.

By Mr. GOWEN:

Q. Did I understand you to say to Mr. Smith that since you have commenced business the number of refiners independent of you has doubled ?—A. I think they have fully doubled.

Q. When you commenced in 1870, what per cent, of the oil trade did

you control in the refining branch of it?—A. Do you mean me as an individual?

Q. The Standard Oil Company when it commenced?—A. There was not any Standard Oil Company until 1875.

Q. In 1875 what proportion of the oil trade did you control?—A. I could not answer the question.

Q. Twenty per cent?—A. Oh, yes.

Q. Thirty per cent?—A. Oh, I think more than that.

Q. In 1875?—A. I think so; yes, sir.

Q. You did not get that 30 per cent. in one day?—A. I came into the Standard Oil Company, of course, long after it went into operation.

Q. When it first went into operation as a refiner, what percentage of the oil trade did it control?—A. Very small percentage.

Q. One per cent.?—A. I think more than that.

Q. Was it 2 per cent.?—A. I think more than that; Mr. Flagler testified to it here to day.

Q. He said six hundred barrels a day. What percentage at that time was that of the oil trade?—A. In 1870?

Q. Yes?—A. Well, it was, I should say, about 10 per cent.

Q. In 1870, 10 per cent.?—A. Yes, sir. I should think the business did not average over ten thousand barrels a day.

Q. Was not the business in 1870 two millions a year?—A. Two millions a year would be less than seven thousand per day.

Q. Was it not over two millions in 1870?—A. I don't think very much.

Q. And now you control 75 per cent. you say?—A. Yes, sir.

Q. Therefore it can not be possible, even if you had 10 per cent. when you started and have now 75 per cent., that the relative proportion of independent refiners had increased?—A. I said the number of the refiners in the oil region since the formation of the Standard Oil Trust had doubled.

Q. But only since the formation of the trust?—A. Yes, sir.

Q. That is, the number in the oil region has doubled?—A. Yes.

Q. But since the formation of the Standard Oil Trust, in 1882, have you lost any of the percentage of the business you then had?—A. Well, I think we are doing a less percentage of the business somewhat now than then.

Q. How much less?—A. Perhaps not much less.

Q. One per cent.?—A. I could not state that exactly.

Q. But you stated a great many things here when questioned by Mr. Buchanan with very great exactness and positiveness. I would like you to answer me whether, since 1882, you have lost or gained in your percentage of the oil trade?—A. Well, I should say that we have lost.

Q. How much?—A. I should say several per cent.

Q. Since that time you have bought a minority interest in the Tide-Water Pipe Line?—A. But we have suffered the creation of the majority interest.

Q. What do you mean by "suffered the creation of the majority interest"?—A. That is, it has taken its place in the trade.

Q. Not since 1882?—A. Well, it was in 1880, was it not?

Q. It was before 1880, was it not?—A. I have forgotten.

Q. The number of refiners which may have increased in any particular locality like the oil region does not necessarily require that you should have lost your percentage of the trade, does it?—A. Well, they have come in, and are competitors with us for the business. And not in the

oil region alone; there have been considerable increases in other localities.

Q. But you admit that you have to-day 75 per cent. of the business?—

A. I think so.

Q. And in that you do not include your share of the Tide-Water Pipe Line?—A. No.

Q. That would be about 4 per cent., would it not, of the whole business?—A. Three or four.

Q. Do you include in that 75 per cent. of the business the amount of crude oil which you may ship abroad?—A. Well, I count that we do not refine that.

Q. That is not included in the percentage?—A. No, sir.

Q. What percentage of crude do you ship abroad?—A. I can not state the amount.

Q. You ought to know better than I do; you certainly know something about it.—A. I should say 6 or 7 per cent.

Q. That must be added to your 75 per cent. of refined?—A. That 6 or 7 per cent. may or may not go through our pipes; we do not refine it.

Q. The 75 per cent. refers only to that which you refine?—A. Yes, sir.

Q. Then you have, as you admit, 3 or 4 per cent. by reason of your interest in the Tide-Water Pipe Lines, which is your principal competitor—in magnitude I mean?—A. Yes, sir.

Q. Now, then, you have 5 or 6 per cent. of the total production which you ship abroad?—A. We do not ship abroad.

Q. You sell it?—A. Yes, sir; it is bought.

Q. It comes through your pipe?—A. It may or may not.

Q. If not through your pipe, how does it get to the market?—A. By railroad or by the Tide-Water Line.

Q. Some of your own oil which you refine comes by the railroads also?—A. Yes, sir.

Q. A considerable proportion?—A. Yes, sir.

Q. Because you give them 26 per cent. of the whole. Now, I want to know whether this 5 or 6 per cent. of the crude oil which you send abroad has not to be added to the 75 per cent. you refine and the 3 or 4 per cent. in the Tide-Water Company in order to determine the total percentage of the entire production that you deal in or control?—A. Well, it may amount to a greater percentage than the 75 per cent. run through the pipes.

Q. Answer the question.—A. I do not get the drift of your question. It is a little involved, I think.

Q. I am trying to make it clear. You have answered that you refined about 75 per cent. of the total product of all in this country?—A. Yes, sir.

Q. And also that you have 3 or 4 per cent. of the product by reason of your minority ownership in the Tide-Water Company?—A. Yes, sir.

Q. And also that you handle about 5 or 6 per cent. of what goes abroad?—A. I have not stated that we handled it, but that it went abroad.

Q. You get your percentage, when it goes abroad, through your pipes?—A. We may or we may not; they are competitive pipe lines.

Q. But if it goes abroad it must go to tide-water, either through the pipes or the railroad?

Mr. BREWSTER. If you will allow me, Mr. Gowen, I will show you where the mistake comes in. He means to say that the Standard refines 75 per cent. of the unit of what is refined, not of the crude.

The WITNESS. Yes; that is what I mean.

Mr. GOWEN. Did you mean to say that only 6 per cent. of the entire product of oil goes abroad as crude?—A. Six per cent. of the entire crude oil is shipped to be refined abroad.

Q. How many millions of barrels go annually abroad?—A. Three and a half millions. I speak in round numbers.

Q. That would be about 6 per cent. of the total shipment?—A. Yes, sir.

Q. Of that 6 per cent. of the total shipment of crude oil you must get the business, under your contract with the railroad, of 75 per cent. of it. You give the railroad 26 per cent., and you get the other 74?—A. If it is shipped over the railroads it is under our guaranty.

Q. But you get 74 and they get 26 per cent. of the entire amount that moves eastward?—A. We may get 74 per cent. and we may not.

Q. Why?—A. There are other lines competing for business.

Q. Eastward?—A. Yes, sir.

Q. Who?—A. The Lehigh Valley Railroad carries some oil.

Q. Do you not know that the Lehigh Valley does not carry any except what it gets from other trunk lines?—A. No, sir; I do not.

Q. Does it not get its entire amount from the Pennsylvania Railroad?—A. I suppose it does.

Q. Is not that part of the 26 per cent.?—A. I suppose it is.

Q. Do not you know that the Pennsylvania Railroad out of the oil which you give to them gives a certain amount of it which goes to New York to the Lehigh Valley Railroad, at a place called Tomhickon?—A. Yes, sir.

Q. Then the Lehigh Valley road is not an original factor, but simply aids the Pennsylvania Railroad in moving to the Bay of New York a certain portion of the oil?—A. I do not think the Pennsylvania oil goes by the way of Tomhickon now. I am not sure, but I do not think it does. They run over their own line now. I do not know what this oil Mr. Buchanan speaks of as going over the Lehigh Valley—crude oil—can be. I have no knowledge of any oil going that way.

Q. Do not you know that within a year or two a great deal of oil has gone over the Lehigh Valley Railroad from Pennsylvania to New York?—A. There was a period before the Point of Rocks Railroad was completed during which it did; but I do not think within the last year and a half—

Q. Now, you have stated in answer to my question, and you repeated almost the same idea in answer to Mr. Buchanan, that the capital invested in your pipe line was at some risk in consequence of the ephemeral character of the business. I inferred from your answer to Mr. Buchanan that you doubted whether new capital would be willing to take that risk.—A. I made that reply to his question as to why it does not.

Q. In other words, you feel, do you, that the 25,000,000 of share capital which is in this National Transit Company is constantly in jeopardy, due to the fact that these oil fields may give out before you have realized a sufficient return for your capital?—A. That their duration is indefinite, and that the business is attended with risk to that extent.

Q. You would not think, therefore, that you were greatly injured if anybody should return you that capital and take it off your hands?—A. Well, we are in the business now and expect to remain in it.

Q. But you must not blow hot and cold under the same oath and during this investigation. I would like you to take one side or the other of that question. You have stated several times that this was a

risky business, and that you had not been in it long enough even to determine what rate of depreciation per annum should be called for in order to return your capital, but to Mr. Buchanan you stated this field was open to anybody who had the real money and was willing to put it at risk in competition with you.—A. I did.

Q. Am I to understand from that that you would feel that no great injury was done to you if this property was taken off your hands at cost; provided, always, that you could secure the supply of oil at the same rate that other people did?—A. Well, I can not conceive what possible significance or importance there is to the question.

Q. You must permit me to be the judge of that.—A. The question as to our willingness to sell is one I have no right to answer about, and one I could not answer, even with reference to my own feeling, without a bona fide offer and collaterals back of it.

Q. You would not want collateral if you got the money?—A. No, sir. I think the Standard Oil success is very largely due to their faith in the business, and the fact that they have been willing to risk their money, and more willing than other people.

Q. Let me follow out this first. Take the capital at \$25,000,000, though it is more, I believe in that statement of the National Transit Company. That company has capacity to-day of 60,000 barrels a day, has it not, according to Mr. O'Day's testimony?—A. In all departments, yes, sir.

Q. Practically, leaving out some of the Sundays, that would make 20,000,000 of barrels a year? You admit that capacity, do you not?—A. Yes, sir.

Q. Mr. O'Day stated further that the capacity by increasing the pumping station could be run up to 90,000 per day. Do you agree with that?—A. I should think that would be a very full capacity.

Q. But there is no question about the 60,000 per day?—A. I think not.

Q. Now, on that you get, including the oil from the lower region, 70 cents per barrel, do you not; 55 to New York and 20 from the wells?—A. Yes, sir; but I do not think we pump any oil from the lower field to the sea-board.

Q. We will take the upper field, then. From that you get 65 cents?—A. Yes, sir.

Q. A large proportion of the oil comes from the upper field?—A. Yes, sir.

Q. In addition to that you get your storage on such of it as is stored?—A. Yes, sir.

Q. Now, 65 cents on 20,000,000 barrels is \$13,000,000. If you only got 25 cents a barrel for that business it would amount to \$5,000,000, would it not?—A. You are assuming that all that goes to the sea-board, which it does not.

Q. I am assuming that it all goes to the sea-board.—A. But it does not.

Q. Most of it does, or a very large proportion of it.—A. I do not know just what proportion.

Q. Every year two-thirds of the total product of refined oil is sent abroad over your line?—A. About two-thirds goes abroad, but a great deal of oil is taken to the sea-board in barrels and tank-cars which does not go through the pipe line.

Q. Now, suppose the State of Pennsylvania, exercising its right of eminent domain, should take possession of your pipe line and run it for the benefit of the producers in the oil region, charging you exactly the

same rates for transportation that they charge others, am I to infer that if you got what this property cost you you would not feel greatly injured by it?—A. Well, that is a question that I can not make any answer to.

Q. Would you be willing that your testimony given here to-day should be read before the jury when they took possession of your property and assessed the damages in order to determine from your statement of the hazardous nature of the enterprise what a fair price should be?—A. I think that any jury which undertook the business of assessing that property without reference to those hazards would probably meet with disastrous results.

Q. But the question is whether you would be willing that your testimony given here to-day should be presented to that jury as a fair statement of the facts by which they should judge of the value of the property.—A. I have made no statement here but what I would be willing to repeat.

Q. Have you any reason to suppose that you or anybody would be injured by any change in this business that would enable you to receive your oil through this pipe at exactly the same price which every competitor of yours paid for it?—A. Have I any reason to believe that we would be injured?

Q. By that.—A. The piping business is a business entirely apart from the refiner's business.

Q. I mean as a refiner.—A. Our refineries pay the same price for transportation for piping per barrel as every other refinery does.

Q. But to you as a transporter?—A. To the pipe line.

Q. Now, suppose that the State of Pennsylvania became the transporter and charged you and everybody else 25 cents a barrel for the transportation of oil, would you feel that in your refining capacity you would suffer injury from such a change?—A. We would as refiners be in just the same position as we are to-day, relatively. We pay just the same to-day as other refiners.

Q. But if you could have that oil transported for you as a transporter instead of paying your own pipe-line company 65 cents for 25 cents as refiners you would be 40 cents a barrel better off?—A. No, sir.

Q. Why?—A. Because the basis of price would be reduced just that much. It would be sold to the foreign consumer at just that much less per barrel.

Q. That would be taken off the price?—A. Yes, sir.

Q. But would that injure you as refiners in the least?—A. As refiners I do not think it would.

Q. Therefore, if the State of Pennsylvania relieved you from the burden of maintaining this pipe line and assured you that you should always receive your oil at the same rate as everybody else, your refining business would not in any manner be injured by such a change?—A. Well, I think, I can hardly answer the question.

The WITNESS (to the chairman). I must appeal from the constant reiteration of how the State of Pennsylvania would be affected. I do not see what the gentleman is trying to get at. I have already answered his question two or three times.

The CHAIRMAN. The objection that the witness makes is that he has already answered your question, Mr. Gowen.

Mr. GOWEN. He has not stated how it would affect him.

The CHAIRMAN. I think so; the answer seems to me to be entirely complete. You put it that that would make a change in his condition.

Mr. GOWEN. The question was whether he would be injured by that system.

The WITNESS. Whether we would be injured as refiners. Whether the rate was 45 cents or 20 cents a barrel, if everybody paid it, we would be relatively in the same position.

Q. You would not be injured then?—A. As a refiner, no.

Mr. GOWEN. If you had said that before we would have had no trouble.

The WITNESS. That is just what I said long ago.

By Mr. GOWEN:

Q. You have stated that certain things that have been stated here or proved here were false. Mr. Cassatt swore before a master, and his testimony has been given in evidence here, that sometime about 1878 or 1879 when the rate on oil was \$1.55 from the Bradford region, you were getting a rebate of 49 cents, including in that 22½ cents which was paid the American Transfer Company. Was that false, did you say?—A. I have not seen the testimony, and it is a very long time ago.

Q. I ask you the question whether that statement of Mr. Cassatt's was false?—A. I would not say that it is false, but I do not know that it is true. I have no recollection specifically of the matter.

Q. Am I to understand that when you replied to Mr. Buchanan that all statements of that kind were false, that that applied to Mr. Cassatt's statement?—A. I can not answer with reference to that special statement, not having seen the testimony.

Q. That is not the question. Did your allegation that such statements were false, apply to that statement of Mr. Cassatt's?—A. As I say, I can not answer. I do not know about it without reviewing.

Q. You must answer yes or no, whether your statement that all such allegations were false applied to Mr. Cassatt's statement?—A. I covered in my statement to Mr. Buchanan the general statements that rebates amounting to \$100,000,000 or \$250,000,000 had been allowed to the Standard Oil Company, and I stated that they were false. I did not specify Mr. Cassatt's statement or any other statement.

Q. Am I to infer that you deny the correctness in any way of Mr. Cassatt's statement?—A. I do not deny or affirm it.

Q. Mr. Cassatt swore that when the rate was \$1.40 from the lower field that you received a drawback of 51½ cents, which included a 22½ cent drawback paid to the American Transfer Company. Do you admit or deny that?—A. I neither admit nor deny it. I have no knowledge about it.

Q. Mr. Cassatt testified that when the rate to the public of refined oil going eastward was \$1.90 less 44½ cents, making, as he said, \$1.44½, that your rate was 80 cents. Do you deny the correctness of that statement?—A. I do not deny it or affirm it. I do not know anything about it.

Mr. CHOATE. Does Mr. Cassatt state that what you call rates to the public were paid by anybody.

Mr. GOWEN. He simply stated the rates these gentlemen got and then stated what the rate to the public was.

Mr. CHOATE. But did he say that that rate which you call the rate to the public was paid by anybody?

Mr. GOWEN. He stated that some people—Mr. Malcom Lloyd I believe was one—got drawbacks. Therefore the inference would be that others did not.

By Mr. GOWEN:

Q. You stated in answer to Mr. Buchanan, or I understood you to say, that it was not true that you ever received a drawback payment or

allowance—or whatever word was used to designate it—on oil that was shipped by other people?—A. I have no recollection of any such case.

Q. You stated that with great positiveness. If I remember right you stated that that statement was false, did you not?—A. Yes, sir.

Mr. BUCHANAN. I would like to have his answer read in that respect. My recollection is, and I was watching closely, that he said he knew of no such case.

Mr. GOWEN. I may be wrong about it; if you prefer I will strike this all out.

Mr. BUCHANAN. Not at all.

By Mr. GOWEN:

Q. I want to say to you that Mr. Cassatt testified on the occasion to which I have referred, and his testimony upon that point has been read and is upon the minutes of this committee, that they paid the American Transfer Company 22½ cents a barrel on every barrel of oil shipped over the road, no matter by whom it was shipped.—A. That is a very different service. That is a consideration paid them for gathering the oil in the field and bringing it to the road. It has nothing to do with the shipments over the road.

Q. How do you mean?—A. Just that it did not go beyond the question of gathering this oil from the field to the railroad.

Q. Are you speaking from your own knowledge?—A. From a general knowledge of the question, not a specific knowledge of it.

Q. Do you not know that the American Transfer Company charged a regular rate to all persons who transported oil over its lines?—A. Whether they did or not at that time, I do not know. There was a period of active competition in the oil field for oil, and I think that for a very considerable time they sacrificed their rates in the purchases of oil.

Q. Mr. O'Day testified to that, but he testified also that they had a regular rate which they charged everybody?—A. A nominal rate.

Q. But a rate. In addition to that the Pennsylvania Railroad paid, according to Mr. Cassatt, the American Transfer Company a rebate on every barrel of oil?—A. As a compensation for the service of gathering the oil and bringing it to the Pennsylvania Railroad rather than to some other transporting line, the Erie road for instance.

Q. Do you mean that that payment applied only to oil delivered by the American Transfer Company?—A. That is my understanding.

Q. Do you know it as a fact?—A. As well as I can know anything without absolute knowledge of the case.

Q. Who was the treasurer of the American Transfer Company?—A. I think Mr. Jones was the treasurer.

Q. Where is he?—A. In New York.

Q. In what capacity?—A. A clerk in the Standard Oil Company's office.

Q. What is his first name?—A. I do not know his first name.

Q. I think Mr. O'Day testified that Jones was the secretary?—A. I think he was both secretary and treasurer.

Q. Do you know Mr. Girty?—A. Yes, sir.

Q. Was he not the treasurer?—A. I do not know.

Q. Where is he?—A. In New York.

Q. In what capacity?—A. As a clerk in the service of the company.

Q. Do you know what his first name is?—A. I do not.

The WITNESS. There are some two or three points, Mr. Chairman, if you will bear with me, you and the gentlemen of the committee, for a few moments, that I think in justice to the interest I somewhat repre-

sent, I ought to ask you to hear me on. We feel that coming before this committee at this time is quite a serious affair in that there seems to have culminated here a line of attack.

The CHAIRMAN. Pardon me one moment, Mr. Archbold. I do not think it will serve any useful purpose in connection with this investigation that you should go any further in any statement you have to make than to correct any answer you have made here in regard to any fact that is not entirely clear or correct upon the record, or to add any statement with regard to any matter of fact concerning which you have not been interrogated and which you deem of importance to the subject of the investigation. Your ideas of the purposes of the investigation will not assist us in any way in reaching the conclusion which we are charged with striving at; so that you will be careful to restrict yourself within that limit.

The WITNESS. I would not presume to attempt to aid the committee in reference to the manner of its investigation. There are some features of the testimony presented and they are very short, which we feel in justice to our interest ought to be put right. It has been stated here by a witness that these alleged discriminations have forced a large number of refiners into bankruptcy. I deny that.

Mr. GOWEN. The witness must not merely say a thing is not true without saying what knowledge he has on the subject. That opens a vast door for further inquiry.

The WITNESS. If you please, the witnesses on the other side have been allowed to testify in the most general way. They have presented statements here which are as absurd as any statements could possibly be. And if it is the purpose to go into detail we shall, with the permission of the committee, offer to prove the falseness in the main of these statements made to you by these witnesses. I make that statement with reference to them all. The statements made by two different witnesses as to the amount of rebates having aggregated one hundred millions and two hundred and fifty millions is false.

Mr. GOWEN. No such statements have been made by any witnesses.

The WITNESS. I deny the statements that the Standard Oil Company had but little capital to start with and procured its capital from the profits derived from rebates as being false. I deny the statement most positively that the railroad officers, or any of them, participated in rebates or were beneficiaries in any respect through the Standard Oil Company in the matter of rebates. I deny the statement by a certain witness that he was forced to sell out for one principal reason, because of the inferior quality of oil furnished him in a discriminating way, as untrue, or that we were a party to the Pennsylvania or any other railroad, diverting cars from him in order that he might be deprived of proper facilities. I thank you very much, Mr. Chairman and gentlemen of the committee.

Mr. GOWEN. One moment. You are aware, of course, of the fact that being under oath before this committee you are responsible for what you state as a matter of fact here?

The WITNESS. According to my best knowledge and belief I am.

Q. When you swear, as a matter of fact, that the statement made by Mr. Emery that he received bad oil is false, what knowledge have you upon that subject?—A. I have the knowledge of an intimate relation with the business, covering the period under discussion, and having myself carefully discussed this question with Senator Emery at different times.

Q. Did you ever take any of that oil and analyze it or subject it to

any test?—A. We were at all times receiving oil at the same time and of the same character, and subjecting it to all the tests.

Q. How do you know it was the same oil?—A. Because there could not by any possibility be any variation. The oil was pumped through the pipe in large quantities and delivered in part to him and in considerable part to our refiners.

Q. This oil was delivered to him upon the cars of the Pennsylvania Railroad, was it not?—A. It was.

Q. Were you ever at that spot and examined that oil?—A. I never was, personally.

Q. Can you say upon your oath that you ever saw a single barrel of that oil and examined it?—A. Personally, no, sir.

Q. Did you ever receive oil loaded from the same rack?—A. Yes, sir.

Q. At the same time?—A. We were constantly receiving the same oil.

Q. Do you know that?—A. The oil was flowing through the line in a continuous stream, and was constantly being delivered to us at the same time as it was delivered to him.

Q. Oil can not flow through the line in a continuous stream that is delivered in tank-cars?—A. The oil, of course, stopped flowing when it went into tank-cars.

Q. And started again at another car?—A. No; of course not.

Q. What is the length of local lines that conveyed the tank-cars on this branch railroad which connected the Philadelphia and Reading from which Mr. Emery got his oil?—A. It was not there that we delivered the oil to him.

Q. Where was it?—A. At Milton.

Q. He got his oil from you at Milton?—A. Yes, sir.

Q. All of it?—A. Yes, sir.

Q. Do you assert that you had any such knowledge of the facts of that case as will enable you to say that his oil was as good as yours was?—A. I have that knowledge from the most careful investigation of the subject that is possible.

Q. And yet you never went to his refinery?—A. No, sir; and yet I have carefully investigated through employes who did have that personal knowledge.

Q. Now, then, does your loading rack at Milton deliver the oil directly into tank-cars from the main line of pipe leading to the oil region from Milton?—A. From the main line?

Q. Yes.—A. It goes into tanks, of course.

Q. Are there any tanks at Milton to hold any deposit which are afterwards emptied into cars?—A. Undoubtedly; yes, sir.

Q. A tank which holds oil near a loading rack will be filled with deposit if the oil remains there for some length of time, will it not? It may accumulate deposit?—A. It will accumulate deposit.

Q. And sediment?—A. And sediment.

Q. Were you ever in your life present and saw the oil running from one of those tanks into the tank-cars that went to Mr. Emery's?—A. I never did personally; no, sir.
